Q. $2.00 per barrel?

A. Yes.

Q. I'll call your attention to Tracts 19 and 20 under which the Protestant, Plummer, Florence M. Plummer, Hazel A. Plummer, Thomas O. Plummer and Virgie M. Upgrove own an interest in the 1/8 royalty, and ask you to state how much [fol. 1403] royalty under that tract was made for the month of April, 1947?

A. Under Tract 19 they received for the month of April, $1489.00,—under the Unit Plan they would receive $1595.00.

Q. Which would be an increase?

A. Yes, a little over $100.00 increase. On Tract No. 20 which is Plummer 4 & 5,—Tract No. 19 is Plummer No. 3,—on Tract No. 20, which is 4 & 5, the 1/8 interest would receive $3014.00,—under the Unit Plan they would receive $2658.00, a decrease of about $170.00.

Q. I'll call your attention to Tract No. 26, under which the Protestant, I. O. Oaks owns a part of the 1/8 royalty, and I will ask you to state from the compilation which you have testified to, how much money the 1/8 loyalty paid for April?

A. That's the Phillips-Oaks lease, the royalty interest for the Month of May, 1947 received $4374.00.

[fol. 1404] A. Under the unit plan they would receive $4,373.00, 1 dollar decrease.

Q. I call your attention to Tract No. 28 under which protested Kit Farwell and Charles T. Williand own an

interest in 1/8 royalty and ask you what it will be for April, 1947.

A. That had no gas production for April, would its interest in the unit plan it would receive $74.00 per month.

Q. I call your attention to Tracts 32 and 33 which protestant's Regina Schlitz, James A. Holland, Ben P. Holland, Ben P. Butler, and Thomas J. Butler, are interested and ask you to state what the 1/8 royalty paid for the month of April, 1947.

A. I have these two tracts broken down separately, Tract 32 is Phillips-Margaret, the royalty received, $1,488.00 for April, 1947 and would receive $1,511.00.

Q. Which is an increase of about $500.00?

A. An increase of $17.00.

Q. What about Tract 33?

A. Tract 33 is Gulf Holland, had no production for April and would receive under unit plan $22.00.

Q. I call your attention to Tract 34, which protestants Nettie Melton is interested in 1/8 royalty and ask you what royalty it is for April, 1947 in that tract.

A. It had no production and has a gas well and evidently shut in.

[fol. 1405] Q. And what would it receive under the unit plan?

A. Ultimately $10.00.

Q. If the Commission please, could we ask the witness to give the one-eighth royalty production from these various tracts in a short form without having to go into where he gets his figures, etc.

Chairman Bond: You may, you might have him state in the beginning where he gets the figures from each and every tract like the records of the Corporation Commission and ask him thereafter.

Reford Bond, Jr. continues with the witness:

Q. You have obtained the figures about which you are testifying and about which you will testify as to the one-eighth royalty of the various tracts of the proposed units from the records of the Corporation Commission, have you not, and have you multiplied all figures, oil figures, by $2.00 per barrel and the gas by 5 cents per cubic foot?

A. That is correct. All figures have been taken from the Corporation Commission records as far as April production is concerned and as to money that protestants will receive under the unit, you have reduced the oil and gas to money at $2.00 per barrel and 5 cents per cubic foot?

A. Yes, that is correct. Now calling attention to Tracts 35, 36 and 37, and protestant Mrs. Fannie McDowell owns [fol. 1406] interest in 1/8 royalty and ask you to state what that is for April.

A. There was no production in April on Tracts 35, 36, and 37.

Q. What would the 1/8 royalty be under the unit plan?

A. About $12.00 per month.

Q. I call your attention to Tract 38, J. S. Smith and J. P. McKinna, who own mineral interests and ask you to state to the Commission what the royalty interest is for April, 1947, and what it is under the plan.

A. Approximately $254 for April under the present method and about $223.00 under the unit plan, a decrease of $31.00.

Q. Is that Tract 35 or is it the three tracts?

A. It is Tract 38.

Q. I call your attention to Tract 40 under which the Protestants Eva I. Pierson, Ernest S. Pierson, Eva J. Mead, Ella Pierson Price, Clarence M. Pierson, Richard E. Pierson and Minnie E. Pierson, own an interest in the 1/8 royalty and ask you to give the figures under the April, 1947, report and under the unit plan.

A. That is the Anderson-Prichard Hayes, and evidently the well went from an oil well to a gas well and they are selling none from the well or didn't in April, 1947, under the unit plan they will receive $232 per month.

Q. Calling your attention to Tract No. 41 which is owned by the same parties listed under Tract 40, and ask you [fol. 1407] to state how much the 1/8 royalty amount to for April, 1947, and how much it is under the unit plan.

A. Tract No 41 is the Stephens-Pierson lease, there is no production from the lease in April, 1947, and under the unit plan they will receive $574 per month.

Q. I call your attention to Tract No. 44 under which the protestants Lewis L. Edwards, M. M. Davis, T. G. Gann

own 1/8 interest under the royalty, state the amount of royalty for April, 1947 and what would be received under the plan.

A. Tract No. 44, the Magnolia-Pickard, located high on the structure is not a producing well in the Medrano and received nothing for April, 1947, and interest in the unit will get approximately $2.00 per month.

Q. Tract No. 45 under which Grace E. Niles, Gay D. Davis, L. E. Davis and M. M. Davis and Eva Parker, protestants, own an interest in the 1/8 royalty and ask you to state the amount of the royalty for April, 1947 and the amount that would be received under the plan.

A. Tract 45 is Magnolia-Niles and is one gas well and received $191 for its royalty for the month of April, 1947, under the unit plan it would receive $143, a decrease of $48.00.

Q. I call your attention to Tract No. 46, under which the protestants are Oza Medrano, Moza Medrano, guardian of C. A. Medrano who own 1/8 royalty and ask you to state. [fol. 1408] what the royalty for April, 1947 is and what it would be under the plan.

A. Tract No. 46, Magnolia-Medrano produces gas and receives approximately $256 for its royalty for April, 1947, under the plan they will receive $233, approximately.

Q. Calling your attention to Tract No. 47 and 48 under which the protestant Lewis Edwards owns a 1/8 royalty and ask you to state what the royalty amounts to for April, 1947 and what it would be under the plan.

A. Tract 47 is Magnolia-L. Edwards, it is an oil producing well, it received approximately $1,275 for April, 1947; under the unit plan, they will receive approximately $923. per month, a decrease of $342.00.

Q. What about Tract 48.

A. Tract 48 is Magnolia-L. L. Edwards which received $177 for its royalty interest for the month of April, 1947, and under the unit plan would receive $726.00, and increase of about $450.00.

Q. Calling your attention to Tract No. 49, under which the protestants Lewis Edwards, Jasper Edwards, Ted R. Edwards, Josephine Welch, Clinton Edwards, Jessie M. Mullindas, Opal Coon and Frank Edwards, own one-eighth

royalty and ask you to state how much they would receive for April, 1947 and how much under the plan.

A. Is that listed as Magnolia Gregory?

Q. That is Amerada Edwards.

A. No. 59?

[fol. 1409] Q. No, 49.

A. No. 49 is Amerada-Edwards, they received approximately $1,542 for their interest in April, 1947, under the unit plan they will receive $1,384.00 or a decrease of $160.00.

Q. Calling your attention to Tract No. 51 which is the estate of Edward M. Rowe, one of the protestants, is the owner of 1/8 royalty and ask you to state how much one tract will receive in royalty for April, 1947 and how much it will receive under the plan.

A. Tract No. 51 is Magnolia-Caddo-Rowe, it is not a producing well from the Medrano, they received no royalty for April, 1947, under the plan he will receive about $200 per month.

Q. Calling your attention to Tract No. 52, under which the protestants Gracie Lindsey and O. Lindsey and C. P. Dixon own interest in 1/8 royalty and ask how much the royalty amounts to for April, 1947 and how much under the plan.

A. Tract 52 is Magnolia-Lindsey, the royalty owners received $176 approximately for their interest in April, under the unit plan they will receive $123.00.

Q. I call your attention to Tract No. 54, protestants L. A. and Marc M. Davis, who are owners of 1/8 interest and ask how much it would receive in April, 1947 and how much under the plan.

A. Tract No. 54, the Potter-Davis had no production for the month of April, 1947 and received no royalty, under [fol. 1410] the unit plan it would receive about $26.00.

Q. Is there a well on that tract?

A. That is right, a gas well.

Q. To the Medrano sand?

A. Yes, sir.

Mr. Williams: Is that well at any time producing any gas?

A. It's not sold any, but it has produced gas.

Reford Bond, Jr. continues with the witness:

Q. What was the natural flow, do you know?
A. I don't know.

Q. Calling your attention to Tract No. 55, I ask you to state how much royalty that tract paid in 1947, April, and how much it would pay under the plan.

A. Tract 55 is Rookstool-Davis, it has no producing well and received *on* royalty for April, 1947; under the plan it would receive about $13.00.

Q. I call your attention to Tracts No. 60, 61, 62 and 63, under which Mary A. Faris owns interest in 1/8 royalty and ask you to state how much was received in April, 1947 and how much under the plan.

A. Magnolia-Gingrich, which received no royalty for April and would have approximately $11.00 under the plan; Tract 61, Stanolind Gingrich, it received no royalty for [fol. 1411] April, 1947, and under the plan would receive about $1.00.

Q. What about Tract 62?

A. Tract 62 is Anderson-Prichard Davis, for the month of April, 1947, the royalty owners received about 400 dollars, under the plan they would have received about 160 dollars, a decrease of 220 dollars.

Q. What about Tract 63, that is Lloyd Noble Davis——

A. Received no royalty for April, 1947, and would receive less than $1.00 under the plan per month.

Q. That lease is a 10 acre lease, isn't it, as shown by the map marked Exhibit A of the applicant's Exhibit 1?

A. Yes, it is a 10 acre lease.

Q. And has no well on it to the Medrano sand?

A. That is right.

Q. The applicant's exhibit A shows what portion under the 10 acre lease to be included in the confines of the pool.

A. This map that I have does not have the limits of the pool on it.

Q. Will you examine Exhibit 24 and state to the Commission what portion a 10 acre lease is included in the pool.

A. There are about 2½ acres of that lease included in the geological boundaries as shown by Exhibit 24.

Q. I will ask you to state to the Commission whether you

would expect to find oil or gas sand under that particular [fol. 1412] part of the tract included in the pool.

Mr. Williams: Is this witness qualified as a geologist, I don't remember.

Reford Bond: Do you object to the question?

Mr. Williams: I just asked if he were qualified as a geologist.

Reford Bond, Jr.: If he knows, I guess he can testify; I asked him the question.

Mr. Williams: If he knows, I have no objection.

Reford Bond, Jr. continues with the witness:

Q. I suggest that you notice the iso-bacious map offered by the applicant and based the character of the sand and the thickness of the sand which underlies that portion of Tract 53 which is claimed to be in the Medrano pool.

A. It should encounter gas sand under that 2½ acres, and the gas sand, revjewing more than the information I have seen, there will be very thin, possibly—sand 5 feet.

Q. I will ask you whether or not it will have any commercial value.

A. As a nuiscance value, it probably would.

Q. *Would* do you mean by nuisance value?

A. If some Company drilled on that property in the Medrano, if the sand had enough permeability and porosity you could probably drain considerable amount of gas from [fol. 1413] off the 3 other leases in the Medrano.

Q. How much will it cost to drill?

A. $60,000 to $65,000 as of to date.

Q. What do you think will be the cost of the gas cap figured at 25 cents.

Mr. Brown: He is talking about the nuisance value, he said that if they drilled the gas that that was the well, they can drill the nuisance wells and they will recover a great deal of oil and gas.

Reford Bond, Jr.: I want to ask the question that I want to ask, and let Judge Brown ask his question later.

Chairman Bond: He may proceed.

A. Assuming that high 10 feet of tensity sand there in 2½ acres, you would have about 25 acre-feet of sand and

that sand up on that area is very tight and all along the north area is tight and has a very low permeability, so the gas under that lease may estimate less than $5,000.00.

[fol. 1414] Q. Now, I'll call your attention to Tracts 64 and 65, under which Winifred M. Prentice, now Graney, Eugene L. Prentice, Maxine Ruth Prentice, and John C. Prentice own 1/8 royalty and ask you to state what the royalty was for April, 1947 and how much it would have been under the Plan?

A. Tract 64 is the Anderson-Prichard-Prentice-A,—they received $2904.00 for the month of April, 1947 and were their interest under the Unit Plan they would receive about $1009.00 per month.

Q. What about Tract 65?

A. Let me continue this answer?

Q. Yes, go ahead.

A. That was a decrease of the royalty interest of $895.00. Now Tract No. 65 is the Anderson-Prichard-Prentice-B,—they received in royalty for April, 1947 $,—under the Unit Plan they would receive $203.00 monthly, approximately.

Q. I'll call your attention to Tracts 27 and 71, under which the Protestant, Elizabeth Payne owns part of 1/8 royalty and ask you to state what she received in royalty for April, 1947, and what she would receive under Unitization?

A. What were those tract numbers?

Q. 27 and 71.

A. 27 is Phillips-Garn A gas property. They received for their royalty interest in April, 1947 $132.00,—under the Unit Plan they would receive about $9.00 per month.

[fol. 1415] Q. And Tract 71?

A. Tract 71 is the Phillips-Garn-B, they received for royalty in April, 1947,—no, they received no royalty for April, 1947 and under the Unit Plan this Tract would receive about $16.00 per month.

Q. Now, I'll call your attention to Tracts 67, 68, 69 and 70, under which Dorothy McClaren, Max E. McClaren, George A. McClaren, Maurice McClaren and Ida B. Rivers are the owners of 1/8 royalty and ask you to state what

royalty they received for 1/8th royalty in April, 1947 and what they would receive under the Plan?

A. Tracts 67, 68, 69 and 70,—I will separate those tracts,—67 and 68 of the McClaren leases, A and B respectively, Anderson-Prichard-,—Tracts 69 and 70 Amerada-McClaren lease,—there are no producing wells on the property, therefore they received no royalty in April, 1947. Under the Plan they would receive about $91.00 per month, that is, for all four tracts, 67, 68, 69 and 70.

Q. I'll call your attention to Exhibit 24 and ask you to state the names of the nearest well in the Medrano sand, to those four tracts?

A. There is a direct 10-acre offset to tract No. 69, being west of 70.

Q. Well, how far is the nearest well from those four tracts?

A. The nearest well, which is the Anderson-Prichard-[fol. 1416] Prentice 4-A, is about 1200 feet from the West side of Tract 67. In other words, there is a 10-acre location between it and Tract 67.

Q. There is a 10-acre location between it and the tract No. 67?

A. Yes.

Q. And on which there is no well?

A. That's right.

Q. Now, as we go North from No. 4-A Prentice, how far is it from the McClaren tracts to the well North?

A. You refer to the Northwest corner of 67?

Q. Well, just take the nearest tier of 10-acre tracts,—how far away is the next well?

A. About three 10-acre locations West of Tract 67.

Q. Then, take the next tier to the North, how far is it?

A. The first row of wells to the West of Section 6-5N-9W, there would be four 10-acre locations between tract 67 and the nearest producing well, which is the Anderson-Prichard-Pickard No. 1.

Q. I'll ask you to state whether or not those four tracts have been defined by actual drilling operations, in your opinion, sufficiently to definitely establish their production, —their productivity, so that you could make a decision,

or so that you could make a division or determine correctly the amount of oil in place under those tracts?

A. The Anderson-Prichard-Prentice-B, which is the West [fol. 1417] 10-acre offset to tract 69, and 69 is a very small well. They set its allowables at 90 barrels for April and it didn't make any oil. In the Corporation Commission allowables it's due for June, the Anderson-Prichard-Prentice 4-X, in the same allowable schedule was allowed 200 barrels,—the Anderson-Prichard-Prentice 3-A is allowed 200 barrels. The lease produced 11,615 barrels of oil for the month of April, 1947. Now, you have two very good wells close in to this lease and one that isn't so good. If you could drill some good wells on these tracts, at least one good well, on the McClaren tract,—so, I don't believe it is thoroughly developed.

Q. I'll ask you to state whether or not in your opinion there's been sufficient actual drilling so that you could, with any degree of accuracy, determine the amount of oil in place under the four McClaren tracts?

A. With the information available, it would be very hard to determine exactly how much oil there was under those tracts.

Q. I'll ask you to state whether or not you would require that a well be drilled on one of those tracts before you could, with any degree of certainty, determine the amount of oil in place under the tracts?

A. I would require a well drilled on, say, tract No. 67, near the South side, I should say the South Central side of tract 67, before I would try to make a good estimate of the amount of oil under those four tracts.

[fol. 1418] Q. I'll call your attention to Tract No. 58 under which the Protestant, J. M. Ball is the owner of the part of the 1/8 royalty, and ask you to state what was paid the 1/8th royalty interest in April, and what would have been paid under the Unit Plan?

A. Tract No. 58 is the Anderson-Prichard-Pickard lease and it produced no month,—no oil for the month of April, 1947 therefore had no royalty for that month. Under the Unit Plan it would receive $427.00 per month. I'll call your attention——

Q. I'll call your attention to Tract 57, under which the

Protestant, Clyde Kahle and the Bob White Oil Company own an over-riding royalty interest and ask you to state the total production from that lease in money, for April, 1947, what would it have been,—what would have been received under the Unit Plan?

A. The value of the production received from tract No. 57, which is the Walker property was $1080.00 royalty for the month, not the royalty interest, but the full 8/8.

Q. What would have been received for the full 8/8?

A. For 8/8, $1080.00 and under the Unit Plan——

Q. Well, give me 1/8, the 1/8 interest, that will be for comparision purposes?

A. 1/8 interest received $1260.00 for April, 1947 and under the Unit Plan he would have received $463.00, a decrease of $797.00.

[fol. 1419] Q. Now, I'll call your attention to Tracts No. 56 in which Protestant, T. B. Walker owns an interest in the 1/8 royalty, incidentally the protestant, T. B. Walker holds an interest in the 1/8 royalty in Tract No. 57 also and I will ask you to state the amount of royalty paid for April, 1947 and the amount that would have been paid under the Plan?

A. On Tract 56, is the Anderson-Prichard-Walker-A lease. In April, 1947, they received $1152.00. Under the Unit Plan they would receive $610.00, a decrease of $555.00.

Q. I'll call your attention to those two tracts, 56 and 57, —the Anderson-Prichard-Walker and the Stephens-Walker and I'll ask you how those tracts are located on the structure, with reference to the favorable probable productivity of oil?

A. These two leases are located right down at the bottom of the structure,—you might right say right down at the bottom of the pile so that all of the oil from up structure would drain to these leases, and if the permeability and porosity is as set forth here, that would be comparable to the A. C. Wilcox, and these leases would produce a very long time at their present rate.

Q. I'll ask you to state whether or not those two leases are fully developed?

A. Those two leases have one well to 40 acres and I feel that they should have one well to 20 acres, at least. The

productivity of the leases indicate that one well to 20 acres [fol. 1420] would take it out very nicely and make a nice profit.

Q. Do you base that opinion on your study of the porosity and the permeability of the sand and the viscosity of the oil to be recovered?

A. Yes, I do.

Q. You think 20-acre spacing would be optimum for the production of oil on this lease?

A. 20-acre spacing would certainly recover much more oil on these two leases than 40-acre spacing, under present method of production.

Q. In your opinion, is the proportion of the total recoverable oil allowed these two wells inequitable?

A. I feel they should have much more oil allowed them, because, under the law of capture they will continue to get this oil for many years yet.

Q. I'll call your attention to Tract 55, under which the Protestant, Clyde Kahle owned 1/8 royalty interest, and ask you how much the royalty was in April, 1947 and how much it would have been under the Plan?

A. We have had that one.

Q. All right,—I'll call your attention to Tract 66, in which Carrie C. Dixon owns a royalty interest and ask you how much the royalty was in April, 1947, and how much it would have been under the Plan?

A. I don't have Tract 66 calculated.

[fol. 1421] Q. All right, I'll call your attention to Tract 67, under which the McClaren heirs and the Protestant, Ida Rivers have an interest in the 1/8 royalty,—well, we have already gone over that tract?

A. Yes, we have.

Q. I'll call your attention to Tract No. 18, under which the Protestant, John A. Fletcher owns an interest in the 1/8 royalty, and ask you what that tract received in royalty in April, 1947 and what it would be, what it would have received under the Plan?

A. Tract No. 18, that is the Phillips-Fletcher lease. That lease has two oil wells and one gas well. In April, 1947, the royalty owners, from their oil interest, received $2297.00. Under the Unit Plan they would receive $2096.00, a de-

crease of $201.00. There was no gas produced or sold on that lease in April, 1947.

Q. I'll call your attention to Tract No. 45, under which the Protestants, Eva Parker owns an interest in the 1/8 royalty and ask you what the royalty was in April, 1947 and what it would have been under the Plan?

A. Tract No. 45 is the Magnolia-Niles,—we have covered that one.

Q. All right, I'll call your attention to Tract No. 6, under which the Protestant, Frank Pohlemann owns an interest in the 1/8 royalty and ask you to state the amount of royalty [fol. 1422] paid in April, 1947 and what it would have received under the Plan?

A. Tract No. 6, is the Stephens-Pohlemann lease. They received $744.00 for the 1/8 royalty interest. Under the Unit Plan they would have received $768.00, an increase of $24.00.

Q. Now, I'll call your attention to Exhibit 24 and ask you to examine that Exhibit with reference to the oil producing area of the Medrano sand zone as disclosed on the map and state whether or not in your opinion, the leases in the oil belt have been fully developed, that is, if the wells have been drilled so as to have the optimum spacing for the production of oil?

A. In certain areas in the oil zone of the Medrano sand, there could be several additional wells drilled, and pay the well out and make a very good profit on the well. As to why the Companies haven't drilled them, I don't know.

Q. Have you studied the porosity and permeability of the sand and the viscosity of the oil, so as to determine the optimum spacing of wells in the oil zone?

A. Well, in studying the spacing, you would take the thickness, the permeability, the proosity and try to find out how much oil that would possibly be produced, taking into consideration your sand thickness, and the possibility that a 10-acre lease would give you, earn a satisfactory percent on your money. If this pool,—in this pool it has been said [fol. 1423] that there is 97,000,000 barrels of oil in place and that from 25 to 70 percent could be produced. My estimate is it would be 35 percent. We have understood that in the Oklahoma City Wilcox zone——

Q. What is the spacing in the Oklahoma City Wilcox?

A. Well, they had one schedule in the City and one outside,—I believe it is less than 4 acres average.

Q. And under that spacing isn't it a fact that the recovery is 41 percent of the oil in place, estimated?

A. As to the exact figure, I believe it is 35 or 36.

Q. Now, what do you expect to recover in the Oklahoma City zone, with that spacing?

A. Well, the field is getting pretty close to its economic limit in certain places,—I don't believe it will exceed 40 percent, but, say you produce 30 percent of the 30,000,000 barrels——

[fol. 1424] (Reporter's Note: The witness is being examined by Reford Bond, Jr.)

A. (Continued) And if you had 100 wells in that zone, that would still give an excess of 90,000 barrels per well—at the present price it's $180,000 per well, so 100 wells in that oil producing section under present estimates would pay for themselves easily and allow a good profit.

Q. What in your opinion will be the best wells in the unit in the Medrano sand area?

A. To be conservative and allow the companies their return of their money, I would guess 20 acre spacing in the oil zone.

Q. In the event of 20 acre spacing, how many additional wells will be required to bring the leases in the oil zone to their full development?

A. I haven't counted the oil wells in this zone, assuming you have 1300 acres in the oil zone, that is, the figures set forth in Exhibit 71, you could drill approximately 65 wells in the oil zone and there are 32 drilled, that will allow 33 more.

Q. How much does it cost to drill a well in the Medrano producing horizon?

A. As set for the Exhibit——

Q. I mean to complete it.

A. And put in the tracts as set forth in Exhibit 1, it will average $55,000 when it is made up, due to the rise in price, since that time a fair estimate would be between $60,000 and $65,000.

Q. And what would be the additional investment required [fol. 1425] to develop the oil zone of the Medrano sand?

A. Approximately 2 million dollars.

Q. Now what would be the cost of the installation of the recycling plant in the Medrano sand zone including connection to all oil wells which produce gas in connection with gas injection wells and the drilling of 7 additional wells in the oil sand area.

A. As set forth in these two reports, Exhibit 1 and Exhibit 71, the companies planned on between $1,500,000 and $2,000,000.

Q. Now, I will ask you what per cent of the oil in place will be produced in the leases in the oil zone are fully developed on 20 acre spacing and, of course, properly operated, and considering the gas production to be, as now controlled by the order of the Corporation Commission.

A. All with the gas production held as they started it means another zone and on a 20 acre spacing and the figure of between 30 and 35 per cent recovery will be a very good estimate.

Q. How much in your opinion, will be recovered by a unit operation as proposed in the present plan if properly operated?

A. Well, taking into consideration several pools, for instance the Billings pool in northern Oklahoma, they started gas in that pool early in life before much pressure was depleted and continued until the gas got out of hand, you might say, as of today, the pool has produced around 19,000,000 barrels of oil. The estimation in these days is around 25,000,000; however others estimated 30 or 35 mil-[fol. 1426] lion barrels which gives better than a 50 per cent recovery, however, they had 10 acre spacing and they had a wide spacing at West Cement, 30 to 35 per cent is a good estimate.

Q. How long, in your opinion, will be required to produce the oil under the unit operation as proposed, assuming that it will be properly operated.

A. Oh, from present day operations, 15 to 18 years.

Q. And how long will be required to produce producable oil on 20 acre spacing plan considering that gas will be as now.

A. Well, there will be a little difference in producing life, you will have more outlets if you have 20 acre spacing,

therefore you could produce a little fast, however, in pressure maintenance of recycling you have a more pressure differential and the two will offset each other in my estimation.

Q. I understand then that it is your opinion that if the Medrano oil belt were fully developed and gas regulated, there will be no waste of oil and gas over and above and such subjected by the unitization plan, assuming that it will be properly operated.

A. Assuming proper operation in a unit and the same spacing in a unit, a unit will save more oil and save more gas, however, in this setup they suggest no drilling, a few more, 7 I believe, is the figure they suggest, that the two plans will recover about the same amount of oil and I can't [fol. 1427] see that they will have too much more waste in 20 acre spacing and proper operation.

Q. Have you examined the plan for the actual optimum recovery of the oil and gas as proposed by the applicants herein—as to the feasibility of the plan?

A. Well, in that application they merely stated that they will inject gas and water and they don't mention where they were going to inject gas or water, so from the plan it's hard to determine exactly what they are going to do with the unit after it's formed, it's hard to pass judgment on it.

Q. If the plan were made more definite and certain so the location of the wells were spotted and the line and where the gas will be reinjected of the structure were defined, would you have sufficient information to determine as to whether the plan is feasible?

A. Yes.

Q. Now, I call your attention again to Exhibit 24 and to the various leases of which only a small portion is included in the pool and which have no development on the leases to the Medrano sand, and ask you to state if it isn't a fact that *that* neither the oil or the gas from the marginal edge of the tract will be commercially produced by wells drained on the lease and be considerably produced, I mean, a man will get back his money and make a profit on the operation.

A. For an example, would you pick Tract 50?

[fol. 1428] Q. Yes, that is a very good example, that is the Amerada-Woods lease.

A. Now, in the light of the information, I would not want to put $65,000 there myself.

Q. As a consulting engineer, would you advise a client to put a well on the Amerada-Woods lease in the Medrano sand?

A. No, on the present information, I would not.

Q. I will ask you if you had a client and owned the Amerada-Woods lease and your primary tract was about to expand, would you not advise him to drill a well to discover deeper horizons of productive gas?

Mr. Williams: I don't know what that has to do with this hearing.

Reford Bond, Jr.: We believe that it is very important to the royalty owners if a small piece of a lease is included in the unitized area, the life of the lease is prolonged and perpetuated as long as oil and gas is in the unitized area; for instance, the Amerada lease has no production except one well which is producing from some horizon other than from the Medrano sand, when that well becomes exhausted that will stop them and expire and then that well returned to the owners of the minerals, that if one well is exhausted [fol. 1429] and a small portion of the lease which is less than 2½ acres of an 80 acre lease, it is included in the Medrano unitized pool, the lease is perpetuated and there is no way for the lessee to force or require the operating company to explore for additional sand unless they take it to court, unless it offsets, therefore these matters are very important to the lessors of the Amerada-Woods lease. It may be that some lessors would wish to become a part of that and this oil and gas that might lie under the tract where some other might for the same reason or other reasons desire to be left, and so long as his inclusion and exclusion does not effect the operation of the unit, then it appears to us that the desire of the royalty owners or lessors should be given consideration by the Commission. It certainly can't make any difference to the lessee, he could'a't recover the oil anyhow.

Chairman Bond: What sand does the plan cover?

Reford Bond, Jr.: Medrano sand.

Chairman Bond: Suppose you represented a client, that

could drill to a deeper sand, does it prevent him drilling for a deeper sand?

Reford Bond, Jr.: No, but if his lease isn't going to bring in anything, he would not have any incentive, he would not want to go ahead on it, it's very difficult to get some [fol. 1430] lessee to drill a deeper sand and that is the valuable right to the lessor if his lease has to be perpetuated.

Chairman Bond: What do you suggest for the purpose of people who have leases of that character.

Reford Bond, Jr.: I suggest that the lease be included in the pool in unitization and the production of the question which I was asking.

Chairman Bond: You are asking for the production whether it ought to be included in the pool, the witness may answer if they are bases that should not be included in the pool, then the Commission wants to know. You may answer Mr. Witness.

A. Witness: As long as the well is not a nuisance to the unit, it should not be included to keep a lease in effect.

Q. Now, is there sufficient information obtained by actual drilling to cause you to be able to determine whether or not the Amerada-Woods leases contains any oil sand in the Medrano horizon.

A. With the drilling as far away as it is, it will be difficult to determine with any certainty how much sand on that property, for instance, Palmer-Sturba No. 7 changed that sand zone for a well down here (indicating) will change it.

Q. Well, will it be a good, sound geological engineering opinion to say that the oil section does not underlie the Amerada lease, considering the information that we have at hand?

[fol. 1431] A. I would not go so far to say that it isn't underlying the lease, there is a possibility that it doesn't and it's possible that it does.

Q. And still you would not go so far as to say that it does?

A. No.

Q. Then, there has not been sufficient drainage to make a definite point on that?

A. That is right.

Q. Now, I call your attention to the Exhibit that is now on the board.

A. What number?

Q. Exhibit 54-R which discloses the bulk in the Medrano sand horizon, will you please give the Commission your opinion as to where the fault lies between Segment A and B and whether it is a fault and what you have of that opinion.

A. Well, there is plenty of geological information to show that there is a fault, there are several wells located along up here (indicating), however, up at the upper end in the northern limits of the pool, that information is at least 2000 feet away from the fault so that the fault could exist there with more throw or less throw than shown.

Q. Is that sufficient information for you to say definitely that the fault does not separate the Medrano oil and gas sand in Segment A, from that in Segment B?

[fol. 1432] A. As to the geological information, it is very far away from the west side of the fault, it's more than 1 mile away on the east side, it's more than 2000 feet to the north well that penetrated the Medrano which will indicate the information is very sketchy, however, on the bottom-hole pressure information, the man that drew the iso-baric map drew that to suit himself for the faults.

Q. He drew the contours on that to suit himself?

A. Yes.

Q. You mean by that, there is a great deal of latitude in contouring?

A. Yes. These two areas, A and B will produce about alike, about the same time and give too much pressure across there and you can't tell whether there is a fault there or selah.

Q. Now, as to the part of the field that you have very definite information.

A. It still is not too definite, however the information is in the Gulf Tract No. 4, that is right on the fault.

Q. Does that indicate that the formations are field from one to the other.

A. No, not necessarily.

Q. That does though indicate the presence of faults?

A. Yes, it would.

[fol. 1433] Q. Now, is there anything that indicates that the oil sand zone is connected at that point?

A. There is no information available to say that is correct.

Q. What is the difference in the bottom of the sand on the west side and the bottom of the sand on the east side as to sub-sea elevation?

A. It's made on the top, there is a base map here, if you like.

Q. I think that we should have both bottom and top.

A. All right, on the top taking the 4500 feet contour in Segment A and the 4400 feet contour in Segment B, it will show a throw or a displacement of about 90 feet on top of the sand.

Q. What is the thickness of the sand at that point?

A. The iso-baric map shows between 100 and 120 feet.

[fol. 1434] Q. Now, then, I'll call your attention to the Sherritt fault, which is between segment "B" and "C",—pardon me,—I mean the Sterba fault, and ask you if there is sufficient information as to that fault from which you could determine whether or not it effectively seals off the oil sand on the West side from the oil sand on the East side?

A. We have one well on the Phillips-Oaks lease, two on the Sterba lease and one on the Magnolia-Cement-Henley lease that are almost on the fault,—in fact two of these wells almost missed the sand, due to the fault.

Q. What are the facts, the information obtained from these wells?

A. Well, the fact is that it is faulted and the well drilled right in here missed the sand, which shows the sand is separated there by some means.

Q. You think the evidence shows that the sands are separated and are not connected in any way so as to permit the passage of oil or gas from one to the other at those points?

A. The water-oil contact in 36-6N-10W, the evidence is very definite as to the displacement of the sand.

Q. Then is there anything to indicate that it isn't separated all the way and that the fault extends to the North and East?

A. Well, it's hard to conceive of the fault running down here (indicating on plat) and breaking off and separating it just for the purpose of separating that one reservoir,— [fol. 1435] I would rather think it would come down here —(indicating on plat) rather than stop here (indicating on plat), unless the fault is scissored right at that one point for a pinch-out, I would think the fault would reach over here (indicating on plat).

Q. Now, the next fault, which separates segment "C" from segment "D",—I'll ask you to state if there is sufficient information in that area to determine whether or not that is a fault?

A. You are speaking of the Hartshorne fault. Down structure we have two wells fairly close to it, however, the displacement on that fault, to be exact, is less than ninety feet, so there is not information enough there to determine whether it is sealed off, or not.

Q. Now, I'll call your attention to the next fault, which separates segment "D" from segment "E", and ask you if there is sufficient information to determine whether or not that is a fault?

A. It is a fault, according to the information shown there is a large displacement or a large throw, which is about 550 feet on the low side where the 4800 foot contour is drawn in segment "E" from the pinch-out down to the first well on which there is something like 3500 feet as to the up-structure part of that fault, it would be hard to determine its displacement, however this section "D" was drilled earlier than section "E" and produced earlier [fol. 1436] than section "E" and from the production information it indicates that there is a seal-off there.

Q. So, from the facts we have it is apparent, I take it, that the faults between segments "D" and "E" seals the gas and oil on one side away from the gas and oil on the other?

A. Well, the production information would indicate that. There isn't geological information enough to determine.

Q. The geological information shows, though, that the two segments are not connected?

A. Yes sir, that's right.

Q. And is there anything to indicate that such fault

doesn't continue on to the North and East and through the gas sand area?

A. No, there is not.

Q. And the pressure Isobaric map indicates that they do continue on?

A. The production information indicates that.

Q. That is indicated by the production information,—not this map, I take it, indicates that the Medrano sand is divided into at least three common sources of supply.

Mr. Williams: Is Counsel testifying,—and we object to this as repetition.

Q. Well, I will ask you to testify how many common sources of supply there are in the West Cement Medrano area?

A. Well, I would state that in my opinion, there are two [fol. 1437] and possibly three. As I stated before, the information of up-structure is very sketchy because the Companies didn't want to drill the gas sand and I can't say,—I can't see why these faults don't extend on across up here (indicating on plat.)

Q. Now, if you were injecting gas from the various segments back into the gas sand area, could you just inject it willy-nilly and expect it to travel through all the gas sand area, repressuring all the gas sand area in the whole Medrano so-called pool, or would it be necessary to inject it in any specific manner in order to keep the gas from one segment from going into another segment, thus making an inequitable distribution?

A. Well, I wish you would clarify the word "inequitable."

Q. Well, I'll give you another question,—just strike that question,—in re-cycling in this area would it or not be necessary to use more than one plant?

A. Not more than one plant, but more than one well.

Q. It isn't necessary to use more than one plant?

A. No.

Q. Now, could you receive into the plant the gas produced from one common source of supply and the gas produced from another common source of supply and then return that gas to the same common source of supply or a like amount of gas to the same common source of supply, with one plant?

[fol. 1438] A. Well, of course, the gas is all alike and it wouldn't hurt to mix it up.

Q. And you could run to one segment as much gas as you took out of it, with one plant?

A. Yes, you could meter it,—of course, the plant is going to use some of it,—you wouldn't get it all back.

Q. The Plan does not indicate at what point the gas is to be re-injected into the structure, does it?

A. The only provision I saw about that, was that it would be re-injected in the up-structure and not down-structure where it would carry the oil up into the cap.

Q. Now, that alone would not be sufficient for you to determine whether or not the Plan is feasible as to the re-injection of gas, is that correct?

A. As to the feasibility of their Plan, the only part of the Plan, as I said before, was to put in a gas-cap. Whether they are going to distribute to each section, I don't know.

Q. Well, do you think it would be feasible if they took gas out of one common source of supply, for pressure purposes and put it into another, in a case of this kind?

A. Well, unless there was some corrosive qualities in part of the gas and unless the gas differed in different parts of the zone, I can't see how it would make too much difference where you got the gas or whether you put it, whether you brought it in from outside properties.

[fol. 1439] Q. Suppose you got the gas in the West common source of supply and you took all the gas out of the East and the West common sources of supply and put it all back into the West, do you think that would be feasible?

A. No, it would not.

Q. Well, I can't tell from the Plan whether they will do that, can you?

A. No, it doesn't say.

Q. And if we proceed on that theory then the Plan wouldn't be feasible, would it?

A. Not, to rob one area and feed the other, no.

Q. And you could do that under this Plan, couldn't you?

A. The way it's sets now, you could, yes.

Q. Mr. Murphree, you can sit down now, if you want to,—you have made a careful study of the instrument which has

been offered by the Petitioners as to the sand thickness volume in the West Cement Medrano sand,—haven't you?

A. I have.

Q. I'll ask you to state whether or not you have sufficient actual controlling, information from the Petitioners to determine accurately the amount of oil in place under each separately owned tract which is included in the Unit?

A. A method of calculating the number of acre-feet on each lease, additional information would more than likely change the amount as shown in this report, because a well, [fol. 1440] the Palmer-Sterba No. 7 which has been drilled would change the figures somewhat and if you drill it on 20-acre spacing it would change them some more.

Q. Would those changes,—changed figures be more correct?

A. Well, the more information you have, the more correct the set-up should be.

Q. Now, I'll ask you if it isn't a fact that the information which the Petitioners have given you, upon which sand thickness is based, is the same,—strike that and I'll ask you this. I'll ask you if it isn't a fact that a Petroleum Engineer could not from the available information figure out the amount of oil in place under some of these leases included in this Plan from the information that has been made available to you by these Petitioners, without its being just a rank guess,—I'll ask you whether or not that's true?

A. Well,——

Q. Well, in these Isopach Maps, or "Isopachous" Maps, we have been calling them here, there are a lot of estimates and whether those estimates should be called guesses or not, we in the oil industry sometimes call them guesstimates and in the case of a lot of these tracts, these estimates have been made, of course.

Q. And in a lot of those tracts, they are rank guesses, aren't they?

A. Well, I would have to say——

[fol. 1441] Q. Well, take the Amerada tract, No. 50,—and there are other tracts here, where the estimates are just as rank a guess as that one is, aren't there?

A. Yes, you could site a few, three, four or five.

Q. Now, Mr. Murphree, going back for a moment to your

20-acre spacing,—in the event this Plan was fully developed on 20-acre spacing, I'll ask you to state whether or not the information as to the fault, as to the sand thickness, and as to the oil in place in the reservoir, wouldn't be much more accurate than it is now, under the present information that the Petitioners have submitted?

A. As to the sand volume, let me exclude the oil in place.

Q. All right.

A. Oil in place,—the reason I exclude that is that they have had two good checks on the oil in place and I am inclined to believe that figure is a pretty good figure. As to the sand volume, there could be, oh, 15 percent difference with closer drilling, and maybe as high as 20 percent.

Q. And in the event the field was developed on a 20-acre spacing, I'll ask you whether or not if the Unitization Plan was instituted if they wouldn't produce more oil than they would under the present proposed Unit Plan?

A. No,——

Q. I'll ask you to state whether or not there would be a greater ultimate recovery of oil with 20-acre spacing?

[fol. 3442] A. You mean over the Unit Plan?

Q. I mean if you had 20-acre spacing and then Unitized it?

A. Oh, there is no doubt but that you would recover more oil that way, yes.

Q. What percent of the total oil in place would you expect to recover with 20-acre spacing under the Unit Operations?

A. Well, it would be in excess of 45 percent.

Q. And under the present plan of Unit Operations, which provides for only 32 wells, it would be what percent?

A. Well, it would be in the neighborhood of 40 percent.

Q. In the neighborhood of 40 percent?

A. Yes.

Q. So that would be how much difference?

A. Well, in the closely,—closer spacing I would say five, seven and half, to ten percent more, that is under the Unit Operations, both Plans.

Q. Yes, yes, and what about the time limit under Unit Operations, with 20-acre spacing,—how much time would be required in your opinion, to produce the oil?

A. With 20-acre spacing and pursuing the project dili-

gently and producing some gas, there should be produced that oil in twelve or fourteen years.

Q. And under the present Plan it would be how many years?

A. Under the present Plan I would estimate it fifteen years to eighteen years.

[fols. 1443-1444] (Reporter's Note: At this point the Commission recessed to further hearing of this case until 10:00 o'clock A.M. on July 22, 1947.)

[fol. 1445] BEFORE THE CORPORATION

COMMISSION OF THE STATE OF OKLAHOMA

(Title omitted)

NOTICE OF HEARING—Filed July 18, 1947

The State of Oklahoma to all persons, firms, corporations, partnerships, trusts, trustees, guardians, executors, administrators, fiduciaries of every kind, the State of Oklahoma and all agencies and subdivisions thereof and all other beings or entities owning oil and gas rights or otherwise interested in the common source of supply of oil and gas known as the West Cement Medrano Pool underlying the hereinafter described lands located in Caddo County, Oklahoma, or in the production, handling or marketing of the oil and gas that may be located therein or produced therefrom, or having the right to share and participate, either directly or indirectly, in the benefits of such production:

Notice is hereby given that, Amerada Petroleum Corporation, et al, Lessees of record of more than 51% of the area of the aforesaid common source of supply of oil and gas, did on the 18th day of July, 1947, file with the Corpora-[fols. 1446-1447] tion Commission of the State of Oklahoma an amendment to the original petition filed in said cause by amending the proposed plan of unitization attached thereto in the particulars set forth in said amendment.

That said amendment has been set for hearing before the Corporation Commission at its court room in the State

Capitol Office Building at Oklahoma City, Oklahoma, at 10:00 o'clock A.M. on the 29th day of July, 1947.

That all those to whom this notice is addressed, and any and all other persons who claim that they will be affected by the amendment, or the petition as amended, shall have the right to be present and participate at said hearing, and shall be granted the opportunity at said time and place to offer evidence and be heard in support of, or in opposition to, the amendment or petition as amended, and in regard to any other matter or thing pertaining to said amendment or petition as amended.

Dated this 18th day of July, 1947.

Corporation Commission of the State of Oklahoma. By Reford Bond (s), Chairman; ——— ———, Commissioner; Ray C. Jones (s), Commissioner. (Seal)

Tom McMurray, Secretary.

[File endorsement omitted.]

[fol. 1448] BEFORE THE CORPORATION COMMISSION OF THE STATE OF OKLAHOMA

(Title omitted)

AMENDMENT TO PETITION—Filed July 18, 1947

Come now the undersigned petitioners and hereby amend their petition filed in this cause by amending the plan of unitization attached thereto in the following particulars, to-wit:

1. The last sentence of Paragraph XXVII entitled "Subscribers" reads as follows:

> "The signing hereof by each of the subscribers hereto is conditioned upon the approval of this plan of unitization by the Corporation Commission on or before the 1st day of February, 1947."

The above quoted paragraph is hereby amended by striking out the clause "on or before the 1st day of February, 1947" so that said clause as amended reads as follows: "The signing hereof by each of the subscribers hereto is conditioned upon the approval of this plan of unitization by the Corporation Commission."

[fol. 1449] 2. In lieu of "Exhibit B, Part 1," attached to the plan of unitization on file with the Corporation Commission as a part of the petition filed herein which said exhibit sets forth the percentages of interest in the unit, there is hereby substituted the "Exhibit B, Part 1," which is attached to this amendment and made a part hereof, and which sets forth a revised computation of percentages of interest in the unit.

3. There is hereby inserted in Exhibit D, attached to the proposed plan of unitization on file herein, the following which shall be a part of said exhibit to the same extent as if written therein, which shall be a part of said exhibit, to-wit:

Operator, Lease and Well	*Tract No.*	*Assigned Value of Well*
Palmer Oil Corporation		
Sterba #7	31	55,126

Except as hereinabove specifically set forth, the plan of unitization on file with the Corporation Commission in this cause as part of the petition filed herein shall remain unchanged, and petitioners adopt and re-allege all of the allegations of the original petition filed in this cause as herein amended.

Wherefore, Petitioners respectfully pray that the plan of unitization heretofore filed in this cause as hereby amended be approved.

Dated this 18th day of July, 1947.

[fol. 1452] BEFORE THE CORPORATION

COMMISSION OF THE STATE OF OKLAHOMA

(Title omitted)

AMENDMENT TO ANSWER OF CLYDE KAHLE, MAUDE KAHLE AND BOB WHITE OIL & GAS COMPANY—Filed July 22, 1947

For further defense, if need be, to the application of the applicants, these respondents, separately and as listed in their separate answer on file herein, leave having been first obtained from the Honorable Commission to file this amendment to said answer, allege and state as follows:

1. That the West Medrano Pool, which the applicants seek to unitize in this proceeding, is a part of and is within the West Cement field. That the said West Cement field was discovered more than 20 years prior to the approval of the unconstitutional statute under which said unitization is sought. That said unconstitutional statute excepts from its operation all fields discovered more than 20 years prior to its approval. That premises considered, this Honorable Commission has no power or authority to unitize the said Medrano Pool and no authority to entertain the application [fols. 1453-1454] on file herein.

2. That the alleged Medrano Pool is not a common source of supply as defined by the statutes of the State of Oklahoma but consists of numerous common sources of supply and that by reason thereof, the applicants alleged plan does not comply with the requirements of said unconstitutional statute and should therefore be rejected by the Honorable Commission.

Wherefore these contestants pray that the application herein be denied.

Reford Bond, Jr. (s), of Hatcher & Bond, Chickasha, Oklahoma, Attorneys for royalty owners as they appear in their answers on file herein.

[File endorsement omitted.]

[fol. 1455] BEFORE THE CORPORATION

COMMISSION OF THE STATE OF OKLAHOMA

(Title omitted)

AMENDMENT TO ANSWER OF TOM POTTER—Filed July 22, 1947

For further defense, if need be, to the application of the applicants, this respondent, leave having been first obtained from the Honorable Commission to file this amendment to said answer, alleges and states as follows:

1. That the West Medrano Pool, which the applicants seek to unitize in this proceeding, is a part of and is within the West Cement field. That the said West Cement field was discovered more than 20 years prior to the approval of the unconstitutional statute under which said unitization is sought. That said unconstitutional statute excepts from its operation all fields discovered more than 20 years prior to its approval. That premises considered, this Honorable Commission has no power or authority to unitize the said Medrano Pool and no authority to entertain the application on file herein.

[fols. 1456-1457] 2. That the alleged Medrano Pool is not a common source of supply as defined by the statutes of the State of Oklahoma but consists of numerous common sources of supply and that by reason thereof, the applicants alleged plan does not comply with the requirements of said unconstitutional statute and should therefore be rejected by the Honorable Commission.

Wherefore this contestant prays that the application herein be denied.

(S.) Reford Bond, Jr., of Hatcher & Bond, Chickasha, Oklahoma, Attorneys for Royalty owners as they appear in th ir answer on file herein.

[fol. 1458] BEFORE THE CORPORATION

COMMISSION OF THE STATE OF OKLAHOMA

(Title omitted)

AMENDMENT TO ANSWER OF ROYALTY OWNERS—Filed July 22, 1947

For further defense, if need be, to the application of the applicants, these respondents, separately and as listed in their separate answer on file herein, leave having been first obtained from the Honorable Commission to file this amendment to said answer, allege and state as follows:

1. That the West Medrano Pool, which the applicants seek to unitize in this proceeding, is a part of and is within the West Cement field. That the said West Cement field was discovered more than 20 years prior to the approval of the unconstitutional statute under which said unitization is sought. That said unconstitutional statute excepts from its operation all fields discovered more than 20 years prior to its approval. That premises considered, this Honorable Commission has no power or authority to unitize the said Medrano Pool and no authority to entertain the application on file here.

2. That the alleged Medrano Pool is not a common source [fol. 1459] of supply as defined by the statutes of the State of Oklahoma, but consists of numerous common sources of supply and that by reason thereof, the applicants alleged plan does not comply with the requirements of said unconstitutional statute and should therefore be rejected by the Honorable Commission.

Wherefore, these contestants pray that the application herein be denied.

(S.) Reford Bond, Jr., of Hatcher & Bond, Chickasha, Oklahoma, attorneys for royalty owners as they appear in their answers on file herein.

[File endorsement omitted.]

[fol. 1460] TRANSCRIPT OF HEARING—July 22, 1947 at 10:00 o'clock a. m.

[fol. 1461] Chairman Bond: Gentlemen, are you ready to proceed in C. D. 1308?

Reporter's note: Whereupon, all parties announced ready for trial.

MOTION FOR LEAVE TO AMEND ANSWER OF TOM POTTER ET AL. AND ORDER GRANTING SAME

Reford Bond, Jr.: If the Commission please, the protestants, the royalty owners on one hand and Tom Potter, Clyde Kahle, Maude Kahle and Bob White Oil Company ask leave to file amendment to their answer, specifically pleading that the West Cement Field was discovered more than twenty years prior to the approval of the constitutional statute under which it was provided, which reads as follows: "This Act shall apply to common sources of supply of oil, oil and gas, or gas distillate in this State.

The provisions of this Act shall not apply to any common source of supply of oil, oil and gas, or gas distillate or any part or parts thereof which at the effective date of this Act are being operated by or under pressure maintenance, repressuring, or secondary recovery methods or operation, Provided, that nothing contained in this Act shall prevent the voluntary inclusion and extension of areas in which are located such existing pressure maintenance, repressuring or secondary recovery methods or operations [fol. 1462] as unit areas under the provisions of this Act. Provided, this Act shall not apply to any field where the discovery well has been drilled twenty (20) years prior to the effective date of this Act." Also that we allege that the Medrano pool is not one common source of supply as described by the Statute of the State of Oklahoma.

Chairman Bond: Permission granted.

Reford Bond, Jr.: We offer copies of the amendment to the answer in evidence as Exhibits No. 107, 108 and 109.

Chairman Bond: Received.

[fol. 1463] Mr. MURPHREE, of lawful age, having previously testified, is recalled to the stand.

REFORD BOND, JR. EXAMINES THE WITNESS:

Q. Regarding your testimony last Friday as to the amount of oil produced on various properties in which the protestant royalty owners owned an interest, for the month of April, 1947, and as to the amount of oil which they expected to have received for their royalty interest under the unitized plan, I will ask you if you gave that testimony from the compiled set of figures, compiled by yourself.

A. In regard to the oil figures and the gas figvres, I got them from this group of figures I have on these two sheets here (indicating).

Q. Did you compile the figures yourself?

A. I did.

Q. And from what records did you make that compilation?

A. The oil figures from the allowable reports that the Commission puts out monthly and the gas figures from their files that they have available in this building.

Q. And you use arbitrarily, the sum of $2.00 per barrel as the value of the oil and 5¢ per cubic feet of gas?

A. That is right.

Q. Will you hand to the reporter the sheet and I ask her to mark it as an exhibit which is Exhibit No. 110.

[fol. 1464] A. Yes.

Q. That is the report that the Reporter has marked 110?

A. Yes, sir.

Q. We offer Exhibit 110 as part of the Witness's direct examination.

Chairman Bond: Received.

MARK ADAMS EXAMINES THE WITNESS ON FURTHER DIRECT EXAMINATION:—

Q. I wonder if you will mind putting back on the blackboard Exhibit 54-R? Now, referring to what line will be the Hartshorn fault on the exhibit, ——

A. It will be here, here is the Hartshorn fault (indicating).

Q. Referring to the discovery of gas wells on the east side and on the west side of that fault line, will you ex-

plain to the Commission what differentials in pressure there were, if any, I said discovery of gas, I meant discovery oil wells, what differentials in pressures if any indicated the presence of sealed from fault at that location?

A. As I recall the pressure on the Stephens-Pierson well, which is the discovery well for oil in that zone ——

Q. Which zone, Segment C?

A. In the Medrano sand?

Q. No, segment.

A. It is in Segment C, yes, the well had a little better [fol. 1465] than 1900 pounds bottom-hole pressure in the sand zone, at that time the pressure in the gas cap up in Segment B was a little above 1700 pounds and at that time there was no gas well in Segment C, there was a gas well drilled in November, 1943, the first gas well drilled in Segment C which was the Magnolia-Lindsey No. 1.

Q. Pardon me, I believe we have the segments mixed up, the Stephens-Pierson is in what segment, and Edwards in Segment B.

A. That is right, I am sorry, we did have a discovery gas well in Segment D.

Q. In order to correct the record, let's start over and get the record straight.

A. The Stephens-Pierson No. 1 was the discovery well in the Medrano sand, that well being in Segment C, at the time that well was drilled the bottom-hole pressure in the Medrano sand was above 1900 sand, that was in March, 1943, the gas wells over in segment B at that time had a pressure of about 1500 pounds, that was surface pressure, casing pressure I should say, as to the pressure on the gas wells in Segment D, I don't have that information.

Q. There was reference to the Sterba fault lying between Segment B and C.

A. Yes.

Q. Now, do you recall what the situation was as to Seg- [fol. 1466] ment C and D at the time of the discovery of the oil which would have relation to the Hartshorn fault?

A. As to the bottom hole pressure in Segment D, there was no gas well in that area at that time, the first gas well drilled in Segment D was November, 1944, that well had

a bottom hole pressure of about 1700 pounds when it was drilled in November, 1944.

Q. Now, the Stephens-Pierson was the first oil well drilled in Segment C?

A. First in Segment C and first in the Medrano sand.

Q. Then, I. Edwards was the first one in Segment D?

A. Yes.

Q. And what is the differential in pressure, if you recall, between these two wells?

A. The I. Edwards, the Magnolia-I. Edwards, which is Segment D completed in the Medrano sand and was completed in February, 1944.

Q. November, wasn't it.

A. Yes, November, 1943, had a bottom hole pressure of above 1900 pounds, at the same time the casing had pressure in the gas wells in Segment D were approximately 1500 pounds.

Q. That is all.

Cross-examination.

By Mr. Williams:

Q. Mr. Murphree, I believe you were employed in January or February of this year to make the study which you [fol. 1467] have testified in these proceedings, or what was the date approximately.

A. The date was sometime in November last year.

Q. November last year?

A. Yes.

Q. Now, in making that study, Mr. Murphree, what was the first thing that you did?

A. Well, after, of course, procuring the job of getting to do the work, I was told by the various companies that this information that they had compiled was available to the royalty owners, engineers and their representatives, so, after the survey of where to find the information and get it all together, I went to Phillips Petroleum Company's office, and I obtained most of the information which I have here, now does that answer that question?

Q. What did Phillips Petroleum Company tell you with

respect to the availability of any information that you might desire.

A. They gave me all the information that I asked for and said that any other information that I needed and wanted they would give to me.

Q. Did they tell you that they would assign one of their engineers to you in your study as to make any explanation that you might desire?

A. As to assigning an engineer to help me, they didn't do that, but they did have Mr. Woods help me.

[fol. 1468] Q. They did furnish you with all the information that you asked for?

A. Yes.

Q. And told you that anything else that you wanted would be supplied?

A. Yes.

Q. As I understand it, you went over the work of the engineering committee?

A. Yes.

Q. That study and report?

A. Yes.

Q. And you examined their basic information?

A. Yes.

Q. Now, Mr. Murphree, is your difference of opinion with that committee, if there is one, with respect to procedure that they followed or conclusions drawn from the procedure?

A. Well, one procedure that I would differ from is with respect to down-structure leases which will more than likely produce more oil as they are now going into the unit due to gravity drainage.

Q. Then, it's your opinion that the quantity drainage factor used by the committee is probably not sufficient to compensate for that drainage, is that your view?

A. I don't think it is.

[fol. 1469] Q. You did study the gravity drainage factor used by the committee?

A. Yes.

Q. And there was a formula to compensate for that?

A. Yes.

Q. And that was one procedure to which you did not agree?

A. Yes.

Q. Was that disagreement so much with the procedure, as they didn't allow the proper percentage factor?

A. It's not the procedure, I don't believe they allowed enough for the gravity drainage.

Q. You reviewed their manner of practicing top and bottoms of sand?

A. I did.

Q. And was that, in your opinion, in accord with general geological practices?

A. Yes, and engineering practices.

Q. Engineering and geological practices?

A. Yes.

Q. Now, I believe that you testified that you reviewed the various areas of the reservoir that have been included within the proposed unit area?

A. Yes, sir.

[fol. 1470] Q. Now, I believe your testimony was that those small tracts along the edge that have been included or probably or underlying with some oil and gas in the Medrano sand, but that in your further judgment it will probably not be in commercial quantities.

A. The west end, that is true in the west end of the field, I believe that it will be in noncommercial quantities.

Q. Now as to the east end, I believe you testified that a well drilled in that area will recover oil and will probably recover it in commercial quantities.

A. I don't see any reason why it wouldn't, lying on Tract No. 67.

Q. Now, are there any of the small tracts, Mr. Murphree, along either the north side of the field or along the south side of the field that have been included in the unit area which, in your opinion, are underlaid with no oil or gas in the Medrano?

[fol. 1471] A. I can't say that there was.

Q. And there would have been a question as to whether or not that oil or gas could be recovered under present methods of operations, commercially?

A. That's true.

Q. Now, will you refer to tract No. 63, which is the tract previously referred to, being the Noble-Davis' tract,—I believe you testified that in your opinion, there was in all probability some gas or oil in the Medrano sand underlying that tract?

A. I believe I testified yes, didn't I?

Q. Well, yes.

A. Yes.

Q. And you said that in your opinion it wouldn't be in such quantities as would justify the drilling of a well?

A. No, I wouldn't recommend drilling a well there.

Q. A well drilled there in the Medrano sand would in all probability have a drainage area extending out beyond that particular tract, would it not?

A. Yes, if it is drilled South,—if the well is drilled it would penetrate the Medrano sand——

Q. Well, just answer my question? If it were drilled into the Medrano sand it would have a drainage area extending out beyond the tract?

A. Yes.

[fol. 1472] Q. I believe you testified last week regarding the core data, that you were of the opinion that the percentage of permeability and the porosity in that immediate vicinity was low. To what core data did you have reference?

A. Well, the only core that I actually saw was the Potter-Davis core and then in the Commission's files I believe there was some data showing the sand, 10, 30 to 50% lime, a very tight sand and the probability would be less than five millidarcys permeability.

Q. The Potter-Davis well is less than a mile from the Noble-Davis tracts?

A. Yes.

Q. Now, I believe you testified that the fault displacement along the various faults had a tendency to lessen as you approach the trend of the structure?

A. I didn't say that directly, no,—I said as you reach the top of the structure, yes.

Q. And that degree of lessening is quite pronounced, is it not?

A. In some of the faults it is and in some it is not.

Q. And I believe you testified, if I understood your testimony correctly and if I didn't you may correct me, that the evidence both pro and con with reference to the connection in the uppermost portions of the structure is somewhat sketchy?

A. Yes, it is.

Q. And that the control points are quite some distance [fol. 1473] away from the supposed location of the fault?

A. In some cases they are.

Q. But you do have some control points adjacent to and in fact on the fault line?

A. That's true.

Q. And the evidence is such that Engineers and Geologists could have a very good argument as to whether the faults do or do not exist?

A. Well, as to argument,—they could argue back and forth a long time and the only thing that would settle it would be to go out there and drill some wells and get some evidence.

Q. And there is a question now as to what the facts actually are?

A. That's,—not as to what the facts that we have are, but as to the deductions.

Q. As to the deductions to be drawn from those facts?

A. Yes.

Q. Now, you refer to the pressure differential between a well drilled by the Stephens-Petroleum Company in segment "C", which I believe you said was the discovery well and the pressure in the gas-cap in segment "B"?

A. Yes.

Q. I believe you testified that differential was approximately 400 pounds?

A. When it was discovered, yes.

[fol. 1474] Q. Are you acquainted with the ratio of gas withdrawals from the gas-cap to that of the oil withdrawals in the oil zone up until the most recent order of the Commission?

A. Yes, I am.

Q. Now, Mr. Murphree, the withdrawals of gas in the ratio to the withdrawals of oil would that possibly bring

about a substantial differential between the two ratios, assuming that they were one common source of supply?

A. Well, then if the permeability and porosity are what they have set forth here, that differential should not exist. Considering the A. C. Wilcox, which has a permeability and porosity comparable, we might cite the case of the North end and the South end,—it ranged from 460 to 600 pounds and down here five miles south, Walnut Grove, we had about 400 pounds differential,—that's 5, 6 and 7 miles and ——

Q. As a matter of fact at the time the Pearson well was drilled no oil had been removed?

A. That's right.

Q. But a tremendous volume of gas had been recovered from the gas-cap?

A. Yes.

Q. And that fact would hold the differential in pressure?

A. The differential would be from the oil zone rather than just purely up-structure,—the gas well on the location in the Stephens-Pierson lease in segment "B" was [fol. 1475] more or less up-structure.

Q. Well, the difference is in that regard, whether it be up-structure?

A. Yes.

Q. Mr. Murphree, you wouldn't say that you could compare the Wilcox sand in the Oklahoma City field, with its high percentage of porosity and permeability with the Medrano sand of the West Cement field, would you?

A. Well, the oil sand in the Medrano sand is very good oil sand. It has very good permeability and porosity. Not as high as the Oklahoma City Wilcox but it does compare in a favorable way with the Oklahoma City Wilcox, however the gas-cap wouldn't be compared very closely.

Q. The Oklahoma City Wilcox does have in it freaks of very high permeability and porosity, does it not?

A. Well, some of those wells, there wasn't,—there wasn't any sand or anything there.

Q. A man could walk from well to well in Walnut Grove, that condition doesn't exist in the West Cement field?

A. Not to my knowledge.

Q. The sand in the West Cement pool is sufficiently tight

that there is no difficulty from sand——, isn't that true?

A. We had no difficulty.

Q. Whereas in the Oklahoma City field that sand was so porous and loose that it was a tremendous problem?

[fol. 1476] A. I should say it was.

Q. And that is evidence of high permeability?

A. Yes, that is one of the evidences.

Q. As a matter of fact, there are differentials in pressure within different segments of the West Cement Medrano field that are of equal magnitude to the differentials in the fault,— differentials in pressure across the fault lines?

A. May I have a look at that pressure map?

(Reporter's Note: A map is presented to the witness.)

A. (continued) Yes, it exists, according to this map.

Q. I'll ask you to state for the records the pressure of the Magnolia-Niles well, No. 10, as shown on Exhibit 72?

A. The pressure shown on this Exhibit 72, the data shows 892 pounds.

Q. That well is in segment "B"?

A. That's right.

Q. I'll ask you to note the pressure and state it for the records on the Phillips-Oaks well, No. 3?

A. This map shows a pressure of 429 pounds.

Q. What is the differential between the pressure in those two wells,— is it approximately the same figure?

A. 453.

Q. Those two wells are within the same segment?

A. Supposedly, yes.

Q. Now, I'll ask you to refer to the pressure of the [fol. 1477] Phillips-Fletcher No. 6 and state it for the records?

A. The pressure in the Phillips-Fletcher No. 6 is, as shown on Exhibit 72, 1119 pounds.

Q. This well is in the same segment that the Phillips-Oaks well No. 3 is?

A. As shown by this Exhibit, yes.

Q. What is the pressure differential between those two wells?

A. Approximately 700 pounds.

Q. Now, that pressure differential is as great as any pressure differential that exists across any of the faults in the pool?

A. It is comparable.

Q. Now, the distance between the Niles 10 and the Oaks 3 is something like a mile and three-quarters?

A. Yes.

Q. And the pressure difference that we were speaking of in the Stephens-Pierson and the Magnolia-Sames is less than three-quarters of a mile?

A. Yes.

Q. Do you know the date of the completion of the Magnolia-Sames well?

A. I don't have the date of completion of any of them,—I note here the time the Pierson was completed, which was in 1943.

Q. I believe you testified, Mr. Murphree, that in your opinion, with the drilling of one well to each 20-acres in the [fol. 1478] oil zone, that the injection of gas would recover as much oil from the pool as would be recovered under gas injection——

A. I said that if there was one well drilled on each 20 acres in the oil zone and if the gas allowables were held as the Commission has set them for this month and if there were no additional wells drilled for the Unit they would recover about the same amount of oil as the Unit could recover with gas injection.

Q. Now, if you were to drill that field with one well to 20 acres you would of necessity drill a number of walls that would be on a high gas-oil ratio, they would be high gas-oil ratio wells under the gas-oil contact?

A. Yes.

Q. And if they were not high gas-oil ratio wells at the time of their completion they would soon become high gas-oil ratio wells?

A. You mean all the wells?

Q. Yes, if they were not high gas-oil ratio when completed they would become soon?

A. They would be completed as good wells and later on the migration of oil down-structure would become such that

they would be high,—they would become high gas-oil ratio wells.

Q. Then there would be a number of wells, if drilled on each 20 acres, that would be high gas-oil ratio wells?

A. I would say yes to that.

[fol. 1479] Q. Mr. Murphree, would you recommend the drilling of any more high gas-oil ratio wells in this field?

A. No.

Q. And if you did drill them you would expect some high gas-oil ratio wells?

A. Yes, you would get some high gas-oil ratio wells.

Q. And if you were the well operator on this pool, you then wouldn't drill all thirty of the wells?

A. My assumption was not that it would be Unitized. My assumption in the drilling of these wells is that the law of capture would be in effect and these wells would produce from individual tracts, not as a Unit. Of course, it is assumed that the Commission would have some restriction on the gas-oil ratio as they do in other fields.

Q. The application of a gas-oil ratio has a very definite bearing on the economics of drilling and operating of oil wells, doesn't it?

A. That's true,—in Texas they have 2000 to 1 ratio, which they enforce.

Q. Would you, as an oil man, recommend the drilling of any more high gas-oil ratio wells in this pool, under competitive operation?

A. If I knew they were going to be high gas-oil ratio wells, I wouldn't.

Q. High ratio wells are bad fundamentally, aren't they?

[fol. 1480] A. That's true.

Q. You heard his testimony as to the location of these wells,—along the lower part of the structure, or at the bottom of the pile, as Mr. Adams would put it?

A. Well, he said they would be strung somewhere along the low side of the oil,—I didn't hear any testimony as to any exact location.

Q. In your testimony you brought out the fact that you don't know where the Unitization gas was to be injected, is that correct?

A. I said it would be injected, under the Plan, up-structure, but it didn't show where up-structure it was to be injected.

Q. Now, assuming that this pool is Unitized for gas injection and that it is contemplated that it,—that additional oil wells will be drilled along the lower part of the structure, you admit as an Engineer that you would be willing to leave it up to the Engineering judgment of the committee as to all phases of injecting the gas and locating these wells, would you not?

A. As an Engineer, the general engineering knowledge of the entire engineer's committee, the engineer's judgment should be the best way, I should think.

Q. And there should be a degree of discretion allowed in that respect?

A. Yes.

[fol. 1481] Q. Can you think of any reason why the operating companies operating the field as a Unit should not have—strike that question.

A. I might say of course that oil companies are in the business for the amount of money they can make out of their properties.

Q. That's what anybody is in business for.

A. That's what anybody is in business for and of course, they are going to try to obtain the best returns they can.

Q. I believe you testified the other day that your program of development,—let me change that,—not your program of development, but the drilling of wells, one to each 20 acres, would cost 2 million and some odd thousands dollars?

A. That's true.

Q. And that program is supposed to be engaged in by the Operators here, would cost somewhere in the same neighborhood?

A. I believe the estimate was $1,800,000.00.

Q. Then there is very little difference in the cost to the Operators in the two programs?

A. That's true.

[fol. 1482] (Reporter's Note: Mr. Murphree is still on the stand and being cross examined by Mr. Williams.)

Q. So, from that standpoint, the company will have particularly nothing to gain by the one unit program over the other?

Reford Bond, Jr.: I object to that.
Chairman Bond: Sustained.

Q. I will limit it from the standpoint of—which is an engineering question.

Reford Bond, Jr.: I object to that.
Chairman Bond: If the witness knows, he can give the figures.

A. I stated before that there is very little additional which I would recommend without life investment for the cost of the additional seven wells.

Mr. Williams: The point that I am making is that the charge has been made that the operators are recommending a program that is a substantial saving here, as a man that has on behalf of this people that is a qualified engineer and studied the situation, at their request, I am asking him to tell the Commission whether that charge is well founded and whether there is a substantial difference in the cost of the two programs.
Reford Bond, Jr.: Should the counsel be confined to argue at the proper time?
[fol. 1483] Chairman Bond: Yes, counsel will have no limits on his argument.

A. (Witness) I would like to clarify that question, in drilling additional oil wells and producing them your listing cost and operating cost due to their limited operations will be very much more than their unit operations, therefore, the original investment is indicative as to the cost of unit and non-unit operation. I might cite a case in the Billings pool, we were averaging around 10 or 11 cents for production costs prior to unitization, after unitization it was less than 3 cents per barrel.

Mr. Williams continues with the witness:

Q. The Billings pool is the pool in which you had the benefit of a water drive?

A. Yes, but we started gas injection.

Q. Now then, figuring the over-all operating cost, you enjoyed the benefit of a water drive?

A. That is true.

Q. And it wasn't necessary to buy water for that production?

A. But to recycle the gas.

Q. Now in a pool where it's necessary to purchase gas to make a gas injection for production, then your cost is then increased?

A. Yes.

Q. Assuming, Mr. Murphree, that you drilled the addi-
[fol. 1484] tional wells concerning which you have testified, so as to develop the oil zone on the base of one well to each 20 acres, and you then injected the gas into the gas cap to assist in maintaining the pressure of the reservoir, would you, in your opinion, obtain additional oil over and above that that you would gain by drilling in competitive methods?

A. I think so, yes.

Q. In other words, the additional gas to the reservoir and aspect of pressure maintenance will in your opinion result in greater recovery of oil.

A. On the same well spacing?

Q. Yes.

A. Yes.

Q. I believe that is all.

Reford Bond, Jr., Redirect examination:

Q. Mr. Murphree, what is the approximate cost of listing the oil in the Cement Medrano pool by use of pumping methods?

A. Well, the various operators down there are going to have various costs; for instance, some of the companies might charge one item to it, and other companies might not, the way they are listing down there now, it's going to run 15 to 20 cents a barrel, that is, sealed listing cost without the company's overhead attached to it.

[fol. 1485] Q. Now, about how long will it be under present methods of operation and assuming that one well will be drilled to the 20 acres, will it be, before it became neces-

sary to pump the oil wells in order to recover and list the oil.

A. I believe most of the wells are pumping now and any new wells will be put on the beam and some sort of a pump right away.

Q. Now then, suppose gas injection used and gas recycling used and pressure of the reservoir increased, that is, from the gas cap of the reservoir increased and reservoir energy increased so that the gas will cause the well to flow and cause the oil to come into the well bores, what would be the cost of listing the oil in that event?

A. Well, assuming that the well will following its production, the cost of producing on a competitive basis shouldn't exceed 10 cents, I might clarify that without the Continental Company's painting program that they now carry on.

Q. Calling your attention to Tract No. 46 on Exhibit 24, and which is the Magnolia-Medrano lease, and ask you to state how many gas wells appear to be completed on that lease to the Medrano gas zone.

A. Two.

Q. And have any wells been completed on that lease to the Medrano oil zone?

[fol. 1486] A. There is one, No. 11.

Q. Do you know whether or not that well is now producing gas with the oil?

A. Yes, that well is, I believe has been changed to a gas well recently, yes, it is classified as a gas well now.

Q. Then there are no wells at this time on that lease classified as oil wells?

A. That is true, there are no oil wells on that.

Q. Now, in the event that this pool is unitized, will the gas underlying the Magnolia-Medrano lease, in the event of recycling and gas repressuring is used and be a value in the producing and listing of the oil produced under that method of production.

A. The oil produced from the same Medrano lease?

Q. No, the oil produced from the adjacent oil wells.

A. Yes, that is the reason for putting it in there.

Q. Is there any compensation allowed the Medrano lease royalty owners and operators for the use of their gas for

producing the oil as contemplated by the recycling and repressuring.

A. The only compensation for their gas is the value of the gas at 5 cents per 1000 feet as included in the plaintiff's compensation, that doesn't say that it will be paid for over and over again, it just says a value for it once and that is the only value allowed for the gas.

[fol. 1487] Q. Is that the market value for the gas at this time in that area?

A. I believe the royalty owners are realizing more than 1000 feet out of it.

Q. Outside of that, no compensation is being allowed the owners of the gas under their lease for its use of the listing in the production of the oil.

A. That is the only value allowed for their gas.

Q. Now, I call attention to Tract No. 51 or Exhibit 24, which is a part of the Magnolia-Caddo-Rowe lease in Section 36 and ask you to state how many acres are contained in that lease as shown in the exhibit.

A. Ten acres.

Q. I will ask you, Mr. Murphree, to call your attention to the matter, if it serves that production from the Magnolia-Cement Caddo-Rowe lease, isn't a 40 acre lease as shown by this exhibit?

A. The whole lease is 40 acres, however you refer to tract 51——

Q. Tract 51 is ten acres and a part of a 40 acre lease shown by the exhibit?

A. Yes.

Q. How much area in acres of this lease is included in the unit, included in the pool, let us say as shown by this exhibit?

A. Of the 40 acres, Magnolia-Caddo-Rowe, the unit con-[fol. 1488] templates taking 10 acres of the lease in the geological limits of the pool according to this exhibit, which is Exhibit 24, it's about 2½ acres.

Q. Now, about what, according to the iso-baric map showing the gas sand thickness that has been offered by the applicants, is the thickness of the gas sand in this?

A. The iso-baric map which represents the gas zone as Exhibit 56-R, it shows a sand thickness of less than 75 feet, the nearest well to it which is about ½ mile away shows a

thickness of 62 feet and according to the northeastern limits of the pool, the sand thickness is zero increasing to 62 feet, one-half mile away, so I made an estimate of 10 feet average over that 2½ acres.

Q. And how many feet do you say the exhibit of the plaintiffs show sand thickness to be at that point.

A. This little tract in here (indicating) right above 36 is the one we are speaking of. It will show a thickness of 62 feet at the nearest contour line which shows a thickness of 75 feet, this limit here (indicating) assumes zero thickness so that it might just be an estimate on my part on the thickness that shows which I say is an average of 10 feet over the 2½ acres.

Q. Now, in your opinion, has there been sufficient actual drilling to make an estimate and determination as to whether there is any gas sand under there?

[fol. 1489] A. No, you can question it either way, whether there has or hasn't.

Q. In the event there is a gas sand underlying the small tract, I will ask you if there is sufficient gas in place there to justify a drilling of a well for recovery.

A. No, not for the amount of gas under that lease.

Q. Now, I will call your attention to Tract 61 under which protesting royalty owners Mary A. Farris has an interest in ⅛ royalty and ask you to state about how much area of that tract this applicant's exhibit 24 makes to be included in the Medrano pool.

A. They indicate about 2½ acres within the geological limits of the Medrano sand.

Q. Now, does the applicant's isopacious map of gas sand thickness indicate gas sand thickness under this little piece of land.

A. This line here represents 25 feet sand thickness of Medrano sand, this line is zero (indicating), it is a small tract we are speaking of, the nearest well to that tract in the Medrano is Anderson-Prichard Davis No. 1 which shows a thickness of 52 feet so an estimate there will not average over 5 feet, it's just an estimate.

Q. As shown by the applicant's map, now, Mr. Murphree, is that in your opinion, has there been sufficient actual [fol. 1490] drilling to determine whether or not that small

piece of land does lie within the confines of the Medrano pool.

A. No, there could be an argument either way on that.

Q. In event part of the Medrano gas sand does underlie this small piece of land, would there or is there sufficient gas in the sand to justify drilling a well on there to recover?

A. I would not recommend the drilling of a well on Tract 61 for the gas in the Medrano sand under that tract.

Q. Now, Mr. Murphree, will you refer to plaintiff's Exhibit 53, and state the value of the gas which the petitioners claim to be under this small piece of land.

A. On Exhibit 53, the Ramsey Petroleum Company, Grenrich shows the value of the gas to be $800.00.

Q. And the royalty owner's value there would be how much?

A. About $100.00.

Q. And you say under the unit plan they will be required 18 or 20 years to recover their gas to produce this.

A. To produce it, to produce this value, something like that, if I understand it.

Q. I don't mean the value, I mean the gas here if it's there as I understand the unit plan, Mr. Witness, and if it's your understand- for their production the gas has to be held in the reservoir until all the oil is produced, then the [fol. 1491] gas is produced. And I was asking about how long until this gas will actually be produced.

A. They don't contemplate producing the gas until the oil is produced.

Q. That is my thought, I just asked how long it would be before it's produced under the plan.

A. About 18 years before that will be produced. I might clarify that in saying that this gas might be chased around the reservoir before it is produced.

Q. Then it might not have any under this land at all?

A. That is correct.

Q. Speaking of the gas then, you are speaking of all the gas in the reservoir?

A. Yes.

Mr. Williams: You understand now, in the meantime the royalty owners will share in the oil wells.

Reford Bond, Jr., continues with the witness:

Q. I call your attention to Tract 66 on Exhibit 54 which is Anderson-Prichard Ray lease and C. C. Dixon, owners of 1/8 interest in the royalty and ask you how much area on that tract the applicants have attempted to include in the Medrano pool.

A. That is again, there they have attempted to take in the pool 10 acres, but there is about 3 acres in the geological limits of the pool.

[fol. 1492] Q. And that Ray lease is an 80 acre lease?

A. Yes, sir.

Q. I will ask you to state whether or not there has been sufficient actual drilling operations to determine accurately whether or not this small piece of land is within the confines of the Medrano pool.

A. The nearest well completed in the Medrano, which is Anderson-Prichard Prentice No. 4A is about 2000 or 2500 feet away and the sand volume estimates or estimates from this isopacious map made up from the wells near there so there could be very easily 3 acres, which could either be included or not included, you could take it or leave it or not increase the amount of acreage or decrease the amount of acreage there, and leave it entirely out.

Q. Now, the applicants show on that isopacious map how much sand thickness under the little piece of land.

A. It is this lease here (indicating).

Q. The south 1/2 of the northeast 1/4 of section 6.

A. It is the lease that we are speaking of, the nearest isopacious contour line shows 25 feet and of course the northern limits will show zero feet, an estimate to the average thickness there from this map will be less than 5 feet.

Q. And would that, in your opinion, be enough gas in there in that small area from the applicant's exhibit to justify expenditures recovered of gas in the lease.

[fol. 1493] A. Drilling a well?

Q. Yes.

A. I would not recommend drilling a well for that gas,——

[fol. 1494] Q. Would you give the Commission the esti-

mate, your estimate of the value of the gas claimed by the Applicant in this little tract?

A. They have it listed in their Exhibit 53, as $500.00.

Q. Which would be how much to the royalty owners?

A. About $60.00.

Q. Now, Mr. Murphree, I will call your attention to the tract, No. 59, which is a part of the Magnolia-Gregory lease, located in the West Half of the Southwest of 31, Section 31, and ask you to state about surface area is included in Applicant's Exhibit 24 of that lease, as being within the confines of the Medrano pool?

A. Within the geological limits, the estimate would be about two and a half to three acres.

Q. Now, do the Applicant's Exhibits show that that tract there has any gas-sand thickness under this tract, and if so, how much?

A. This is the Magnolia-Gregory lease, as shown on Exhibit 56-R, 25 feet,—the 25 feet contour line cuts across the tract, across the North limits of the pool, where it would be zero,—it would be an average of 20 or 25 feet from the Isopach Map, I think that would be a good estimate.

Q. Now, in your opinion, has there been sufficient actual drilling in this area to determine whether or not this small piece of land lies within the Medrano pool, or not?

[fol. 1495] A. No, the nearest well to that well, which lies in the Medrano section, is the,—the nearest well that lies in the Medrano sand is the Potter-Davis, which has a sand thickness of 57 feet and it is almost half a mile away or say, 2000 feet, so it would be very questionable whether it was in the pool or whether it has any sand, or not.

Q. Now, in the event the figure claimed for this small piece of land is correct, and that it is in the Pool, what would be the value of gas under this tract as shown by the Applicant's Exhibit 53?

A. It shows that $2100.00.

Q. And how much would that be royalty?

A. About $260.00.

Q. Now, then, I will call your attention to tract No. 44,—let's see, that's tract No. 44, which is marked of the Pickard, the Magnolia-Pickard-Edwards lease, in which L. L. Edwards, T. G. Gan, M. M. Davis and J. F. Ball own part of

the royalty, I'll ask you to state from Applicant's Exhibit 24 about how much area this lease, how much of the area of this lease the Applicant's claim is included within the confines of the Medrano pol?

A. I would estimate less than two acres, by the geological limits of the Medrano,—less than two acres, in my opinion, are within the geological limits of the Medrano sand pool.

Q. Has there been sufficient actual drilling of this area, in [fol. 1496] your opinion, to determine whether or not any part of this lease lies within the confines of the Medrano pool?

A. No, I don't think there has.

Q. Now, I'll call,—according to the Applicant's Sand Thickness Map, what do they claim as sand thickness for this little piece of land?

A. This is a tract where the thickness at the line is 50 feet,—this would be zero at the North limits,—I would say less than 5 feet.

Q. And what value do the Applicant's attribute to the gas under that tract?

A. $2700.00.

Q. How much would the 1/8 royalty be?

A. About $335.00.

Q. Now, I'll call your attention to the tract No. 33, which is the tract of the Gulf-Holland lease, which is located in the South Half of the Northwest of Section 2, and ask you to state approximately, from the Applicant's Exhibit 24, how much of the surface area of that lease is included in the confines of the Medrano pool, as claimed by the Applicants?

A. About 5 acres, or half of the lease,—half of the area which that lease covers is confined, contained within the geological limits of the Medrano pool.

Q. Now, I'll ask you to examine Exhibit 24 and state whether or not, in your opinion, there has been sufficient [fol. 1497] drilling actual drilling within the area of this tract to determine the extent of the Medrano oil sand at this point?

A. Well, of course, in that tract they had to make two estimates. In one estimate of the water level and the other as to the estimate of the top of the sand down there and the nearest well in segment "C" is the Phillips-Margaret No. 1,

which is something like 12 or 1400 feet away. A well drilled closer in to that lease would give you a much better opinion than is available now and in my opinion the information on that well is very sketchy from which to include that lease in this Unit, or to exclude it.

Q. What would be your opinion in the operation to determine whether or not that lease should be included or excluded, and if included to determine the porportionate share of gas?

A. Well, of course, Gulf doesn't own either of the off-set properties. There should be a well drilled closer in to that tract, either in the Phillips-Margaret, Phillips-Hartshorne, or the Amerada-Hartshorne.

Q. Would you recommend the drilling of a well on tract 33?

A. In the light of the present information, I would not.

Examination.

By Mr. Adams:

Q. Mr. Murphree, as I understand your testimony, while there may be some question about there being sufficient facts from which to determine with certainty the existance of [fol. 1498] certain faults extending across the Medrano section, there isn't any question in your mind but what there are at least two such faults which do seal off the Medrano sand of one side from the Medrano sand on the other side?

A. I said Friday, in the Edwards fault, in my estimation in the light of the production information, due to this being developed much later than this area up here (indicating on plat), that it was sealed off. In my opinion I believe it is sealed off.

Q. That is your opinion?

A. Yes, to clarify that, this limit here (indicating on plat) is not the top of the structure. Of course the geologist who drew this map might have intended this (indicating on plat) to continue out all the way. It wouldn't go to a certain point and break off abruptly.

Q. In other words it would extend through what is shown as the North limits of the Medrano sand area?

A. Well, more than likely, the geologist who drew this had some opinion as to that.

Q. Then, when you testified about the Medrano pool you were meaning, you really meant the Medrano area?

A. What I had reference to was the area which produced the oil and gas from the Medrano sand.

Q. Did you have an opinion as to whether that is divided into three separate pools?

A. I have stated, it was at least two, and maybe three.

[fol. 1499] Q. Separate pools?

A. Separate pools, yes.

Q. You are familiar with the method of operation for the production of oil in the Medrano area of the West Cement field, are you?

A. Yes.

Q. Some produce oil, some produce gas, some produce oil and gas and some produce water, is that true?

A. You mean they produce oil and water?

Q. Yes.

A. Yes.

Q. Some of the wells flow, some are required to be pumped, is that correct?

A. Yes.

Q. Does that cost more to operate a well that has to be pumped and which makes some water, than it does to produce a well that makes nothing but oil and flows?

A. Oh, definitely, yes, there is a very definite difference, substantial difference between a well that makes water and one that does not,—you must have treating tanks, settling tanks, and places to dispose of the water, unless you run it down the creek and kill all the fish. A well that produces water costs definitely more to produce than a well that doesn't produce water.

Q. Does the proposed Plan of Unitization take into con-

[fol. 1500] sideration all the different lifting costs of the oil on these different leases and give adequate consideration thereto?

A. The information that I have on the Plan is that it does not state the methods of lifting or take into consideration lifting costs whatsoever.

Q. Which would indicate what?

A. That they have not considered that in any of the equities set forth.

Q. In your opinion should that have been considered and set forth as a material factor?

A. In respect to the various companies it probably would mean something to the various companies, but with the royalty owners it wouldn't make much difference.

Q. Yes, I appreciate that.

A. As between the companies it would probably make some difference.

Q. Well, it wouldn't make some difference to the royalty owners that ultimately from an economic standpoint the portion of the lease may become so burdensome that it might be abandoned?

A. Yes, that is possible, however, when you get down to certain limits you are not going to produce much for anyone.

Q. Well, that would make some difference to the royalty owners, also?

A. Yes, it would.

[fol. 1501] Q. I believe you said that in order for you to state an opinion as to the—of the proposed Plan of Unitization you would have to know where it was proposed to drill the additional seven wells in the oil section and where it was proposed to re-cycle the gas, is that correct?

A. That's right.

Examination.

By Mr. Williams:

Q. Mr. Murphree, inquiry has been made of you in respect to location of the geological boundaries of this pool, as reflected in Exhibit 56-R,—that is the map on the blackboard. Now, assuming, Mr. Murphree, that there was no controversy here in respect to the Unitization of this pool, and you were employed by anybody, any client, based on the information at hand, to draw for him a map that would reflect the boundary, the proposed outer boundaries of the producing part of the formation in question, wherein would that map be different from that one on the board?

Counsel for Protestants: Objected to for the reason that he asked him to assume that he was not representing royalty owners.

Chairman Bond: He can ask him whether in his opinion

that map is correct and then if he says it is not, he can ask him what in his opinion would be a correct map.

[fol. 1502] Q. Let me ask you,—is the map on the board, Exhibit 56-R, a reasonably correct geological deduction from the evidence at hand?

A. This includes only the gas.

Q. Well, the boundaries of that map?

A. It is reasonably correct,—you could argue on very small points, but on a map of the boundary lines 300 feet or five hundred feet, on a map that scale would,—you could justify that much difference either way.

Q. You would not say that is not a logical interpretation of the facts at hand?

A. No, I wouldn't,—would you repeat that question?

Q. Yes, you wouldn't say that that is not a logical interpretation of the facts at hand,—in your opinion,—is your answer the same?

A. It is.

Q. Although the oil map is not on the board, would your answer be the same in respect to the oil thickness?

A. I can't recall any point that I would change too much.

Q. Mr. Murphree, in your study of the Plan, you have studied the equity portion of the Plan?

A. Yes, I have.

Q. The equities were not determined on the basis of surface acreage, were they?

A. No.

[fol. 1503] Q. Now, these small tracts that you mentioned, they were taken into account only as to the portion thereof shown to be within the limits of the pool?

A. Yes, the production limits of the pool, yes.

Q. And other equities were, their equities were calculated accordingly?

A. Yes.

Q. And they were calculated in the same manner, as were the equities as were the other tracts within the outer boundaries of the pool?

A. Yes, gas tracts were to be just like the other gas tracts.

Q. And the oil tracts were computed just as the other oil tracts?

A. Yes.

Q. As a matter of fact the producing oil wells in the Medrano sand at this time are on the pump, isn't that true?

A. I believe that all the oil wells reported on the Corporation Commission Schedule allowables as oil wells, are pumped.

Q. Now, under Unitization, assuming that no make-up gas is purchased and injected into this reservoir, do you know of anything that would cause these pumping wells to begin to flow?

A. Assuming that there is no additional gas injected, the only thing that would cause a pumping well to start flowing would be to get the gas-oil contact down low enough to cause [fol. 1504] the oil to flow.

Q. Then, the Unit Operation, if you expect to reduce the operating costs by making flowing wells out of pumping wells, you will, of necessity, be forced to buy a substantial quantity of outside or make-up gas?

A. Sure. And you might introduce water into the Medrano to raise the pressures,—if you don't use water it would be necessary to purchase gas.

Q. And that is quite an item of expense, is it not?

A. Yes.

Q. Now, if you do use water or gas the injecting of water is a sizeable part of the operating cost, is it not?

A. Yes, it is.

Q. Now, you mentioned the fact that the gas-cap gas under Unitization wouldn't be produced for some eighteen or twenty years, except to the extent that it might be—from your study of the Plan, you do not understand that the owners of gas leases will not participate in the production of oil in the meantime, do you?

A. According to the Plan set forth in Exhibit 1, they will participate in the oil production immediately,—yes.

Q. And that will not be dependent solely,—they will not be dependent solely on the small quantity of gas that underlies their leases and which may be produced in later years,—they will not be required to wait until that gas is produced? [fol. 1505] A. No.

Examination.

By Reford Bond Jr.:

Q. But they are required to wait eighteen years in order to get the last penny, aren't they? The time is set at eighteen years, isn't it?

A. Yes.

Q. Now, in the beginning gas is purchased to inject into this reservoir under the Plan of Applicants, to produce the oil there. It will still be necessary to use this gas and it will be used?

A. They contemplate using that gas over and over, yes.

Q. And the gas that is there now can be used along with the gas that is purchased?

A. Yes.

Q. And one wouldn't be used without the other?

A. That's right.

Examination.

By Mr. Williams:

Q. I believe you said you wouldn't recommend the drilling of wells on these small tracts? Such tracts as ~~41, 61~~, 56, ~~44~~, I believe?

A. Well, I took tract 44, 33, 61, 59, 66,—I wouldn't recommend drilling on those.

Q. Then, in the absence of Unitization, along,—how long [fol. 1506] would it take the land owners to recover the recoverable oil and gas under those tracts?

Mr. Adams: Objected to for the reason that there is no testimony from anybody that there is any oil under these tracts,—as to tract 33——

Chairman Bond: Sustained as to the other tracts.

Q. In respect of tract 41, 61, 66, 59 and 44, which, I understand, are gas tracts, how long would it take those owners to get their gas in the Medrano sand in the absence of Unitization?

A. They are receiving nothing now, and they would never receive anything from the Medrano sand.

Q. Is that also true as to the oil underlying tract 33?

A. Yes.

Q. Then, do you know, in the absence of Unitization any way whereby these land owners will ever receive any credit for the gas in relation to the gas tracts, or the oil under the oil tracts?

A. Well, they will never receive anything for the oil in the Medrano sand, however, a small amount might be picked up by re-leasing the tracts for other production.

Examination.

By Reford Bond Jr.:

Q. Mr. Murphree, I understood you, in answering Counsel cross examination awhile ago, to state that the map which is [fol. 1507] on the blackboard——

A. Exhibit 56-R?

Q. Exhibit 56-R, is a logical interpretation of the facts as you have them, and I'll ask you if you had in mind at the time you made that statement, the dry hole that is out there in the Northwest part, up there in the Northwest part of that map? You may explain that, if you care to do so.

A. You are speaking of the one on the Stephens-Dome-Bo? And the one on the Stephens-Brown lease?

Q. Yes.

A. The statement I made was that this is an interpretation of the—I said nothing about production from these leases, I meant it was a logical assumption of sand limits.

Q. By your answer you merely intended to confine your answer as to sand limits, based on the facts disclosed by the top and bottom sand maps which the Plan put in evidence?

A. I think it is a logical interpretation of the top and base maps.

Q. Now, Mr. Murphree, you have made a study of the Applicant's engineering report with reference to the permeability and porosity of sands in the various sectors and segments of the Medrano sand,—I'll ask you to state whether or not it is a fact that the Engineer's report shows the porosity to be uniform throughout each segment?

A. No, it varies considerably.

[fols. 1508-1509] Q. There is a different porosity in the different segments?

A. Yes, segment "A" is low in porosity and "C" and "B" are fairly close together, and these two vary,—"D" and "E" vary from "B" and "C" some.

Q. Now, in determining the amount of oil in place, what was done with the porosities, that is, are the weighted averages shown?

A. There was a weighted average shown, yes.

[fol. 1510] Chairman Bond: Gentlemen, are you ready to proceed.

CLYDE KAHLE, of lawful age, being duly sworn, testified as follows, to-wit:

Reford Bond, Jr. examines the witness:

Q. State your name, please.

A. Clyde Kahle.

Q. Where do you live, Mr. Kahle.

A. Two and one-half miles north of Cyril.

Q. How long have you lived there?

A. About twenty-five years.

Q. How old are you, Mr. Kahle?

A. Seventy years old.

Q. In what business have you been engaged since you came to Cyril and the community?

A. In the oil business.

Q. To what extent?

A. I have been in the drilling and producing business.

Q. Are you the owner of an over-riding royalty interest in part of the Medrano sand area and west Cement field?

A. Yes, sir.

Q. And what lease is that, Mr. Kahle?

A. Walker lease.

Q. What section is that in?

[fol. 1511] A. 1-5-10.

Q. Can you give the description that the Stephens Walker or Anderson-Prichard Walker?

A. Stephens-Walker?

Q. Stephens-Walker.

A. Yes, sir.

Q. Mr. Kahle, are you familiar with the meaning of the

word "field," used in connection with oil and gas in common?

A. Yes.

Q. What is the use of that word in oil and gas relationship?

A. The total field.

Q. By that, you mean that it covers all of the sands underlying an area?

Mr. Williams: I think that that is leading and stating to the witness what he means for testifying about.

Chairman Bond: It's leading.

Reford Bond, Jr. continues with the witness:

Q. Will you please, Mr. Kahle, amplify your statement as to the meaning of the word "field" in connection with oil and gas.

A. As I understand it, it takes in the whole thing of all sands and everything.

Q. State to the Commission now what "field" the Medrano sand is located.

[fol. 1512] A. In the West Cement Field.

Q. Are there other sands in the West Cement Field besides the Medrano?

A. Yes, sir.

Q. About when, Mr. Kahle, was the West Cement field first discovered?

A. Well, I drilled a well in on Mr. Walker's in the field in the fall of 1918 and one also on Mr. Davis.

Q. And were those wells in the West Cement field?

A. Yes, sir.

Q. And they were located in what section?

A. 1-5-10.

Q. Now, Mr. Kahle, you have been engaged in the practice and sale of producing oil and gas leases during your operations and worked in the oil industry?

A. What is that?

Q. You have been engaged in the practice and sale of producing oil and gas property?

A. Yes, sir.

Q. You know the significance of an over-riding royalty interest or 7/8 working oil and gas lease, do you not?

A. I think so.

Q. Now, the particular over-riding royalty interest that [fol. 1513] you own under the Stephens-Walker lease, is there or not, dependent on the working interest in the lease?

A. I don't understand that.

Q. How long does your over-riding remain in force?

A. As long as that well produces.

Q. I will ask if it's as long as the lease is in force.

A. The lease is in force as long as the well produces.

Q. And if that produces from some other sand, it still continues?

A. Yes.

Q. Your over-riding being from what horizon?

A. Everything from 2400 feet down.

Q. Are you aware, Mr. Kahle, under the unitization statute that in the event that the production in the Medrano pool unit operation dropped below the value of the oil and gas produced, all the payment of the over-riding royalty and that your over-riding royalty will become cancelled and revert to the lease?

Mr. Williams: I object to that, because there is no such a thing in the law.

Chairman Bond: I don't know if he's referring to the law or lease.

Reford Bond, Jr.: I am referring to the law and asked if he knows that there is such a provision of law.

Chairman Bond: I don't think that he can testify as to [fol. 1514] the law, you will have to argue that with your client.

Reford Bond, Jr. continues with the witness:

Q. Very well, I will ask him another question. When the production from an oil and gas lease becomes so small that the cost of operation equals the amount of oil, the value of the oil and gas produced to the credit of the operator, state whether or not the over-riding royalty owner has a trading advantage with a lessee in regard to the lease.

Mr. Williams: I think that if the Commission please, the rights of the parties of over-riding royalties will be reflected by the instrument itself instead of this witness's interpretation.

Chairman Bond: The instrument is the best evidence, he is an old oil operator, he can tell if he knows, he should know.

A. (Witness.) I think that a man can take it over and produce it himself.

Q. That, in your opinion, will be the trading advantage that he can take the lease over and produce it himself at a profit where the lessees can't do that.

A. That is right.

Q. Now state to the Commission what your objection is to the unitization of the Medrano sand in regard to this [fol. 1515] treatment of the over-riding royalty interest.

A. Well, I think that it will take my interest out to pay for some other fellow's gas to put in there and it won't compensate me at all, those equities are not right, they don't consider the thickness of the sand nor porosity.

Q. Does this plan compenstate you for the trading value of your over-riding royalty.

A. No, sir.

Q. That is all.

Mr. Williams: No cross examination.

Mark Adams examines the witness:

Q. Mr. Kahle, to clarify the matter as I understand you, in the oil and gas business would you say the West Cement Field, you mean an area under which that has production in one or more horizons of oil or gas?

A. Yes.

Q. And that is without relationship to what particular production horizons that there is in the area.

A. Without relationship to any of it.

Reford Bond, Jr. examines the witness:

Q. And has that always been the meaning that they use in common parlance prior to 1945?

A. That always was.

Witness excused.

[fol. 1516] Mr. Murphree, is recalled to the stand:

Witness examined by Reford Bond, Jr.:

Q. When we adjourned before lunch, I believe you were testifying about the porosity of the oil sand or oil and gas sands in the various sectors of the Medrano sand as included by the applicant's plan, would you examine the engineering report of the applicants which was offered as evidence here and state whether or not there is any difference of porosity shown in the various sectors of the West Medrano sand.

A. That is within the sectors themselves?

Q. No, as between the sectors, I believe that is Table 9, is it not, of Exhibit 71?

A. From Exhibit 71, Sector A, or Segment A, Item No. 2, porosity and core data, Segment A is listed as 15 per cent. Segment B, 17 per cent. Segment C 17 per cent. Segment D, 17 per cent. Segment E, 16 per cent.

Q. Do you know, from your examination of the applicant's data, how it figures, how these figures were arrived at?

A. It isn't stated in the report exactly how they were arrived at, but from what I have been told, they were averages of that area, these averages according some of the tighter sections of the core that they figured would not produce or are too tight to produce.

[fol. 1517] Q. Is that what the applicants' witnesses have termed as weighted averages?

A. I believe so.

Q. State to the Commission whether or not that porosity figure as used in determing the sand thickness is between the various tracts which are sought to be unitized in this proceeding.

A. By sand thickness you mean the sand, the core volume, as used in obtaining the amount of oil in place, what I mean to say is determining the amount of oil in place determined in the applicant's plan. As to the statement the average figure as listed in Exhibit 71, Item 2 is used to determine the oil in place in that segment.

Q. And does each porosity figure, as set up for each segment, used to determine the amount of oil in place in each segment by the applicants?

A. As set up in this report, yes.

Q. It is used as a factor in the formula that is used to determine the amount of oil in place, is that right?

A. Yes.

Q. If the porosity is increased in any particular segment, would that increase the amount of oil which is calculated to be in place in that segment?

A. With each increase in porosity, of course the amount [fol. 1518] of oil in place in that segment would be increased.

Q. In the unit of that figure of the formula?

A. Yes.

Q. And if the porosity were decreased, then accordingly the amount of oil will be decreased.

A. Yes, it varies as porosity varies.

Q. In order to obtain the porosity figures, I believe you testified that the applicants used an average weighted figure, is that correct?

A. They call it weighted average method.

Q. Now, in obtaining or what information or with facts, what facts were used by them in obtaining this porosity percentage in each of the segments?

A. Well, in each segment——

Q. Well, the same was just used in each segment, the same method?

A. Yes, the same method.

Q. And the same type of facts were used to make that determination in each segment?

A. Yes.

Q. Now then, what datum and facts were used by the applicants?

A. Well, they have limited some, I don't know the exact number, but something like 30 points in that core data that [fol. 1519] was used to determine the porosity.

Q. And what do they do with these porosity figures that were obtained from that core data to determine the porosity figure to each segment?

A. As I understand that method, they take the core data and where the porosity is now too low, including all of the vertical section of the cored section of the well to arrive at an average porosity figure for that well and if they had several wells in there, they took that average. They took

the average between the wells where the permeability was very low, that section was excluded as I understand that, and that porosity section was not included, that porous section was not included in the average section of the wells.

Q. Then that average was obtained for the entir section?

A. Yes, if they had four wells in the one area with so much average porosity averaged by the taking of the vertical section, they took four wells and averaged them.

Q. Then they found the porosity of Sections, or rather Segments B, C, D, and E, but Segment A had a lower porosity than other segments.

A. Segment A 15, for B, C, D, had 17 per cent and E 16 per cent.

Q. Now, I will ask you whether or not it would have been more equitable and whether or not the interest of the various tracts should have been more accurately and equitably obtained, had the acreage been figured separate for [fol. 1520] each tract rather than by segments used as a whole.

A. Yes, more accurately and equitably as to the tracts around that well.

Q. Could it have been figured by tracts from the data that they had as well as by factors?

A. Yes, I suppose they could have assigned an area to each cored well that they have and have an average for that area rather than the average for the sector and it would have perhaps been more equitable than an average for the segments.

Q. Had the applicants determined the porosity for each tract separately would that have resulted in a different interest and being finally contributed to the owners of each tract and interest that was attributed to the present plan.

A. Yes, it would have varied as the porosities varied, however, with the data that they have they couldn't have enough for each separate tract to determine separate tracts, like for Segment A, they had 1-2-3-4 wells cored and there are several more tracts and more wells on that. There are 12 tracts in the whole Segment A, so they would not have had core data for each tract, however, they could have assigned one of the cored wells near that tract to that tract.

Q. Would that procedure, in your opinion, been more

equitable and more nearly accurate than the procedure used?

[fol. 1521] A. I believe so.

Q. Now, will you refer to Exhibit 71 again and state to the Commission what that shows, the probability attributed to each segment by the applicant.

[fol. 1522] A. I don't know whether this Exhibit 71 shows the permeability, or not.

Q. I will ask you if it isn't a fact that an arbitrary permeability was shown by the Application and attributed to the Medrano sand?

A. As I gather from what I can find here, the permeability figure was more or less estimated. The figure of 300 millidarcys, which appears on page 4 in this Exhibit 71, was an estimation or guess from looking at all the core data, and was not the weighted average, therefore it's the same permeability figure that was attributed to the sand.

Q. Has the permeability factor ever been taken into consideration in dividing the oil and gas among the persons entitled thereto?

A. The permeability is merely,—it isn't an indication of the amount of oil in place in that sand, so as to the permeability being of any help in increasing the equities, the only thing that can be considered is whether the oil can get to the well bore or not.

Q. Would wells of high permeability tend to be more valuable of,—than wells of low permeability?

A. Under the law of capture it would cause it to be more valuable because it would, it could produce more oil in a given time.

Q. Then, considering the present development of the [fol. 1523] Medrano sand, I'll ask you whether or not in fixing the equities between the parties the permeability of the sand could be taken into consideration?

A. As I understand the formula it was not taken into consideration in the formula for figure equities, and unless you put it in the formula the permeability could not have been used, however, under the law of capture the permeability means much to the property owner or the lease owner.

Q. The permeability was not considered then in fixing the

equities and dividing the oil and gas among the persons entitled thereto, is that correct?

A. It was not used in the 80 percent,—they might contend that it was used in the 20 per cent current income.

Q. Now, the 20 percent of present income was modified by the regulatory order of the Commission, was it not?

A. Yes.

Q. Giving each well a certain allowable?

A. The maximum allowable is 200 barrels a day.

Q. And the open flow of the wells was not considered in making a division between the parties?

A. No.

Q. Should that factor, in your opinion, be considered in dividing the oil between the parties?

A. In this 20 percent factor, I think it should, because the order of the Commission says that well may produce [fol. 1524] 200 barrels a day.

Q. I'll ask you if it isn't a fact that that well will have a longer life than a well which has less favorable conditions underneath it, that is also limited by the same allowable?

A. In the same sand zone, that should be true.

Q. Now, Mr. Murphree, in regard to the point in the top of the structure at which gas should be reinjected in recycling, I'll ask you to state whether or not engineers differ as to the point at which injection should be made in the gas structure?

A. Oh, yes, we have arguments back and forth that way.

Q. I'll ask you to state whether or not those matters are concerned with the propriety or properness of operation?

A. Well, no, that means that one engineer may consider this well a better point and another engineer may consider another well a better point and the only way you will really find out is to try it,—that's the only way I can answer that question.

Q. And you have somebody to make the decision?

A. Well, whether his position was better than the other would be determined after it was tried out.

Q. But in the event one man was to make the decision there would be no argument, would there?

A. That's true.

Q. As a matter of fact, after the matter was arbitrarily [fol. 1525] fixed you wouldn't have any opinion in fixing the method which is probably the best to be devised from all good opinions, is that correct?

A. That's correct.

Examination by Mr. Adams:

Q. Mr. Williams asked you why all the wells producing oil from the Medrano section in the West Cement pool, asked you if all those wells were on the pump,—I believe you said they were?

A. My statement was that all the wells that the Corporation Commission shows an allowable report for were on the pump.

Q. Now, that wouldn't effect your previous answer, would it, that the lifting costs were a factor which were not considered but which should be considered in determining the value which each separate lease might contribute to any Unit?

A. No.

Q. Now, that is true, is it not because of the fact that there could be wells producing from the Medrano section in the West Cement field, perhaps as low as three barrels a day and other wells produce 200 barrels per day, and it would cost as much to lift the three barrels as it would the 200 barrels?

A. Well, it might, I believe, run higher to lift the three barrels.

Q. The cost of lifting the three barrels would cost more [fol. 1526] than 200 barrels?

A. Cost more per barrel.

Q. And in cases where you have water produced with the oil it is higher?

A. That's true.

Q. While other wells producing oil have the necessity of lifting water also and disposing of it or treating the oil, is that correct?

A. Yes.

Q. And it is for those reasons that you believe that factor should be considered?

A. As between the operators, it should, yes.

Q. And you say it makes some slight difference as between royalty owners?

A. That's right.

Examination by Mr. Williams:

Q. Mr. Murphree, I believe there are 72 tracts involved in the proposed Unitization. Do you know how many of those tracts have on them wells from which cores have been taken?

A. They are all listed here on this copy of this Exhibit.

Q. If I were to tell you that the figure was 15 tracts out of 72, would that appear to you to be a reasonably correct statement?

A. Well, let's count them here,—yes 15 is right.

[fol. 1527] Q. Fifteen,—in other words there are fifteen separate tracts on which you have core data and 57 tracts on which you do not have?

A. Yes.

Q. And only fifteen on which you do have core data?

A. That's right.

Q. Now, then, as an engineer, under like circumstances I'll ask you if you wouldn't, involving such a problem as this, use weighted average in order to have the tracts alike?

A. Well, I suppose the engineer who prepared this would go into this having in mind, for instance, could I do this on the blackboard?

Q. Yes, go ahead.

A. These squares represent wells which have been cored (indicating on blackboard). Take this particular well, for instance (indicating on blackboard), if you were to use the data on that well——

Q. Now, name the well, and then the area?

A. On Exhibit 54-R, which is the map of the Medrano sand,—the Gulf-Pell No. 1, that well was cored and they have the core data on it. The porosity was 13.30 percent. Now, it would be much easier to use the core data from the Gulf-Pell, No. 1, from the well to the West, than it is the Stephens-Pell, or the Stephens-Dome-Bo, than to use this well. Then the argument comes up "What shall I use", shall I use the well to the East of the Gulf-Pell No. 1, or [fol. 1528] whether to use the porosity figure on Gulf-Pell No. 1, or come down here and use the porosity figures on

the Gulf-Sherritt 1, or 2 and 4, so the Engineer does have quite a problem.

Q. What is the diameter of the core taken from the Gulf-Pell well?

A. It's less than 3 inches.

Q. Is the Core Analysis taken from that well, would that represent only the porosity and permeability as contained in that three inch zone?

A. That's right.

Q. In other words, you tell the Commission that the use of that three inch core, that determines or has determined the porosity of the well and would determine the porosity better than the use of the average or of the core data?

A. I think it is, because the porosity means the tightness,—over here (indicating on map) it was 14.50.

Q. Well, is there any variation in the porosity between the three wells that were cored in that segment on the Sherritt lease?

A. I don't know,—don't have all the figures here on that lease.

Q. Well, in the porosity of the field,—have you found that there is a uniform, that it is uniform from one point to another?

[fol. 1529] A. No.

Q. Then, in the absence of uniform coring, wouldn't it be better to use the average than to use one core and,—as reflecting what the porosity would be in any one portion?

A. I don't think so.

Q. How can you determine the porosity from a cored well?

A. Well, I know the method is accepted as Engineers,—which is accepted as proper.

Q. That's the method that was used in this case?

A. Yes.

Q. But say you have 15 percent porosity here (indicating on map) and you have some wells here slightly grading to the West,—do you find any evidence of gradation to the West in that section?

A. This well here (indicating on plat) where we had 13.3, the Stephens-Dome-Bo.

Q. What was the porosity of Sherritt 2 and 3,—no, let

me withdraw that question. Mr. Murphree, in all of your testimony in respect to the recovery under these methods of operation, you have laid considerable stress, as I have understood your testimony, upon the continuance in effect of the present order of the Commission, limiting withdrawals of gas from a gas-cap,—am I correct about that?

A. Yes.

Q. What importance do you place on the continuance of [fol. 1530] that Order in effect?

A. Well, to maintain the pressures.

Q. Now, under that Order, Mr. Witness, the withdrawals of gas from the gas-cap are limited to approximately 4½ to 5 million cubic feet per day,—is that correct.

A. Yes.

Q. And under that Plan of Operation isn't this gas to be compensated for that gas that is retained in the reservoir and——

A. There is no method of compensation—wait a minute,——

Q. The gas under the lease would be used to maintain the pressure in the oil and gas zone?

A. That's right.

Q. Now, Unitization is only the manner in which these owners can be compensated,—Unitization is the only manner in which these owners can be compensated for that gas?

A. Yes.

Examination by Reford Bond, Jr.:

Q. Mr. Murphree, are you familiar with the Petroleum Engineer, a Magazine published by this company, (Exhibiting magazine to witness) and in general circulation?

A. Yes.

Q. Is that considered to be one of the oracles of the Petroleum Engineering Profession?

[fol. 1531] A. Well, it's articles are written by various Petroleum Engineers, Geologists, and Physicists.

Q. I hand you the Petroleum Engineer, for August, 1944, and will ask you to turn to page 67, and ask you to state what that is?

A. This article is entitled,—"Method of Approach to Determine the Optimum Spacing of Wells",

Q. By whom is the article written?

A. By N. Van Wingen.

Q. Do you know who he is?

A. I see down here it states that he is the Senior Production Engineer of the Richfield Oil Corporation.

Q. You will note at the bottom of column 2 that the word "Optimum" as used in well spacing is defined,—will you look at that definition and state whether or not in your opinion that is a good definition of the word used in connection with well spacing?

A. Do you refer to the definition of the——

Q. Yes, the definition of the word, "Optimum"?

A. Well, this states that well densities of spacing should be definite enough——

Q. Well, I am asking you about the definition of the word, "Optimum",—there it is underlined with pencil?

A. Well, I want to clarify my answer.

Q. All right.

[fol. 1532] A. He states that the density should be such that the maximum profit by the operators would be realized.

Q. Yes.

A. He doesn't mention the maximum recoveries, so, in general, I agree with him.

Q. What is your definition of it?

A. Of Optimum Well Spacing?

Q. Yes.

A. To get the prestest ultimate recovery without it being too expensive.

Q. Now, Mr. Murphree, I'll ask you to look in the third column of the first page of this article, where you will note a statement underlined, which statement I'll ask you to read to the Commission,—do you see it?

A. Yes, this article states, (reading), "For the purpose of carrying through a sample analysis on a quantitative basis, application was made to an actual California reservoir, the Bell zone of the Sante Fe Springs field, whose characteristics can be considered to be well established due ot its now having reached a realitively advanced stage of depletion."

Q. Now, Mr. Murphree, what is the meaning of the word, "field", as used by the writer of that Article?

A. Well, my conception of the meaning of the writer, he

says "the Bell zone of the Sante Fe Springs field",—the [fol. 1533] Bell zone would include all——

Q. Well, are you familiar with the word, "field", as used in oil and gas common parlance?

A. Yes.

Q. Well, what does it mean?

A. For example, the Oklahoma City field would include all the zones in the field, the word, "field", would embrace the whole surface area that produced oil.

Q. All the sand producing horizon?

A. Yes, that's my conception of "field".

Q. Then the West Medrano sand would be part of the West Cement field, which was discovered back in 1922?

Mr. Williams: Wait a minute,—we object to that question.

Chairman Bond: Sustained.

Q. Would you hand that article to the Reporter and ask him to mark the underlined portion only, as Exhibit 111?

(Reporter's Note: The witness hands the Reporter the publication entitled, "The Petroleum Engineer", and marks, as Exhibit 111 that portion of the article, on page 67, reading as follows:

> "For the purpose of carrying through a sample analysis on a quan-tative basis, application was made to an actual California reservoir, the Bell zone of the Sante Fe Springs feild, whose characteristics can be considered to be well established due to its now having reached a relatively advanced stage of depletion."

[fol. 1534] Mr. Reford Bond, Jr.: Now we offer Exhibit 111 in connection with the witness re-direct examination.

Chairman Bond: Received.

[fol. 1535] Mr. Murphree is on the stand.

Mark Adams examines the witness:

Q. Mr. Williams asked you, Mr. Witness, by restriction on the production of gas in the Medrano section of the West Cement Field would record the time of recovery by the owners of mineral rights by the recovery of royalty to which they would be entitled, wouldn't your answer in that

respect apply equally to restriction of oil production of oil in the oil bearing portion of the area in the same field?

A. Yes.

Q. As you understood it, the purpose of the present order of the Commission as to protecting correlative rights of all persons owning interests in this area, isn't it?

A. As I understood the Commission's purpose, I wasn't at the hearing, as I understood, the purpose was to give each owner the same volumetric withdrawal of gas as well as oil.

Q. You think that that is proper?

A. Yes, I do.

Q. And you think that by following that course that the interest of the various mineral interests under each tract will be protected.

A. Yes, it would.

Q. So you don't think that there is any preference given the mineral interest holders where there is mineral interest [fol. 1536] where the gas is located.

A. No, I don't believe so.

Q. That is all.

Mr. Williams examines the witness:

Q. Mr. Murphree, how long can the 20 gas wells in the pool be operated at a profit with the maximum gas allowable of 5 million cubic feet a day from the pool?

Mr. Adams: We object to that, if the Commission please as long as correlative rights are protected it is not a question if a man can operate his property solely to his profit, that is what we have correlative rights for.

Chairman Bond: That order may not last long, the Commission made its order to protect the rights of the people out there, that is put in force to keep one company from running all of the gas out of the field.

A. (Witness) As to the exact number of gas wells, I haven't counted them, but 5 million cubic feet spilt up among the wells, that is approximately 18 gas wells, that will give each well less than 300,000 cubic feet per day or somewhere near 300,000 feet per day at 5 cent per thousand.

Q. Do you know what the casing head pressure of these

[fol. 1537] gas wells is today, approximately in round figures?

A. About 720 pounds.

Q. And do you know what the pipe line pressure is in the field to which that gas is sold.

A. It's in the neighborhood of 600 pounds.

Q. It isn't going to be very long then until boosters will have to be installed to boost gas into the line.

A. No, sir, that is true.

Q. Can you afford to put in boosters to boost it in the line at 5 cents a thousand at 300,000 per day?

Mr. Adams.: We object to that; the producers will be required to boost the gas.

Mr. Williams: How will it get into the lines?

Mr. Adams: Reduce the line pressure.

Mr. Williams: What is your answer?

Mr. Adams: I object to it.

Chairman Bond: The factors should be asked the witness. Do you know how long it will be before we have to boost it out there, it will put that in a proper question and ask him in a proper way, you can ask him a hypothetical question, how long it will be.

Mr. Williams: He said it won't be long.

Chairman Bond: Do you know how long it will be?

[fol. 1538] A. (Witness) According to a diagram, the pressure will be below 600 pounds in late 1948 and you have to have a little pressure differential to get it in the lines, so in 1948 most of the gas will have to be boosted into a line carrying 600 pounds, if they will maintain 600 pounds.

Chairman Bond: As one of the questions that the Commission wants in the hypothetical question, you can't say that it will be 600 pounds next month or next year.

Mr. Williams continues with the witness:

Q. Are you acquainted with the magazine, Producer's Monthly?

A. I have seen it.

Q. That is one—there is one of the articles by an engineer, petroleum geologist, is it not?

A. Yes. (Mr. Williams shows magazine to witness.)

Q. It's an article and magazine of the oil industry, is it not?

A. I suppose you would classify it as that.

Q. I hand you what has been marked by the Reporter as Exhibit 112, and ask you to state what that is or whether you recognize that as being a photostatic copy of certain pages torn from the magazine to which reference has been made, namely, the "Producer's Monthly."

A. Yes.

[fol. 1539] Q. An article by Mr. Frederick Squires.

A. Yes.

Q. Do you know him?

A. I don't know him.

Q. Do you know who he is?

A. It states here he is a petroleum engineer of Illinois, Geological Society.

Chairman Bond: I think that you should prove that by a witness who knows him.

Mr. Williams: This is introduced by a man under the same authority under which they introduced exhibits.

Chairman Bond: That is by a man that knew him, this witness will have to read the article, if you will state that he is an authority.

Mr. Williams: I don't understand how we will do that unless we use other men that are here.

Reford Bond, Jr.: What we did was introduce men concerning the field being an oil field twenty years before 1945.

Reford Bond, Jr. examines the witness:

Q. Mr. Murphree, in the plan submitted by the applicants, was there any distinction made between the 1/8 royalty interest and 7/8 working interest in the division of the gas that a person was entitled thereto?

[fol. 1540] A. I don't believe there was.

Q. In other words, the oil and gas was attributed to tracts and the royalty owners got their proportionate share of 1/8 and working interest and over-riding royalty owners the balance.

A. Yes.

Q. Now I will ask you to state to the Commission if there

are instances in which the royalty owners' interest will not be the same to the royalty owners' interest with reference to the division of the oil and gas, the way they are entitled thereto.

A. Will you restate that question, I don't understand it.

Q. Well, I will ask another and proceed differently. I will call your attention, for example, to Tracts 67, 68, 69 and 70 which are known as the McClaren leases in the northeast quarter of Section 6 and call your attention to the fact that these leases are not developed, there are no wells drilled thereon to the Medrano sand horizon, now I will ask you if it isn't a fact that under the plan the sand area under these four tracts was determined and arbitrarily divided by two, what was used in connection with determining the amount of oil and gas of owners was entitled to have, is that correct.

A. Yes.

Q. That is the theory of the plan?

A. Yes.

[fol. 1541] Q. Now then, isn't it a fact that the interest of the royalty owners and interest of working interest, owners in working out the amount of oil and gas to be attributed to that tract, had a working interest inasmuch as the lessee has not developed the tract and probably will not have to develop the tract and the royalty owner will get the same amount of royalty under the lease regardless of whether the tracts are developed or undeveloped.

A. Well, it's a fact that Anderson-Prichard and Amerada won't have to pay for drilling a well but will have to pay for an interest in producing interest already drilled and the royalty owner will only get one-eighth of the oil, but the formula divided by the sand volume by 2, before estimating the oil in place.

Q. Now then, with that in mind, I will ask the question I asked first, whether or not the interest of the royalty owner or interest of the operator are always the same when it comes to dividing up the money?

A. Under 1/8? It is.

Q. Do you think that that interest, with reference to the division, is always the same as to whether developed or not?

A. Well, as I stated before, the companies are not going to have to pay out a large sum for development, therefore, the royalty owner will still get his one-eighth, as they figured they cut that royalty in half when they cut the sand volume in half.

[fol. 1542] Q. Now as an engineer, suppose you had a client who was the owner of tracts 67 and 68, the McClaren A and B, Anderson-Prichard leases, and let us assume that there were no wells drilled on either one of those tracts and that Phillips Petroleum Company and others had filed an application with the Corporation Commission to unitize the Medrano pool claiming that a part of the Medrano sand underlay these two tracts here, that fact as disclosed by actual drilling operations being such that the exact thickness of the sand and its porosity and permeability could not be obtained with definite certainty, would you advise your client to take a reduction in the portion of the oil and gas in the unit and enter the unit as a financial proposition rather than to drill wells on the lease themselves to explore and determine actually as to whether that was paying production in the Medrano oil zone under that lease for gas.

A. I believe I stated I would recommend a well on Tract 67, but under the present information, I would not on 68. I would not advise him to take the reduction or cut him in half, now his interest there, I think that it is a better interest than that.

Q. Do you think that the royalty owners under that tract are receiving an equity in sand volume as arbitrarily cut into?

A. No, I don't think so.

Q. Do you think that the fact that no operator would not [fol. 1543] have to drill the tract would be an inducement to agree that this sand volume be cut into?

A. No, that doesn't make him any more money.

Q. Now, under the plan, the operators have tracts 67, 68, 69 and 70, will not have to expend the expense of an exploitation on those tracts, will they?

A. As set forth in Exhibit 1, each man is to share and share alike in the expense of wells already drilled.

Q. Would you advise your client to share in the expense

of the wells already drilled if they could and receive an equal interest?

A. If he didn't take the reduction of 50 per cent it might be a fairly good deal.

Q. If he did take the reduction of 50 per cent which Anderson-Prichard and Amerada have done, will he make money on the deal?

A. The royalty owners?

Q. No, the operators.

A. No, not on tract 67. He would, probably, on the other three tracts.

Q. In other words, then, you think that the allocation as assigned by the McClaren is not equitable.

A. I don't think so, by cutting it in half, I don't think that it shows them in the same category.

Q. Now, calling your attention to Tracts 1, 2, and 3 in the [Vol. 1544] northwest end, defined by dry holes, and I will ask you if the sand volume under those tracts is given the same treatment as in the southeast?

A. If you refer to 50 per cent reduction, they have.

Q. Did you in your opinion, do you, those tracts 1, 2, and 3, I believe will not produce oil, is that correct.

A. They have been tested by Stephens Petroleum Company and will not drill a well and spend $70,000.

Q. They gave those tracts the same treatment as the McClaren Wells have that produce.

A. Yes, they have the same treatment.

Q. And is that the reason that you think that this plan is inequitable?

A. Yes, and another reason is that Stephens-Pell No. 1 doesn't have any oil to its credit in the Commissions records, it doesn't produce any oil, and coming down to Gulf-Pell, they have produced very little oil in the west end, here these are poor wells (indicating), but on the other hand Anderson-Prichard 3a and 4a they are prorated wells, they make more than 200 barrels per day, they are not bad wells. Tract 67 will make a pretty good well with one well drilled on it.

Q. Now, Mr. Murphree, in your testimony with regard to the value of the gas as set up in the applicant's plan at

[fol. 1545] 5 cents per 1000 cubic feet, I believe that is correct.

A. Yes.

Q. I will ask you to give the Commission your opinion as to the equity allowed the owners of the gas in consideration of the fact that the Commission has made an order in the Hugeton field at a minimum price of 7 cent gas.

A. There is no doubt of the shortage of gas and value put on it, that it should be worth as much as Hugeton gas at 7 cents per thousand.

In the event of the Commission's order in the minimum price fixing of gas was sustained, what in your opinion would be the equitable or inequitable treatment of the owners of gas in the plan under this unit?

A. Considering the difference of price of 2 cents there, the gas owners have lost approximately a 2/5 interest.

Q. 40 per cent difference to them?

A. Yes.

Mr. Adams Examines the Witness:

Mr. Bond asked you if the lease operators on some of these outlying tracts under the unit plan will be relieved of the expense of the development, and I believe you testified that he would and the lease operators lost also, by sharing the risk.

A. Yes.

[fol. 1546] Q. And there is considerable risk in developing or attempting to develop the Medrano production in the outlying tracts.

A. Yes.

Reford Bond, Jr. Examines the Witness:

Q. Do you not, in your opinion, believe that the interest in the 7/8 working interest of the 1/8 royalty be fixed separately raised and together in some of the tracts.

A. In some of the tracts?

Q. Yes.

A. No, in these tracts that have been cut one-half, I would think so, yes.

Mr. Adams Examines the Witness:

Q. The unit plan doesn't use in any respect as a factor the consideration of the risk about which I just asked you.

A. No.

Q. That is all.

Mr. Williams Examines the Witness:

Q. Mr. Murphree, figuring the equity to the oil tracts, the price of $1.52 is used.

A. Yes.

Q. As a matter of fact, the price at the present time is $1.85.

A. It is 36 gravity oil and 40 gravity is $1.95 and you lose 2 cents per degree gravity, it's about $1.87, isn't it?

[fol. 1547] Q. Now, the difference between $1.87 and $1.52 is approximately the same as between 7 and 5, isn't that true?

A. No, this difference would be about 22 per cent.

Q. And the ratio will be in favor of the gas?

A. Yes.

Q. As I understand your testimony, Mr. Murphree, although, under unitization, the Amerada will not be required to drill wells on the McClaren lease, they will be required to pay for their proportionate interest in the entire field development to date and also their interest in future wells.

[fol. 1548] A. I stated that in my testimony.

By Mr. Bond:

Q. But they wouldn't be required to pay for any dry holes if any had been drilled, would they?

A. No.

Q. They are all good producing wells?

A. Yes.

Examination by Mr. Williams:

Q. Do I understand you to say that the Stephens Petroleum Company drilled the Dome-Bo well?

A. I believe Cities Service drilled the well.

Q. Isn't it a fact that Cities Service Company purchased that lease after the Dome-Bo well was drilled and abandoned?

A. Well, I don't like to talk about operators, but——

Q. Well, my question is, the Stephens Petroleum Company bought this lease after that?

A. Well, that's true.

Examination by Mr. Adams:

Q. You don't know whether they paid any substantial amount for it, do you?

A. I don't know anything about that,—I know I. P. I. O. drilled the well and it is now Stephens property.

Mr. Reford Bond:

Q. Stephens may have had an interest in it when I. P. I. O. drilled it, for all you know?

A. That's true.

Witness excused.

[fol. 1549] Wayne Rowe, called as a witness, being first duly sworn, testified as follows:

Direct examination.

By Mr. Reford Bond, Jr.:

Q. State your name, please?

A. Wayne Rowe.

Q. Where do you live, Mr. Rowe?

A. In Caddo County, about 26 miles Northwest of Lawton.

Q. What is your business?

A. Livestock.

Q. How old are you?

A. Forty.

Q. You have control and own an interest in the May C. Rowe land in the Southwest of the Northeast of 36-10-6?

A. That's right.

Q. Mor. Rowe, are you one of the protestants in this matter?

A. I am, yes.

Q. I'll ask you to state to the Commission if you know the amount of the,—first do you know the meaning of the

word, "field", as used in speaking of oil and gas in common parlance?

Mr. Williams: Oh, we object to that,—this witness has qualified as a livestock man.

Chairman Bond: You might qualify him further, he hasn't answered yet.

A. I do.

[fol. 1550] Chairman Bond: You might ask him further, —he says he knows.

Q. What is the meaning of the world "field", as used in connection with oil and gas in common parlance?

A. Well, it would be the surface area that is underlain with oil and gas structure.

Q. I'll ask you whether or not, in common parlance, it would include all the producing oil and gas sand under a particular surface?

A. It would, yes.

Q. Now, Mr. Rowe, I believe Mr. Murphree testified that about two and a half acres of your forty acre tract has been included within the applicant's plan as lying within the Medrano zone?

A. That's right.

Q. You have other producing wells on that particular forty acres, I believe?

A. Yes, we have.

Q. Do you know from what sands they are producing?

A. The Fortuna sand, the Rowe sand,—I believe there is another one or two but I don't know the names,—there is a series of sands.

Q. Do you know how much is attributed to your lease?

A. It would amount to about $2.00 a month.

Q. Do you know how much that would be for the entire [fol. 1551] life of the pool or field?

A. It would figure out between $400.00 and $500.00.

Q. I understand that under the terms of your lease it expires when oil and gas is no longer produced in paying quantities?

A. That's my understanding of the lease, yes sir.

Q. Now, are you familiar with the price usually paid for

bonuses on leases in surrounding areas which are underlain by the Medrano sand?

A. No, I don't believe I am familiar with that.

Q. You are not familiar with those prices?

A. No.

Q. Now, will you please state to the Commission whether or not you want this little piece of land included in the Medrano Unit?

A. We do not want it included. And I am speaking for my mother and my sister,—we are joint owners of the property.

Q. I'll ask you to tell the Commission why?

A. Well, if there's only that small part there we are entitled to we don't feel that we are entitled to have it in there, and we do feel that there is a deeper sand there to be developed and that little ten acres in this Unit would hinder that development.

By Mr. Adams:

Q. When you say you speak for your Mother and Sister, you also speak for yourself?

A. That's right.

[fol. 1552] Q. When you say this might hinder development, you might hinder the development of lower horizons?

A. That's right.

Examination.

By Mr. Williams:

Q. Is this tract the only tract you are interested in?

A. I don't believe I understand you.

Q. You testified to your interest in the May Caddo-Rowe?

A. Yes.

Q. Are there any other tracts in that field in which you have an interest?

A. Only in that one quarter section.

Examination.

By Reford Bond, Jr.:

Q. Mr. Rowe, is there any other statement you want to make to the Commission other than the statement you have made,—if so, go ahead?

A. I don't believe, if the Commission please,—I don't believe the royalty owners, are the land owners, I should say, are going to be well pleased with this Unit Operation. I believe the- would rather have the other type of operations, that they have been used to.

Q. Is that all?

A. That's all.

By Mr. Adams:

Q. Your last statement, is that of the reason that you [fol. 1553] have a contract,—your lease sets forth a contract and you feel that you ought to be permitted to deal directly?

A. Yes, that's right.

Q. And you couldn't deal directly under Unitization?

A. That's right, you lose contact.

Witness excused.

[fol. 1554] Jim Holland, called as a witness, being first duly sworn, testified as follows:

Direct examination.

By Reford Bond, Jr.:

Q. State your name?

A. Jim Holland.

Q. Where do you live?

A. Crowley County, Colorado.

Q. Are you the owner of one of the leases in the West Cement Medrano field?

A. Two of the leases.

Q. Mr. Holland, which lease is it that you are interested in?

A. The Phillips-Margaret and the Gulf-Holland,—32 and 33 I believe, the tracts are.

Q. Now, Mr. Holland, are you one of the protestants in this matter?

A. I am.

Q. Do you know the meaning of the word, "field", as used in connection with oil and gas in common parlance?

A. When I worked in the oil fields twenty some years ago, it applied to the surface area where oil was being produced or had been produced.

[fol. 1555] Q. Is that your definition of the word, "field", used in connection with oil and gas in common parlance?

A. As an oil field, yes.

Q. I'll ask you to state whether or not the word, that word, "field", would include all of the area underlain with oil and gas?

A. I believe so. When I worked at West Cement field twenty years ago it was the West Cement field and it is still West Cement today.

Q. Now, Mr. Holland, you are objecting to the inclusion of your land in this Unitized area and you are objecting to the Medrano sand as being Unitized,—will you tell the Commission why?

A. Well, for many reasons. I might state that I am not opposed to Unit operations, if it can be done fairly and with the consent of the land owners, such as was done in the field, in Louisiana and over at Schuler field, in Arkansas, but I am very much opposed to this present plan.

Q. Can you state what particular features of the Plan you object to?

A. Well, there are many, but I will state a few. It was forced upon us without any regard to our rights in the matter, and it isn't fair and equitable, I don't believe. We people up here in this corner,—over here are five wells [fol. 1556] (indicating on plat),—the Stephens-Gulf, the Pell-Gulf, the Pell-Stephens, and Stephens-Brown and the Stephens-Odla-thale, and Stephens-Dome-Bo, about three hundred and twenty acres of land has been allocated about 3,000,000 barrels of oil. We find a dry hole here (indicating on plat) a dry hole (indicating on plat),—down here is the

Stephens-Pell well,—these wells are given an allowable of 3,500,000 barrels.

[fol. 1557] These people up here (indicating) will furnish the oil for the Noble experiment, they want to know where that is coming from and I might add that Gulf lease,——

Q. That is Gulf-Margaret?

A. Gulf-Holland well, we have the Phillips-Holland well and it made its allowable according to the figures in the last plan at $98.90 per day.

Q. What well?

A. Amerada-Hartshorn No. 2, according to figures in the plan it made $98.90 per day in a few months, after I went to the Gulf man and asked for an offset and he told me that they did not have the necessary equipment and that they had to have a heavy duty rig and the heavy duty rigs were at West Edmond field, and because of the war effort they were being drilled out there and, of course, I figured that we were all interested in the War effort and didn't say anything, and now I have been forced to sit here and listen to all of this and I heard an attorney say they would have them if they didn't plan it.

Mr. Lowe: Who made that statement?

A. A Mr. Adams who has an office in the Apco Tower on the 32nd floor, he bought the lease.

Mr. Lowe: What is his name?

A. Mr. Adams, that will perpetuate that lease and after I talked to Mr. Adams, we in our family held a family [fol. 1558] conference, there are five that own ⅞ of the ⅛ royalty and we decided that we would let the lease run out if Gulf didn't want to drill it and drill it again; our parents had received about $200 per acre since 1921 and now we find that under this plan it will perpetuate it forever and give a few dollars and when you take the allotment and figure it up on the Magnolia and ours and compare it with others like Tom Walker, there is a big difference then and I have a whole notebook here that I put down for several months, but if I talked on and told all of them, we would be here when it starts snowing.

Reford Bond, Jr., continues with the witness:

Q. How many wells drilled on Phillips-Margaret?

A. One.

Q. What size is that lease?

A. 80 acres. There is 1 and 59/100, it lacks 1 and 59/100 being a full 80.

Q. The one well on that lease is an offset to what well?

A. The Palmer well north and Phillips Hartshorn east.

Q. That is the well on the Phillips-Oaks that is off to the northwest to your 80?

A. Yes, sir.

Q. Has there been any well drilled to offset that well?

A. In the Medrano sand there was a 2400 foot well on that corner.

[fol. 1559] Q. The lease was given as 80 acre producer on your land?

A. Yes, sir.

Q. I will ask you to state if your lease was fully developed.

A. It was not.

Q. Have you been advised about that?

A. Engineers and lawyers, yes.

Q. And you make that statement on that advice?

A. Yes.

Q. The Gulf-Holland has no well at all?

A. None whatsoever.

Q. And never developed?

A. Never have been drilled.

Q. And you have not received any royalty?

A. No royalty.

Q. What is the primary term of the Gulf-Holland lease?

A. Five years.

Q. What is its expiration date?

A. We have two leases with the Gulf and I believe one runs out in March and the other in December, 1948.

Q. And unless the Gulf drills on that 80 acre lease, you will get your lease back at the end of the year?

A. Yes. I said that we have two leases, the other Gulf lease is 6-10, I am confused about the date, but the lease [fol. 1560] is here in the court room, it is the 16th of December, 1943, that was when the lease was given.

Q. You would rather have your primary term expire on its regular date unless it has some development on the lease to justify extension of that and not to take the money offered to come in the unit operation.

A. Yes, we decided to do that instead of bringing court action against Gulf.

Q. Is there anything else?

A. I could take up the Commission's time in speaking against this and against the law, this law has many, many things about it that the average lease holder and land owner doesn't like and we find out more all the time, we understood all the way along and heard some lawyers plead before the Senate Committee to leave this law for the good judgment of this court, that they would see that they would do what was right and not to tamper with it because it would be a reflection on this Commission, two weeks ago, I heard some of the same lawyers plead that this Commission, in the West Edmond hearing, had no jurisdiction, they could take it or leave it and get it one way or the other, it occurs to me it not only hangs the royalty owners, but hamstrings the Commission, and that is what I think—it should be tossed out the window and it seems that 10 per cent of the people can't come to the Commission and [fol. 1561] this lawyer was pleading that this plan was set up and put in operation to be operated no matter what the Commission says until 10 per cent of the operators come in, and on the other hand 90 per cent of us come in, you will be powerless to help us on any law of secondary recovery, thousands and thousands of dollars lost in 20 years and they will not agree and this is an old deal and certainly needs secondary recovery and this field might come in under it, and there is many, many things about this plan of operation we have our lease, the Company came out and bought and paid for it and we were satisfied and apparently they were satisfied; we are asked to trade this lease for a pig in a polk. It's very undefined about what they will do before I consent to surrender that lease, we should be given a contract either as individuals or as a whole stating what they will do or not do. There are many things, I could talk along here indefinitely.

Q. Is that all you care to say to the Commission at this time, you still leave all the answers out in your pleading.

A. That is all at this time.

Mr. Adams: Mr. Holland, this mineral interest that you own in this area under discussion arises by reason of your royalty interest.

A. We own the surface.

Q. In addition to surface, you own minerals to which you referred?

[fol. 1562] A. Yes.

Q. How long have you and your family owned the real estate rights?

A. Since 1906.

Q. And this property has been or these farms or farm land has been in your family for over 40 years?

A. Yes, sir.

Q. And has some member of your family farmed this land during this time?

A. For a great many years, not all of the time however, but for a great many years and is still the home of one member of the family.

Q. And as I understand it, you only sold to other parties 1/8 of your mineral interest?

A. Some of the family did, a small amount sold 1/8 of 1/8, that is sold.

Q. And all the rest of the members have assumed the interest to the extent of their interest as developed in the West Cement field for oil and gas production?

Mr. Williams examines the witness:

Q. Your interest in the West Cement field is royalty interest in tracts 32 and 33?

A. Yes.

[fol. 1563] Q. 32 leased to Phillips Petroleum Company?

A. Yes.

Q. And 33 to Gulf?

A. Yes.

Q. I believe you testified that Tract No. 1 will bring the only well in the Medrano on the Magnolia well in Tract 32 being an offset to the Sturba here to the north.

A. It is an offset, when it was drilled there, that has been changed under the P.A.W. and under the present order of the Commission.

Q. It is No. 1 Sturba at the time it was drilled?
A. Yes.
Q. What adjacent well has not been offset?
A. The Phillips-Oaks Nos. 2 or 3.
Q. Phillips-Oaks No. 2?
A. In the northeast section of 34.
Q. That is the immediately northwest corner of your tract?
A. Yes.
Q. And it's your contention that you are entitled to an offset well and your property is being drained in here (indicating) not having it?
A. Yes.
Q. I am talking about absence of unitization.
A. Yes.
[fol. 1564] Q. And that the drainage of Phillips-Oaks No. 2, that you are entitled to an offset well?
A. Yes.
Q. And that is true even though Phillips No. 2 is west of the Sturba fault.
A. Yes, because this plan of unitization doesn't admit that that well is there and that it is a 3.1 common source of supply.
Q. I was not asking you that, I was asking about your opinion of the facts. That is all.

Mr. Adams examines the witness:

Q. It either is or it isn't one common source of supply?
A. Yes, personally I believe it isn't and there is another reason I object to that plan of unitization, they say that there is no—down and yet they admit that it's a stone-throw of 600 feet of the line.

Witness excused.

[fol. 1565] Whereupon, Mr. O. Lindsey, of lawful age, being first duly sworn, testified as follows, to-wit:

Reford Bond, Jr., examines the witness:

Q. State your name to the court.
A. O. Lindsey.

Q. Where do you live?
A. On my homestead in West Cement field.
Q. What section is that now, Mr. Lindsey?
A. Southeast 36-6-10.
Q. Is your land underlayed by the Medrano sand?
A. Pardon?
Q. Is the Medrano sand under your farm?
A. I suppose so, they have gotten a gas well.
Q. You are one of the protestants in this matter, are you not?
A. I am.
Q. Do you wish to state to the Commission what your objections are to the unit plan?
A. Well, there is just too much discrimination between the royalty owners and the operators, it takes our rights from down there and everything else.
Q. Did you give them a lease on your land?
A. Did I?
Q. Yes.
[fol. 1566] A. Yes, sir.
Q. Who owns it?
A. Magnolia.
Q. Have they drilled all of the wells that they should drill under the covenants of that lease?
A. No, not on the south.
Q. You have examined the plan that has been submitted by the companies as to how much money you will get in case this plan is authorized?
A. Well, in a way.
Q. Will you get as much under the plan as you get now and have been getting?
A. No, not by any means.
Q. Do you know what the word "field" means when it's used in connection with oil and gas in common parlance?
A. I can't say that I do.
Q. You don't know?
A. I can't say that I do.
Q. Is there any statement that you would like to make to the Commission at this time about your objections to the unit plan?
A. I believe not.
Q. That is all.

Mr. Adams examines the witness:

[fol. 1567] Q. How long have you owned that land, Mr. Lindsey?

A. Since 1908.

Q. Do I understand you to say that you homesteaded?

A. I bought it from the state.

Q. That is your home?

A. Yes.

Q. You have farmed it all the time since then?

A. No, not all the time, but I have had a home there all the time.

Q. You feel that if this plan is put in effect it's like reaching down in your pocket and taking money out of your pocket for someone else?

A. I figure that I will have to go to making rails for a living.

Witness excused.

[fol. 1568] Thomas B. Walker, of lawful age, being first duly sworn, testified as follows, to wit:

Witness examined by Reford Bond, Jr.:

Q. State your name to the Commission.

A. Thomas B. Walker.

Q. Where do you live, Mr. Walker?

A. Caddo County, Section 1-5-10.

Q. How old are you?

A. I was 66 the 7th of March.

Q. Does the Medrano sand underlie your land, Mr. Walker?

A. I have no idea it does, I have two wells that they say is in it.

Q. Is it leased?

A. Yes.

Q. Who has your lease?

A. About three. Stephens has interest in the east 40 and the Rexall and Bob White and Anderson-Prichard has the west 40.

Q. How many wells on west 40 to the Medrano sand?

A. One.

Q. Is it an oil or gas well?

A. Oil.

Q. Is that the only well to the Medrano sand on your west 40?

A. Yes, it is.

[fol. 1569] Q. You think that the Anderson-Prichard Company has fully developed your lease and drilled as many wells as you are entitled to have?

A. No.

Q. How many wells do you have on the east forty?

A. One.

Q. That is to the Medrano sand?

A. Yes.

Q. Now, is that a pumping or flowing well?

A. Flowing well.

Q. Has it ever been on a pump?

A. Not to my knowledge.

Q. Never has?

A. No.

Q. Is that the only well that is drilled to the Medrano sand on the east forty?

A. Yes.

Q. Do you feel that the Stephens Petroleum Company has fully developed your east forty to the Medrano sand?

A. No, and because this well is nearly on the west side of the forty and there is 45 acres and no well and there is one to the south and one to the east that is to the Medrano sand.

Q. Are they producing?

[fol. 1570] A. One is a gas well, it is on the Davis lease.

Q. Now then, Mr. Walker, do you know how much money you will receive a month under this unit plan if it's placed in operation?

A. No.

Q. But if your leases were full developed, you would — twice as many wells?

A. Yes, sir, I should have.

Q. Are you familiar and do you know the meaning of the word "field" when it's used in connection with oil and gas in common parlance?

A. Yes, I think I do.

Q. What does it mean?

A. It's a tract of land with oil and gas produced under it, that is what I always thought that of Cement field east and west where oil and gas was found.

Q. Does that include all the sands underlying the area?

A. Yes.

Q. And all the producing horizons?

A. Yes.

Q. Now, Mr. Walker, tell the Commission whether or not you are in favor of this unit plan as proposed by the proponents.

A. I am not.

Q. Do you want to tell the Commission why?

[fol. 1571] A. Yes.

Q. All right, you tell them your objections.

A. I'm of the opinion that it's not fair to one and all, it won't hurt me and it's not fair, my grandchildren and children are the ones I'm looking after and if we don't have a contract so we can know what we are going to do, the royalty owners are not considered at all.

Q. If you had the right, would you ask to defeat this unit plan?

A. Sure I would.

Q. If you have the right, you intend to defeat it?

A. Yes, what I want is my whole lease, my 80 acre farm developed. I don't want something of the other man's and don't like the other man to get anything of mine and don't think that other men want anything from me.

Q. Have these companies offered you any compensation to have the other wells on there?

A. No.

Mr. Adams examines the witness:

Q. How long have you owned the land, Mr. Walker?

A. Since 1916.

Q. You would like to pass it along to your children and your grandchildren?

A. Yes, it's not me I am working for, it's for the benefit [fol. 1572] of the other generation, not for me but for the children and the commonwealth.

[fol. 1573] Examination.

By Mr. Williams:

Q. Mr. Walker, I believe you testified that your interest in the West Cement Medrano field is fee, and also an interest under 80 acres of land?

A. "Fee," what do you mean by "Fee"?

Q. You own the surface?

A. Yes.

Q. Also a royalty interest under that tracts?

A. Yes.

Q. That's the South Half of the Northeast of Section 1?

A. Yes.

Q. Do you have an interest in that,—any other interest than that?

A. No, that's all.

Q. And that forty is under lease to the Phillips Petroleum Company?

A. And Rookstool, and others.

Q. And your other forty is under lease to Anderson-Prichard?

A. Yes, the same concern.

Witness excused.

[fol. 1574] L. M. Davis, called as a witness, being first duly sworn testified as follows:

Examination by Reford Bond Jr.:

Q. State your name, please?

A. L. M. Davis.

Q. Where do you live, Mr. Davis?

A. I live in Caddo County, two and three-quarters miles North of Cyril.

Q. How old are you?

A. 71.

Q. Do you own a farm in the West Cement field, that is underlain by the Medrano sand?

A. What was that?

Q. Do you own a farm in the Medrano pool area?

A. Yes.

Q. Where is your land located?

A. In 6-5-9.

Q. How many acres?

A. 80 acres.

Q. Is that the South Half of the Northwest Quarter of Section 6?

A. Yes.

Q. Who has a lease on your land?

A. Well, I let—— Have it and he later sold his rights [fol. 1575] — Anderson-Prichard.

Q. How many wells do you have there on your land to the Medrano sand?

A. I have one.

Q. Is that an oil or a gas well?

A. Well, they call it a gas well,—they shot the sand below the oil and above the oil and got a gas well.

Q. Is there any oil?

A. They show it the same as on the Prentice and on the Pickard.

Q. Are you familiar with the word, "field", as used in oil and gas parlance?

A. Yes, I think I am.

Q. What does it mean?

A. It means that it takes in the whole field, the Medrano sand part and the whole field, the Medrano sand part and other sand besides the Medrano.

Q. You mean it includes all the surface area and includes all the sand that's under it?

A. Yes.

Q. Has your lease been fully developed by Anderson-Prichard?

A. It has not.

Q. It has not?

A. No, sir, not by a long ways. We have been begging and pleading with them for two years.

Q. Do you have a regular 88 oil and gas lease on your land?

[fol. 1576] A. Well, Noble-Olson has ten acres and Anderson-Prichard has seventy.

Q. Your lease is a regular 88 form lease, is it?

A. Yes.

Examination by Mr. Adams:

Q. How long have you lived down there, Mr. Davis?

A. Well, I have been down there thirty-eight years last Christmas.

Q. You have owned that land all that time?

A. I have owned it about twenty-one years.

Examination by Mr. Williams:

Q. Mr. Davis, your interest in the West Cement Medrano field, as I understand it, is the South Half of the Northwest of 6-5-9?

A. Yes.

Q. Your interest in that tract is both a fee interest, that is the surface rights——

A. Yes.

Q. —and a contract on the minerals?

A. Yes.

Q. Now, do you have any other interests in the West Cement Medrano field, other than the interest I have mentioned?

A. No.

[fol. 1577] Examination.

By Reford Bond, Jr.:

Q. Mr. Davis, care to make any statement to the Commission about whether you favor this Unitization program, or not?

A. Well, I am not in favor of that Unitization in any way.

Q. Do you mind saying why?

A. Well, because it isn't right, it's against the Constitution of Oklahoma and the United States.

Q. You feel like it is taking your property without paying you for it?

A. Yes sir,—my lease calls for 1/8 and they want to take it and scatter it all over that country,—it aint right, it aint just. They will get my royalty, about $245.00 a month and I am not in favor of no such a law.

Witness excused.

[fol. 1578] L. L. Edwards, called as a witness, being first duly sworn, testified as follows:

Direct examination.

By Reford Bond, Jr.:

Q. State your name?
A. Edwards, L. L. is my name.
Q. Where do you live?
A. I live North of Cyril, four miles, and a half mile West.
Q. How long have you lived in that community?
A. I have lived in that community about thirty-five years.
Q. How old are you, Mr. Edwards?
A. I am 76, will be next November.
Q. Do you own some land, a farm in this area out there in the Medrano sand area?
A. Yes.
Q. Whereabouts is it located?
A. Well, it's the Northwest Quarter of Section 1-5-10.
Q. How many leases do you have on your land?
A. Well, there is 160 acres and I have sold some royalty, the Magnolia has a lease on part of it, the Magnolia has a lease on 80 acres and on a forty.
Q. The Magnolia has the East 80?
A. Yes.
Q. And the Northwest 40?
A. Yes.
[fol. 1579] Q. And who has the lease on the Southwest 40?
A. Amerada.
Q. How many wells has Magnolia drilled on the Northwest 40?
A. Well, it'll be,—they drilled one to the Medrano sand.
Q. That's what I mean?
A. Just one.
Q. Do you feel that they have fully developed that lease, that forty-acre lease?
A. No, I don't think they have.
Q. What kind of a well is it?
A. Well I think it's a pretty good well and it might——
Q. Is it an oil well?
A. Yes.

Q. How many wells has the Magnolia got on the East 80?

A. They have had two.

Q. What kind of wells are they?

A. Well, they made a little gas and a little oil, not much of either one.

Q. Do you think they have fully developed your East 80?

A. Well, I don't think they have.

Q. How many wells has Amerada drilled on your Southwest 40?

A. Just one.

Q. What is it, an oil or gas well?

A. Oil well.

Q. Is it pumping or flowing?

[fol. 1580] A. Pumps.

Q. Now, do you think they have fully developed that Southwest 40?

A. Well, I don't think so.

Q. I'll ask you to state whether or not Amerada has a lease over in Section 2, the Hartshorne lease which is across your West line?

A. Yes, Amerada owns that too.

Q. Is that draining oil out from under your land?

A. Well, I shouldn't wonder if it isn't,—I think it is.

Q. Have you got a well to offset it?

A. No, Amerada is closer to the line than mine.

Q. Your well is on the East side?

A. Yes, in the Northeast corner. Amerada has one in the Northeast corner on other property.

Q. Mr. Edwards, do you know what the word, "field", means, when it is used in connection with oil and gas in common parlance?

A. No, I never heard that brought out until I heard it here and I am not familiar with it.

Q. I'll ask you whether or not you know whether you will get as much money under this proposed plan as you have been getting from your property?

A. Well, from what I heard here Friday, there won't be much difference. But I will probably lose on the West 80 but make up some on the East.

[fol. 1581] Q. Well, if you had the wells you are entitled to have, if they had fully developed your property, and you

had twice as many wells, you would get twice as much money, wouldn't you?

A. I think so, yes.

Q. Is that the way you feel about it?

A. That's the way I feel about it.

Q. Are you in favor of this Unitization Plan?

A. I don't think it's fair, and my neighbor might favor it, and it might be all right for him. I have a neighbor that they gave ten acres in this Unit and if he doesn't have any of that Medrano sand he is not entitled to it. I have an 80 in Section 25——

Q. Is that the Pickard-Edwards?

A. Yes.

Q. Do you prefer to have that Pickard-Edwards 80 left out of the pool?

A. Well, if the pool goes through, I would.

Q. Is there anything else, Mr. Edwards, you would like to say to the Commission about why you object to this proposed Plan?

A. Well, I don't know, the other boys have explained it, I don't think I could add anything, but I just want to state that I am opposed to it because I don't think it is a fair deal, and everybody else can make their statement about it, themselves.

[fol. 1582] Examination.

By Mr. Adams:

Q. How long have you owned that land there, Mr. Edwards?

A. I have owned it ever since 1912, 35 years.

Q. Did you get it the hard way?

A. Yes, I paid for it.

Examination by Mr. Williams:

Q. Your interest in this field consists of two tracts, the Northwest of 1-5-10 and also an interest in 80 acres, being the West Half of the Southwest of 25-6-10?

A. You're right,—that's right.

Q. And you own both the fee or surface interests and the royalty interest?

A. Yes.

The Witness excused.

[fol. 1583] Mrs. E. W. Jones, called as a witness, being first duly sworn, testified as follows:

Direct examination

By Reford Bond, Jr.:

Q. State your name, please?

A. Mrs. E. W. Jones.

Q. Where do you live?

A. Anadarko.

Q. Do you have an interest in any of the land in the West Medrano sand in the West Cement field?

A. I do, I have a ¼ interest in 33-6-10.

Q. Who has a lease on that land?

A. The Gulf Oil Company.

Q. What part of 33 is your land in? Is it the Northeast or the Southeast?

A. Yes, Northeast.

Q. Known as the Palmer lease, no, the Sherritt?

A. Yes, the Sherritt.

Q. That's the Northeast of 33?

A. Yes.

Q. Known as the Sherritt lease?

A. Yes.

Q. How many wells have been drilled on that lease?

A. Four.

[fol. 1584] Q. Are they oil or gas wells?

A. Oil,—three are flowing and one is on the pump. Now, I haven't seen them for probably two or three months, but's the way they were doing at that time.

Q. Mrs. Jones, do you feel that four wells on your 160-acre lease has fully developed that lease?

A. No, we have had a promise of more wells, however, the heirs, we heirs, are pretty well satisfied,—however, if we are due more wells, I would like to have them, but they are very

good wells and I think we can keep them that way and not enter this pool,—we are fairly well satisfied.

Q. You are satisfied with the Gulf's operation on your lease?

A. Yes, we are not rushing them, pushing them, we think we'll get some more wells some day.

Q. Do you have any other objection to the Unitization of the Medrano sand area, which you would like to tell the Commission about?

A. Oh, My!, I am opposed to it, just opposed to it.

Q. Would you mind telling why?

A. Well, I think it is,—it's just this way,—they take our property from us,—this is a free country and then they take our property, we have no voice, no vote or anything,—I can't see how it is fair, we can't do anything, I don't see any fairness about it.

Q. Were you called upon or consulted about this Unitiza-
[fol. 1585] tion matter before the matter was worked out?

A. Oh, no, nothing about it.

Q. Were you invited to join or send a representative or to attend any of the conferences had about it?

A. No, not at all.

Q. Were you ever asked about signing any agreement to Unitize?

A. No, that's what hurts,—I didn't think the Gulf Oil Company would do us that way, but they just disregarded us in every way.

Q. Is there in,—anything else you would like to have the Commission know about this?

A. Well, there has been so much said that I don't know how I could add to it. You know how we feel about it, I can't see why the Companies would want to Unitize that field, I don't see the fairness of it.

Examination.

By Mr. Adams:

Q. Mrs. Jones, you are,—were a Sherritt?

A. Yes.

Q. This land has been in your family for many years?

A. Yes, my parents bought it before this well was discovered, I think in 1915.

Witness Excused.

[fol. 1586] Ben Holland, called as a witness, being first duly sworn, testified as follows:

Direct examination.

By Reford Bond, Jr.:

Q. State your name?
A. Ben Holland.
Q. Where do you live?
A. My Post Office is Anadarko.
Q. How old are you?
A. I was born in '99, so I guess I am about 48 years old.
Q. Do you have an interest in land which is underlain by the Medrano sand in this field?
A. ⅓ interest in 2-5-10, which land is leased to the Phillips Petroleum Company, the North 80 is the Phillips-Margaret lease and the South 80 is leased to the Gulf and is known as the Gulf-Holland.
Q. Is there a well on that land?
A. No. 1 Margaret, yes.
Q. That's the Phillips lease.
A. Yes.
Q. Is there a well on the Gulf lease, at all?
A. No.
Q. Do you know when that lease expires?
A. Well, it has a little over eight years,—it has a little over a year to run, and since oil and gas is produced in paying quantities,—unless oil and gas is produced in paying [fol. 1587] quantities.
Q. Now, Mr. Holland, do you feel that the Phillips Petroleum Company has fully developed the North 80?
A. No, I do not.
Q. Have you been advised about that by geologists or petroleum engineers?
A. I have, yes, they,—very well.
Q. And you make that statement on their advice?
A. Yes.

Q. Do you know the meaning of the word "field", in connection with oil and gas parlance?

A. Well, I have worked in a lot of fields in Oklahoma and California.

Q. Can you tell us the meaning of the word, "field",?

A. Well, you might say the Long Beach Field, in California, or the West Cement field.

Q. Well, would you say the word, "field", includes all of the oil which,—all of the area,—that is it includes all the oil and gas that underlies the surface?

A. I think that has been the accepted theory.

Q. Now, you were one of the protestants in this matter, you are a protestant in this matter?

A. Yes.

Q. Do you wish to state to the Commission why it is that you are protesting?

[fol. 1588] A. Yes, I have several objections,——

Q. Do you wish to make a statement of your reasons?

A. Yes,—one of my objections is to what they call "Select Wells", where they are going to put these wells,—I suppose they have a pretty good idea where they are going to put these wells, but they haven't said,—I have a pretty good idea and I have an idea that the royalty owner is going to be left on the outside in a good many places,—I think from the standpoint of the royalty owner it is unfair,—I think the Commission should go between the royalty owner and the operator and tell the Operator to give the royalty owner a fair deal. I just wonder how the royalty owner would take it or how they would be effected if the Commission should shut down the field entirely for a year or two. I have seen it in my experience.

Q. Mr. Holland, you have given the Phillips Company and the Gulf Company a regular 88 producers lease on that land?

A. Yes.

Q. I'll ask you whether or not Phillips has complied with the terms and conditions of their lease?

A. I don't see how they have.

Q. Well, do you say they have or have not?

A. I say they have not.

Q. And that is the advice of your petroleum engineer?

A. Yes.

Q. Why haven't they complied?

[fol. 1589] A. They have not drilled on the Northwest 40.

Q. Now, why is it that you don't want this South 80 included in the Plan?

A. Well, we would have a nickel, dime or a quarter at a time and I don't see how there would be anything in that.

Q. You think you would get more money out of it otherwise, than if it was included in the Unit?

A. Yes, I do.

Examination.

By Mr. Williams:

Q. Do you know how many royalty owners there are in the West Cement Medrano field?

A. I imagine there are quite a number.

Q. Do you know just how many?

A. No, there might be several hundred.

Q. Your interest in the Medrano field is the same as that testified to by your brother?

A. Yes.

Examination.

By Reford Bond Jr.:

Q. Is there anything else you want to state to the Commission?

A. Well, I would like to give my personal opinion, which would differ from what the engineers and geologists have been saying.

Q. Go ahead.

[fol. 1590] A. I'll take my chances on it about what is underneath the surface,—it seems to me that there was an encroachment of gas across the structure——

Chairman Bond: Well, you want it properly distributed, don't you,—you don't want one man to have it all?

A. That's right,—I want it done equitably.

[fol. 1591] A. Yes, but I don't want to say and ask the Commission to hold gas on the gas cap and produce the oil bearing zone.

Q. What is your definition of correlative rights?

A. I imagine that all will be the rights of everybody concerned, but that word is a little bit beyond me, but I take it that is it.

Chairman Bond: The Commission will recess until 10:00 o'clock in the morning.

[fol. 1592] Tom Palmer, called as a witness, being first duly sworn, testified as follows:

Direct examination.

By Mr. Adams:

Q. You are Tom Palmer, President of the Palmer Oil Corporation?

A. I am.

Q. Mr. Palmer, your company owns certain rights and properties known as the Palmer-Sterba lease, in the area under discussion here?

A. Yes.

Q. Which tract is under and by a contract with Gulf Oil Corporation and an instrument of assignment which has been referred to and offered in evidence as Exhibit 35?

A. Yes.

Q. There has been some discussion as to the construction placed by your company upon the terms of the assignment and contract under which the assignment was made to you by the Gulf Oil Corporation,—I'll ask you whether or not a conversation was had by you and any representative of the Gulf Oil Corporation and if so, about when and where?

A. Yes, before we completed the No. 4 Sterba, I think it was '43,—I believe it was '43.——

Q. In any event it was while that well was being drilled?

A. Yes, we talked before it was completed,—I went to [fol. 1593] Tulsa and talked to Mr. Greenslade——

Q. Who is Mr. Greenslade?

A. I think he was the man in charge of operations for the Gulf——

Judge Lowe: I believe we shall object to this, I assume it will be an attempt to vary the terms of a written instrument.

Chairman Bond: Well, if it is the same.

Q. Mr. Palmer there was some discussion to the effect that you, on behalf of the Palmer Oil Corporation, had never claimed the rights to any Medrano oil below a depth of 6000 feet,—such testimony has been offered in this case, that in conversation supposed to have been had in Tulsa, Oklahoma you made that statement,—I'll ask you to state whether or not that is correct?

Judge Lowe: Objected to as incompetent, irrelevant and immaterial, and contrary to the response filed by the Palmer Oil Company in this case.

Mr. Adams: If the Commission please, Mr. Kaveler testified to that fact.

Chairman Bond: If Mr. Kaveler testified to that, you may examine the witness on any point relating to it but you will have to show that Mr. Kaveler testified to it.

[fol. 1594] Mr. Adams: I have a transcript prepared by the Court Reporter, your Honor, I will read it to the Court. (Reading.)

"Q. Referring back to the Palmer-Sterba lease and the computation which you and your operators committee made, dividing between the Palmer Oil Corporation and Gulf Oil Corporation the participating factor which under your Plan you allowed to the Sterba lease,—correct me if I am in error,—did you make that computation based on that portion of the oil bearing sand located above or below respectively to the two companies, the 6000 feet level from the surface of the earth, is that right?

A. Yes sir.

Q. Or was that made in accordance with the geological report that went to the operators committee?

A. It was made by drawing a line 6000 feet below the surface of the earth on the basis of the statement of Mr. Tom Palmer, himself, and he appeared in Tulsa and made no claim on anything below 6000 feet below the earth and he asked that—— . . ."

Mr. Adams: That's where the answer breaks off,—that is Mr. Kaveler's testimony.

[fol. 1595] Chairman Bond: If Mr. Kaveler testified that

Mr. Palmer appeared in Tulsa and made that statement, the witness may answer.

A. I made the statement at the time that I wasn't interested in the Medrano sand where the top of the Medrano was below 6000 feet.

Judge Lowe: We object to that,—let me read the response of the Palmer Oil Company. Omitting the caption and reading (reading) "that this respondent and protestant *to the* corporation regularly organized and existing under and by virtue of the laws of the State of Kansas and is duly authorized to transact and carry business in the State of Oklahoma.

2nd. That it is the owner of the 7/8 working interest in and to the oil and gas lease on and covering the Southwest quarter of Section 35, Township 6, North, Range 10, West, situated in Caddo County, Oklahoma, with respect to all horizons to a depth of 6000 feet subject to an overriding royalty of 1/8 of the 7/8 working interest oil and gas in favor of Gulf Oil Corporation; that on said oil and gas lease respondent and protestant has drilled three test wells to a depth sufficient that the test of the Medrano sand formation [fol. 1596] and two of said wells have been completed as produc- oil or gas wells from the Medrano sand formation and have at all times since completion and are now being operated by the Palmer Oil Corporation.

3rd: That the Medrano sand formation has not from present exploration of said oil and gas lease been shown in any instance to be located or productive at a depth below 6000 feet; that all of oil and gas that is heretofore or now being produced from said Medrano sand in and under said lease has been and is being produced from said formation at a depth less than 6000 feet.",—they are not claiming before this Commission anything below a depth of 6000 feet.

Chairman Bond: The Commission will take it into consideration and if there is some dispute between Mr. Kaveler and Mr. Palmer,—whether that is material or not, if it has crept into the record, the Commission will hear this dispute between the parties, but the Commission can't understand how any of that can creep into the records without objection.

Mr. Adams: We made an objection, Your Honor,

Chairman Bond: And the Commission overruled you?

Mr. Adams: The record doesn't show any ruling. Your [fol. 1597] Honor.

Mr. Williams: It was elicited in cross examination.

Chairman Bond: You may proceed, gentlemen.—the Commission is going to ascertain what the dispute was between these parties.

Q. Will you proceed with the conversation you had with Mr. Greenslade, Mr. Palmer?

Judge Lowe: The same objections, if the Commission please.

Chairman Bond: Overruled.

Judge Lowe: Exception.

A. As I stated, I went to Tulsa at the time this Palmer-Sterba No. 4 was being completed,—I went to Mr. Greenslade's office, talked to him in his office,—and I said to him,—"What would happen in the event we drill another well to the Medrano above 6000 feet", and he says, "Tom, I don't know, but I'll see and let you know". I said, "If I get the Medrano above 600- feet, it's my well" and he said, "I'll let you know", but he never has. That's the only thing ever said between Mr. Greenslade and myself.

The witness excused.

[fol. 1598] Tom Gann, called as a witness, being first duly sworn, testified as follows:

Direct examination.

By Reford Bond, Jr.:

Q. State your name?
A. Tom Gann.
Q. Where do you live?
A. Chickasha, Oklahoma.
Q. What is your business?
A. I am engaged in farming and I trade in oil.
Q. And you are associated with the Bob White Oil Company?
A. Yes.

Q. In what capacity are you connected with that company?

A. I am a Director.

Q. I'll ask you to state whether you have been authorized by the President of that Company to appear here in behalf of the Bob White Oil Company?

A. Yes, I have.

Q. What lease is your Company interested in, in this Unitization matter, Mr. Gann?

A. The Stephens-Walker lease, located in the Southeast of the Northeast of Section 1.

Q. Southeast of the Northeast of Section 1?

A. Yes.

Q. What interest does your company have in that lease?

[fol. 1599] A. It has 1/16 overriding 7/8.

Q. Is that interest to your company free and clear of all costs of production?

A. It is.

Q. Will you state to this Commission what your objection is to the Unitization, so far as the interests of your company is concerned?

A. Well, as I understand under Unitization they would have a prior right and that would wipe us out,—we have an overriding interest, without any expense, and I understand Unitization would wipe that out.

Witness Excused.

[fol. 1600] Mrs. A. W. Flitt, called as a witness, being first duly sworn, testified as follows:

Examination.

By Reford Bond, Jr.:

Q. State your name?

A. Mrs. A. W. Flitt.

Q. Where do you live?

A. Thre- miles North of Verden, in Caddo County.

Q. In what county?

A. Caddo County.

Q. Mrs. Flitt, I believe you own part of the royalty interest under the Phillips-Margaret lease?

A. I do.

Q. That lease is located in Section 2, is it not?

A. That's correct.

Q. And is thought to be included in this Unitization?

A. Yes.

Q. Now, Mrs. Flitt, are you one of the objectors to this Plan?

A. Yes.

Q. Do you wish to state to the Commission what your objections are?

A. Yes, I do.

Q. Go ahead.

A. Well, one main objection, we believe this is our prop- [fol. 1601] erty to do with as we see fit. For years to come. And under Unitization that privilege is denied us, not for a year or two years but for eternity and I think that is a great injustice to anybody who owns property, under our Constitution. That's one of them,—can I say more than one?

Q. Yes.

A. Well, there are several others,—Phillips-Margaret has 130 acres of valuable land and there should be more wells put on that land. Mr. Williams, when I interviewed him in the winter for more wells said that, "We are not realizing on our equity in the land and I think that is a grave grievance because we are entitled to one eighth of every barrel of oil brought to the surface on that lease",—I think that's a grave grievance. Another reason the Phillips Petroleum Company has had that lease for four years,—for forty acres and they never have protected our interest. The Gulf has a lease that has expired on 80 acres and they haven't drilled enough wells on it, and another reason, up until now we have been successful in leasing that land but under Unitization that would be denied and that's a grievance to anybody.

Q. The Gulf has never put any well on the Holland lease?

A. No, they have allowed Amerada to drill two and drain our land for two years. They have never showed any inten-

tion of drilling and in fact they have ignored any plea I have made to them.

[fol. 1602] Q. Under the terms of your lease with them, when does it expire?

A. Just about a year, I think.

Q. And there are no wells on that land, whatsoever.

A. None soever.

Q. And the Phillips-Margaret 80 there is only one well?

A. There is only one well on the Margaret to the Medrano sand, yes.

Q. And there is a location on the Northwest corner of the lease which is being drained by the well to the Northwest of it?

A. That's right, by the Oaks well.

Q. And there's only one well on that 80 acre tract?

A. That's all, and Mr. Commissioner, please, I have another grievance,—there are many sands in the Medrano field. Up until a few years ago we had never heard of the Medrano sand, but it was discovered and we happened to have a very fine well in the Medrano sand. There's no possibility that any other company is going to explore that sand under our property and we believe that is a very prolific sand, or sands, and the Unitization will never——

Q. You object to the Gulf-Holland lease being included in this Unit?

A. I do, sir.

Q. Is there anything else, Mrs. Flitt, that you care to say [fol. 1603] to the Commission?

A. Well, there are quite a few things on that order, I don't think one well should be allowed to hold 160 acres and they have my lease and the can't anybody say anything about it,—we have no assurance that these gentlemen intend to do anything about it.

Q. Under your present contract, Mrs. Flitt, you have the right under the law to enforce drilling and marketing of your oil?

A. Yes, and I understand under Unitization further contracts are void.

Q. Now, you object to Unitization because you have no right to force these companies to do anything?

A. I have no right, our property is taken from us and we are at their mercy.

Q. Were you consulted about this Unitization matter before this Plan was put up?

A. No sir, we never knew anything about this,—this was a law on the books at the Capitol about 1945 and the first I knew of it was this.

Q. Now, you have made all the objections that have been made by you, with the advice of your engineer?

A. Yes.

Q. Is there any other point you want to tell the Commission?

A. Well, it is a fact that the people who have these leases [fol. 1604] aren't without any right in their property.

[fol. 1605] (Mrs. Flitt is on the stand, being examined by Reford Bond., Jr.)

Q. Now, Mrs. Flitt, do you know when I talk of "field" what that means in oil and gas in the term of common parlance?

A. It means accepted fact, common fact, and it's always been accepted since the discovery of oil and will be referred to as the oil companies as Cement field and we are West Cement field.

Q. What does the word "field" used in connection with oil and gas in terms of common parlance mean?

A. That is a field of a number of acres underlaid with numerous oil and gas sands.

Mr. Williams Examines the Witness:

Q. Your interest in the West Cement Field is under the two leases, one designated as Phillips-Margaret and the other as the Gulf Holland lease.

A. That is correct.

Q. And these two are the only two in the field?

A. That is all under the Medrano sand, I have other interests.

Q. That is all.

[fol. 1606] Mr. L. A. Davis is recalled to the stand.

Witness examined.

By Reford Bond, Jr.:

Q. You are the same L. A. Davis who has been on the stand before?

A. I am.

Q. And you are conducting the defense in this application in chief for the royalty owners?

A. Yes, I am.

Q. Do you have with you the maps of the Cement field that were filed by Mr. Clapp?

A. Yes.

Q. I hand you what has been marked as Exhibit 113 and ask you to put that on the blackboard, please, Mr. Davis, so the Commission can see it.

(Witness puts exhibit 113 on blackboard.)

Now, tell the Commission what that is.

A. It is a map of the Cement field up here (indicating).

Mr. Williams: Did you have anything to do with the drawing of the map?

A. I did not.

Reford Bond, Jr., Continues with the Witness:

Q. By whom was the map drawn?

A. The map was drawn by Frederick G. Clapp.

[fol. 1607] Q. You know him?

A. Yes, and I took him over the field in my car.

Q. That was his personal possession at one time in his lifetime?

A. Yes, sir.

Q. And you — that map was compiled by and is the work of the late Mr. Fred G. Clapp?

A. Yes, he told me that it was his and I know that it was.

Mr. Williams: We object for hears-y.

Commissioner Jones: Sustained.

Mr. Adams Continues with the Witness:

Q. Do you know whether or not that map or copy thereof was in general circulation in the vicinity of the field that is here under discussion?

A. There were many copies in circulation.

Q. About when?

A. 1940.

Mr. Williams: That still doesn't say it's accurate, just because that a man made a map and another layman here that knows the man and says thus and so, that it should be proper evidence, a man or someone who is an engineer and not a layman that knows, should identify the map.

Reford Bond, Jr.: The ruling is excepted to.

Commissioner Jones: Exception allowed.

[fol. 1608] Reford Bond, Jr., Continues with the Witness:

Q. The royalty owners offer a tender in evidence, a map marked Exhibit 113, and further state that if the witness was permitted to testify that he would testify that he received the map from Mr. Clapp's office and that his partner in Chickasha, Oklahoma, Mr. John Graham gave it to him and was represented by Mr. Clapp to him as having been prepared by him and was given to him for the purpose of showing Mr. Clapp's geological research work in the area of the Cement field and Chickasha gas field, that the purpose of the map is to show that the use of the term "field" was used by geologists in mapping their work and geological work and particularly in the area in which is located the Cement oil field and Chickasha gas field inasmuch as the Clapp map defines the area which is underlaid by the West Medrano sand and numerous other sands in the Cement area and Cement oil field and which designates the area which is underlaid by numerous gas sands and in the area of the Chickasha gas field, is the Chickasha gas field.

Mr. Williams: We would like to renew our objection to the offer.

Reford Bond, Jr.: And we tender the evidence.

Mr. Williams: We say that it's not competent, relevant or material.

Commissioner Jones: We will admit the exhibit for what it's worth, but he should not be allowed to testify unless he [fol. 1609] had something to do with it.

Reford Bond, Jr.: Then the tender is accepted by the Commission,

Mr. Williams: Exceptions.

Commissioner Jones: Exceptions allowed.

Reford Bond, Jr., Continues with the Witness:

Q. Now, Mr. Davis, I hand you what has been marked by the Reporter as Exhibit 114 and ask you to state what that is.

A. It is a geological report of the Cement oil field by F. G. Clapp, dated May 1, 1919, giving information of the Cement field.

Mr. Williams: We would like to make the same objection, Mr. Clapp is not here for cross-examination.

Reford Bond, Jr., Continues with the Witness:

Q. Mr. Clapp is now deceased?

A. Yes.

Q. Did you know him in his lifetime and of his national reputation?

A. Yes, and signature.

Q. Will you state what that is? (indicating to Exhibit 114)

A. It is the geological report.

Q. Will you state what his national reputation was?

A. He first become prominent in the Tea Pot Dome deal for the Government, he was an engineer and an instructor [fol. 1610] and lecturor and became well known and an authority on geology.

Mr. Williams: We still object.

Chairman Bond: Same ruling.

Reford Bond, Jr., Continues with the Witness:

Q. I call your attention to that part of the report which the term "field" in connection with oil and gas and I will

ask you to read that portion of the report to the Commission.

Mr. Williams: The ruling was to introduce it for what it's worth, but not qualify to testify.

Chairman Bond: That is right.

A. "Geological Report of the Cement Field, by F. G. Clapp, Oklahoma City, Oklahoma, May 1, 1919.

In reply to your verbal inquiry as to the desirability of deeper drilling (below the level of the 2200-2400 feet groups of sands) I would like to state first that I am an earnest advocate of deep drilling in this field. I have already recommended formally to the companies in which I am financially interested, and informally to the others which are operating in the field, that they continue all wells to greater depths unless they be paying producers in the known sands and have further recommended that all new wells be started with suitable equipment and size of casing to drill to 4000 feet, if necessary.

Now, I am sure you will like to know why I am confident [fol. 1611] the field with a big producer from deeper sands than those now known and you may be interested to know that this probability appears geologically to be almost a certainty, or at least as nearly so as can be in the present stage of development.

In the first place, therefore, I must explain that all the sands thus far tapped in the Cement field are in the series of rock strata technically known as the Permian or red beds, those formations being 2700 feet and certainly 1700 feet in thickness. Judging by geological correlations between the Cement field and certain Texas fields where identical fossils are found, the Permian in the Cement field may be as much as 3000 feet from the surface. *This fact is very important to a correct understanding* of the existence of deeper productive sands, because the Permian is a geological series in which oil is not known to have been originally in nature, all the oil in the Permian having come up from deeper strata. Now, since productive oil and gas wells have been found in the Cement fields in the Permian, we know that the oil and gas in them comes from below. Since the volumes in the 2200-2400 group of sands are considerable,

something much better may be expected below. Such being the case, all wells should be started so as to drill to the extreme depths, if necessary.'

Now, you will ask what is the extreme depth? All geologists will answer that nobody knows with certainty as [fol. 1612] the underlying groups of sands have not been penetrated within fifty miles of Cement. We, however, make a certain production based on the developments in the Healdton, Fox, Duncan and Burkburnett fields and correlation of well logs with those in the Cement field. Judging by such comparisons, my opinion is that the first big sand or group of sands in the Cement field will be somewhat about 3400 feet from the surface, or within a few hundred feet of that depth. It will probably not be necessary to go 4000 feet. There may continue to be productive sands to that depth and deeper, and it is well to prepare for all contingencies.

I should say, also, that the formation underlying the Permian, or red beds, is the Pennsylvanian in which the greater part of the production of Northern Oklahoma, Kansas and the extreme north Texas field is found. Therefore, there is every probability that the same formation will be immensely productive in the Cement field which has such good geological structure and abundant showings near the surface—not to mention the 2200-2400 feet sands which will make paying producers throughout a substantial part of the field.

My idea is that wells in the Cement field should be drilled with the combination outfit, using the Rotary type of tools to a depth of say 2200 feet, then shifting to standard cable tools. Any sand might be lost by drilling into it with Rotary tools.

[fol. 1613] Trusting this answers your inquiries, I am, Yours very truly, (Signed) F. G. Clapp."

Q. We offer Exhibit 114 for the purpose of showing the meaning of the word "field" as used in connection with oil and gas.

Chairman Bond: Same ruling.

Mr. Williams: Exception.

Reford Bond, Jr., continues with the Witness:

Q. Mr. Davis, I hand you a photostatic copy of a map and ask you to state where you got that.

A. I procured it from John S. Graham who is a partner of Dr. Frederick G. Clapp at Chickasha and taken from Dr. Clapp's files.

Q. Read the title of the map.

A. "Map of the Cement Field."

Q. We offer the map as exhibit 115 for the purpose of showing the meaning of the word "field".

Chairman Bond: Same ruling.

Mr. Williams: Same objection.

Chairman Bond: Exception allowed.

Reford Bond, Jr. continues with the Witness:

Q. Now, Mr. Davis, are the owners of various royalty interest under leases covering lands within the area underlaid by the Medrano sand?

A. Yes.

[fol. 1614] Q. What leases do you own royalty under?

A. Tract No. 54, known as the Potter lease, Tract 55 known as the Ruxtell lease, and my wife and I have it jointly, some under the L. L. Edwards tract, 44, Section 25-6-10 and Tract 45 known as Niles farm in northwest quarter of Section 36, Township 6, North Range, 10 West, Caddo County, Oklahoma.

Q. Do you have any other royalty interest in the interest in the area underlaid by the Medrano sand, Mr. Davis, or have you enumerated them all?

A. I think that is all.

Q. All of these leases are producers of gas, are they in the Medrano sand?

A. Well, the Potter lease has a well on it, it hasn't been classified, the Niles one has a well classified in the Medrano sand and L. L. Edwards in 44 has an oil well, but is not Medrano sand, but has an offset of Medrano sand and Kistler sand.

Q. Has any compensation been offered you by the plan for use of gas in the production of oil?

A. No, they have not indicated that I might receive any more than a small pittance from the oil from someone else's tract.

Q. That is figured on the value of the gas that is estimated to be under your tract at 5 cents per cubic foot.

A. That is what I understood.

[fol. 1615] Q. And the other factors in working out the equities was done by the plan, as done by the plan?

A. Yes.

Q. As I understand your testimony no compensation was allowed you in the plan for use of gas or producing the oil for recycling and replacing the oil?

A. No, none at all.

Q. Now the L. L. Edwards well, which lease is that you have interest under?

A. The Magnolia west half of SW of 4-25, 6N, 10W, Tract 44, they attempted to take 10 acres out of the 80.

Q. Now, has any well been drilled to the Medrano sand on that lease?

A. No.

Q. And about how much of the 80 acre lease was attempted to be included in the Medrano sand area by the applicant's plan?

A. They zigzagged the corner of the 10 acres.

Q. Can you see by Exhibit 24 how much of the 10 acres supposing to be underlaid by the Medrano sand according to their contention,

A. I believe their geologist contend 2½ acres, two to 2½ acres.

Q. You can see that by looking at Exhibit 24?

A. Yes.

Q. Now, that lease is right up at the top of the structure [fol. 1616] where the applicant's geologist says that the gas sand pinches out.

A. That is what the reports say on it.

Q. Will you state to the Commission that you do not want this lease included in the pool in the unit plan?

A. All the income from this would be so small that it would not compensate having it and it might perpetuate the lease or prevent the sale of the lease or getting other wells drilled on it, if it is perpetuated.

Q. I understand you to say that the applicants say that it's so small that it doesn't mean anything to you?

A. That is right.

Q. And you heard the testimony here of Mr. Kaveler when he said that various objections that were made were diminished.

A. I remember his using that word.

Q. Do you know what deminimus means?

A. No, I don't believe I do.

Q. Mr. Kaveler said it means that it's so small it means nothing.

A. Deminimus, means nothing?

Q. I will ask you if you think that this matter of this fact is deminumus, if that is the meaning of the word.

A. It would be diminmus from our standpoint, but from the proponents it might be that they could save drilling a well.

[fol. 1617] Q. The amount of the gas?

A. It would not equal $1.00 per acre rental, that is, 100 to 150 dollar bonus an acre that we could get now if we had the lease.

Q. Is there any statement that you would like to make to the Commission at this time?

A. I think so, Mr. Holland has spoken of them, I would like to say this, the other day when we heard the argument in eliminating the tracts, my good friend, Judge Brown, to prevent drilling a nuisance well and otherwise he thought that you would drain all the gas from under the pool, what we should be entitled to, otherwise he takes the position of the "Dog in the Manger," he won't let the cow eat hay and he won't let anyone else eat it, that's the way with the little tract, they won't drill it and don't want you to drill it.

Q. As far as you are concerned they can have the gas under that little piece of land and you are not interested.

Mr. Williams: We object to that.

Chairman Bond: Sustained.

Mr. Williams: We have no objection at all to his land owners and royalty owners coming before the Commission and stating their position, the nature of this hearing is an invitation, it is a form where these things should be phrased [fol. 1618] at and this man is the moving light, and the ram-

rod of this and when he comes to the stand and enters into this argument, we think that it is beyond his realm of his position and think that it should be left to his attorney to do that.

Chairman Bond: The Commission sustains the objection on grounds that it's leading.

Reford Bond, Jr. continues with the Witness:

Q. If the Commission please, the royalty owners would not have been so bold to introduce evidence of this kind before the Commission if it hadn't been for the fact that the proponents introduced numerous letters at the beginning for what they were worth, and stated their position and instead of doing that by letter, we are bringing them here and letting them state their position orally.

Chairman Bond: The Commission sustained it because it's leading.

Reford Bond, Jr. continues with the Witness:

Q. State to the Commission whether or not you desire to recover the gas under this little piece of land in the Edwards lease if there is any gas under it which I understand the engineer does not admit.

A. The only thing that we want, I think that we asked for all royalty owners under their tracts be treated fair, but [fol. 1619] anyway for myself, we would like to have a well drilled there ourselves, whether it's Kistler or Medrano sand, it's offset by wells claiming to be both.

[fol. 1620] Q. You are willing to rest on your engineer's testimony to the Commission?

A. Yes.

Q. Is there anything else you would like to state to the Commission, Mr. Davis?

A. Well, I think there are several things that are unfair and are not feasible,—I think anything that is not right, not feasible,—I think when people do these things there is a law or decision that will reach them. I think that will happen to this case,—I think that there is discrimination between the royalty owners and the lease owners and I think they have no right to the oil under these leases, at all.

I think we are not being fairly treated,—we may have to go to the Supreme Court to find out what our contract provides, but I think we must protect our rights. We have a contract with Mr. Potter to protest this well here (indicating on plat) but if it is Unitized I don't know what can be done,—we have a contract with Mr. Rookstool, on this well (indicating on plat) and the Magnolia has a contract on this well (indicating on plat.)

Q. You think if they Unitize the Medrano sand they will Unitize the rest of the sands too?

A. I think that is the next move and I think there — a few other things. I didn't receive any notice until this application was filed and I never did receive any personal [fol. 1621] notice from them until after the meeting at the Chamber of Commerce at Chickasha, and there then they asked me to come over. We had a meeting down there and the proponents come to the meeting,—Mr. Rookstool made us a speech in which he told the royalty owners that,—he told them it was unfair to the royalty owners, and it was socialistic and communistic and unfair,—that the Unit Plan was unfair,—they told us this Plan would make us so much more money that we ought to join.

Mr. Williams: We move to strike out the argument as incompetent, irrelevant and immaterial and untrue.

Chairman Bond: The Commission will strike out the hearsay testimony.

A. (continued) we were told that under the Plan of Unitization that we might have, would mean consolidation of contracts of the royalty owners like they had in Cotton Valley, down in Louisiana. I think this is unfair,—in the Cotton Valley Unitization those people consulted the royalty owners before they Unitized, they had voluntary Unitization. If they had done that in this case, but they have not tried to sell it to the royalty owners, they have tried to cram it down their throats. I don't think it is right, fair or feasible or practical. I don't think it is right to attempt to do without the consent of the land owners and royalty owners, the owners of the oil in place. I think I can speak the opinion of more than 300 royalty owners, Grady

[fol. 1622] and Caddo Counties and say that we do not want the Unitization.

Q. Do you have anything more to say, Mr. Davis?

A. Yes, I believe that before the Medrano sand was discovered we had more than 200 wells in that field, and in 1936 we had. In 1936 we had to file suit or a suit was filed to compel the drilling of the Magnolia well on the Medrano farm. Corey and Bearden had this well and Ray Stephens took it over and completed—Magnolia had it and turned it back,—Mr. M. E. Blake had it and wouldn't pay the rental and turned it back and as a result we have the Medrano sand well, otherwise we wouldn't have had the Medrano sand.

Examination.

By Mr. Williams:

Q. What well in the gas cap was that, to which you refer?

A. The Medrano No. 6.

Q. That was the discovery well in the Medrano field?

A. Yes.

Q. When was that well drilled?

A. It was completed in October or November 1936. I have a log of it here,—August 22, 1936,—it was completed October 15, 1936.

Q. What interest did you have in that well?

A. At that time I had 11-5/6 acres of the royalty,—I have sold it since.

[fol. 1623] Q. Did you have any other interest in the well at that time?

A. I did not at that time.

Q. Your other interests are what?

A. The Northwest of 36.

Q. That is tract No. 45?

A. That's tract No. 45.

Q. What is your interest in that tract?

A. My interest is, and my wife's, 10 acres and my brother and sister,—we have 30 acres out of 160.

Q. That would be 30/160ths?

A. Yes.

Q. What other interest do you have?

A. 9-3/4 interest in the L. L. Edwards, in Tract 44.

Q. What is the total acreage in that?

A. 80 acres of which there is 10 acres in the pool.

Q. You have many acres?

A. 9-1/3.

Q. And you have tract 54 and 55?

A. Yes, I have the royalty to the mineral interest to 54, and all the mineral interest and 1/4 of the oil royalty interest in 55. I sold 3/4 of 1/8 of the oil produced.

Q. But from the oil produced from the Medrano sand you would receive 1/4?

A. Yes.

Q. Do you have any other interest in the West Cement [fol. 1624] Medrano field?

A. No, I believe that's all.

Q. Mr. Davis, how much are you receiving from these interests at the present time?

A. Well, we have a good gas well at present on tract 54.

Q. That was completed about a year ago?

A. Yes.

Q. How much income do you receive or have you received during that time?

A. Not anything from that.

Q. How much income do you receive from tract No. 55?

A. Not anything.

Q. What Medrano income do you receive from tract 44, which I believe is the Edwards tract?

A. Not anything.

Q. And what have you received from tract 45, the Niles tract?

A. Not much, I don't know.

Q. Have you calculated what your income would be under the Unit program?

A. Yes, I did down here in 54 and 55 under that gas well, the Potter gas well, when it was,—I would get 44¢ a day.

Q. Do you know, as a matter of fact, that if this Unitization is approved, you will received $68. and some cents a month?

A. No sir, I don't know, I haven't figured that up.

[fol. 1625] Q. The evidence shows your income would be $68.75?

A. Well, we wouldn't be,—we wouldn't see much of it because if it does produce it will be taken by somebody else.

Q. You are just "agin" it?

A. Well, we are not so much against Unitization, but we are against compulsion.

Q. You are president of the Caddo County organization of royalty owners, are you?

A. Yes.

Q. You are organized,—you organized them,—when did you organize them?

A. I believe it was November 1st.

Q. For what purpose?

A. For the purpose of considering this Unitization Plan, whether we wanted it or not.

Q. Yet, you didn't receive any notice of this Unitization?

A. No.

Q. You just looked into your crystal ball and saw it was coming up.

Mr. Reford Bond Jr.: We object to the crystal ball question.

A. May I speak to the Commission on that point,—may I tell just how we heard it,—about it when it first started?

Chairman Bond: You may.

A. I was at Anadarko and Senator Pruet asked me how [fol. 1626] was the matter coming along with the Unitization over there. I said, "how is that", he says, "the plan for unitization for West Cement, how is it coming along," and I said, "what was that" and he says, "the new law passed by the legislature,—I voted for the crazy thing but I don't like it" and he told me what it was and I said I don't think the folks will agree to it,—I went to Judge Sanders' office, he is Justice of the Peace, and got a map,—a copy of the Session Laws and read it. I didn't know anything about the procedure in hearings before the Corporation Commission. We called a meeting and we discussed it and talked it over and asked them how many of them had ever heard of that law——

Q. Well, you were against it before you read any of the details of the Plan, weren't you?

A. Well, we read the law and the law said that a well drilled anywhere on a tract,—read the substance of the law and that was enough to satisfy us.

Q. Mr. Davis, how much did you collect from your organization for that work?

Mr. Reford Bond Jr.: We'll object to that.

A. I'd like to answer that question, to say that I have received no compensation, I never received any compensation along the line but I spent a dollar ever time anybody else did.

Q. Who collected that money?

[fol. 1627] A. Most of it was paid to me.

Q. You paid your own dollar to yourself?

A. No.

Q. Who did you pay it to?

A. I paid it to the pool.

Examination by Reford Bond Jr.:

Q. You operate under a Board of Directors, do you?

A. Yes.

Q. How many directors do you have?

A. 12.

Q. You operate under a Board of Directors?

A. Yes.

Q. Now, is there anything else you want to state to the Commission?

A. That's all I think of at the present time,—there are a lot of things I would like to say but I know it is taking time up from the Commissioners.

Examination by Mr. Adams:

Q. Mr. Davis, Mr. Williams, in his cross-examination of you, asked you what interest you owned in the several tracts, and in his questions each time he would say, "West Cement Medrano Field" or in the "Medrano Field",—I wondered if you understood that?

[fol. 1628] A. I don't understand the meaning of the word, "field",—there is no such thing as the Medrano field over there. It is the Medrano zone of the West Cement Field. It was drilled within the confines of the 200 wells

that had existed before the Medrano pool or Medrano sand was discovered.

Q. It was known as the West Cement Field?

A. It was known as the West Cement Field.

Q. So, when you answered those questions you had reference to the Medrano zone and,——

A. Yes.

Examination by Mr. Williams:

Q. Mr. Davis, before you were coached by my good friend, Mr. Adams, you——

Mr. Adams: We object to the form——

Q. Well, I asked you the question with reference to the West Cement Medrano Field, you understood what I meant, didn't you?

A. That wasn't the terminology of it, but I thought you meant the West Cement Field in which the Medrano sand was located.

Q. But when I used the terminology, West Cement Medrano Field, you had no difficulty in pointing out on the map what I was talking about, did you?

A. I pointed it out in the West Cement Field. There is [fols. 1629-1630] no such thing as the West Cement Medrano Field.

[fol. 1631] Chairman Bond: Gentlemen, are you ready to proceed?

Reford Bond, Jr.: The next information and testimony that we wish to offer is on the Tom Potter lease on Tract 54 and the production of the testimony is to show the sand from which the well is producing, we expect the testimony to show that it's almost impossible to show what this well is completed in. It's now not producing and never has produced. I expect Mr. Potter to ask the Commission for a temporary order so if there is any change or available information that this well is now in the Medrano sand, the Commission can get him released.

Chairman Bond: Is there any controversy as to the sand that this well is in?

Reford Bond, Jr.: Yes, there is.

[fol. 1632] . Whereupon, B. T. MURPHREE, is recalled to the stand.

Witness examined by Reford Bond, Jr.:

Q. You are B. T. Murphree that testified heretofore and you are an engineer?

A. Yes.

Q. I call your attention to Tract No. 54 in petition of the exhibit and to the gas well located thereon designated as the Potter-Davis well, and ask you to state if you have made an examination of data in connection with this well?

A. I went out to the Potter Davis well and took the samples that they had conducted in drilling the well and took those samples and looked at them to ascertain the type of the Medrano or type of sands that will appear in the well. As far as the samples are concerned,——

Q. Mr. Murphree, if you will confine the answer to things that you did and data that you examined, please.

A. I took these samples and looked at them and did a log on them, on the well, I should say, then I obtained electric logs around the well and compare those and I prepared a cross section which I have here (indicating) through the Amerada Hartshorn to Amerada Hartshorn 1, Amerada Edwards 1, Magnolia-Edwards 6, Magnolia-Edwards 1, Potter-Davis No. 1.

Q. Mr. Murphree, you examined samples of the electric logs, did you? You examined the actual cores?

[fol. 1633] A. I obtained the cores which were taken from the wells and I still have them in my possession.

Q. Did you examine any other physical data from these wells?

A. The only other thing that I could mention is the casing and tubing pressure on the well.

Q. Then, of course, you examined the data on other wells surrounding the other?

A. Yes.

Q. You prepared a chart to various wells in this area in connection with your studies?

A. I did.

Q. That is marked as Exhibit 116 and will you please place that map on the board so the Commission can see it.

A. Yes. (Witness places Exhibit 116 on blackboard.)

Q. Now then, Mr. Murphree, will you explain that part to the Commission?

A. It is a cross section shown on a little map where it extends from and to across the south end of the Medrano sand from east to west, taking the electric log on Amerada Hartshorn No. 2, Hartshorn No. 1, Amerada Edwards No. 1, Magnolia Edwards No. 6, Magnolia Edwards No. 7 and Potter Davis which is located here on the small map. (Indicating). It is normally, the electric logs, placed at the same sub-sea level as to correlate them and see what [fol. 1634] sands would correlate with each other or would not correlate with each other, this little kick on both sides will indicate the cross section.

Q. Those are the kicks that lie along the top black line across the exhibit?

A. Yes.

Q. Will you mark that line A?

A. I will mark it A-A*. This lower line which I will mark B-B* shows what is proposed to be the Medrano sand in these lower wells. (indicating) These three here. It can be picked out very easily. This well here (indicating) had practically no Medrano or it didn't show on the electric log.

Mark Adams: What well is that?

A. Magnolia Edwards No. 6. They are all very questionable to me whether they included any Medrano sand at all, it's very thin or tight if it were present.

Mark Adams: What were the names of the three wells?

A. Magnolia-Edwards 6, Edwards No. 1 and Potter-Davis No. 1.

Reford Bond, Jr. continues with the witness:

Q. Now, will you state to the Commission whether or not in your opinion it can be determined with any degree of certainty from the data that is available from what sand or in which sand the Potter Davis well is completed.

[fol. 1635] A. It is the best information we have on whether it is in the Medrano or not and from this information I could not say whether it is or not.

Q. Will you point out to the Commission the things that will indicate that is in the Medrano sand?

A. Down here (indicating) on the three wells, Amerada-Hartshorn 2, Hartshorn 1 and Amerada-Edwards No. 1, we got 9 electric logs in the sand and porosity will indicate that there — oil in the sand (over here) in the Magnolia-Edwards No. 6, and Edwards No. 1 and Potter-Davis, we got very little reaction in the sand.

Q. Which indicates what?

A. Which makes the data very sketchy as to whether there is Medrano or not.

Q. Now, what other evidence have you examined which would indicate that the sand in which the Potter-Davis well completed is in the Medrano?

A. These cores which I obtained from the well ranged from 40 per cent up to 60 per cent, almost contending they are very hard and tight and the sand just doesn't look like the Medrano sand in the cores.

Q. Does the Medrano sand contain a little lime?

A. As I understand it, it's a fairly clean sand and does not contain too much lime.

Q. Is there any conglomerate on the sand in the cores? [fol. 1636] A. In the samples that we obtained from the well, I could find no conglomerate section from the Medrano sand.

Q. Does that indicate that it is in the Medrano sand.

A. There should be a conglomerate come in on top of the Medrano, or there has been in the field.

Q. State to the Commission whether or not in your opinion, if you are able to do so, if this Potter-Davis well was completed in the Medrano sand?

A. I couldn't definitely state whether it is or not, it's questionable if it is.

Q. How could it be definitely determined?

A. As to the definite determination of what it's production is, information from the well which is not available, I mean production information, boring of the well, observing pressures and that is all I know.

Q. At the present time, the well has not been produced?

A. No.

Q. Completed about when?

A. About one year ago.

Q. Would that be any assistance in determining the sand if that well was deepened, or another well to be drilled, deepened.

A. Yes, if you deepened the Potter-Davis well and determined the sections below the well, you could definitely correlate the Medrano and find out.

[fol. 1637] Q. Now would it not be practical engineering operation to deepen this well?

A. You have a 7 inch casing in that well and it could be that you could drill a 6 or 6¼ inch hole inside the casing.

Q. With such an operation, would it injure the Medrano sand in the horizon if the well were not completed in the Medrano sand?

A. No, it wouldn't injure the sand.

Q. It could be done?

A. Yes.

Mark Adams examines the witness:

Q. On your diagram on the board the third well from the left, did you say that that did not disclose any Medrano sand?

A. It doesn't have any Medrano sand, I believe.

Q. Which one is it that you said did not have?

A. This one (indicating), the Magnolia-Edwards No. 6.

Q. Isn't that a well, Magnolia-Edwards No. 7, wasn't that drilled immediately north of the well, about 200 feet to the Medrano sand?

A. That is right.

Q. And it recovered a complete section in the Medrano sand?

A. I believe it did.

Q. Which very definitely reflects that the No. 6 well was drilled in a fault, was it not?

[fols. 1638-1639] A. It seems that this section from here down (indicating) on the Edwards No. 1 contains up in comparison to these others and it fixes the irregular intervals again over here (indicating) so that must be a fault in there somewhere.

Q. And that well, to which we have just referred, is in the location of what has been marked on the map as Edwards fault?

A. Yes.

Q. That is all.

Mr. Williams: Will you kindly, across the board, identify these wells again?

A. We have the Amerada-Hartshorn No. 2, Hartshorn No. 1, Amerada-Edwards No. 1, Magnolia-Edwards No. 6 and Magnolia Edwards No. 7, and Potter-Davis.

Chairman Bond: The Commission will recess until 2:00 o'clock.

[fol. 1640] STIPULATION RE EXHIBITS

Chairman Bond: Gentlemen, you may proceed in C. D. 1308.

Reford Bond, Jr.: It is stipulated by the Petitioners and the royalty owners that the list of Royalty Owners marked Exhibit 117 be used by the parties in connection with this stipulation to show the interests of the royalty owners, and their per cent in the entire unit and that it is stipulated by the parties that the interest of the royalties is and the lands under which they own that interest are and that percentage of the total interest in the proposed pool is shown on Exhibit 117, would the exception of Harold Edwin Plummer, he has withdrawn as a protestant.

Mr. Williams: We can't stipulate that those are parties he represents because we do not know. We will stipulate that the interests set out by the names are the interests of parties who appear on this exhibit.

Reford Bond, Jr.: If the Commission please, I don't believe that there was anything in the stipulation that provided about whom we represented, in the event the Commission wants to know and I know that they wish to know, I will say that I represent every name and every person on that exhibit and have been so authorized by their signatures which I have in my files and which Mr. Davis has in his. [fol. 1641] If the Commission please, I take it that Counsel agrees to the stipulation that was dictated into the record, is that correct?

Mr. Williams: I will agree that the interest of several parties on Exhibit 117 or the interests shown on that exhibit is correct.

Reford Bond Jr.: That they own the interests as on the exhibit?

Mr. Williams: Yes.

Reford Bond, Jr.. And that those are per cent interests in the pool to be unitized, the area that you propose to unitize as appears on the exhibit opposite their respective names?

Mr. Williams: It is the one that we figured for you.

Reford Bond, Jr.: Yes, you made it out.

Mr. Williams: Taken from pipeline division orders.

Chairman Bond: Let the exhibit be received.

Reford Bond, Jr.: At this time we want to offer here J. W. Fletcher, the owner of the NW¼ of Sec. 34, Tnsh 6N, containing 160 acres subject to the oil and gas leases there-on and Eva Parker, the owner of an interest in the NW¼ of Sec. 35, Township 6N Range 10W and Frank Pohleman, the owner of tract No. 6 on the applicant's [fol. 1642] exhibit 24 which is the NW¼ of Section 33, Township 6N, Range 10W, in addition thereto to the list offered.

[fol. 1643] B. T. Murphree recalled to the stand.

Cross examination by Mr. Williams:

Q. Mr. Murphree, your conclusions in regard to the Potter-Davis well, as I understand it, are predicated upon your observance of the samples taken from the well, your observance from the cores and correlation of the electric logs as shown on Exhibit 116.

A. Yes, there were some other production.

Q. How many samples from wells in the West Cement Medrano field have you analyzed for study.

A. You mean how many wells have I logged in the field?

Q. Yes, that you have examined the samples on.

A. Five, I believe.

Q. And how many cores from other wells in the field have you had opportunity to observe?

A. Two other wells.

Q. Do you remember those wells?

A. They were Phillips wells, it's been quite awhile back, one on the Oaks lease, that was 2 or 3 or 4, there were that many cored.

Q. There were two other wells?

A. Yes.

Q. You spoke something about the pressure of the Potter-Davis well, you are appearing here on behalf of Mr. Potter, are you not?

[fol. 1644] A. Yes.

Q. Mr. Potter has information as to those pressures, does he not?

A. Yes.

Q. Do you know what they are?

A. Well, at the time I went down there and cored it, it had about 900 pounds at the well head.

Q. At the well head?

A. Yes.

Q. At the time you went down to observe it, can you fix approximately the time.

A. December of 1946.

Q. December, 1946?

A. Yes.

Q. Do you know how long the well had been completed and shut in at the time that you observed the pressures on the well?

A. About four and one-half months, now, as to being shut in all the time, they might have had it open into the air.

Q. It's not been connected?

A. No.

Q. Do you consider the well head pressure as observed by you either higher or lower than normal for the Medrano?

A. Well, the Medrano at that time was around 900, was near the Medrano pressure, or was at that time.

[fol. 1645] Q. Then in your testimony, you are not expressing a definite opinion one way or the other as to the sand at which it was completed but you are pointing out the fact that the information was sketchy and that there was a question about it.

A. Yes, there is a question in mind as to the sand it's completed in.

Q. That is all.

Witness excused.

Reford Bond, Jr.: We offer Exhibit No. 116.

Chairman Bond: Received.

Reford Bond, Jr.: Should the original be withdrawn and substitute a photostatic copy?

Chairman Bond: Permission granted.

Reford Bond, Jr.: That is all the evidence that we have at this time, if the Commission please, however, we understood that there will be some additional evidence offered in protest to this application and therefore we prefer not to rest our case at this time.

Mr. Page: I desire to offer evidence on behalf of our Clients, they will be here in a few moments, while we are waiting, I would like to recall Mr. Murphree.

[fol. 1646] Mr. Murphree recalled to the stand.

Mr. Page examines the witness:

Q. Are you the same Mr. Murphree who has testified heretofore on behalf of the royalty owners?

A. I am.

Q. I believe you have compiled certain figures that have been introduced in evidence concerning the amount of income to the various leases under present competitive operations and when it will be adopted here and put in force by the Commission.

A. Yes, as stated in there.

Q. Mr. Murphree, I direct your attention to what is known as the Plummer lease, which is divided into two separate tracts, No. 19, is Plummer with 80 and Tract No. 20 is known as Plummer east 80, will you please state to the Commission concerning the east 80 in the amount of decrease in income to the east 80 that will occur in event this plan is adopted and put in operation.

A. Tract No. 20, Plummer 4 and 5 under competitive operations, as it's going now, oil at $2.00 per barrel and gas at 15 cent per thousand, at present about $3,014 per month; under the unit plan they would receive about $2,678 per month.

Q. Now, I direct your attention please, sir, as to the Plummer west 80 and ask you to give the figures on that tract as you have done on the east 80.

[fol. 1647] A. Tract No. 19, the Plummer No. 3 would receive or is receiving about $1,489 to the 1/8 interest and the unit interest would receive about $1,596.

Q. That would be an increase of about how much per month?

A. $107.00.

Q. The West 80 is the one in the Medrano pool?

A. Yes.

Q. And the east 80 has two Medrano wells?

A. 4 and 5.

Q. The east 80 is decreased how much under the plan, approximately.

A. $340.00.

Q. And the west 80 is increased something over $100.00?

A. Yes.

Q. Now can you state to the Commission please, sir, from the exhibits that have been introduced what is known as the Plummer West 80 as included as to number of acres.

A. 50 acres.

Q. And how many acres of the east 80 are included?

A. 70 acres.

Q. 70?

A. Yes.

Q. Stephens Petroleum Company own both of the two [fol. 1648] 80's, all of the west 80 and a portion of the east 80.

A. According to this exhibit.

Mr. Adams: You mean they own the lease interest?

A. Yes, according to the exhibit.

Mr. Adams: And the reduction to royalty?

A. Royalty interests only.

Jack Page continues with the witness:

Q. Do you have the figures at your command as to the amount of income, working interest?

A. No, I have the amount of production figures on the lease here.

Q. That is all.

Mr. Williams examines the witness:

Q. These calculations were based on what months income?

A. April, 1947.

Q. That is prior to the present gas order in the pool?

A. Yes.

Q. Now then, at arriving at your unit income of the unit operation did you take into consideration the accelerated income in parts of the exhibit?

A. The interests that I used in arriving at the 1/8 interest in the unit plan or the ones set forth in the table, Exhibit D, Part 1?

Q. And you did not take into account accelerated interest?

[fol. 1649] A. As I understood, that was merely to boost income.

Q. You aren't using 5200 barrels daily allowable?

A. Yes.

Witness excused.

Chairman Bond: The Commission will recess for ten minutes.

[fol. 1650] B. T. MURPHREE, recalled, further testified as follows:

Re-examination.

By Reford Bond Jr.:

Q. You are the same Mr. Murphree who has heretofore been on this stand as an Engineer and as a Geologist?

A. Yes sir.

Q. Calling your attention to the oil wells in the oil producing zone of the Medrano sand, I'll ask you to state to the Commission if there is any difference in the present capacity of those wells to produce?

A. From the Commission records which I have examined it shows the wells capable of producing from 10 barrels per day through 550 barrels per day.

Q. The present allowable under the Commission Order,—I believe, is 200 barrels per day?

A. What they can produce, or 200 barrels per day.

Q. But wells that do not have the capacity to produce 200

barrels per day, their allowable is the amount which they can produce?

A. Yes.

Q. And wells having a present capacity to produce more than 200 barrels per day are restricted to 200 barrels per day?

A. Yes.

Q. Now, in cases where the oil wells have a present high capacity to produce, what does that indicate about the sand [fol. 1651] underlying and around those wells, as compared with the sand underlying and around wells with small capacity to produce oil?

A. With small capacity to produce oil,—with the same amount of Medrano sand open, same amount present in the well of high capacity, the high capacity well has indicated that it had a higher permeability than the low capacity well and if it had high permeability it would necessarily have to have high porosity.

Q. Is it or not your experience that wells with a high present capacity to produce oil, if operated as they are at present in the Medrano field, would produce substantially more oil than wells with a lower present capacity to produce oil.

A. Those wells with higher producing capacity would produce more oil.

Q. Even with the order now in force by the Commission?

A. Well, say you had two wells with different present allowable, one would produce 300 and the other 600 barrels per day,—there would be a little difference between those wells, due to the restricting factor, but with wells under 200 there might be a greater difference.

Q. As between two wells, what,—one of which had a present capacity to produce 600 barrels and one that had a present capacity to produce 300 barrels per day, which would produce more oil during the life of the well?

A. In the answer,—in the life of the well normally, the normal thing would be that the well with the higher capacity [fol. 1652] would hold out longer than the one with the lower capacity.

Q. Then, I understand you to say that between,—the 300 barrel capacity well would drop below 200 barrels before the other well would?

A. That's what I intended to say.

Q. Then, as the 300 barrel wells drops below 200 barrels the 600 barrel well will stay in there and produce 200 barrels?

A. Yes, that's right.

Q. That is what is to be expected?

A. Yes, that is normal.

Q. I'll ask you to state whether or not the plan offered by the applicant considers the present capacity to produce oil in the Medrano sand?

A. The 20 percent factor, they use in the present income, the 200 barrel well, if it is over 200 barrels there is no consideration,—there is no consideration for a well producing over 200 barrels per day.

Q. In your opinion is it equitable to consider the present capacity of the well to produce if you are going to consider the present production of the well?

A. If the income factor has been entered, the capacity to produce should be, yes.

Examination.

By Mar. Adams:

Q. The records of the Corporation Commission, to which [fol. 1653] you referred, do they list the separate wells and their ability to produce?

A. Those are merely 24 hour production tests made use of. There is one form for each well.

Q. Are there all the same date, or approximately the same date?

A. This particular date the test shown was February 1947, the early part of February. I don't know whether it would be difficult for you to find it or not.

Q. But do you know what those records show in respect to the Palmer-Sterba No. 4 well?

A. I think we had it here awhile ago, I believe it is 427 barrels. The Sterba No. 4, that test was in 1945. Here, the Sterba No. 4, 2-12-47, made 427.63 barrels with no water.

Q. Per day?

A. Per day, 24 hours.

Q. I assume the records to which you refer do not show the ability of the Palmer-Sterba No. 7 well, with respect to

oil production in 24 hours,—that well was completed in February?

A. It isn't in this file.

Q. Do you happen to know what the ability of that well was to produce?

A. No sir.

[fol. 1654] Examination.

By Mr. Williams:

Q. Mr. Murphree, the ability of a well to produce on a production test such as was there taken depends on many circumstances, does it not?

A. Yes, it depends on a great many circumstances.

Q. The extent to which, and where the pipe was perforated would have a bearing on that, would it not?

A. Yes.

Q. And the pressure at the time of the production test would have a bearing on it, wouldn't it?

A. All the pressure would have some effect, yes.

Q. The type of the pump in it would have some effect on it, wouldn't it?

A. Yes, of course the operator is going to put enough in there to get his allowable at least.

Q. Well, 200 barrels?

A. Yes.

Q. Are there any,—there was no incentive on the part of any operator to produce in excess of that?

A. That's right.

Q. These low capacity wells can be made into high capacity wells be shooting the well, can they not?

A. I don't know what the records show in respect to shots in the Medrano sand, I believe a shot down there would help, [fol. 1655] probably.

Q. Acid would effect the permeability down around the bore hole, would it not?

A. Shooting would work, but I believe acid would, in that sand.

Q. Now, there are many wells that have high permeability that will show more capacity to produce where, whereas, the

reserves behind that well are low and it will decline rapidly in the course of time, isn't that true?

A. In some cases that is true, yes.

Q. You wouldn't want to judge the reserves on a group of wells by their capacity to produce on a production test such as this, without making a study of their, well without making a study of the,—other things, would you?

A. No, but I would definitely want the capacity to produce to be in there.

Q. Now, if in your opinion, is the potential of a well, or its capacity to produce, the final criterion of the reserves under that well?

A. It doesn't indicate the reserves entirely, no.

Q. You would want to know more about the well than merely the production test, to determine its capacity up to 200 barrels?

A. Yes.

[fol. 1656] Examination.

By Reford Bond Jr.:

Q. These wells in the Medrano pool use about the same method of completion, do they not?

A. As I understand, they do.

Q. These pressures that Counsel asked you about are all about the same, aren't they?

A. The bottom-hole pressures in the pool have varied some 400 pounds in one local area,—they should be about the same.

Q. Counsel asked you about the back pressure,—those tests are usually made at about the same back pressure, aren't they?

A. The back pressures on the separator are usually about the same, yes.

Q. They all have about the same pump equipment, out there, don't they?

A. Well, the brands are the,—not the same, but the capacity to get the oil out of the holes is about the same.

Examination.

By Mr. Williams:

Q. Do you know about the perforating and shooting and how they are completed,—I want to know if you know when and where the several wells were perforated, the number of shots, the number of * * *

A. As far as I know, I have not shot records of these wells out there and we did make perforation records, but the way [fol. 1657] the Corporation Records, but the way the wells were completed when I was working out there, you set the pipe on top and drilled it into the producing horizon.

Examination.

By Mr. Adams:

Q. Was that uniform?
A. That was usual, general practice, so far as I know.
Q. It was uniform?
A. Yes.

By Mr. Williams:

Q. Do you know what other companies did?
A. About the shots, I don't know that.

By Reford Bond Jr.:

Q. Did they do much shooting down there in that field?
A. We didn't know of any wells that have been shot.
Q. Well, does that shooting down there make you want to change your estimate about the present capacity of these oil wells to produce oil?
A. No.

Witness is excused.

[fol. 1658] B. E. Johnson, calles as a witness, being first sworn, testified as follows:

Direct examination.

By Mr. Page:

Q. State your name, please?
A. B. E. Johnson.

Q. Do you live in Oklahoma City?
A. Yes.
Q. Now, what is your business, Mr. Johnson?
A. Oil Producing.
Q. You have several oil producing properties and wells in the state of Oklahoma, have you?
A. Yes.
Q. Are you now operating some tracts?
A. Yes.
Q. How long have you been an oil operator and producer?
A. Since '32.
Q. You have operated and are now operating leases in Seminole, Pottawatomie and various counties in the State?
A. Yes.
Q. Mr. Johnson are you familiar with what is know- as the West Cement Field, oil field?
A. Yes sir, fairly so.
Q. How long have you been operating in the West Cement Field?
A. Since 1939.
[fol. 1659] Q. Is that when you drilled your first wells there?
A. Yes.
Q. Now, do you know what is the West Cement Field, do you know what the West Cement Field, as it is referred to here in this application, do you know where it is?
A. I think so, yes, I'm satisfied of that.
Q. You know whether or not that West Cement Field is more than twenty years of age and has been in existence more than twenty years?
A. To the best of my knowledge it has, yes, from the records.
Q. Have you had occasion to drill and operate in various oil fields within the State of Oklahoma?
A. Well, in Pottawatomie County, Caddo County,——
Q. Just how well do you know what is commonly referred to as an oil field in this State?
A. Well, I think I know.
Q. Well, as to what is termed here the West Cement area or field, is that an oil field, in your opinion?
A. Yes sir.

Q. What is your definition of what is commonly known and referred to in the State of Oklahoma and has been during your time as an operator, as an oil field?

A. Well, it is where there has been some production in that area, regardless of the sands.

Q. In the West Cement Field about how many different [fol. 1660] producing horizons or sands are there, if you know?

A. To the best of my knowledge, I think about four, or three possibly.

Q. What are some of the producing horizons in the West Cement Field, other than the Medrano?

A. The Noble-Olsen, the Niles, and oh, that sand that runs in streaks, what is that?

Q. Is there one known as the Rowe?

A. Rowe, yes.

Q. Do you have wells producing in the West Cement Field?

A. No sir, not now. Oh, yes, I do in the Noble-Olsen, yes.

Q. In the West Cement Field?

A. Yes.

Q. You are one of the protestants are you?

A. Yes.

Q. You have filed your protest?

A. Yes.

Q. Your son-in-law, M. L. McIntyre, is one of the protestants?

A. Yes.

Q. Did you protest Unitization?

A. Yes.

Q. Are you familiar with what is known as the Plummer land, the East Half of 34-6N-10W?

A. Yes.

Q. I'll speak of the Plummer East 80?

[fol. 1661] A. Yes.

Q. Did you originally own the Plummer East 80?

A. Yes.

Q. You and your partner?

A. Yes.

Q. I'll ask you,—hand you what has been marked by the Reporter as Exhibit 118, and ask you what that is?

A. This is an oil and gas lease made to Hall & Briscoe.

Q. By whom?

A. Well, by N. T. Plummer and Florence Plummer, husband and wife.

Q. On what land?

A. The East Half of the Southwest quarter of Section 34, Township 6, North, Range 10, West I. M.

Mr. Bond: We offer it in evidence.

Chairman Bond: Received.

Reporter's Note: Exhibit 118 is at this time read to the Commission.

Q. Now, I'll hand you what has been marked Exhibit 119 and ask you to state what that is?

A. That is the assignment from Hall & Briscoe to me, covering the same land.

Reford Bond Jr.: We offer in evidence Exhibit 119.

Chairman Bond: Received

Reford Bond Jr.: I want to read this to the Commis-
[fol. 1662] sion.

(Reporter's Note: Exhibit 119 is at this time read to the Commission)

Reford Bond Jr.: If the Commission please, we want permission to withdraw this original assignment and substitute with a photostatic copy.

Chairman Bond: Permission granted.

Q. Mr. Johnson, how many wells are there now producing from the Medrano sand of this lease, the Plummer East 80?

A. Two.

Q. How long have they been on there and been producing wells approximately?

A. Three years,—one is three years and the other not quite three as I remember right.

Q. You and the Stephens Petroleum Company drilled these wells?

A. That's right.

Q. They were drilled under the order of the Court?

A. Yes.

Q. You were in litigation with Stephens at the time?

A. Yes.

Q. They are known as the Plummer-4 and Plummer-5?

A. Yes.

Q. Are these wells making their allowables?

A. Yes,—they have run behind but they have made up. That is on account of the pump having been out of order.

[fol. 1663] Q. As long as the pumps worked all right they made their allowable easily, of 200 barrels per day?

A. Yes.

Q. Now, adjoining this lease, on the Plummer West 80, how many are there?

A. There is only one well in the Medrano.

Q. What do you and your son-in-~~law~~ have in the Plummer West 80 of a working interest?

A. I have 1/7 and my son-in-law owns 1/14 below 3600.

Q. And you own all of the lease above 3600?

A. Yes.

Q. Did you sign this application that has been submitted here to the Commission, asking that this Plan be put in operation?

A. No sir.

Q You understand that your mining partner signed it, Stephens?

A. Yes, I understand he did.

Q. You didn't sign it?

A. No.

Q. Are you inquiring,—are you in favor of this Plan?

A. No sir.

Q. Why?

A. Because it takes away from what I have and adds it to somebody else.

Q. Are you familiar with the well on the East 80,—the [fol. 1664] Medrano well?

A. Yes.

Q. What kind of a well is it?

A. Well, it didn't come in as strong as the original well on the East 80.

Q. Do you know whether it made its allowable?

A. Yes, it makes its allowable?

Q. Does it make it's allowable?

A. Yes, as far as I know.

Q. Now, some testimony,—Mr. Johnson, from your experience as an oil operator, is it or is it not your opinion that this Plummer lease, these Plummer leases have been properly developed?

A. No, I don't think so, at the present time, under the regulations.

Q. Do you know why they never drilled but one well on the Plummer West 80?

A. No sir, I do not.

Q. Do you know how long ago it was the first producing well was drilled in what is known as the West Cement Field?

A. I can- tell exactly, but to the best of my recollection, it was in '21 or '22, some place along in there.

Examination.

By Mr. Adams:

Q. To clarify this one thing, Mr. Johnson, you were asked by your counsel about the equity assigned to the East [fol. 1665] Plummer 80 and to the West Plummer 80,—your counsel gave you the percentage figures and you said those were right,—have you said, have you meant by that, that you were satisfied with them or that the figures were about the same?

A. The figures were about the same.

Q. You say they are right, you mean that,—you do not mean that they were satisfactory to you?

A. No sir.

Examination.

By Mr. Williams:

Q. Mr. Johnson, I understand your testimony, as I understand your testimony you originally owned these two Plummer leases?

A. One of them.

Q. And you made an assignment to the Stephens Petroleum Company of your interest?

A. No sir, I did not.

Q. Where did you get it? I mean where did Stephens get it?

A. Mr. Rollins was supposed to be a partner of mine at the time it was being made, and later *it* on I conveyed to him his half, and he sold to the Stephens Petroleum Company.

—. ——.

[fol. 1666] A. June, 1939.

Q. Do you know what the discovery, or when the discovery well in the West Cement field was drilled?

A. Medrano sand or field?

Q. Medrano sand or field.

A. No, I could not say exactly, I have seen the record; it is hearsay, along in 1921 or 1922 or 1923, I would not say positive when, I went out to drill this well, the one on the Oaks and Sturba and——

Q. Did you have any other interest in the Medrano other than in which you testified?

A. That is all.

Q. Any other royalty?

A. No.

Q. You testified as to certain other fields or pools, what pools are those?

A. I have a little interest in the Town of Cement, I did have a lot of interest at one time in Pottawatomie county.

Q. What interests in Pottawatomie County?

A. St. Louis and Maud.

Q. Are you acquainted with the Fitts pool?

A. Only hearsay.

Q. You know where it's located?

A. Yes, sir.

[fol. 1667] Q. Do you have any interest in the Cushing pool?

A. No, sir.

Q. You know where it's located?

A. Yes, sir.

Q. Do you know what is referred to as the Mid-Continent pool?

A. I don't know exactly, but it's termed as most all the pools, I couldn't say exactly, I couldn't say.

Q. The Mid-Continent pool is the Mid-Continent area?

A. That is the way I understand it.

Q. Seminole, Cushing and Kansas area, all of that is in the Mid-Continent pool?

A. That is the way that I understand it from hearsay.

Q. That is also referred to as Mid-Continent field.

A. I couldn't say, because I don't know except as far as hearsay is concerned.

Q. Before you came out here, before you went on the stand, you discussed with your counsel, didn't you, on the meaning of the word "field:" and "pool?"

A. Yes, we talked it over several times.

Q. And talked it over since noon.

A. He said he wanted me to come out and testify about what the "field" was.

Q. He told you what other witnesses testified to as to "field" and "pool."

[fol. 1668] A. No, he didn't tell me that.

Q. You know, do you not, that the field's pool is more than one sand?

A. I understand it is.

Q. And you know the Cushing pool is more than one sand?

A. Yes.

Q. As a matter of fact, you have heard the terms "field" and "pool" used interchangingly by lawyers, geologists, and lease brokers and everyone in the business.

A. Well, different ways.

Witness Examined by Jack Page:

Q. Did you ever hear of the West Cement field being called anything but the West Cement field?

A. That is all.

Q. You never heard it referred to as West Cement pool?

A. No, sir.

Q. Counsel asked you about my telling you to testify, I called you on the telephone and tried to get you here and you have been out of town?

A. Yes.

Q. I called you on the phone and asked you to come out and testify?

A. Yes.

[fol. 1669] Q. And that was the substance of our conversation?

A. Yes.

Mr. Williams: I didn't imply that counsel told him what to say, I am and have more confidence in Mr. Page than that and more respect and regard for him.

Mr. Page Continues with the Witness:

Q. You know what a field is without my telling you?
A. Yes, sir.

Mr. Williams: I have too much respect for Mr. Page to say that he would do that.

Mr. Adams Examines the Witness:

Q. Counsel asked about Midcontinent area being referred to as a pool, on second thought, did you ever hear the Mid-Continent Oil and Gas area referred to as Mid-Continent pool?
A. I never did.
Q. I never did and I thought that you had heard it referred to as Mid-Continent pool.
A. I never did.
Q. Mid-Continent area, did you ever hear it referred to as field or pool, wasn't it always referred to as Mid-Continent area?
A. I understand that Mid-Continent field is a number of pools of oil.
Q. You heard it referred to as Mid-Continent field?
A. That is my understanding.
[fol. 1670] Q. That is all right, but I never heard it referred to as that, it was always Mid-Continent area.
A. I heard it as Mid-Continent field, I never kept up with it on those things.

Jack Page Continues with the Witness:

Q. Speaking of these fields that they interrogated you about, have you drilled a number of wells on the Cement townsite?
A. Yes, sir.
Q. How many?
A. Five.
Q. What is that known as?
A. Cement field.

Q. Is that separate and apart from the West Cement field commonly referred to as West Cement field?

A. It's commonly referred to as Cement field and West Cement field.

Q. Have you ever heard of it as anything else?

A. No.

Q. That is all.

Witness excused.

Jack Page: We rest as far as this protestant is concerned.

Reford Bond, Jr.: We rest, your Honors.

Mark Adams: We rest, your Honors.

[fol. 1671] Chairman Bond: Rebuttal testimony.

Whereupon, JACK MONTGOMERY is recalled to the stand as a rebuttal witness by the applicants.

Witness examined.

By Mr. Williams of Phillips Petroleum Co.

Q. State your name.

A. A. J. Montgomery.

Q. You are the same Mr. Montgomery who has previously testified in this proceeding?

A. I am.

Q. Mr. Montgomery, did you hear the testimony of Mr. Murphree with respect to the Potter-Davis Well No. 1 in Tract No. 54?

A. I did.

Q. Have you had occasion to examine the exhibits introduced by him, being Exhibit No. 116?

A. Yes, sir.

Q. Have you had occasion, Mr. Montgomery, to examine and study the electric logs and the wells shown on Exhibit 116?

A. I have, yes, sir.

Q. With respect to how many other wells in the West Cement field have you had occasion to examine the electric logs.

A. Well, all that had electric logs run on them.

Q. Approximately how many were there?

A. Approximately 50 or 55, something like that.

[fol. 1672] Q. Have you examined the samples on any of the wells in the West Cement field?

A. Yes, sir.

Q. On approximately how many wells?

A. I would say certainly at least one-half of them.

Q. Did you have a geologist working under your supervision and direction personally examine them?

A. Yes, we examined all of them.

Reford Bond, Jr.: We object to any samples that were examined by any geologist working under his supervision.

Chairman Bond: He may testify as to work under his supervision.

Mr. Williams Continues with the Witness:

Q. And have you had occasion to see all sample reports and results of these examinations of these under your supervision.

A. They are in the file.

Q. As part of the company's records?

A. Yes, sir.

Q. And have you studied these logs?

A. Yes, sir.

Q. Are you acquainted with the location of wells shown on Exhibit 116?

A. Yes, sir, all the wells.

[fol. 1673] Q. I wish you would, Mr. Montgomery, for the benefit of the Commission, give your interpretation of the facts with respect to the Potter-Davis well as reflected by Exhibit 116 and as determined by your examination of the logs and samples and wells in the field and knowledge of the field, generally, as to respect of being in the Medrano sand or some other sand.

Reford Bond, Jr.: I would like to ask the witness one or two questions to qualify him.

Chairman Bond: You may.

Reford Bond, Jr., Examines the Witness:

Q. Did you see the samples of the Potter-Davis well?
A. I have not.
Q. Did you see the cores when taken from the well?
A. Several of them.
Q. Who were present?
A. Mr. Potter, Mr. Lacey Rowland, Mr. Willard Miller.
Q. Anyone else?
A. To the best of my recollection, I think they were the ones I say I saw in Mr. Miller's office.
Q. Were these people present in Mr. Miller's office or were you at the well?
A. I went over to Mr. Rowland's office and Mr. Potter was present and they said they had them at Mr. Miller's office.
[fol. 1674] Q. You did not see the cores taken from the well, but in Mr. Miller's office?
A. Yes.

Mr. Williams: Did you see them at the request of Mr. Potter?

A. Either he or Lacey Rawlins.

Reford Bond, Jr.: Mr. Potter was present?

A. I am quite sure he was.

Mr. Williams Continues with the Witness:

Q. You all went down together to look at them?
A. Yes, sir.
Q. Who is Mr. Miller?
A. Geologist with Ramsey Petroleum Company who made the Farmite deal with Mr. Potter.
Q. What interest did he have in the well?
A. An overriding deal.
Q. And he is the geologist?
A. Yes, sir, he practices that profession and has for a number of years.
Q. Go ahead.
A. It so happens that the cross section was drawn as a complicated angle and to make a clear picture of the Potter No. 1 Davis that is shown in Exhibit 54-R, we will retain

on Amerada-Hartshorn lease the patch of the cross section which crosses the Edwards fault twice and No. 1 and No. 2 [fol. 1675] Hartshorn of Amerada are normal sections, in Medrano while we go to Amerada No. 1 Edwards and to the east of the No. 1 Hartshorn, you notice that upper line marked A-A' in the case, a decided drop in this line, it so happens that this horizon is correlated as a nile sand zone that is productive back to the northwest and easily identified on all electric logs as well as all sample logs. The well is low as it reached a nile sand zone, but it crossed the field immediately along there and lost all the wade sand section and also it is a funk zone black—zone, then it came immediately across there, (indicating) and started running high in the shale section in the Medrano zone, consequently it reached there (indicating) and on here (indicating).

Q. What fault is that to which you make reference?

A. Edwards fault, the cross section, then goes to No. 6 Edwards drilled by Magnolia and located in the NW¼ of one, the well was drilled and had a relative normal section and reached to the Medrano sand and had a slightly lengthening section before the sand was reached, unquestionably the committee of geologists placed as market sand and that is the Medrano sand, 2300 feet.

Q. What was that?

A. Because it crossed the fault as denoted on the side as No. 6 Edwards.

Q. Is that shown on Exhibit 54 as Medrano sand?

[fol. 1676] A. No dry hole and Medrano sand absence by faulting. Subsequent to this drilling and the producing of this well, they then went in and attempted to—No. 6 and crossing it high in the hill to reach the up course and get the Medrano sand where it would be productive and it is now productive and figured they could save money by drilling a new hole. Mr. Farman, a member of the Committee, and I discussed it as to where they would drill it and they eventually drilled a No. 7 which is the next well on the line of cross section, the well here (indicating) the No. 7 Edwards is crossing the fault as it reached the Medrano sand, it actually did get the Medrano sand on the high side of the fault, or northwest side of the fault, the sand was started in cores and fractured and broken up, and consequently the

sand section found in there in that well is not a true representation of what it would be in productivity, 100 feet to the northwest it represents in this well as influenced by the fault itself.

Q. Were you present at different times at the drilling of these wells and have personal knowledge of what you have just discussed.

A. No, but I kept close contact with them and did go on all leases from an academic standpoint.

Q. At the time of the drilling of the wells?

A. Yes.

Q. Go ahead.

[fol. 1677] A. A- early test brought out, I believe, Phillips Petroleum Company, sand zero, a map pertaining to a Medrano of Cement and they claimed that we changed that map considerably, I believe that was changed and the one that made it in the Bartlesville office was not familiar with the things and made it hurriedly, we did not call that Medrano; going to Potter No. 1 Davis, that is, wells located to the north, to the east and south and southeast and southwest surrounding this area of the Davis which I believe unquestionably proves that Potter No. 1 Davis had the Medrano sand and the sand in the bottom of the hole is Medrano.

Q. Have you personally examined the logs in that area that you made reference to?

A. Yes, not only myself, but the Committee of geologists did have a period of time so that prior to drilling the No. 1 Davis—there was no later information that would change their minds as to what it was.

Q. What are the facts in connection with these other wells that lead you to the conclusion that the sand in the Davis well is the Medrano sand?

A. Anderson-Prichard No. 1 A Davis, inspection 6-5-9, as I recall, drilled out, the so-called Kistler zone, that is roughly 1600 or 1800 feet below the margin, geological section, the No. 1 A Prentiss was drilled considerably deeper [fol. 1678] than the Medrano sand zone. Peppers No. 1 Grinich was drilled deep, the Magnolia No. 6 Medrano was drilled through the market sand, at least there was no reason that we should—that should be anything other than sand in that geological section, that so happened to fit in the

sand and be the Medrano, consequently, it's a process of reasoning.

Q. How does the section in the Potter Davis well in the top of the Niles sand and top of the sand show at the bottom of the log as compared with the section between the Niles section and the Medrano sand as found in other wells in the vicinity.

A. Checks nicely.

Q. Would you say that there is a normal section intervening between the Niles sand and top of the Medrano?

A. Yes.

Q. And correlative—I mean, consequently, a normal section. Is that correct?

A. Yes, sir, that is correct.

Q. —has been called to the fact that the—in the electric logs appearing at the bottom of the reproduction of the electric logs varies in some respects to the—to the other logs of the Medrano sand wells in the field that have the appearance of the Potter well as shown on this exhibit (indicating)?

A. I think so.

[fol. 1679] Q. You think so?

A. I have not compared them in great detail, but there is no basic difference.

Q. I believe that some reference was made to the effect that there was some absence of conglomerate above the Medrano in the Potter well?

A. Yes, sir.

Q. Is that conglomerate now even in every other well in the field?

A. No.

Q. Are there other wells there with very light characteristics with respect to the absence of a conglomerate?

A. Going down to No. 1 Hartshorn, it did not, and another had, No. 2, Amerada, No. 1 Edwards had no conglomerate, and Magnolia No. 2, Edwards.

Q. Are they Medrano sand wells?

A. Yes, sir, and several other wells have only a slight conglomerate or cherry pebbles.

Q. Is there anything from the examination of the cores of the wells that led you to believe it wasn't Medrano sand?

A. No.

Q. You have not examined the samples in that well?

A. No.

[fol. 1680] Q. Why haven't you?

A. They were were no sand through the sample cuts, I believe Mr. Murphree told me he would make them available to me, if I thought I needed them.

Q. I believe you testified that the log on Exhibit 116 to the right was, in your opinion, a market sand well along line B-B*?

A. That is right.

Q. Now if that well is removed from the exhibit, what would be the course of the line B-b*?

A. It would have a very, a gap in it.

Q. But, if you continued the line?

A. You were to disregard that well entirely, it would be a point shown on Magnolia No. 7, Edwards, to a point on Amerada No. 1 Edwards.

Q. And the Davis well will have an abnormal position along that line?

A. That is right.

Q. How long have you been in the oil business?

A. I am not in the oil business, I work for Phillips Petroleum Company.

Q. Phillips are in the oil business.

A. Yes.

Q. Your work takes you in every pool in the State?

[fol. 1681] A. Yes.

Q. How long have you been in the business that brings you in contact with them?

A. First company in 1922.

Q. How many fields or pools in the State of Oklahoma are you familiar with, approximately?

Reford Bond, Jr.: Objection, as repetition.

Mr. Adams: That is not proper rebuttal.

Chairman Bond: Overruled.

[fol. 1682] A. Well, I would hesitate to try to name all of them,—I am fairly familiar with quite a few.

Q. In connection with your trade and your association with the oil business have you had occasion to know and become acquainted with the name of such terms as the term,

"pool", and "field," as used in common parlance in the industry.

Mr. Adams: Objected to as not proper rebuttal.

Chairman Bond: Sustained as to "pool", but as to the term "field", as I remember you may ask him as to "field" or you may refer to the records if you like.

Q. Are you acquainted with the use of the term, "field", as that term is generally used in the oil business?

A. I think I am, yes sir.

Q. I'll ask you, Mr. Montgomery, whether or not that term is used synonymously with the word "pool", in common parlance?

Reford Bond.: We object to that as assuming he asked him as common parlance, not in the oil industry.

Chairman Bond: You may answer as "in common parlance":

Reford Bond Jr.: I object as the witness is not qualified.

Chairman Bond: The witness says he is, that he has been working for oil companies 22 years.

[fol. 1683] Q. Have you had occasion to observe the use of the word, "field", in connection with common parlance, as used in every day conversation in the oil business and general common parlance?

A. Yes, I have been in contact with a number of different types of people.

Q. Well, do you think you have knowledge of the meaning of the word "pool", as it is used in common parlance?

A. Yes.

Q. Well, what is it?

Reford Bond Jr.: He hasn't qualified him yet, he asked him if he thought he knew.

Q. Well, do you know?

A. What?

Q. In the common meaning of the word "pool", as used in every day parlance?

A. Well, "field" would mean everything from——

Reford Bond Jr.: We move that the answer be stricken.

Chairman Bond: Sustained. The answer is stricken.

A. Well, I think I know.

Reford Bond Jr.: We object to that.

Chairman Bond: Let him answer whether he knows.

Mr. Williams: I asked him if he knew.

Chairman Bond: Well, he didn't say that, he said he thought he knew.

[fol. 1684] A. I know what the word means in common parlance.

Chairman Bond: You may answer that.

A. "field", as I have heard it expressed and as I have expressed it myself and as I understand, means range.

Reford Bond Jr.: We object to what he understands.

Chairman Bond: He said he knew, he may testify what the word "field", means in common parlance.

A. "field" such as the Oklahoma City field, West Edmond Field, or any of the innumerable fields in Oklahoma.

Q. If I were to ask you where the Wilcox field is would you know what I was talking about?

Reford Bond Jr.: We object to what he understands.

Chairman Bond: Overruled.

A. Well, the Wilcox field, I don't know whether I can hardly define it close enough——

Q. Well, if I was to say the Oklahoma City Wilcox field?

A. Well, that's located in Oklahoma, Cleveland,—Oklahoma and Cleveland Counties.

Q. If I were to ask you the location of the West Cement Medrano Field, would you know what I was talking about when you heard the word used in common parlance, "West Cement Medrano Field",—would you know what was meant by that?

A. Well, I think so, I know I would.

Chairman Bond: You asked him if he knew what the [fol. 1685] West Cement Medrano Field means, when you know that is a sand.

Mr. Williams: I asked him, I gave him the name of a particular area and asked him if he knew what that meant.

Chairman Bond: Well, you gave him the name of a sand, a sand field,—the question is what the word "field" is, in common parlance.

Q. Does the word, "field", in common parlance have a fixed and definite meaning, to you?

A. I do.

Q. Doesn't have a fixed and definite meaning?

A. It does not.

Q. Are there any other words used synonymously in common parlance, with the word "field"?

A. "pool" is used in common parlance, synonymously with "field".

Examination by Mr. Page:

Q. What do you mean, Mr. Montgomery, when you put on this Exhibit, "West Cement Medrano Unit"?

A. Well, that's the entire,—it's another common term.

Q. Unit of what?

A. Unit of the West Cement Field.

Q. You mean the West Cement Field, don't you?

[fol. 1686] A. West Cement Field, yes.

Q. You didn't mean to refer to this map as a map of the West Cement Medrano Field?

A. That wasn't the purpose of the map.

Q. You meant to describe an area?

A. That's the reason for the title.

Q. Well, the West Cement area is known as the West Cement field?

A. Yes.

Examination by Mr. Adams:

Q. Is the Medrano sand located any other place in Oklahoma?

A. Not to my knowledge, no sir.

Q. So, by the use of the word, "West Cement" that locates the area, doesn't it?

A. That's right.

Q. That locates the place where the various sand bodies happen in this case to exist?

A. That's right.

Q. You wouldn't say the "West Cement-Niles Field" or the "West Cement-Rowe Field", but you would say the "West Cement Field, Medrano section", wouldn't you?

A. Well, that's according to who you would be talking to.

Q. Well, if the Medrano sand if not found in Oklahoma any where else than in the West Cement Field, why would [fol. 1687] you use all of that,—why do you say "West Cement Medrano Sand"?

Mr. Williams: We object to him arguing with the witness.

Chairman Bond: Let him ask the witness,—I want to see what the d-finition of "field" is.

Q. Do you understand me, Mr. Montgomery,—you don't call that the West Cement-Niles Field, do you?

A. Well, if you were talking about the Niles production in the West Cement Field and you say "Niles Field" because "pool" and "field" have been used synonymously in every place I have ever been.

Q. With respect to one horizon?

A. Not necessarily,—sometimes the words fit on nicer, now it fits "pool", that sounds better than Fitts "field". They say "Fitts Pool" because it sound better. There has been discussion for years of expression.

Examination by Mr. Page:

Q. Mr. Montgomery, do you have, have you ever, in your experience ever heard of this area being called the Medrano Field?

A. I can't say that I have, no sir.

Q. It has always been known as the West Cement Field, hasn't it?

A. Yes, which embraces,——

Q. Now, don't add to it, it has always been known as the West Cement Field?

[fol. 1688] A. Yes.

Examination by Mr. Williams:

Q. You heard Mr. Keplinger's testimony in this case?

A. Part of it.

Q. And you heard him testify to facts and say "West Cement Medrano Field".

Counsel for Protestants: We object to that.

Chairman Bond: He may answer.

Q. Mr. Montgomery, a field or pool is made up of sand or limestone——

Reford Bond Jr.: We object to that.

Chairman Bond: You have had that testimony in the record.

Examination by Mr. Page:

Q. Mr. Montgomery, what was this field known as before they discovered the Medrano sand?

A. The West Cement Field.

Examination by Reford Bond Jr.:

Q. Mr. Montgomery, I will call your attention to Exhibit 116, on the blackboard, which you referred to awhile ago and asked me to look at it, is that a fair representation of the electric log to which it is supposed to represent?

[fol. 1689] A. I think so, yes.

Q. Do you think that is a good map cross section?

A. This cross section is very good, it is a matter of interpretation from that cross section.

Q. Do you think it is a correct representation of what it is supposed to disclose?

A. No, for instance, what I pointed out in the No. 6 Edward-Magnolia——

Q. Well, do you mean to say that the Medrano sand pinches out to the bottom of segment "E"?

A. No, not at all.

Q. Then, why wasn't it in this Magnolia well?

A. I believe it has been shown in previous testimony that ——by crossing a fault at a low angle,—that it might be missing by crossing this fault.

Q. Will you point out the location of the No. 6 Edwards-Magnolia well as disclosed by your Exhibit 54?

A. Here it is (indicating in the Northwest Quarter of Section 1-5N-10W).

Q. Well, point it out?

A. Right here (indicating on plat)

Q. On which side of the fault does it appear to be on?

A. It would appear to be on the down-throw side.

Q. That is the East Side?

A. Yes.

[fol. 1690] Q. And it's in segment "E"?

A. That's right.

Q. What segment of the bottom of the hole in?

A. It would be in the West of segment "D".

Q. The bottom of it is in segment "D"?

A. That's right.

Q. Now, do you show that well shown on the fault to be where?

A. If you take the measurement laterally it would be possibly a couple of hundred feet over here (indicating on plat).

Q. Then, why don't you show the fault line there at that well instead of to the West of it?

A. Because the fault line is shown as near as we could determine it on the Medrano sand zone.

Q. Well, you told the Commission it was exactly on this Medrano sand?

A. No, I said it crossed the fault prior to getting to the Medrano sand.

Q. Then, why don't you put the fault East of the Magnolia well?

A. For the reason I have just stated.

Q. Well, you say you started drilling the well on the East side of the fault?

A. Yes.

Q. And you drilled through the fault, over to the West side?

[fol. 1691] That's right.

Q. And you show the fault to be on the West side of the well?

A. Yes.

Q. Now, do you mean to tell the commission that the bottom of the hole is on the West side of that fault line which you have drawn on this map?

A. Yes.

Q. And the top of it is on the other side? The East side?

A. Yes, that's right.

Q. Well, in fact it would be hard to determine. A great number of wells are drilled—didn't you say you know which side of the fault the bottom of the well is and on

which side the top of the well is? Do you mean you can't tell the Commission how wide that fault is?

A. No sir, I can't, with any degree of accuracy.

Q. Will you estimate it with reference to the surface fault?

A. No,— —

Q. You indicated to the Commission the distance between the Medrano section on the West side and the East side of the fault, didn't you?

A. No sir, I didn't do that.

Q. Do you say that you can't determine that?

A. No sir, you can't.

Q. And how do you explain to the Commission this Magnolia well No. 6 being in the Medrano sand?

[fol. 1692] A. Because it crossed the fault before it reached——

Q. Right there, will you indicate the point to the Commission, at which it crossed the fault?

A. In the hole?

Q. Yes.

A. In the hole, it crossed it——

Q. Well, show the Commission the point at which it left the East side of the fault?

A. You understand that this is a big scale section map here, and here is a big shale section (indicating on plat) and it crossed in that shale section.

Q. Can you show the Commission where it crossed?

A. Yes, possibly a couple of hundred feet in the hole.

Q. All right, show them?

A. About there (indicating on plat)

Q. Now, show where it came out on the other side?

A. About here (indicating on plat)

Q. Then, how many feet was it before it crossed that fault?

A. I don't know.

Q. Was it an inch——

Mr. Williams: We object to that, the witness said he didn't know.

Reford Bond Jr.: All right, I'll ask him something else.

[fol. 1693] Q. Now, why didn't you examine the samples in this Potter well?

A. Well, in the first place it wasn't convenient and in the second there was no necessity for it.

Q. You thought it wasn't necessary?

A. Not with the surrounding information we had.

Q. In other words, when you have as much information as you have in this case you are not interested in any more information and you throwed the samples out the window, so far as the Potter well was concerned?

A. Not necessarily throw them out the window.

Q. Well, you disregarded them, then.

A. I did not look at them.

Q. Well, you disregarded them?

A. No, I wouldn't say I disregarded them.

Q. You didn't look at them?

A. No sir.

Q. You didn't see anybody's report for what they looked like?

A. I did not.

Q. And you didn't consider the samples in making your determination, did you?

A. As I said before, I didn't think it was necessary.

Q. I will ask you again, if it isn't a fact, and if you didn't think your determination without even looking at the samples of this Potter well?

[fol. 1694] A. Well, as qualified, that's what I said, yes sir.

Q. Now, then, are you familiar with the electric log on the Anderson-Prichard No. 1-A Davis?

A. I have studied it, yes sir.

Q. You have studied it. And you mentioned that that well and its condition in your testimony to the Commission on direct examination, did you not?

A. I think so, yes.

Q. And I'll ask you if you didn't tell the Commission that the section between the Niles-Medrano in the Anderson-Prichard 1-A Davis was shorter or the same as the section in the Potter-Davis?

A. What do you mean,—"shorter"?

Q. Well, I'll say just the same, then?

A. They are approximately the same.

Q. They are approximately the same,—now, how many feet do you mean to allow by the word, "approximately"?

A. Oh, generally speaking, 50, 60, something like that.

Q. You wouldn't go as strong as 200, would you?

A. No, on this fault——

Q. I want to know if you would go as far as 200 on this section between the Niles and Medrano in this particular Anderson-Prichard-Davis 1-A and the Potter-Davis well,—do you think you want 200 feet of latitude there or are you satisfied with 60 or 75 feet?

[fol. 1695] A. I don't believe there is a variation of 200 feet.

Q. Will you say as much as 65 or 70?

A. Yes.

Q. And is that about right?

A. Well, what one might say about the Medrano sand——

Q. Mr. Witness, will you say, is there 65 or 70 feet,—you are looking at that log, aren't you?

A. Yes, I am.

(Reporters Note: At this point the Commission recessed until 10:00 A.M. July 24, 1947.)

[fols. 1696-1697] Chairman Bond: You may proceed in C. D. 1308.

Reford Bond, Jr.: We will ask that we be allowed to reopen the case.

Chairman Bond: Very well, the Commission will reopen the case and you may reopen at any time.

[fol. 1698] Mr. Murphree recalled to the stand.

Reford Bond, Jr. Examines the Witness:—

Q. You are the same Mr. Murphree that testified in this case and testified as a petroleum geologist in this case?

A. I am.

Q. I call your attention to certain tracts which appear on applicant's exhibit 24 and numbered 1, 2, 3, 66, 67, 69, 68, 70, 61, 59, 51, 44, 33, and 50, which are all so-called tracts and ask you to state whether or not in your opinion there will be any material adverse effect on any of these tracts if left out of the unitization plan by reason of the operation of the unit, if it is created and ordered by the Commission.

A. Due to the location of these tracts on the edge, I cannot see an adverse effect in my opinion that the unit will have on these tracts.

Q. That is, that the unit operation would have?

A. That is right.

Q. That is all.

Mr. Adams Examines the Witness:—

Q. Mr. Murphree, assume that the unit proposed, the unitization as approved as to the portion of the Medrano area lying within the segments A and B, but not as to the portion of the Medrano area in Segment C, D, and E, would in your opinion, there be any material adverse effect as the result of operation of such a unit on the production of the [fol .1699] Medrano area in Segments C, D, and E?

A. If the Sturba fault sealed off between B and C there would be an adverse effect.

Q. And, in your opinion, I believe you said that it did seal, it ought.

A. I stated that the evidence would show that it was sealed off in there.

Q. Now then, if a unit such as here proposed were placed in effect in Segments C and D with respect to Medrano area and sand unit was operated with that, in your opinion, have any material adverse effect on the operators for production of oil or gas for the Medrano area in Segment E?

Mr. Williams: We would like to object to that as not being pertinent information here, if the unitization is put in only C and D, that it would have adverse effects on the others, there is nothing like that proposed in the plan, it will either be all or none.

Chairman Bond: It will have to effect the pool.

Mr. Williams: The plan is that the entire field be put into operation, if that isn't done, it fails.

Chairman Bond: You may answer as to the plan and how it could effect it, how it could affect a segment without effecting the plan, the plan is what the Commission has under consideration, now if there is an impervious fault [fol. 1700] there, that will effect the plan as to whether the fall tracts will effect the plan, if there is sufficient evidence there, then we want to hear it.

Mr. Williams: If there is no impervious there, that is to separate sources of supply then the whole plan fails.

Mr. Adams: That is my thought too.

Chairman Bond: That is one thing that bothered the Commission as to fields, you might refer to Mid-Continent field or the Medrano field and the land only refers to the Medrano sand, you go far afield, there as to what the intent of the Legislature is as to the use of the world "field:" and as these reservoirs have numbers of sands or one sand, a field may have three sands or two sands, or may—two sands may be depleted, then when you go to unitize the last two sands, the third sand would be, the intent of the Legislature which is referred to by them, and you can't unitize except in a common source of supply, all the other sands have—on unitization, what did the Legislature mean when it said "field?" These are questions that confront the Commission.

[fol. 1701] After further proceedings off the record a recess was had, following which recess, and on the same date, the witness, B. T. Murphree, was recalled to the stand and further testimony was offered.

Examination—by Mr. Williams.

[fol. 1702] Q. Mr. Murphree, assuming that the judgment of the geological committee was accurate in the fixing of the geological boundaries of the pool and assuming that there is oil and gas in the Medrano sand or, oil or gas, in the Medrano sand underlying the tracts to which you have made reference, that oil or gas will be recovered by the Unit through it's unitized program of gas injection, will it not, or a substantial part of it will be recovered?

A. Your question is rather difficult to answer, since there is no location of any of the wells to be drilled shown, and, to get that oil under some of those tracts there would have to be more wells drilled in the proper place to pick up that oil,—there would have to be wells drilled on some of those tracts.

Q. You heard the testimony, that the Unit, when organized, proposes to drill additional wells?

A. I did.

Q. Now, if additional wells were drilled in accordance with good engineering practice to recover the oil and gas

and if those wells were drilled, then in your opinion that gas and oil would be recovered from these tracts?

A. Yes.

Q. Then, to that extent, the Unit operations will remove from under the tracts the oil and gas there located, or the recoverable percentage of it?

A. Yes.

[fol. 1703] Q. And, to that extent, these tracts will be adversely affected by the Unit Operations if they are not take- in?

A. Well, as I said, if they are not taken in, there won't be too much oil recovered from them. In fact, there will be some oil shoved down on them if the gas, for the gas will increase the saturation in the sand.

Q. And the Unit Operations may shove some gas or oil, or gas and oil across the tracts into other tracts within the Unit area, will it not?

A. In one or two cases, that might be likely, but most of these tracts are in,—are on the edge.

Q. Isn't it a fact that under Unit Operations where you keep control that you have a cross-drive,—in other words the drive can be in all directions, can it not?

Reford Bond, Jr.: If the Commission, please, we object to that for the reason that there has been no evidence showing that that would be the Plan.

Chairman Bond: Counsel has asked a hypothetical question,—if he is going to develop it along those lines it will be admissible,—if not it will not be admissible.

Mr. Williams: Mr. Kaveler testified that additional wells would be drilled, according to good general engineering practices.

[fol. 1704] Chairman Bond: Well, that's highly speculative because you don't know where the well is going to be drilled, even if it is good engineering practice.

Mr. Williams: Let me put my question this way,——

Q. Mr. Murphree, assuming that the geological committee was correct in its judgment as *of* its outer boundaries of this area and assuming that there is inter-communicating permeability, as this same witness testified to, then, in your opinion wouldn't any operations carried on by the Unit by

the geological boundaries of that pool, have an effect upon all parts of the common source of supply?

Reford Bond Jr.: Objected to because the question assumes there would be that condition.

Chairman Bond: You might ask if it would have any effect,—overruled, and exceptions allowed.

Q. Would it have an effect upon all the tracts within the geological boundaries?

A. There is no question but would have an effect.

Q. And that effect would be the movement of oil and gas from place to place within the reservoir?

A. The result or the effect of the gas drive would be to move the oil down-structure in the lower, to a lower point in the structure.

Q. Now, by the injection of the gas there will be a greater differential created, will there not?

[fol. 1705] A. Should be.

Chairman Bond: The question should be to these tracts.

Mr. Williams: I am referring to the common source of supply, as well.

Chairman Bond: That's improper cross examination, because Counsel asked him particularly as to these tracts.

Mr. Williams: Well, I am leading up to the tracts.

Chairman Bond: Well, ask him about the tracts, use the proper language if you are going to confine it to the tracts, —why can't you on cross-examination direct attention to the tracts.

Mr. Williams: He is not our witness.

Chairman Bond: He is your witness now, on cross-examination, and therefore you must confine your examination to the evidence brought out by Counsel on direct examination,—why can't you ask the question without, "leading up to it", why don't you ask him about the tracts, what effect it would have to those tracts, if they were left out? You can lead up when you are laying a predicate, but when you are proposing to cross-examine a witness, you are confined [fol. 1706] to what was brought out by the other parties, unless you want to make him your own witness.

Q. What effect would the Unit Operation and injection of gas in the reservoir have on the several tracts in the Unit,

including the particular tracts discussion of which you have been interrogated?

Reford Bond Jr.: Now, we object to that.

Chairman Bond: Sustained.

Q. Well, what effect would it have upon these tracts?

Mr. Adams: If the Commission please, we are going to make an objection to the type of question, unless Counsel wants to put into it that this is one common reservoir.

Chairman Bond: He asked him in the beginning,—"assuming that the common source of supply"

Mr. Williams: That's right, that's the assumption.

A. These tracts we are talking about are very far on the edge where the sand pinches out, they are down at the water-oil contact.

Q. Assuming that you had gas in this well, the Phillips-Sunray Dixon, shown on Exhibit 25,—I say, assuming, that you put these, inject gas into that well, it will,—assuming that you put the gas into it near the feather-edge portion where the sand pinches out on the down-structure [fol. 1707] side, near the water-oil contact, that gas will merely serve to put this oil farther down into those areas where there no wells, and I can't see how you would produce it without a well down there to produce it.

Mr. Williams: Now, may I ask this witness some questions to test his——

Chairman Bond: You are entitled to test his credibility and his capacity and his qualifications, but you can't prove anything you want to prove, by saying, "this is testing his credibility,—" you are bound by the rules of evidence.

Q. Now, Mr. Witness, are you,—you have referred to Exhibit 25, on which is shown the Phillips-Garn No. 5 well and which is near the top of the structure?

A. Yes.

Q. And the Phillips-Garn well is shown on Exhibit 25, and is also shown on Exhibit 54-R at the location to which I am now pointing,—is that correct?

A. Yes, in the Southeast of the Southwest of 26-6N-10W.

Q. Now, assuming that this is one common source of supply, and that gas is injected into the Phillips-Garn well

in greater quantities and gas is injected into the gas-cap or is in the gas-cap to the East, would you say that a differential would or would not be created in the top of the structure?

Reford Bond Jr.: Now, you are asking this witness to [fol. 1708] assume something.

Mr. Williams: Yes, this question assumes that it is one common source of supply and that there is gas or oil underlying it. If gas was injected into the Garn well in greater quantities than in the gas that is in the gas-cap a pressure differential would be created, isn't that true?

A. Well,——

Q. And there would be a movement of oil or gas into the other tracts to which you have made reference?

A. Yes.

Q. The gas entering would move to a point of lower pressure?

A. Yes.

Q. And that would cause the gas to migrate across the tracts to which you have made reference?

A. Yes.

Q. And, to that extent, the gas that underlies these tracts would be effected by that movement?

A. Yes.

Q. Now, some of the tracts you refer to are along the lower part of the structure?

A. Tract 33, 50, 1, 2, 67, 68, 69, and 70.

Q. Now, that pressure differential was created along the flank of that structure there and represents the movement of oil as a result of this pressure differential, across the [fol. 1709] tracts to which you made reference and is the result of this pressure differential.

A. That's true, however, the contemplated plan is for the gas to be put in the gas cap, not in the oil zone.

Q. Now, if there is no well on these particular tracts wouldn't the pressure downward ultimately cause that fault to move away from those tracts to a point of lower pressure.

Reford Bond Jr.: Objected to for the reason that the plan doesn't disclose any such method of Unit Operation.

Chairman Bond: He may answer on the assumption of the present drilled wells.

Q. Wouldn't that downward pressure ultimately force the oil from those tracts to other holes now drilled wherein a lower pressure exists?

A. If such condition exists, it would. There is no well down in this low end of the tracts we are talking about,—there is no pressure to cause that oil to go back to some other well. It is just trapped down here.

Q. Good engineering practice would call for the drilling of a well down there, wouldn't it?

A. Yes, it would.

Q. Now, none of the things Counsel has asked you about would have any adverse effect upon any of these tracts, would it?

Mr. Williams: Objected to——

[fol. 1710] Chairman Bond: Overruled, he may answer.

A. The only question that he put to me that would have an adverse effect would be the injecting of gas into some well on this order (indicating point on plat), which would drive the oil into these tracts which are not contemplated in the Plan of Unitization, I understand.

Examination by Mr. Adams:

Q. You mean to inject the gas into the oil zone?

A. Yes.

Q. That isn't contemplated, is it?

A. I understand it is not.

(Reporter's Note: The witness is excused)

[fol. 1711] Mr. Williams: We rest.

TESTIMONY CLOSED AND ARGUMENT AND SUBMISSION OF CASE

Chairman Bond: Do you have any rebuttal, Mr. Adams?

Mr. Adams: No, Your Honor.

Chairman Bond: If you gentlemen desire to argue the case, you may argue it without limitation.

Mr. Williams: I wonder if Counsel around the table might get together and agree to limit the arguments so that we might close today.

Chairman Bond: The Commission will take a short recess and you may see what you can do, but in the other case argument was not limited and the Commission stated that the argument would not be limited in this case,—we'll take a short recess.

(Reporter's Note: After a short recess the argument began and continued until 4:30 o'clock P.M. at which time a recess was had to 10:00 o'clock A.M. on July 25, 1947.)

On July 25, 1947 the Commission is again in Session with all Commissioners present and the parties appeared by Counsel as heretofore stated and the argument was resumed, continued until 12 o'clock Noon, then adjourned to 1:30 P.M. on July 25, 1947, at which last named hour the argument was resumed and continued to it's conclusion [fol. 1712] at 3:00 O'clock P.M., at which time the Chairman announced the case was closed and would be taken under advisement.

[fol. 1713] July 29, 1947, at 10:00 o'clock a.m.

[fol. 1714] Chairman Bond: Gentlemen, you may proceed in C. D. 1308.

Floyd Green: I offer as Exhibit 120 a copy of the amended petition filed by applicants and ask leave to supply that any record at a later date, as Exhibit 121, I would like to offer a copy of the notice issued by the Commission on the 18th of July, 1947, as Exhibit 122, I would like to offer the affidavit of publication to show that the notice issued by the Commission was published in the Daily Law Journal in Oklahoma County for hearing at this time and place.

Chairman Bond: Received.

Mr. Williams: I would like to state in the record and for the Commission that giving the notice of amendment of the petition and the opinion of the applicants was unnecessary but done out of abundance of precaution for the reason that those that did not participate in the hearing would not know of the amendment, the nature of the amendments are very minor and the hearing has already been had, in respect to the amendments to this petition, as a further precaution, we should formally reoffer the evidence, the transcript heretofore taken in the case.

[fols. 1715-1716] Chairman Bond: Any objections: If not, received.

The Commission will recess until 11:00 o'clock.

[fol. 1717] BEFORE THE CORPORATION COMMISSION OF THE STATE OF OKLAHOMA

Order No. 20289

[Title omitted]

REPORT AND ORDER OF THE COMMISSION—Filed September 5, 1947

The above styled and numbered cause is a proceeding brought by the lessees of a substantial majority of the acreage in the West Cement Medrano oil and gas pool or field located in Caddo County, Oklahoma, seeking to unitize the management, operation and further development of said field for the purpose of preventing the waste of oil and gas and of substantially increasing the ultimate recovery of oil therefrom, all as authorized and provided for in H. B. 339 of the 1945 Oklahoma Legislature. The bringing of this proceeding followed months of cooperative study of the field and of the benefits of unitization engaged in by substantially all of the operating lessees in the pool and in which all were invited to participate. The original petition herein, attached to which was a recommended Plan of Unitization applicable to said field, was filed October 23, 1946.

Pursuant to order of the Commission, said petition was [fol. 1718] first set for hearing November 7, 1946, at 10:00 o'clock, A.M. in the Commission Courtroom in the State Capitol Office Building at Oklahoma City, Oklahoma, and notice thereof published once a week for two consecutive weeks in a newspaper of general circulation in Caddo County, in which West Cement Medrano field is located, and for the same time in a newspaper of general circulation in Oklahoma County, Oklahoma.

At the time and place so fixed for said hearing, a large number of persons were present, not only lessees but also land owners, royalty owners and other persons having varying interests in the West Cement Medrano field. A group of

lessors and royalty owners, represented by their attorney, Reford Bond, Jr., advised the Commission that they had not had sufficient time within which to study the proposed Plan of Unitization and requested a continuance of the hearing. The granting of the continuance was agreed to by the petitioners who, through their attorneys, publicly announced that during the period of the continuance they stood ready and willing, upon request, to furnish any party in interest any factual data pertaining to the West Cement Medrano field and the proposed Plan of Unitization available to petitioners. At the same time Magnolia Petroleum Company, an operating lessee in the field, asked leave to sign the petition as one of the petitioners thereto. Whereupon, the Commission continued said hearing to December 9, 1946, [fol. 1719] at 10:00 o'clock A.M. at the same place, permitted the Magnolia Petroleum Company to sign the petition as one of the petitioners, directed that the petition be refiled and ordered that notice of the refiling of the petition and of the date to which said hearing was continued be published in the same manner and for the same time as was the first notice of hearing, all of which was done.

In advance of said original hearing date, as is its usual custom in oil and gas matters, the Commission mailed mimeographed copies of the petition, together with information as to the time of hearing, to all persons on its established mailing list, which includes all operating lessees within the West Cement Medrano field as well as a number of royalty and other interest owners.

The hearing of said cause was commenced at the time and place so fixed, namely, December 9, 1946, at 10:00 o'clock A.M., in the Commission Courtroom in the Capitol Office Building in Oklahoma City, Oklahoma, and continued at the same place throughout all the following days, to wit: December 9 and 23, 1946; January 6 and 7; February 25, 26, 27 and 28; May 13, 14, 15, 16, 20, 21, 22 and 23; July 15, 16, 17, 18, 22, 23, 24 and 25; all in 1947, except for said first mentioned dates in 1946. The continuance of said hearing from time to time was by proper orders of continuance. At said hearing the petitioners and subscribers [fol. 1720] to the proposed Plan of Unitization were represented by the following named attorneys: W. H. Brown,

Russell G. Lowe, Booth Kellough, W. R. Wallace and R. M. Williams. The protestant, the Palmer Oil Corporation appeared by its attorneys, Mark H. Adams and Charles Jones of Wichita, Kansas. Protestants Tom Potter, Clyde Kahle, Maud Kahle, Bob White Oil and Gas Company and a group of approximately 65 lessors and royalty owners appeared by their attorney, Reford Bond, Jr. The protestants B. E. Johnson, Virginia McIntyre and M. L. McIntyre appeared by their attorney, Jack Page. A number of royalty and other interest owners wrote letters to the Commission urging the granting of the petition, all of which appear in the record. Other royalty owners and various parties in interest were present at the hearing from time to time but took no part.

At the hearing everyone who desired to do so, regardless of the interest of such person, was given full opportunity to offer any and all competent evidence that any such person chose to offer, either for or against the recommended plan of unitization or by way of amendment thereto, and to otherwise be heard in regard thereto. The evidence so introduced consisted of extensive geological, engineering and other proof concerning the history, development, discovery, operation and present condition of the West Cement Medrano field and the probable results obtainable both [fol. 1721] under present competitive methods of operation and through the unitization thereof; proof both pro and con as to the fairness, reasonableness and equitableness of the recommended Plan of Unitization; and proof by protestants with respect to certain amendments which they claim should be made in said Plan.

In addition to the knowledge gained from the evidence introduced at said hearing, the Commission has had, over a period of time, a general knowledge of the West Cement Medrano field and of conditions existing therein gained through the exercise by it of its jurisdiction over such field under the Conservation Laws of the State of Oklahoma, dating from the discovery thereof. As a result of the evidence, statements and arguments introduced and made in the hearing here under consideration, and by reason of its general knowledge of said West Cement Medrano field, as aforesaid, the Commission is of the opinion that it has

sufficient knowledge and information upon which to base a proper order in this cause.

In addition to the proceedings and notices aforesaid, further mention is here made of the fact that during the course of said hearing, The Palmer Oil Corporation drilled and completed an additional well on a lease owned by it in the aforesaid field, necessitating a relatively slight change in the percentage of interests of the several separately owned tracts in the field shown in "Exhibit B" attached [fol. 1722] to the recommended Plan of Unitization, and also necessitating the inclusion of such additional well in "Exhibit D" attached to said Plan of Unitization. Also as a result of the time consumed by the hearing, it was considered desirable by the petitioners and subscribers to the recommended Plan of Unitization to strike from Section XXVII of said Plan the time limitation therein contained. To accomplish the aforesaid objectives, the petitioners during the course of the hearing asked and without objection were granted leave to amend the petition accordingly. In order to permit persons not present at the hearing an additional opportunity to be heard with respect to said amendment, the Commission set the petition as amended for further hearing on July 29, 1947, at 10:00 o'clock, A.M., in the Commission Courtroom in the State Capitol Office Building at Oklahoma City, Oklahoma, and caused notice of the amendment to said petition and of the hearing thereon to be published, ten (10) days prior to said hearing date, in a newspaper of general circulation in Oklahoma County, Oklahoma. At the time and place so named, the further hearing was had in said cause upon the petition as amended, no one appearing, however, in opposition thereto.

Now, on this 5th day of September, 1947, the Commission having previously taken said cause under advisement and having considered the matter in conference and each [fol. 1723] of the Commissioners being well and fully advised, the Commission makes the following findings of fact, conclusions of law, and enters the following order authorizing and approving the creation of the West Cement Medrano Unit, defining of the Unit Area thereof and prescribing of the Plan of Unitization applicable to such Unit and Unit area.

Findings of Fact and Conclusions of Law

The Commission finds:

1. That notice of the filing of the original petition, the refiling thereof after being signed by the Magnolia Petroleum Company, the filing of the amendment thereto and the time, place and purpose of the hearings on the petition, both as originally filed and as amended, was given in all respects as by law required, and that the Commission has jurisdiction of the subject matter of said petition and amended petition and of all persons interested therein, and has jurisdiction to make the promulgate the hereinafter prescribed order.

2. That the lands (hereinafter designated and referred to as the "Unit Area") located in Caddo County, Oklahoma and outlined by the hatched line on the map marked "Exhibit A" and attached to the Plan of Unitization attached to and made a part of this order, are underlaid with an oil and gas-bearing formation known as the Medrano sandstone found at a depth ranging from approximately 4500 feet along the North and Northeast side of the Unit Area [fol. 1724] and an approximate depth of 6241 feet along the South and Southwest side of the Unit Area; that a gas cap exists along the high part of the producing formation from which the primary production is gas, whereas, the primary production from wells drilled lower on the structure is oil; that the average sand or formation thickness in the gas cap area or zone is approximately 65 feet; that the average sand or formation thickness in the oil area or zone is approximately 95 feet; that the said Medrano sandstone underlying said above described lands as aforesaid constitutes a single common source of supply of oil and gas, all parts of which are permeably connected so as to permit the migration of oil or gas or both from one portion of said common source of supply to another wherever and whenever pressure differentials are created as a result of the production or operations for the production of oil or gas from said producing formation; that although faults are known to exist in parts of said common source of supply said faults do not prevent substantial migration of oil and gas and of pressures from one part of said common source of supply to another; that said common source of

supply of oil and gas has heretofore been designated by the Commission and is generally known as the West Cement Medrano Pool.

3. That said common source of supply of oil and gas was first discovered in October, 1936 by the drilling and [fol. 1725] completion of the Magnolia Petroleum Company's Medrano No. 6 gas well in the SE/4 of the NE/4 of the SW/4 of Section 36, Township 6 North, Range 10 West, Caddo County, Oklahoma; that the presence of oil in said common source of supply of oil and gas was first discovered in March, 1943 by the drilling and completion of the Stephens Petroleum Company's Pierson No. 1 oil well in the SE/4 of the SW/4 of the SE/4 of Section 35, Township 6 North, Range 9 West, Caddo County, Oklahoma; that at the present time there are 37 oil wells and 19 gas wells producing from said common source of supply of oil and gas.

4. That the outer boundaries of said common source of supply of oil and gas underlying and by this Order included within the aforesaid Unit Area have been reasonably defined by actual drilling operations, both by the drilling of wells within and the drilling of wells outside said Unit Area; that said Unit Area consists of approximately 3700 acres of land.

5. That the lands embraced within the aforesaid Unit Area are divided into a large number of individual tracts of varying size and shape, and owned in severalty by a large number of different individuals, firms and corporations owning varying interests therein, including oil and gas leasehold interests, royalty interests and various and sundry other rights and interests; that the several oil and gas leases covering said lands are owned by not less [fol. 1726] than 25 different lessees; that the royalty interests under said land are divided among and owned by several hundred royalty owners; that the petitioners in this cause are lessees of record of 73.32% of the area of the common source of supply sought to be unitized; that the subscribers to the recommended Plan of Unitization and other lessees favoring its adoption are lessees of record of approximately 94% of the area of said common source of supply; that the lessees appearing at the hearing and protesting the granting of the petition herein are lessees of

approximately 4% of the proposed Unit Area; that the lessees of the remaining percentage of the unit area have not appeared for or against the granting of the petition herein.

6. That without the unitization of said West Cement Medrano common source of supply of oil and gas the only method whereby said pool can be feasibly and effectively operated and produced for the recovery of oil and gas therefrom is by and under individual competitive pressure depletion methods of operation, the methods now being used in the pool, that is to say, by treating each separately owned tract or lease as a separate unit for operating and production purposes and depending on the natural energy in the producing formation to move what oil and gas can be moved thereby out of the formation to the well bore where it can be produced; that the principal natural energy [fol. 1727] mechanism in said pool is gas in solution with the oil coupled with a gas cap expansion; that under present competitive methods of operation, treating each tract or lease as a separate operating unit, there has been and still continues to be a disproportionate, inequitable and wasteful utilization and dissipation of the gas energy in the pool by certain tracts to the detriment and disadvantage of other tracts and to the injury of the pool as a whole; that by and under the best known competitive pressure depletion methods of operation not more than 25% or approximately 24 million barrels of the 97 million barrels of oil originally in place in the reservoir can be economically recovered, leaving the remaining 75%, or approximately 73 million barrels of oil in the ground unrecovered and recoverable except through and by means of unitization of the pool and the adoption of unitized methods of operation therein; that to permit the owners of gas wells and high gas-oil ratio wells to continue to produce such wells will result in robbing the oil wells of gas energy required to produce the oil; that to shut in the gas wells and the high gas-oil ratio wells without permitting the owners thereof to share in the oil and gas production from the oil wells, would deprive the owners of the gas wells of their fair share of the production from the pool; that the value of the recoverable oil exceeds many times the market value of the gas;

that the return to the reservoir of the gas produced from [fol. 1728] the oil to supplement the remaining natural gas energy and retard the decline in reservoir pressure and perhaps the injection at some later date of water low on structure is desirable and necessary to obtain the greatest ultimate recovery of oil from the pool, but which cannot be done in the absence of unitization because of the migratory nature of the injected gas or water and the effect that the injection thereof into the reservoir would have upon properties in the pool other than the property on which the gas or water is injected and upon the pool as a whole.

7. That by and through the unitization of the proposed Unit Area and the unitized management and operation and further development thereof as a unit, all as set out and provided for in the Plan of Unitization hereto attached, full use can be made of the gas energy in the reservoir to the mutual advantage of all the owners of the said common source of supply of oil and gas, that waste of large volumes of oil and gas can be prevented, gas can and will be returned to the reservoir to supplement the natural reservoir energy, water encroachment, either natural or artificial, on the lower side of the pool can be properly controlled and utilized, substantially more oil, amounting to many millions of barrels, can be recovered from the common source of supply than can be otherwise recovered, a more equitable [fol. 1729] distribution of the recoverable oil and gas can be had as between the several owners of the pool and the correlative rights of the several owners can be more fully protected.

8. The unitization and unitized management and operation and further development of said common source of supply as a unit is reasonably necessary to effectively carry on the unitized methods of operation described in the proposed Plan of Unitization.

9. That any one or all of the unitized methods of operation described in the attached Plan of Unitization as applied to the common source of supply underlying and included within the Unit Area are feasible, will prevent waste, and will, with reasonable probability, result in the increased recovery of substantially more oil and gas from the common source of supply than would otherwise be recovered; that the estimated additional cost of conducting such

operations will not exceed the value of the additional oil and gas so recovered; that such unitization and the adoption of any one or more of such unitized methods of operation is for the common good and will result in the general advantage to the owners of the oil and gas rights in and to the common source of supply thereby affected.

10. That neither said West Cement Medrano common source of supply of oil and gas nor any part or parts thereof [fol. 1730] were being operated by or under pressure maintenance, repressuring or secondary recovery methods of operation as of the effective date of H. B. 339 of the 1945 Oklahoma Legislature.

11. That the Plan of Unitization attached to this order and which is made a part hereof, is one suited to the needs and requirements of the West Cement Medrano Unit, the creation of which is hereby authorized and approved, taking into account all the facts and conditions found by the Commission to exist in respect thereto; that said Plan of Unitization is fair, reasonable and equitable and contains all the terms, provisions, conditions and requirements reasonably necessary and proper to protect, safeguard and adjust the respective rights and obligations of the several persons affected, including royalty owners, owners of overriding royalty interests, oil and gas payments, carried interests, mortgages, lien claimants, and others, as well as the lessees and such as will effectuate and accomplish the purposes of H. B. 339 of the 1945 Oklahoma Legislature; that said plan of unitization provides for the efficient unitized management and control of the further development and operation of the Unit Area for the recovery of oil and gas from the common source of supply affected; that the division of interests set forth in "Exhibit B" attached to said Plan of Unitization pursuant to which the unit production is to be apportioned and allocated among and to the several separately owned [fol. 1731] tracts within the Unit Area is fair and equitable and is such as will reasonably permit persons otherwise entitled to share in or benefit by the production from such separately owned tracts to receive, in lieu thereof, their fair, equitable and reasonable share of the unit production or other benefits thereof; that the division of interest assigned to the several separately owned tracts in the Unit

Area as set out in said "Exhibit B" to said Plan of Unitization is fair and reasonably representative of the value of said several tracts for oil and gas purposes and the contributing value thereof to the unit in relation to like values of other tracts in the unit; that the basis used to arrive at said division of interest takes into account the acreage of the several separately owned tracts, the quantity of oil and gas recoverable therefrom, the location thereof on structure, the probable productivity of oil and gas from such tracts in the absence of unitization, the burden of operation to which such tracts will or are likely to be subjected, together with all other pertinent engineering, geological and operating factors as are reasonably susceptible of determination; that the manner in which and the basis, terms and conditions on which the cost and expense of the further development and operation of the Unit Area shall be financed and apportioned among and assessed against the tracts and interests chargeable therewith are fair, [fol. 1732] reasonable and equitable; that the provisions of the said Plan with respect to taking over and using the wells, equipment and other properties of the several lessees within the Unit Area, including the method of arriving at the compensation therefor and otherwise proportionately equalizing and adjusting the investment of the several lessees in the project as of the effective date of the unit operations are fair, reasonable and equitable; that the provisions of said Plan with respect to the creation of an operating committee and the powers and duties of such committee are fair, reasonable and equitable.

12. That the Plan of Unitization hereto attached in all respects conforms to and complies with the requirements of H. B. 339 of the 1945 Oklahoma Legislature.

13. That the West Cement Medrano pool is a field within the meaning of that term as used in the second paragraph of Section 2 of H. B. 339 of the 1945 Oklahoma Legislature; that the term "field" in ordinary usage has no fixed or definite meaning but is sometimes used to refer to the general area where a number of oil or gas producing formations are found and at other times used to refer to a particular common source of supply or pool; that as used by the Legislature aforesaid, the term was intended to relate

to the particular common source of supply or pool sought to be unitized under the Act and not to any general area [fol. 1733] which in a broader sense could be termed a field; that in effect said Act throughout relates to and deals only with single common sources of supply of oil and gas.

[fol. 1734] Order

It is therefore ordered by the corporation commission of the State of Oklahoma as follows:

1. That the petition filed herein be and the same is hereby granted.

2. That the creation of the West Cement Medrano Unit as prayed in said petition be and the same is hereby authorized and approved.

3. That the Unit area of said unit shall extend to and include all of the West Cement Medrano common source of supply of oil and gas outlined by the hatched lines on the map marked "Exhibit A" attached to the Plan of Unitization attached to this order.

4. That the Plan of Unitization hereto attached and which by reference is made a part of this order is hereby approved and shall constitute the Plan of Unitization of and for said West Cement Medrano Unit and the Unit Area of said Unit, all to the same extent and with the same force and effect as if copies herein in its entirety.

5. Nothing herein contained shall be construed as a waiver by the Commission of any of its powers or authority over the West Cement Medrano Unit or the persons comprising said unit, or the development and operation of the Unit Area thereof under the general Oil and Gas [fol. 1734A] Conservation Laws of the State of Oklahoma, it being expressly recited that the Commission has and retains continuing jurisdiction over the operations carried on by the unit to the same extent that it would have jurisdiction over any other lessee or person producing oil and gas from the West Cement Medrano pool or field in the absence of unitization.

6. The Unit shall from time to time make such reports to the Commission concerning the operation by it of the Unit Area as may be requested by the Commission.

Done and performed by the Corporation Commission at its office in the Capitol Office Building, Oklahoma City, Oklahoma this 5th day of September, 1947.

Corporation Commission of Oklahoma, (S.) Reford Bond, Chairman; (S.) Ray O. Weems, Vice-Chairman; (S.) Ray C. Jones, Commissioner.

Attest: (S.) Tom McMurray, Secretary. (Seal.)

[fol. 1737] PLAN OF UNITIZATION OF WEST CEMENT MEDRANO UNIT

KNOW ALL MEN BY THESE PRESENTS:

The following shall constitute the Plan of Unitization applicable to the West Cement Medrano Unit created pursuant to authority of House Bill 339 of the 1945 Legislature of the State of Oklahoma and having for its purpose the unitized management, operation and further development of the Medrano Sand common source of supply of Oil and Gas underlying the lands outlined by the hatched line on

the map hereto attached and marked "Exhibit A", all to the end that a greater ultimate recovery of Oil and Gas may be had therefrom, waste prevented and the correlative rights of the respective owners protected.

I.

DEFINITIONS

As used in this Plan of Unitization, the following terms and expressions are defined as follows:

(a) "Unit" shall mean the West Cement Medrano Unit.

(b) "Commission" shall mean the Corporation Commission of the State of Oklahoma.

(c) "Person" shall mean any individual, corporation, partnership, common law or statutory trust, association of any kind, the State of Oklahoma or any subdivision or agency thereof acting in a proprietary capacity, guardian, executor, administrator, fiduciary of any kind or any other entity capable of holding an interest in and to the Unit Area.

(d) The pronoun "it" is used to refer to any person regardless of gender.

(e) "Unit Production" shall mean and include all Oil and Gas produced from the Unit Area from and after the Effective Date hereof regardless of the well or tract within the Unit Area from which the same is produced.

(f) "Lessee" shall mean any owner, in whole or in part, of an Oil and Gas lease or any unleased mineral interest, who alone or in association with another per- [fol. 1738] son or persons has the right, except for Plan of Unitization, to explore, develop and operate a Separately Owned Tract for Oil and Gas and in so doing would be personally chargeable with a proportionate part of the cost and expense of the operation thereof. An owner of an overriding royalty interest, oil payment, carried interest, net profit contract, or other oil and gas rights of a similar nature, who is not personally chargeable with the cost and expense of operations, shall not be regarded as a Lessee.

(g) "Unit Operator" shall mean and refer to the Lessee designated to carry on and conduct the Unitized Operations within the Unit Area as provided in Section X hereof.

(h) "Oil and Gas" shall not only refer to oil and gas as such in combination one with the other, but shall have reference to oil, gas, casinghead ~~gas, casinghead~~ gasoline or other hydrocarbons, or any combination or combinations thereof, or any one thereof, which may be found in or produced from the Unit Area.

(i) "Oil and Gas Rights" shall mean and include the right to explore, develop and operate lands within the Unit Area for the production of Oil and Gas, to reduce the same to possession or to share in the production so obtained or the proceeds thereof.

(j) "Effective Date" shall mean the date on which the Unit assumes and takes over the operation of the Unit Area as is provided in Section IX hereof.

(k) "Unit Expense" shall include any and all cost, expense or indebtedness incurred by the Unit or Unit Operator as authorized by this Plan of Unitization or the order of the Commission creating the Unit.

(l) "Unqualified Subscribers" shall mean and refer to those Lessees who sign this Plan of Unitization as Unqualified Subscribers as is provided for in Section XXVII hereof.

(m) "Qualified Subscribers" shall mean and refer to those Lessees who sign this Plan of Unitization as Qualified Subscribers as is provided for in Section XXVII hereof.

II

NAME

The name of the Unit created hereby shall be West Cement Medrano Unit.

[fol. 1739]

III

UNIT AREA

The Unit Area of the Unit shall extend to and include all of the Medrano Sand formation underlying the lands

outlined by the hatched line on the map hereto attached, marked "Exhibit A" and made a part hereof, the same being a single common source of supply of Oil and Gas, located in Caddo County, Oklahoma.

IV

SEPARATELY OWNED TRACTS

Each tract of land within the Unit Area, which by virtue of the ownership thereof in fee, or by common ownership of the Oil and Gas Rights therein or by lease or other agreement among the owners thereof, is presently regarded as a single tract or leasehold estate for the purpose of Oil and Gas development and operation shall be defined, regarded and treated as a Separately Owned Tract within the purview and meaning of this Plan of Unitization. The Separately Owned Tracts as so defined and established are shown on the map hereto attached and marked "Exhibit A" and are for convenient identification numbered thereon and may be referred to by number.

V

GENERAL POWERS OF UNIT

The Unit is authorized and empowered on behalf and for the account of all the Lessees within the Unit Area, without profit to the Unit to supervise, manage and conduct the further development and operation of the Unit Area for the production of Oil and Gas, pursuant to the powers conferred and subject to the limitations imposed by the provisions of House Bill 339 of the 1945 Sesson of the Oklahoma Legislature and by this Plan of Unitization.

VI

EFFECT OF UNITIZATION

The adoption of this Plan of Unitization and the creation of the Unit as herein provided shall have the effect from and after the Effective Date hereof of unitizing all further development and operations for the production of Oil and Gas from the Unit Area and of pooling and unitizing the

production so obtained, all to the same extent as if the Unit Area had been included in a single lease and all rights thereunder owned by the Lessees in undivided inter-
[fol. 1740] ests. Property rights, leases, contracts and all other rights and obligations in respect of the Oil and Gas Rights in and to the several Separately Owned Tracts within the Unit Area are hereby amended and modified to the extent necessary to make the same conform to the provisions and requirements of this Plan of Unitization, but otherwise to remain in full force and effect.

The relationship between the Lessees within the Unit Area, resulting from the creation of the Unit shall not be that of a trust, partnership or association but shall be in the nature of the tenancy in common.

Nothing herein contained shall be construed to require or result in a transfer to or the vesting in the Unit of title to the Separately Owned Tracts within the Unit Area or to the leases thereon, other than the right to use and operate the same to the extent set out in this Plan of Unitization; nor shall the Unit be regarded as owning any of the Unit Production. The Unit Production and the proceeds from the sale thereof shall be owned by the several persons to whom the same is allocated under this Plan of Unitization. All property, real or personal, acquired, held or possessed for use in the operation of the Unit Area shall be the property of the Lessees as their interests may appear under this Plan of Unitization, subject, however, to the rights and powers herein granted the Unit and the Unit Operator.

The amount of the Unit Production allocated to each Separately Owned Tract and only that amount, regardless of the well or wells in the Unit Area from which it may be produced, and regardless of whether it be more or less than the amount of the production from the well or wells, if any, on any such Separately Owned Tract shall, for all intents, uses and purposes, be regarded and considered as production from such Separately Owned Tract.

Operations carried on, under and in accordance with this Plan of Unitization shall be regarded and considered as a fulfillment of and compliance with all the provisions, covenants and conditions, express or implied, of the several oil and gas mining leases upon lands included within the Unit Area, or other contracts pertaining to the develop-

ment thereof, to the same extent that the development and operation of and the production of Oil and Gas from each of the several Separately Owned Tracts within the Unit Area would have constituted a fulfillment of and compliance with such leases and contracts. Wells drilled or operated on any part of the Unit Area, no matter where located, shall for all purposes be regarded as wells drilled on each Separatey Owned Tract within the Unit Area.

[fol. 1741]

VII

Allocation of Unit Production

All Unit Production, except so much thereof as is used in the development and operation of the Unit Area, including repressuring, pressure maintenance and other operations carried on in accordance with this Plan of Unitization, or is unavoidably lost, shall be apportioned among and allocated to the several separately Owned Tracts within the Unit Area in accordance with the percentage and division of interest set forth and shown in Part I of "Exhibit B" hereto attached, subject, however, to the further provisions of Part II of said Exhibit.

Except as may be otherwise authorized or provided in this Plan of Unitization, the Unit Production allocated to each Separately Owned Tract shall be distributed among or the proceeds thereof paid to the several persons entitled to share in the production from such Separately Owned Tract in the same manner, in the same proportions, and upon the same conditions that they would have participated and shared in the production from such Separately Owned Tract, or the proceeds thereof, had not the Unit been organized, and with the same legal force and effect.

Except as may be otherwise authorized or provided in this Plan of Unitization, and provided adequate provisions are made for the receipt thereof, the share of the Unit Production allocated to each Separately Owned Tract shall be delivered in kind to the persons entitled thereto by virtue of ownership of Oil and Gas Rights therein or by purchase from such owners, subject, however, to the right of the Unit Operator to withhold and sell the same in payment of Unit Expense pursuant to this Plan of Unitization, and

subject further to the right of the Unit Operator to take and use such portion of the Unit Production (including residue gas) as may be required for operating purposes, including repressuring, pressure maintenance and any other operation carried on, pursuant to this Plan of Unitization. Persons so entitled to take and receive in kind any portion of the Unit Production shall have the right to construct, maintain and operate within the Unit Area all necessary facilities for that purpose, provided the same are so constructed, maintained and operated as not to interfere with the operations carried on pursuant hereto.

To the extent that any person entitled to take and receive in kind any portion of the Unit Production shall fail to take and receive the same currently as and when produced, the Unit Operator, as agent and for the account and at the expense of such person, is authorized to market and sell or itself purchase, at not less than the market price prevailing at the time of such sale or purchase, the portion of Unit Production not so taken in kind by the person entitled to [fol. 1742] take and receive the same. Proceeds of the Unit Production so sold, or purchased by the Unit Operator, shall be paid by the Unit Operator to the person or persons for whose account the same is so marketed.

The person or persons receiving in kind the Unit Production allocated to any Separately Owned Tract or receiving the proceeds of such Unit Production, if the same is marketed and sold, or purchased by the Unit Operator, shall be responsible for the payment of, and shall indemnify the Unit, the other Lessees and the Unit Operator against any liability for, any and all royalties, overriding royalties, production payments, gross production taxes and any and all other payments and taxes chargeable against or payable out of the Unit Production which is received in kind by, or the proceeds of which are paid to, such person or persons, and neither the Unit nor the Unit Operator shall have any responsibility or liability for payment of such royalties, overriding royalties, production payments, gross production taxes or the other payments or taxes.

If at any time the title or right of any person claiming the right to receive in kind all or any portion of the Unit

Production allocated to a Separately Owned Tract is in dispute or is disapproved by the Operating Committee, the Unit Operator shall at the direction of the Operating Committee either (a) withhold and market, or itself purchase the portion of the Unit Production, title to which is in dispute or is disapproved, and impound the proceeds thereof until such time as the title or right thereto is established, by final judgment of a court of competent jurisdiction or otherwise to the satisfaction of the Unit Operator, whereupon, the proceeds so impounded shall be paid, without interest, to the person or persons rightfully entitled thereto, or (b) may require that the person or persons to whom such Unit Production is delivered, or to whom the proceeds thereof are paid, furnish security for the proper accounting therefor to the rightful owner or owners in the event the title or right of such person or persons shall fail, in whole or in part.

The Unit Operator shall have the right to take and utilize so much of the Unit Production as may be necessary or desirable in the development and operation of the Unit Area, including but without being limited to, the use of gas (including residue gas) for repressuring, pressure maintenance or other operations carried on in accordance with this Plan of Unitization. No royalties, overriding royalties, production payments or other payments shall be payable upon or with respect to that portion of the Unit Production so taken and utilized by the Unit Operator or which may be lost in handling or otherwise without want of due diligence on the part of the Unit Operator.

[fol. 1743]

VIII

Operating Committee

An Operating Committee is hereby created to consist of one representative to be designated by each Lessee within the Unit Area, provided that an individual Lessee may himself be a member of the Committee. Such designation shall be in writing and with respect to the representative to participate at the organization meeting of the Committee shall be presented at such meeting, or if thereafter made, shall be filed with the Secretary of the Operat-

ing Committee. Any such Lessee may in like manner (a) designate an alternate representative on the Operating Committee, who, in the absence of the Lessee or its regular representative, shall have the same full right and power to represent the interest of such Lessee, or (b) may from time to time discharge any such regular or alternate representative and designate a new representative to act for such Lessee on the Operating Committee.

The Operating Committee shall have the general overall management and control of the Unit and the conduct of its business and affairs and the operations carried on by it, and is authorized and empowered, subject to the terms and provisions hereof, to do all things necessary, proper and convenient for carrying out the terms and spirit of this Plan of Unitization and to that end, not excluding or limiting any other power or powers that may be necessary or proper for that purpose, shall have the following specific powers and duties:

(a) To adopt rules and regulations for the proper functioning of the Operating Committee, including such matters as the time and places of holding meetings, the calling thereof or the manner of taking the vote on any question all in a manner not inconsistent with the express requirements of this Plan of Unitization.

(b) To remove any Unit Operator.

(c) To select a successor to any Unit Operator.

(d) To determine the extent of drilling operations and development to be carried on by the Unit Operator, including the approval or disapproval of the contemplated drilling, deepening, plugging back, reconditioning, abandonment or the use to be made of any well or wells.

(e) To pass upon and approve or disapprove all costs and estimates of costs and any proposed expenditure by the Unit Operator; provided, that the Committee may permit without prior approval by it the [fol. 1744] incurring of normal operating expense and any proposed expenditure by the Unit Operator of not more than Five Thousand ($5,000.00) Dollars; and provided further that the approval by the Operating

Committee of the drilling of any well or wells or carrying out any specific project of development or operation shall mean and include the approval of all necessary expenditures in drilling, completing and equipping such well or wells or carrying out such project.

(f) To determine from time to time the rate at which and the wells from which the Unit Production shall be produced in conformity with good engineering practices and any applicable conservation laws or regulations.

(g) To pass upon, approve or disapprove the purchase, sale or other disposal of materials and equipment by the Unit Operator otherwise than in the normal course of approved operations.

(h) To approve and authorize the purchase, construction, location, abandonment, sale or other disposal of any compressor plant, gasoline plant, tank batteries, salt water disposal system or other facilities serving the Unit Area.

(i) To determine the manner in which, the location at which and the extent to which gas can best and should be injected into the reservoir to accomplish the Plan of Operation set forth in Section XV hereof.

(j) To provide for the proper auditing of the accounts of the Unit Operator with respect to the operation and development of the Unit Area.

(k) To appoint such sub-committees as it may deem proper and requisite, as for example, an advisory committee, legal committee, engineering committee, plant committee, geological committee and tax committee to act under the authority and subject to the control of the Operating Committee consonant with the terms of this Plan of Unitization.

(l) To approve or disapprove any proposed plan of development or operation or amendment thereof required to be submitted to any regulatory body having jurisdiction of the subject matter thereof.

(m) To approve or disapprove any proposed expenditures for expert technical advice, including any [fol. 1745] extra services rendered by the Unit Operator's technical staff, not contemplated by the provi-

sions of the accounting procedure hereto attached, marked "Exhibit C" and not covered by the overhead charges therein authorized, which overhead charges in said accounting procedure are intended to cover only normal lease development and lease operations.

(n) To direct and consult with the Unit Operator in all matters pertaining to the duties and functions of the Unit Operator.

(o) To provide for the finances in the manner herein provided for the carrying on of the Unit Operations hereunder.

Each Lessee within the Unit Area who is represented on the Operating Committee shall have a vote equal to the proportionate interest of said Lessee in the Unit determined as follows:

(a) In respect of each Separately Owned Tract, the Lessee or Lessees thereof shall have a vote equal to the percentage indicated opposite such Separately Owned Tract in Part I of "Exhibit B" hereto attached.

(b) Should there be more than one Lessee of a Separately Owned Tract, the vote in respect thereof shall be divided between such Lessees in proportion as such Lessees share in the Unit Expense chargeable to such tract.

(c) The vote of a Lessee having an interest in more than one Separately Owned Tract shall be the sum total of the votes of such Lessee in respect of all such tracts.

In all matters except the removal of a Unit Operator the vote on behalf of Lessees having at least 66⅔% of the total voting interest in the Unit shall control.

A Unit Operator may be removed only by the vote of at least 75% in interest of the Lessees other than such Unit Operator.

If at any time the voting interest of a Lessee should be such as to control the action taken by the Committee, the vote of such Lessee shall not serve to carry or defeat action taken by the Committee unless such vote is supported by the vote of a majority in interest of the remaining Lessees.

[fol. 1746] Minutes shall be made of all meetings of the Operating Committee and kept as a part of the permanent records of the Unit. Such minutes need not be a verbatim record of all the proceedings, but shall show and reflect (a) the names of all members present at the meeting; (b) all motions and resolutions offered or acted upon, together with the result of such action; and (c) such other formal action as may be taken by the Committee. A copy of the minutes of each such meeting shall be mailed to each member of the Committee within a reasonable time after the meeting.

Notices or other communications addressed and sent to the Unit or to the Operating Committee by United States mail or telegraph in care of the Unit Operator shall be deemed to have been properly given to or served upon the Operating Committee. The Unit Operator shall promptly deliver all such notices or communications to the Chairman or Secretary of the Operating Committee.

IX

Organization of Unit and Effective Date of Plan

Subject to call by Lessees of record owning 50% or more in interest in and to the Unit as shown in Part I of "Exhibit B" hereto attached the representatives designated by the several Lessees to serve on the Operating Committee shall meet at some convenient place to perfect the organization of the Operating Committee. Such meeting may be held at any time after twenty (20) days from the date of the order of the Commission approving this Plan of Unitization. Notice of the time and place of said meeting shall be mailed at least ten (10) days prior thereto to all Lessees within the Unit Area whose names and addresses are known to the Lessees calling said meeting, as well as those Lessees who shall have within ten (10) days from the date of said order notified the Secretary of the Commission in writing of their desire to be so notified of the meeting. Any Lessee within the Unit Area desiring notice of such meeting may file a statement of such desire with the Secretary of the Commission, giving its name and the address to which it desires the notice to be sent.

The Operating Committee shall organize by selecting a Chairman, a Vice-Chairman, a Secretary and such other officers as to the Committee may seem proper. The Chairman and Vice-Chairman shall be selected from among the members of the Operating Committee. The Secretary and other officers may or may not be members of the Committee. The Chairman shall preside at all meetings of the Operating Committee when he is present and shall be the Chief Executive Officer of the Unit. The Vice-Chairman shall perform all duties of the Chairman in the absence of the Chairman. The Secretary shall keep and maintain all [fol. 1747] the records of the Committee and shall also be Secretary of the Unit. Such officers shall serve at the will of the Operating Committee and perform such other duties as are delegated to them by the Operating Committee.

Upon completion of its organization, the Operating Committee shall proceed to make plans and preparations and take such steps as are necessary for the taking over of the unitized operations and further development of the Unit Area by the Unit, and shall in advance thereof fix the time when the Unit will take over such operation and development, and give the Lessees within the Unit Area reasonable notice thereof. The time so fixed shall not be less than sixty-one (61) days after the entry of the order of the Commission approving this Plan of Unitization nor more than three months after the time when said order shall have become final.

The time when the Unit takes over the operation and further development of the Unit Area shall be the Effective Date of this Plan of Unitization.

In the event the Unit shall fail to assume and take over the operation of the Unit Area on or before three (3) months after the time when the order of the Commission approving this Plan of Unitization shall have become final, then and in that event the Unit shall, without further action on the part of the Operating Committee or the Commission, be dissolved and all rights and obligations under this Plan of Unitization shall be at an end, except that any and all costs and expense incurred by the Unit incident to its organization or preparatory to the taking over of the operation of the Unit Area shall be borne and paid for by the

Lessees whose representatives on the Operating Committee by their vote authorized the incurring of such expense, in proportion as the interest of each such Lessee in and to the Unit as set out in Part I of "Exhibit B" bears to the total interest of all such Lessees in and to the Unit as shown on said Part I of "Exhibit B". In the event the Unit assumes and takes over the operation of the Unit Area within the time so named, this Plan of Unitization shall thereafter remain in force and effect until such time as the Unit is dissolved and abandoned as provided in Section XXV hereof.

The order of the Commission approving this Plan of Unitization shall be regarded as having become final at the end of the time allowed by law for any appeal therefrom, if no appeal is taken, or, if an appeal is taken, then upon the final determination of any such appeal.

The Unit on or before five (5) days after the Effective Date hereof shall submit to the County Clerk of Caddo County, Oklahoma, for filing, a written declaration signed by the Chairman and Secretary of the Operating Committee, setting forth

(a) The hour, day and year on which the Unit took over the operation of the Unit Area;

[fol. 1748] (b) A description or plat of the lands included within the Unit Area; and

(c) The cause number and date of the Commission order approving this Plan of Unitization, with an appropriate reference to such order and the files of the Commission for further information concerning this Plan of Unitization.

X

Unit Operator

Subject to the further provisions of this Plan of Unitization, operations in connection with the development and the operation of the Unit Area for Oil and Gas shall be carried on and conducted by a Unit Operator in accordance with the instructions of the Operating Committee.

The Unit Operator shall:

(a) Conduct all such operations in a good and workmanlike manner.

(b) Keep full, true and correct books, accounts and records of its operations hereunder which shall be made available for inspection at all reasonable times by any of the Lessees within the Unit Area.

(c) Mail to each Lessee on or before the 10th day of each calendar month a full, true and correct statement of all Unit Production during the preceding calendar month.

(d) Comply, to the extent of its operations within the Unit Area, with the Workmen's Compensation Laws of the State of Oklahoma and with all other valid and applicable federal and state laws and regulations.

(e) Carry such insurance as may be required by the Operating Committee.

(f) Keep the land and leases within the Unit Area free from liens and encumbrances occasioned by the operations of the Unit Operator save only the lien granted the Unit and the Unit Operator under this Plan of Unitization.

[fol. 1749] The Operating Committee may by the vote hereinbefore provided remove a Unit Operator at any time. A Unit Operator may resign only after giving the Operating Committee six months' written notice of its intention to resign, or sooner if a successor is selected and has assumed the duties of Unit Operator prior to the end of such time. Upon the removal or resignation of a Unit Operator the Operating Committee shall designate a successor Unit Operator from among the Lessees within the Unit Area.

Phillips Petroleum Company is hereby designated as Unit Operator.

XI

Unit Expense

The Unit Operator in the first instance shall pay and discharge all cost and expense incurred in the development

and operation of the Unit Area and in the conduct of the activities and affairs of the Unit. All such cost and expense incurred in the development and operation of the Unit Area shall be in accordance with the Accounting Procedure hereto attached, marked "Exhibit C" and made a part hereof. All other costs and expense shall be only such sums as are approved by the Operating Committee.

All such Unit Expense as it accrues shall be charged to the several Separately Owned Tracts in the Unit Area in proportion to the percentage of interest of such tracts in and to the Unit as set forth and shown in Part I of "Exhibit B" hereto attached.

Except as may be otherwise hereinafter specifically provided, a Lessee or Lessees obligated or responsible for the cost and expenses of operating a Separately Owned Tract for Oil and Gas in the absence of unitization shall, in the same proportion and to the same extent, be chargeable with and responsible for the payment of the Unit Expense charged against such Separately Owned Tract.

The Unit Operator shall on or before the last day of each calendar month render to each Lessee within the Unit Area an itemized statement of all charges and credits during the preceding month and of the amount due from or to each Lessee with respect to each Separately Owned Tract. If the Unit Operator so elects, such statement of account may also include a charge by way of an advance of the proportionate part of the estimated Unit Expense for the ensuing month chargeable to the Lessee against whom such statement is rendered, using as a basis therefor the budget hereinafter provided for. Except as may be otherwise provided herein, each Lessee chargeable with the payment [fol. 1750] hereof shall, within fifteen (15) days from the receipt of such statement, pay to the Unit Operator the amount thereof. If not paid when due, the unpaid balance shall bear interest at the rate of 6% per annum until paid. Payment of any such statement shall not prejudice the right of any Lessee to protest or question the correctness thereof; provided, the Unit Operator shall not be required to adjust any item of charge or credit unless a claim therefor has been presented in writing within six (6) months after the approval by the Operating Committee of the annual audit for the period in which the charge or credit was made.

Before or as soon as practical after the Effective Date hereof, the Operating Committee, acting in conjunction with the Unit Operator, shall prepare a budget of estimated Unit Expense for the remainder of the calendar year and on or before the first day of each December thereafter shall prepare a budget of estimated Unit Expense for the ensuing calendar year, which budgets shall set forth the estimated Unit Expense by quarterly periods. Unless otherwise specified in the budget, it shall be presumed for the purpose of advance billings as aforesaid, that the estimated Unit Expense for each month of a quarterly period shall be one-third (⅓) of the estimate for the quarterly period. Budgets so prepared shall be estimates only and shall be subject to adjustment and correction by the Operating Committee and Unit Operator from time to time whenever it shall appear that an adjustment or correction is proper. A copy of each such budget and adjusted budget shall be promptly furnished each Lessee within the Unit Area.

Any Lessee, other than an Unqualified Subscriber, who does not elect to pay its proportionate share of the Unit Expense, shall not be personally obligated for the payment thereof, but the amount thereof or such portion thereof as such Lessee shall elect not to pay, together with interest thereon at the rate of 6% per annum, shall be carried and shall be payable, so far as such Lessee is concerned, as follows:

(a) So much of said charge as is made up of current operating costs, as distinguished from items of investment, together with interest thereon, shall be payable out of proceeds from all Unit Production to the credit of the interest or interests chargeable therewith.

(b) So much of said charge as is made up of items of investment, together with interest thereon, shall be payable out of 50% of the net proceeds of the Unit Production to the credit of the interest or interests chargeable therewith after deducting the charge for Operating costs under subparagraph (a) last above.

[fol. 1754] (c) All credits to any such Lessee on account of the sale or other disposal of surplus material or equipment or otherwise shall be applied against any such unpaid Unit Expense charged against such Lessee.

Amounts so carried as aforesaid, shall be billed to and paid by the Lessees who sign this Plan of Unitization as Unqualified Subscribers, in the proportion that the interest of each in the Unit bears to the total interests in the Unit of all of the Unqualified Subscribers to this Plan of Unitization, Lessees so paying the same shall be reimbursed therefor, together with interest thereon, as and when the amounts so carried and the interest thereon are collected from the Lessees or interests primarily chargeable therewith.

The Unit shall have a first and prior lien upon the leasehold interest (exclusive of a 1/8 royalty interest) in and to each Separately Owned Tract, the interest of the owners thereof in and to the Unit Production and all equipment in possession of the Unit, to secure the payment of the Unit Expense and other items of cost charged to and against such Separately Owned Tract, provided such lien may be enforced as against overriding royalty, oil and gas payments, royalty interests in excess of a 1/8 of the production, or other interests which otherwise are not chargeable with such costs, only in the event the owner of the interest or interests primarily responsible fails to pay such Unit Expense when due, and the production to the credit thereof is insufficient for that purpose. In the event the owner of any royalty interest, overriding royalty, oil and gas payment or other interest which under the Plan of Utilization is not primarily responsible therefor pays any part of such Unit Expense for the purpose of protecting such interest or the amount of such Unit Expense in whole or in part is deducted from the Unit Production to the credit of such interest, the owner thereof shall, to the extent of such payment or deduction, be subrogated to all of the rights of the Unit and of the Unit Operator with respect to the interest or interests primarily chargeable with such Unit Expense. A one-eighth (1/8) part of the Unit Production allocated to each Separately Owned Tract shall in all events be regarded as royalty to be distributed to and among or the proceeds thereof paid to the royalty owners free and clear of all Unit Expense and free of any lien therefor. The lien hereinabove provided for shall be for the use, benefit and protection of Unit Operator or other Lessees or persons entitled to receive or share in the monies, the payment of which is secured thereby, and in the event of failure of the Unit to

enforce such lien, the Unit Operator or other person entitled to the benefit thereof, shall be subrogated to the lien rights of the Unit, including the right of foreclosure.

In the event of a failure of any Lessee to pay its share of the Unit Expense when due, and also in the case of a Lessee who elects to be carried as aforesaid; the Unit Operator shall be entitled to take and market, or itself purchase the Unit Production to the credit of such Lessee or to the credit of the interest or interests chargeable with such Unit Expense, or to otherwise collect and receive the proceeds from the sale thereof, and shall apply all such sums so collected against the delinquent or unpaid Unit Expense due from such Lessee or interest, the balance of such proceeds, if any, to be paid to the Lessee or other person entitled thereto. The Unit Operator may likewise take any other credit due any such Lessee or interest and apply the same [fol. 1752] against sums due from such Lessee or interest for Unit Expense.

Any and all income and credits received by Unit Operator on account of Unit Operations hereunder, from whatever source received, shall currently be accounted for and credited to the Lessees or interests entitled to credit therefor.

XII

Initial Adjustment of Investment

Upon the Effective Date hereof the Unit shall assume control and management of the further development and operation of the Unit Area and, except as may be otherwise herein provided, each Lessee within the Unit Area shall deliver possession to the Unit Operator of (a) all wells within the Unit Area, (b) all lease and other operating equipment used in the operation of such wells, and (c) all production and well records and other pertinent data pertaining thereto.

(1) Completed Wells

All wells which as of the Effective Date are completed as producing wells in the Medrano Sand shall be taken over by the Unit, except that in the case of wells determined by the Operating Committee to be unnecessary to Unit opera-

tions, the owners thereof may upon request retain possession thereof for the purpose of completing the same in some other formation not a part of the Unit Area, provided, the owners thereof shall immediately cause the Medrano Sand to be sealed off in a manner satisfactory to the Operating Committee.

(2) Wells Being Drilled or Reconditioned

Any well being drilled, repaired, deepened or plugged back to the Medrano Sand as of the Effective Date hereof may be completed by the separate owner or owners thereof and if so completed as a producing well in the Medrano Sand, shall be taken over by the Unit except that in the case of wells determined by the Operating Committee to be unnecessary to Unit Operation, the possession thereof may be retained by the owners thereof under the circumstances and upon the conditions named in (1) last above.

(3) Casing, Tubing and Wellhead Connections

All casing, one string of tubing and wellhead connections in or on wells taken over by the Unit shall be treated and regarded as a part of such wells.

(4) Lease and Operating Equipment

As of the Effective Date hereof the Operating Committee shall determine what part of the lease and other operating equipment (exclusive of warehouses, lease houses, camps and office buildings) used in the operation of wells taken over by the Unit it considers necessary or desirable to take over and use in connection with the unitized development and operation of the Unit Area including, by way of example but not thereby excluding, other equipment of a like or different kind, derricks, tank batteries, separators, [fol. 1753] rods, pumps, tubing in excess of one string, flow lines, water lines, gas lines, etc., which said lease and operating equipment (exclusive of warehouses, lease houses, camps and office buildings) shall be delivered to and taken over by the Unit. All lease and operating equipment not so taken over shall remain the separate property of the several owners thereof and may be used by said separate owners in the operation of wells producing from formations

other than the Medrano Sand or reclaimer as such separate owners may desire. The acquisition of existing warehouses, lease houses, camps, or office buildings considered desirable to the operation and development of the Unit Area shall be by negotiation and separate contract of purchase with the owner or owners of such warehouses, lease houses, camps and office buildings.

(5) Adjustment of Well Investment

(a) Each Separately Owned Tract on which is one or more wells taken over by the Unit shall be given credit for the value assigned to such well or wells as follows: wells listed in "Exhibit D" hereto attached shall have the assigned value therein shown; wells not listed in "Exhibit D" shall be assigned a value determined in the same manner as well used in determining the values assigned to the wells listed in "Exhibit D."

(b) Each Separately Owned Tract within the Unit Area shall thereupon be charged with the total value of all such wells in proportion to such tract's percentage of interest in and to the Unit as shown in Part I of "Exhibit B" hereto attached, less the amount of the credit due such tract under (a) last above, resulting in either a net debit or a net credit with respect to each Separately Owned Tract.

(c) The amount of any net debit chargeable against a Separately Owned Tract under (b) above shall be payable by the Lessee or Lessees of such tract out of 10% of 7/8 of the Unit Production of oil allocated to such tract if such tract has a credit under (a) above, or 25% of 7/8 of said oil if said tract has no credit under (a) above. The oil applicable to the oil payment with respect to each Separately Owned Tract having a net debit shall be sold by the Unit Operator, at not less than the prevailing market price, for the account of the Lessees of Separately Owned Tracts having net credits under (b) above until such time as the accumulated proceeds thereof equal the amount of such net debit. The Lessee or Lessees of each Separately Owned Tract having a net debit shall have the right to designate the purchaser to whom said oil shall be sold, provided the purchaser so designated will take and purchase said oil

at the prevailing market price. Amounts collected by the Unit Operator under the provisions of this paragraph shall be paid by said Unit Operator to the Lessees of Separately Owned Tracts having net credits under (b) above in proportion to the percentages which the net credit due each bears to the net credit due all such Lessees. The amounts of the debits and credits under (a) and (b) above in respect to Separately Owned Tracts held by the same Lessee may, at the option of such Lessee, be grouped for the purpose of arriving at a combined net debit for all such tracts payable out of such fraction of 7/8 of the Unit Production of oil allocated to all such tracts as will result in the application of the same amount of oil each month to the payment of said combined net debit as would have been applied to the payment of the separate net debits against said several tracts in the absence of such grouping.

[fol. 1754] (6) Accounting for Lease and Operating Equipment

An accounting for the lease and operating equipment so transferred to and taken over by the Unit shall be had as between the owners thereof, and all Lessees within the Unit Area on the basis of the value thereof determined in accordance with Section IV of the accounting procedure hereto attached marked "Exhibit C", plus a reasonable allowance for the cost of installation, if installed, to be determined by the Operating Committee, and proper charges and credits entered against the several Separately Owned Tracts, all to the end that on and after the Effective Date hereof each of the several Lessees within the Unit Area instead of separately owning the equipment delivered to the Unit by such Lessees, will have exchanged the same for an undivided interest in and to all the equipment so taken over and acquired by the Unit and will have paid or have been paid, as the case may be, for any difference in value. The amount of any net charge made against a Separately Owned Tract under this paragraph shall be treated and regarded in all respects the same as any other charge for Unit Expense chargeable to such tract.

XIII

Oil in Lease Tankage as of Effective Date

A proper and timely gauge shall be made of all lease or other tanks taken over by the Unit to ascertain the amount of oil in such tanks at the time the Unit assumes and takes over the development and operation of the Unit Area. So much of such oil as is legally produced shall remain and be the property of the parties entitled thereto had not the Unit been created, and upon request, shall be delivered in kind to persons entitled thereto, or in the absence of such request, shall be sold by the Unit Operator for the credit of such persons at not less than the prevailing market price and the proceeds thereof paid to such persons.

XIV

Settlement with Respect to Gas Produced and Underproduction of Gas Prior to Effective Date

A settlement with respect to gas produced and underproduction of gas prior to the Effective Date shall be made as follows:

[fol. 1755] (a) Each Separately Owned Tract having underproduction to its credit as of the Effective Date shall be given credit for such underproduction, less so much thereof as may have accumulated between November 1, 1946, and the Effective Date, on the basis of 95% of what the Lessee or Lessees of each such tract would have received and been paid therefor, less seller's cost of dehydration, had said gas been produced and sold currently during the period or periods in which such underproduction accumulated.

(b) Each Separately Owned Tract shall be charged with the sales of gas from such tract during the four months' period from November 1, 1945, to March 1, 1946, plus any overproduction charged against such tract as of the Effective Date other than overproduction as may have accumulated during said four months' period, on the basis of 7/8 of 95% of the average

price, less seller's cost of dehydration, received for gas sold from such tract during said four months' period from November 1, 1945 to March 1, 1946.

(c) Unit Operator shall pay to the Lessee or Lessees of each Separately Owned Tract having a net credit after deducting the amount of the charge under (b) from the credit under (a) the amount of such net credit.

(d) The Lessee or Lessees of each Separately Owned Tract against which there is a net charge after deducting the amount of the credit under (a) from the amount of the charge under (b) shall be charged with and shall pay to the Unit Operator the amount of said net charge in the same manner and on the same terms and conditions as if said net charge was a charge for Unit Expense against such Separately Owned Tract.

(e) If the amounts collected under (d) are less than the amounts paid under (c) the difference shall be charged against the several Separately Owned Tracts within the Unit Area in proportion to their respective percentages of interest as set out in Part I of Exhibit B hereof as an item of Unit Expense. If the amounts collected under (d) are more than the amount paid out under (c), the difference shall be credited to the several Separately Owned Tracts and paid to the Lessees thereof in proportion to the percentages of interest of such tracts as set out in Part I of Exhibit B hereof.

(f) The amounts credited to each Separately Owned Tract and paid to the Lessee or Lessees thereof under (c) and (e) shall be distributed and paid by such Lessee or Lessees to the owners of the Oil and Gas Rights in and to such tract, including the Royalty Owners, in the same proportion and to the same extent that they share in the Unit Production allocated to such tract as of the Effective Date hereof.

[fol. 1756] (g) The underproduction and overproduction of gas and the amount of sales of gas from any Separately Owned Tract at any time or during any period shall be determined from the books and records of the Commission.

XV

Plan of Operation

To the end that the quantity of Oil and Gas ultimately recoverable from the Unit Area may be substantially increased and waste prevented, the further development and operation of the Unit Area, from and after the Effective Date hereof, shall be conducted by the application to the Unit Area of the following unitized method of operation:

(a) As soon as practical after the Effective Date hereof, the Unit shall make the necessary preparations therefor and with diligence and in accordance with good engineering and production practices engage in pressure maintenance or repressuring operations through the return of gas to the reservoir to the extent and in the manner best calculated to efficiently and without waste result in the greatest ultimate recovery of Oil and Gas from the Unit Area. In so doing, the Unit is authorized to construct, purchase or otherwise acquire and operate such gasoline plants, processing plants or compressor plants and other facilities as may in the best judgment of the Operating Committee be desirable for that purpose, or is authorized, should it so elect, to contract with the owners of an individually owned plant or plants and facilities to render in whole or in part the desired services in connection therewith.

(b) The oil produced from the Unit Area shall be produced from those wells in the Unit Area from which the same can be obtained with the smallest loss or dissipation of reservoir energy reasonably possible under practical operating conditions as they may exist from time to time.

(c) Gas wells and wells which produce oil with gas-oil ratios found to be excessive in relation to the gas-oil ratios of other wells producing oil from the Unit Area shall be shut in or the production therefrom restricted in such manner as to make the most effective utilization of the gas energy of the reservoir reasonably possible under practical operating conditions as they may exist from time to time.

(d) Production of Oil and Gas from different parts of the Unit Area shall be regulated in such manner as to retard, control or effectively utilize water encroachment, in such manner and to such extent as may be found reasonably possible and economically advisable from time to time.

(e) Gas (other than gas produced in connection with the production of oil) shall be produced from the Unit [fol. 1757] Area only at such time or times and in such manner as in the judgment of the Operating Committee such gas may be produced without materially decreasing the quantity of oil economically recoverable from the Unit Area.

(f) Such other unitized method or methods of operation as may from time to time be determined by the Operating Committee to be feasible, necessary or desirable to efficiently and substantially increase the ultimate recovery of Oil and Gas from the Unit Area, provided the estimated additional cost thereof does not exceed the value of the additional Oil and Gas to be so recovered.

Nothing herein contained shall prevent the Unit from abandoning or changing in whole or in part any particular method or methods of operation, including the pressure maintenance or repressuring operations required under (a) above, if and in the event, at such time, and to the extent that any such method of operation as applied to the Unit Area is, in the best judgment of the Operating Committee, no longer in accord with good engineering or production practices.

XVI

Right to Information Regarding Unit Operations

Each and all Lessees within the Unit Area shall have access to the entire Unit Area at all reasonable times to inspect and observe operations of every kind and character on the property, and shall have access at all reasonable times to any and all information pertaining to wells drilled, production secured, marketing of Unit Production and to the books, records and vouchers relating to the operation

of the Unit Area. Unit Operator shall, upon request, furnish to any such lessee tank tables, daily gauge and run tickets and reports of stock on hand at the first of each month and any other pertinent information pertaining to the Unit Area or development and operation thereof. All of the rights herein granted shall apply with equal force to the construction and operation by the Unit of any repressuring or pressure maintenance plant or other facilities in connection therewith.

XVII

Liability

No member of the Operating Committee or any other committee shall be personally liable or individually responsible for any act, error, default or omission as a member of such committee or committees.

Neither the Unit nor the Unit Operator shall be liable or responsible under any of the provisions of this Plan of [fol. 1758] Unitization for any acts or omissions resulting from causes beyond the control of the Unit or such Unit Operator, or other causes which by the exercise of due diligence could not have been prevented or overcome.

Unit Operator shall not be liable or responsible for any damage to the Unit Area or the property, equipment or facilities used in the development and operation thereof, or for the loss of any production arising out of its operation of the Unit Area, except only for bad faith or gross negligence in connection therewith.

If and in the event, notwithstanding the foregoing provisions of this section, the Unit, the Unit Operator or any member of the Operating Committee is held liable by a court of competent jurisdiction for any matter or thing for which it is herein provided the Unit or person so named shall not be liable, the amount of such liability as finally determined shall thereupon be treated, regarded and paid as an item of Unit Expense.

XVIII

Change of Interest

All transfers, assignments and conveyances of any interest in, or with respect to, any of the Separately Owned

Tracts within the Unit Area shall be subject to the terms, provisions and conditions of this Plan of Unitization, but shall not be binding on the Unit or the Unit Operator unless and until a photostatic or certified copy of the recorded instrument evidencing such change of ownership has been delivered to the Unit Operator. Each such transfer, assignment or conveyance, whether so stating or not, shall operate to impose upon the person or persons acquiring such interest the obligation of the assignor or grantor with respect to the interest so transferred and shall likewise operate to give and grant to the person or persons acquiring such interest all benefit attributable hereunder to such interest.

XIX

Audits

The Operating Committee shall cause an audit to be made of the books, accounts and records of the Unit Operator in respect to matters pertaining to the Unit and the operation of the Unit Area at least once each year and shall furnish a copy thereof to each of the Lessees within the Unit Area. Each such audit shall cover the period intervening since the last audit. The audit may be made by an [fol. 1759] auditor or auditing committee from the accounting staff of one or more of the Lessees within the Unit Area, or by an independent auditor or auditors employed by the Unit to make such audit.

XX

Rights of Way

The Unit shall have a servitude and right of way on, over and across all of the lands in the Unit Area for the purpose of laying, constructing, building, using and maintaining, operating, changing, repairing and removing pipe lines, tanks, telegraph and telephone lines, water lines, and other facilities for the development and operation of the Unit Area for Oil and Gas and for the gathering, handling and disposal of the Unit Production; provided, the Unit shall pay all damages to growing crops, timber, fences, improvements and structures on the land resulting from the exercise of the rights and privileges granted to it in this section.

XXI

Claims, Suits and Judgments Against Individual Owners of Unit Area

In the event claim is made against any of the owners of the Unit Area or any of such owners are sued on account of any matter or thing growing out of the development and operation of the Unit Area by the Unit and over which such owner or owners have no control because of the rights, powers and duties herein granted the Unit, said owner or owners shall immediately notify the Operating Committee in writing of such claim or suit. The Operating Committee shall assume and take over the further handling of such claim or suit and in pursuance thereof may select an attorney or attorneys for that purpose, who, subject to the directions of the Operating Committee, shall have the exclusive right to direct and control the settlement or defense thereof. Should such claim be settled, final judgment be entered against any such defendant or defendants upon said cause of action and any such defendant is required to pay or satisfy such judgment or expense of litigation in whole or in part, the amount of such settlement or judgment shall be treated, regarded and paid as any other item of Unit Expense. Nothing herein contained shall apply to or relieve any such owner or owners of liability which may have accrued prior to the effective date of this Plan of Unitization.

XXII

Title Information

Upon request of either the Operating Committee or the Unit Operator, the Lessees of the several Separately Owned [fol. 1760] Tracts shall furnish and make available to the Unit or the Unit Operator, as the case may be, an abstract brought to the date of the request, together with all other title information in the possession and files of such Lessees, title opinions, original or true copies of all leases, assignments, contracts, curative matter and all other data and information pertaining to or otherwise affecting titles to the Oil and Gas Rights in and to the Unit Area.

XXIII

Other Formations

It is understood that the common source of supply described herein as the Unit Area, namely, the Medrano Sand of the West Cement Field, underlies and may overlie other reservoirs or common sources of supply of Oil and Gas not a part of the aforesaid Medrano Sand or a part of the Unit Area of the Unit created hereby. Except as specifically provided in this Plan of Unitization, all rights of any and all persons in and to such other reservoirs or common sources of supply of Oil and Gas and the production therefrom, together with the right of ingress and egress and the use of the surface of the Unit Area for the exploration, development and operation of such other reservoirs or common sources of supply of Oil and Gas, are expressly reserved unto the separate owners thereof and shall remain unaffected by the creation of the Unit and the adoption of this Plan of Unitization, all to the same extent as if this Plan of Unitization had not been adopted except that in the exercise of such rights the owners thereof shall have due regard for the rights granted the Unit with respect to its operations hereunder. Likewise, any reference in this Plan of Unitization to a Separately Owned Tract or to the Unit Area, although in general terms broad enough to include the surface and all underlying common sources of supply of Oil and Gas, shall have reference to the lands embraced within such Separately Owned Tract and within the Unit Area only in relation to the Medrano Sand of the West Cement Field.

XXIV

Abandonment of Wells

If the Operating Committee at any time desires to abandon any well completed in the Medrano Sand and salvage the casing and other equipment that is a part of the well, the Lessee or Lessees of the Separately Owned Tract on which such well is located shall be notified in writing of such decision and shall have and be granted thirty (30) days from receipt of such notice within which to elect to take over such well for the purpose of completing the same [fol. 1761] in some other formation not a part of the Unit

Area. Any such Lessee electing to take over such a well shall pay the salvage value of the casing and other equipment in and on the well, determined in accordance with Section IV of the accounting procedure hereto attached marked "Exhibit C", and shall agree to assume full responsibility for the proper plugging and abandonment thereof at such time as the well is ultimately abandoned. No such well shall be operated or used for the production of Oil and Gas from the Unit Area and to that end the Lessee taking over such a well shall immediately cause the Medrano Sand in such well to be sealed off in a manner satisfactory to the Operating Committee. In the event the Lessee or Lessees of such a Separately Owned Tract do not elect to take over such well, the Unit Operator shall proceed to properly plug and abandon the same and salvage the casing and other equipment therefrom.

XXV

Abandonment of Operations and Dissolution of Unit

At such time as it is determined by the Operating Committee that Unit Production can no longer be produced from the Unit Area in paying quantities the further development and operation of the Unit Area by the Unit shall be abandoned, the Unit dissolved and its affairs wound up.

Upon abandonment of Unit Operations,

(a) All rights in and to the several Separately Owned Tracts shall revert to the separate owners and Lessees thereof;

(b) The owner or Lessee of a Separately Owned Tract desiring to take over and continue to operate a well located on such Separately Owned Tract may do so by paying the salvage value of the casing and other equipment in and on the well determined in accordance with Section IV of the accounting procedure hereto attached marked "Exhibit C" and by agreeing to properly plug and abandon the well at such time as it is ultimately abandoned;

(c) With respect to all wells not taken over by the owner or Lessees of the Separately Owned Tracts as aforesaid, the Unit Operator shall salvage so much of the casing and other equipment therein as can economically and reasonably be

salvaged and shall cause such well to be properly plugged and abandoned;

(d) The salvaging, liquidation or other distribution of assets and properties used in the operation of the Unit Area shall be in a manner determined by the Operating Committee; provided, any Lessee desiring to take its share of the physical assets or any portion thereof in kind may do so. All such assets and property shall belong to the several Lessees in proportion to their respective interests in the Unit.

[fol. 1762] At such time as the Unit Operations are abandoned and the affairs of the Unit wound up, the Unit shall submit for filing a declaration to that effect with the Secretary of the Corporation Commission and with the County Clerk of Caddo County, Oklahoma, whereupon the rights, powers and duties of the Unit shall be at an end.

XXVI

Amendment to Plan of Unitization and Enlargement of Unit

Any amendment of this Plan of Unitization or any enlargement of the Unit or Unit Area shall be in accordance with the provisions of Sections 11 and 12 of House Bill 339 of the 1945 Legislature of the State of Oklahoma or any amendment thereto.

XXVII

Subscribers

Provision is made below for the signing of this Plan of Unitization by Lessees within the Unit Area who wish to expressly signify their agreement to the terms, provisions and conditions hereof. Such Lessees may sign either as Unqualified or Qualified Subscribers. Those signing as Unqualified Subscribers agree to all the terms, provisions and conditions hereof, including the agreement to participate in carrying the Lessees who elect to be carried under the provisions of Section XI. Those signing as Qualified Subscribers agree to all the terms, provisions and conditions hereof, except that they reserve the right to be carried in respect to the payment of Unit Expense as is provided in Section XI and do not agree to participate in carrying the other Lessees who elect to be carried under the terms of

said Section. This Plan of Unitization may be so signed by the subscribers hereto at any time, the original of which shall at all times from and after the approval hereof by the Commission remain on file in the office of the Secretary of the Commission. In lieu of signing the original of this Plan of Unitization, any Lessee desiring to subscribe hereto, either as an Unqualified or Qualified Subscriber, may do so by separate instrument filed with the Secretary of the Commission, all with the same effect as if such Lessees signed the original.

The signing hereof by any Lessee shall be binding upon the heirs, personal representatives, successors and assigns of such Lessees.

The signing hereof by each of the subscribers hereto is conditioned upon the approval of this Plan of Unitization by the Corporation Commission.

[fol. 1763] The signing hereof by the Unqualified Subscribers is further conditioned upon the signing hereof by Unqualified Subscribers who, under this Plan of Unitization based on present lease ownership, will own sixty-five per cent (65%) or more in interest in the Unit.

Unqualified Subscribers: Amerada Petroleum Corporation, By —— ——; Anderson-Prichard Oil Corporation, By —— ——; Cities Service Oil Company, By —— ——; Foster Petroleum Corporation, By —— ——; Gulf Oil Corporation, By —— ——; Magnolia Petroleum Company, By —— ——; Palmer Oil Corporation, By —— ——; Phillips Petroleum Company, By —— ——; Ray Stephens, Inc., By —— ——; Stephens Petroleum [fol. 1764] Company, By —— ——; Sunray Oil Corporation, By —— ——.

Qualified Subscribers: —— ——, By —— ——, etc.

NOTE: All leases are subject to the adjustment outlined in Exhibit "B"—Part II.

[fol. 1770] EXHIBIT "B"

Part II to Plan of Unitization

For the purpose of this exhibit:

(a) The following amounts of the Unit Production of Oil shall be regarded as "*Normal Production*" for the years shown opposite the amounts so named:

Year Following Effective Date	*Daily Average in Barrels*
1st year	5,225 Barrels
2nd year	5,075 "
3rd year	4,925 "
4th year	4,775 "
5th year	4,775 "
6th year	4,203 "
7th year	3,872 "
8th year	3,788 "

(b) All Unit Production of Oil in excess of said Normal Production shall be regarded as "*Excess Production*".

(c) "*Time of Acceleration*" shall mean and include the time from the Effective Date to the end of five consecutive periods, each consisting of 12 calendar months, with the exception that any month shall not be counted as a month fixing the term of each such period if the Unit Production of Oil during such month is less than the Normal Production as a sole and direct consequence of a statewide proration order of the Corporation Commission. The five periods aforesaid shall be designated consecutively as Periods 1, 2, 3, 4 and 5.

(d) "*Time of Deceleration*" shall mean and include the time from the end of the Time of Acceleration and continuing until such time as the total number of additional barrels of Oil allocated to Separately Owned Tracts numbered 56, 57, 58, 64 and 65 during the Time of Acceleration as hereinafter provided, is offset by a like number of barrels of Oil allocated to the other Separately Owned Tracts during such Time of Deceleration, as hereinafter provided. [fol. 1771] During the Time of Acceleration the Normal Production of Oil as hereinabove defined shall be allocated

to all the several Separately Owned Tracts within the Unit Area in proportion to their respective percentages of interest shown in Part I of this Exhibit.

The Excess Production, if any, in any month during the Time of Acceleration and if sufficient for that purpose, shall be allocated to Separately Owned Tracts numbered 56, 57, 58, 64 and 65 in such amounts as to allocate to each such Separately Owned Tract the following amounts of Oil in excess of the number of barrels of Normal Production allocated to such Separately Owned Tracts.

Number of Period	*Percent in Excess of Normal*
1	100%
2	75%
3	50%
4	25%
5	10%

If the Excess Production in any month during the Time of Acceleration exceeds the amount required to satisfy the aforesaid increased allocations to the 5 Separately Owned Tracts last hereinabove named, the excess shall be allocated to all of the several Separately Owned Tracts within the Unit Area in proportion to their respective percentages of interest as shown in Part I of this Exhibit.

If the Excess Production, if any, in any month during the Time of Acceleration is not sufficient to satisfy in full the aforesaid increased allocations to the 5 Separately Owned Tracts hereinabove named, then and in that event the amount of such Excess Production shall be allocated to said 5 Separately Owned Tracts in the proportion that the percentage of interest of each such tract bears to the sum of the percentages of interest of all of said 5 tracts, [fol. 1772] as shown in Part I of this Exhibit.

During the Time of Deceleration the amount of the Unit Production of Oil allocated each month to the 5 Separately Owned Tracts hereinabove specifically named, shall be 50% of their respective percentages of interest as shown in Part I of this Exhibit, until such time as the total accumulated number of barrels of Oil so withheld from such tracts by reason of said 50% reduction in percentage shall exactly equal the total accumulated number of additional

barrels of Oil allocated to said tracts by reason of the special increase in allocation granted such tracts during the Time of Acceleration as hereinabove provided. The Unit Production of Oil so withheld from said 5 Separately Owned Tracts hereinabove specifically named by reason of said 50% reduction in the percentage allocation to such tracts shall be allocated to the other Separately Owned Tracts in the Unit Area, exclusive of the 5 tracts hereinabove specifically named, in the proportion that the percentages of interest of each bears to the sum of the percentages of interest of all such other tracts, exclusive of the 5 specifically named tracts, as shown in Part I of this Exhibit.

After the End of the Time of Deceleration all Unit Production shall be allocated to all the several Separately Owned Tracts within the Unit Area in proportion to their respective percentages of interest as shown in Part I of this Exhibit.

[fol. 1773] EXHIBIT "C" TO PLAN OF UNITIZATION

Accounting Procedure

The term "joint property" as herein used shall be construed to mean the Unit Area covered by the Plan of Unitization to which this "Accounting Procedure" is attached, together with any processing or other plants and facilities used in the development and operation of such Unit Area.

The term "Operator" as herein used shall be construed to mean the Unit Operator designated to conduct the development and operation of the joint property for the joint account.

I—Development and Operating Charges

Subject to limitations hereinafter prescribed, Operator shall charge the joint account with the following items:

(1) Delay or other rentals, when such rentals are paid by Operator for the joint account.

(2) Labor, teaming and other services necessary for the development, maintenance and operation of the joint property.

(3) Materials, equipment and supplies purchased or furnished by Operator from its warehouse stocks or from its other leases for use on the joint property. Insofar as is practical and consistent with efficient and economical operation, only such materials shall be purchased for or transferred to the joint property as are required for immediate use, and the accumulation of warehouse or lease stock on the joint property shall be avoided.

(4) Moving materials to the joint property from vendor's or from Operator's warehouse in the district or from other properties of Operator, but in either of the last events no charge shall be made to the joint account for a distance greater than the distance from the nearest reliable supply store or railway receiving point.

(5) Moving surplus materials from the joint property to outside vendees, if sold f.o.b. destination, or minor returns to Operator's warehouse or other storage point. No charge shall be made to the joint account for moving major surplus materials to Operator's warehouse or other storage point for a distance greater than the distance to the nearest reliable supply store or railway receiving point, except by authority of the Operating Committee; and no charge shall be made to the joint account for moving materials to other properties belonging to Operator, except by authority of the Operating Committee.

(6) Use of and service by Operator's exclusively owned equipment and utilities as provided in Paragraph (6) of Section II: "Basis of Charges to Joint Account."

(7) Damages or losses incurred by fire, flood, storm or from any other cause not controllable by Operator through the exercise of reasonable diligence. Operator shall furnish the Operating Committee written notice of damages [fol. 1774] or losses incurred by fire, storm, flood or other natural or accidental causes as soon as practicable after report of the same has been received by Operator.

(8) Expenses of litigation, liens, judgments and liquidated claims involving the joint property or incident to its development and operation. Actual expenses incurred by Operator in securing evidence pertaining to the joint property shall be a proper charge against the joint account.

(a) When any case, by prior agreement, is handled by Operator's legal staff, thereby eliminating the re-

taining of outside counsel, a charge commensurate with the cost of services rendered may be made to the joint account. Charges of this nature shall not be rendered until the Operating Committee has approved the amount thereof.

(b) Fees and expenses of outside attorneys shall not be charged to the joint account except where the employment of such outside attorneys is authorized by the Operating Committee.

(9) All taxes paid for the benefit of the parties in interest including ad valorem, property, gross production, occupation and any other taxes assessed against the jointly-owned properties, the production therefrom or the operations thereon.

(10) Insurance:

(a) Premiums paid for insurance carried for the benefit of the joint account together with all expenditures incurred and paid in settlement of any and all losses, claims, damages, judgments and other expenses, including legal services, not recovered from insurance carrier.

(b) If no insurance is required to be carried, all actual expenditures incurred and paid by Operator in settlement of any and all losses, claims, damages, judgments and any other expenses, including legal services, shall be charged to the joint account.

(11) Overhead:

In lieu of any charge for the salaries and expense of officers and employees of Operator other than employees directly assigned to the operation of the joint property and employees performing special work pursuant to authority of the Operating Committee, and, in lieu of any charge for office and camp expense other than the expense of a field office or camp, if any, required for the operation of the joint property, the Operator shall have the right to charge the joint account with the following overhead charges:

(a) $150.00 per month for each drilling well, beginning on the date the well is spudded and terminating

when it is on production or is plugged, as the case may be, except that no charge shall be made during suspension of drilling operations for fifteen (15) or more consecutive days.

[fol. 1775] (b) $50.00 per well per month for the first ten (10) producing wells.

(c) $40.00 per well per month for the second ten (10) producing wells.

(d) $25.00 per well per month for all producing wells over twenty (20).

(e) $20.00 per well per month for injection wells.

(f) An allowance to be agreed upon between the operator and operating Committee with respect to the construction and operation of any gas injection plant and faciilities if and when the construction and operation thereof is authorized.

In connection with overhead charges, the status of wells shall be as follows:

(1) Producing gas wells shall be included in overhead schedule the same as producing oil wells.

(2) Wells permanently shut down but on which plugging operations are deferred, shall be dropped from overhead schedule at the time the shutdown is effected. When such wells are plugged, overhead shall be charged at the producing well rate during the time required for plugging operations.

(3) Wells being plugged back or drilled deeper shall be included in overhead schedule the same as drilling wells.

(4) If and when a well is temporarily shut down (other than for proration) and not produced or worked upon for a period of a full calendar month, it shall not be included on the overhead schedule for such month.

(5) Salt water disposal wells shall not be included in overhead schedule.

The above specific overhead rates are subject to adjustment and shall be amended from time to time by agreement between Operator and the Operating

Committee if, in practice, they are found to be insufficient or excessive.

(12) Warehouse Handling Charges: None.

(13) Any other expenditure incurred by Operator for the necessary and proper development, maintenance, and operation of the joint property, except that Operator shall not charge the joint account with any expenditure or contribution made by Operator towards employes' stock purchase plan, group life insurance, pension, retirement, or bonus, other than such expenditures or contributions imposed or assessed by governmental authority.

II—Basis of Charges to Joint Account

(1) Outside Purchases: All materials and equipment [fol. 1776] purchased and all service procured from outside sources shall be charged at their actual cost to Operator, after deducting any and all trade or cash discounts actually allowed off invoices, or received by Operation.

(2) New materials furnished by Operator (Condition "A"):

New materials transferred to the joint property from Operator's warehouse or other properties shall be priced f.o.b. the nearest supply store or railway receiving point at replacement cost of the same kind of materials. This will include large equipment such as tanks, rigs, pumps, boilers and engines. All tubular goods (2" and over) shall be charged on the basis of mill shipment or carload price. Other materials, where the replacement cost cannot be readily ascertained, may, for the purposes of consistency and convenience, be charged on the basis of a reputable supply company's preferential list price f.o.b. nearest supply store or railway receiving point to the joint property prevailing on the date of transfer of the materials to the joint property.

In determining the value of any transferred materials, all special and preferential discounts shall be allowed but the regular cash discount shall not be considered.

(3) Secondhand materials furnished by Operator (Conditions "B" and "C"):

(a) Tubular goods (2" and over), fittings, machinery and other equipment which is in sound and serviceable condition at date of transfer, will be classed as condition "B" and charged at 75% of the price of new materials, in accordance with the provisions of Paragraph (2) above.

(b) Tanks, derricks, and buildings or other equipment involving erection costs shall be charged on a basis not to exceed 75% of knocked-down new price for similar materials.

(c) Other secondhand materials, such as units of machinery or other equipment that is serviceable, but substantially not good enough to be considered first-class secondhand material when transferred to the joint property, shall be classed as condition "C" and charged at 50% of the new price.

(d) There may also be cases where some items of equipment, due to their unusual condition, should be fairly and equitably priced by Operator.

(4) Warranty of Materials Furnished by Operator: Operator does not warrant the materials furnished from its warehouse or other properties beyond or back of the dealer's or manufacturer's guaranty, and in case of defective materials, credit shall not be passed until adjustment has been received by Operator from the manufacturers or their agents.

(5) If materials required are not available in Operator's surplus stocks, Operator shall whenever in its judgment it is practical to do so, give to other lessees within the Unit Area opportunity of furnishing the materials required in [fol. 1777] proportion to their interest, provided that the same can be furnished at the time such materials are required, and further provided that any such materials so furnished shall be in condition acceptable to Operator and shall be charged to the joint account on the same terms and conditions as are provided herein to cover the furnishing of materials by Operator.

(6) Operator's Exclusively-owned Facilities: The following rates shall apply to service rendered to the joint property by facilities owned exclusively by Operator:

(a) Water service, gas, teaming, power, and compressor service: All at rates currently prevailing in the field where the joint property is located.

(b) Automotive Equipment: Rates commensurate with cost of ownership and operation and in line with schedule of rates adopted by the Petroleum Motor Transport Association as recommended uniform standardized charges against the joint account. Automotive charges will be based on use in actual service on or in connection with the joint property. Truck, tractor and pulling unit rates shall include wages and expenses of driver.

(c) A fair rate shall be charged for the use of drilling and cleaning-out tools and any other items of Operator's fully-owned machinery or equipment which shall be ample to cover maintenance, repairs, depreciation and the service furnished the joint property. Provided, however, that such charges shall not exceed those currently prevailing in the field where the joint property is located.

(d) Whenever requested, Operator shall inform the other lessees within the Unit Area in advance of the rates it proposes to charge.

(e) Rates shall be revised and adjusted from time to time when found to be either excessive or insufficient.

III—Disposal of Lease Equipment and Materials

(1) Materials purchased by Operator shall be credited to the joint account and included in the monthly statement of operations for the month in which the materials are removed from the joint property.

(2) Materials purchased by other lessees within the Unit Area shall be invoiced by Operator and paid for by such lessees to Operator immediately following receipt of invoice and delivery of materials. Operator shall thereupon immediately pass credit to the joint account and include

the same in the monthly statement of operations for the month in which the materials were paid for by such lessees.

(3) Division of materials in kind, if made between Operator and other lessees within the Unit Area shall be in proportion to their respective interests in the joint property. Each party will thereupon be charged individually with the value of the materials received or receivable and [fol. 1778] corresponding credits will be made to the joint account by the Operator, and, both credits shall appear in the same monthly operating statement.

(4) Sales to outsiders of major materials shall be made only with the approval of the Operating Committee as to both terms and price and where made the proceeds shall be credited by Operator to the joint account at the full amount collected from vendee. Any claims by vendee for defective materials or otherwise shall be charged back to the joint account, if and when paid by Operator.

IV—Basis of Pricing Materials Transferred from Joint Account

Materials and equipment purchased by either Operator or the lessees in the Unit Area, or divided in kind between them, unless otherwise approved by the Operating Committee, shall be valued on the following basis of condition and price: (New price as used in the following paragraphs shall have the same meaning and application as that used above in Section II: "Basis of Charges to Joint Account").

(1) New Materials: (Condition "A") being new equipment or supplies purchased or procured for the joint property but never used thereon; at 100% of current new prices.

(2) Good Secondhand Materials: (Condition "B") being good serviceable materials which are further usable without repair, at:

(a) 75% of current new prices, if materials were new when originally charged to the joint property.

(b) 75% of current new prices less depreciation consistent with their usage on and service to the joint property, if materials were originally charged to the joint property as secondhand at 75% of new prices.

(3) Other Used Materials: (Condition "C") being materials further usable for their original function only after repair and reconditioning; at 50% of current new prices.

(4) Bad Order Materials: (Condition "D") being materials not further usable for their original function but for possible other service; at 25% of current new prices.

(5) Junk: (Condition "E") being obsolete and unserviceable materials; at prevailing junk prices in the district. Where practicable, junk should be disposed of at the joint property.

(6) Temporarily Used Materials: When the use of certain items of equipment on the joint property has been only temporary, and the time of actual use thereon does not justify the deduction of depreciation as listed in (a) and (b) of Paragraph (2) hereof, such materials will be priced on a basis that will leave a net charge against the joint account consistent with the service rendered and adequate for the time the materials were in use.

V—Inventories

Periodic inventories of the materials and equipment of the joint property, which shall include such materials and equipment as are ordinarily considered controllable by Operators of oil and gas properties, shall be taken by Operator at such times and under such conditions as may be prescribed by the Operating Committee.

[Title omitted]

MOTION TO SET ASIDE FINDINGS OF FACT AND CONCLUSIONS OF LAW AND IN LIEU THEREOF TO MAKE OTHER FINDINGS OF FACT AND CONCLUSIONS OF LAW—Filed September 5, 1947.

Comes Now the Palmer Oil Corporation, one of the Protestants in the above matter, and moves the Honorable Commission for an Order to set aside its Findings of Fact and Conclusions of Law, entered in the above matter under date of September 5, 1947, and in lieu thereof to make the following Findings of Fact and Conclusions of Law, to-wit:

Requested Findings of Fact

The Corporation Commission of the State of Oklahoma in Cause No. C. D. 1308, makes the following Findings of Fact:

First: That the production of oil and gas from the Medrano oil and gas bodies in the West Cement Oil Field in Caddo County, Oklahoma, is now being had without waste, [fol. 1783] the same being had in accordance with the Rules, Regulations and Orders of the Corporation Commission of the State of Oklahoma.

Second: The Medrano Sand Horizon in the West Cement Oil Field in Caddo County, Oklahoma, is completely separated into two or more common sources of supply from and between which there is no communication of oil or gas by reason of the presence of faults extending through such horizon constituting sealed barriers.

Third: That the West Cement Oil Field in Caddo County, Oklahoma, in which the Medrano Sand body lies in separate segments, is a field in which oil was discovered in commercial quantities and produced in the year 1918, and at all times subsequent thereto.

Fourth: That unitized management, operation and further development for and of oil and gas from the several separate common sources of supply thereof in the Medrano sand in the West Cement Oil Field in Caddo County, Oklahoma, will not substantially increase the recovery of oil and gas therefrom, or decrease the time in which the same will be recovered, adequate conservation measures now in force and effect being continued in force and effect by the Corporation Commission of the State of Oklahoma in respect thereto.

Fifth: That the plan of compulsory unitization here proposed is not feasible.

Sixth: That under operations which might be conducted [fol. 1784] by virtue of the adoption of the proposed plan here under consideration, the value of the oil and gas which might be produced from the Medrano Sand in its several, separate common sources of supply would not be sufficiently in excess of that which would be produced in the normal operations with respect to said Medrano Sand to equal the cost of the operations under such compulsory unitization.

Seventh: That the compulsory unitization under the plan here proposed is not for the common good of all interested parties.

Eighth: That the proposed plan of compulsory unitization here under consideration is inequitable and unjust.

Ninth: That the proposed plan of compulsory unitization here under consideration, if adopted, would effect the taking of property of certain royalty and lease owners and give it to others without just compensation.

Tenth: That the proposed plan of compulsory unitization here under consideration would, if adopted, include areas which have not reasonably been defined by actual drilling operations.

Eleventh: The division of interest or formula for the apportionment and allocation of the purported unit production among the several separately owned tracts within the proposed unit area under the plan of compulsory unitization here proposed, if adopted, is not fair, reasonable or equitable.

[fol. 1785] Twelfth: The division of interest or formula for the apportionment and allocation of the purported unit production between the owners of interests within separate tracts within the proposed unit area under the plan of compulsory unitization here proposed, if adopted, is not fair, reasonable or equitable.

Thirteenth: That the plan of compulsory unitization here proposed, if adopted, makes no provision for the adjustment or change of the division of interest or formula for the apportionment and allocation of purported unit production in the event the results of actual future drilling operations establish that such adjustment or change should be made.

Fourteenth: That the plan of compulsory unitization here proposed does not give adequate weight to the location on structure of the several separate tracts within the proposed unit area.

Fifteenth: That the plan of compulsory unitization here proposed, if adopted, fails to use as a factor the essential factor of the ability of the several presently drilled and operating oil wells to produce from the Medrano Sand bodies.

Sixteenth: That the plan of compulsory unitization here proposed fails to use as a factor the essential factor representative of the different lifting costs of oil being pro-

duced from the several tracts from the several bodies of Medrano Sand.

[fols. 1786-1787] Requested Conclusions of Law

The Corporation Commission of the State of Oklahoma makes the following Conclusions of Law in Cause C.D. No. 1308:

That the petition filed herein and the amendment thereto, and the evidence presented in support thereof, do not establish that it should be granted under the provisions of *O. S. Supp. 1945, Title 52, Chapter 3, Sections 286.1 to 286.17*, both inclusive, and should, therefore, be denied.

The Palmer Oil Corporation, Protestant, by Monnet Hays and Brown, by (S.) Coleman Hayes, Oklahoma City, Oklahoma; Adams, Jones and Robinson, by (S.) Mark H. Adams, Wichita, Kansas, Attorneys for Protestant.

Motion for New Trial—Filed September 5, 1947

Comes Now the Protestant, the Palmer Oil Corporation, and moves the Commission to set aside, vacate and hold for naught the Order made in the above entitled cause on the 5th day of September, 1947, said Protestant being aggrieved thereby, and to grant a new trial of said cause for the following reasons and causes which affect materially the substantial rights of said Protestant:

1. That said Order is not sustained by sufficient evidence.
2. That said Order is contrary to the evidence.
3. That said Order is contrary to law.

4. Errors of law occurring at and during the trial duly excepted to by Protestant.

JOURNAL ENTRY ALLOWING APPEAL—Filed September 5, 1947

Now on this 5th day of September, 1947, it appears to the Corporation Commission of the State of Oklahoma, that The Palmer Oil Corporation, a corporation, protestant in the above styled and numbered cause, has filed herein written notice of its intention to appeal to the Supreme Court of the State of Oklahoma from the order of this Commission rendered herein on the 5th day of September, 1947, granting the application and petition for

unitization herein, and that The Palmer Oil Corporation, a corporation, has requested this Commission to certify the entire record in this cause to the Supreme Court of the State of Oklahoma, as prescribed by law.

Now, therefore, it is ordered by the Commission that said appeal be granted and that the Secretary of the Corporation Commission of the State of Oklahoma cause the entire [fols. 1796-1797] record in this case to be transcribed and submitted to the Chairman of the Commission for certification at the earliest possible date.

Done at the office of the Corporation Commission, Capitol Office Building, Oklahoma City, Oklahoma, this 5th day of September, 1947.

Corporation Commission of the State of Oklahoma; by (S.) Reford Bond, Chairman; (S.) Ray O. Weems, Vice-Chairman; (S.) Ray C. Jones, Commissioner.

[File endorsement omitted.]

[fol. 1812] BEFORE THE CORPORATION COMMISSION OF THE STATE OF OKLAHOMA

PROCEEDINGS UPON HANDING DOWN OF AN OPINION—September 5, 1947

[fol. 1813] Chairman Bond: Gentlemen, the Commission will hand down in open court an opinion in the West Cement unitization case which is C. D. 1308.

After 24 days of hearing, the Commission today granted the application of 94 per cent of the operators in the West Cement Medrano Pool, adopting a plan of unitization for the entire pool. The pool comprising approximately 37,000 acres, containing 37 oil wells and 19 gas wells is known as a gas expansion dry pool. The testimony indicated that under present competitive methods of operation only 25 per cent or 24 million barrels of oil would be ultimately covered, but under unitization management an additional 25 per cent or 25 million barrels of oil could be recovered for royalty owners and lease holders.

Testimony further showed that unless the pool was operated on a unitization plan, the correlative rights of the various operators and owners who owned an interest in the gas cap where gas only is produced, would be adversely affected and it was these facts which moved the Commission to grant the application unitizing the entire field.

[fol. 1814] Reford Bond, Jr.: To which order, the royalty owners as they appear by name in the proceedings and pleadings and Tom Potter, owner of oil and gas leasehold estate, Clyde Kahle, owner of an overriding royalty and Bob White Oil Corporation, owner of an overriding royalty except and announce their intention to appeal from the Order of the Corporation Commission of the State of Oklahoma to the Supreme Court of the State of Oklahoma, and ask that the proper notation be made on the Docket of the Corporation Commission, of such notice of intention to appeal and ask that time be allowed for the making and filing of transcripts.

Chairman Bond: How much time do you ask, a different rule applies to oil and gas cases as what applies in other cases. Under the general Order you are allowed six months for other cases, but in oil cases you are only allowed 60 days.

Reford Bond, Jr.: We request the regular time allowed by statute.

Chairman Bond: The regular time, 60 days as allowed by statute.

Jack Page: We want to give the same exceptions and notice of intention to appeal as far as B. E. Johnson, and [fol. 1815] M. L. McIntyre and Virginia McIntyre.

Motions to Set Aside Findings of Fact and Conclusions of Law and Denial Thereof

Mark Adams: The Protestant, Palmer Oil Corporation, excepts separately to each of the findings of fact and conclusions of law contained in the Order of the Commission, of this Order on this Date, and excepts each and every line of the Unitization Plan as adopted by the Order of the Commission, and we would like for the record to so show. In addition, the Palmer Oil Corporation moves to set aside findings of fact and conclusions of law made by the Commission in this matter, this day, and in lieu thereof to make further findings which are as follows: First: That the production of oil and gas from the Medrano oil and gas bodies in the West Cement Oil Field in Caddo County, Oklahoma, is now being had without waste, the same being had in accordance with the Rules, Regulations and Orders

of the Corporation Commission of the State of Oklahoma. Second: The Medrano Sand Horizon in the West Cement Oil Field in Caddo County, Oklahoma, is completely separated into two or more common sources of supply from and between which there is no communication of oil or gas, by reason of the presence of faults extending through such horizon constituting sealed barriers. Third: That the [fol. 1816] West Cement Oil Field in Caddo County, Oklahoma, in which the Medrano Sand body lies in separate segments, is a field in which oil was discovered in commercial quantities and produced in the year 1918, and at all times subsequent thereto. Fourth: That unitized management, operation and further development for and of oil and gas from the several separate common sources of supply thereof in the Medrano sand in the West Cement Oil Field in Caddo County, Oklahoma, will not substantially increase the recovery of oil and gas therefrom, or decrease the time in which the same will be recovered, adequate conservation measures now in force and effect being continued in force and effect by the Corporation Commission of the State of Oklahoma in respect thereto. Fifth: That the plan of compulsory unitization here proposed is not feasible. Sixth: That under operations which might be conducted by virtue of the adoption of the proposed plan here under consideration, the value of the oil and gas which might be produced from the Medrano Sand in its several, separate common sources of supply would not be sufficiently in excess of that which would be produced in the normal operations with respect to said Medrano Sand to equal the [fol. 1817] cost of the operations under such compulsory unitization. Seventh: That the compulsory unitization under the plan here proposed is not for the common good of all interested parties. Eighth: That the proposed plan of compulsory unitization here under consideration is inequitable and unjust. Ninth: That the proposed plan of compulsory unitization here under consideration, if adopted, would effect the taking of property of certain royalty and lease owners and give it to others without just compensation. Tenth: That the proposed plan of compulsory unitization here under consideration would, if adopted, include areas which have not reasonably been defined by actual drilling operations. Eleventh: The division of interest or

formula for the apportionment and allocation of the purported unit production among the several separately owned tracts within the proposed unit area under the plan of compulsory unitization here proposed, if adopted, is not fair, reasonable or equitable. Twelfth: The division of interest or formula for the apportionment and allocation of the purported unit production between the owners of interests within separate tracts within the proposed unit area under the plan of compulsory unitization here proposed, if [fol. 1818] adopted, is not fair, reasonable or equitable. Thirteenth: That the plan of compulsory unitization here proposed, if adopted, makes no provision for the adjustment or change of the division of interest or formula for the apportionment and allocation of purported unit production in the event the results of actual future drilling operations establish that such adjustment or change should be made. Fourteenth: That the plan of compulsory unitization here proposed does not give adequate weight to the location on structure of the several separate tracts within the proposed unit area. Fifteenth: That the plan of compulsory unitization here proposed, if adopted, fails to use as a factor the essential factor of the ability of the several presently drilled and operating oil wells to produce from the Medrano Sand bodies. Sixteenth: That the plan of compulsory unitization here proposed fails to use as a factor the essential factor representative of the different lifting costs of oil being produced from the several tracts from the several bodies of Medrano Sand. The Corporation Commission of the State of Oklahoma makes the following Conclusions of Law in Cause C. D. No. 1308: That the petition filed herein and the amendment thereto, and the evidence [fol. 1819] presented in support thereof, do not establish that it should be granted under the provisions of *O. S. Supp. 1945, Title 52, Chapter 3, Sections 286.1 to 286.17*, both inclusive, and should, therefore, be denied. If the Commission please, we would like to have a ruling on our motion.

Chairman Bond: Very well.

Reford Bond, Jr.: We desire to join in the motion of the Palmer Oil Corporation.

Chairman Bond: Let the record so show.

Jack Page: Likewise, we would like to join in the motion.

Chairman Bond: Gentlemen, would you like to be heard? Mr. Williams, would you like to say something?

R. M. Williams: I don't know that there is anything I could say except his motion is in direct conflict with the order of the Commission, if the Commission's order is correct, then this motion should be denied, if it's correct, if this motion is correct, then it should be granted and the Commission's order is no good. That is the issue of the lawsuit.

Chairman Bond: Mr. Green, do you have anything to say?

Floyd Green: I agree with Mr. Williams, since the Commission has adopted the conclusions of law, these are en- [fol. 1820] tirely different from what he proposes in the motion of the Palmer Oil Corporation and the motion should be overruled.

Chairman Bond: The Commission denies the motion of counsel, and exceptions are allowed.

Mark Adams: We offer in evidence this Motion as Exhibit 123, and ask that it be admitted. We will file a copy of this with the Commission. We offer this document as Exhibit 123.

Chairman Bond: Received, denied and exceptions allowed.

Motion to Set Aside Order and Denial Thereof

Mark Adams: At this time, if the Commission please, in behalf of The Palmer Oil Corporation, Protestant, we herewith would like to make the following motion: Comes now the Protestant, The Palmer Oil Corporation, and moves the Commission to set aside, vacate and hold for naught the Order made in the above entitled cause on the 5th. day of September, 1947, said Protestant being aggrieved thereby, and to grant a new trial of said cause for the following reasons and causes which affect materially the substantial rights of said Protestant: 1. That said Order is not sustained by sufficient evidence. 2. That said Order is contrary to the evidence. 3. That said Order is contrary to [fol. 1821] law. 4. Errors of law occurring at and during the trial duly excepted to by Protestant.

Chairman Bond: Very well, do you gentlemen wish to join in on this motion?

Reford Bond, Jr.: We wish to join in the demurrer.

Jack Page: We also join in the demurrer.

Chairman Bond: Let the record so show.

Mark Adams: We would like to offer this motion of new trial as Exhibit 124 and ask that it be received.

Chairman Bond: Received, notice for new trial denied and overruled, exceptions allowed.

PROCEEDINGS RE NOTING OF APPEALS AND FIXING BONDS

Mark Adams: We would like the record to show that on behalf of the Protestant, the Palmer Oil Corporation, of its notice of intention to appeal to the Supreme Court of the State of Oklahoma and for the order be entered this day in this Cause by the Commission on its docket and request that such Notice of Appeal be duly entered upon the Docket of the Corporation Commission as required by law.

Chairman Bond: Request granted and let the record so show accordingly.

Mark Adams: Notice of Appeal in this instance has been marked by the Reporter as Exhibit 125 and we would like [fol. 1822] to have that admitted in evidence.

Chairman Bond: Received.

Mark Adams: Your Honors, please, we prepared an order for a journal entry overruling the motion for a new trial which, if it's agreeable and Commission's counsel here would like to examine same, we would like to have the Commission sign it if everything is in order.

Chairman Bond: Very well, let counsel examine the Order and bring it to the desk and we will sign it now.

Mark Adams: We have also prepared a journal entry, an order for the signature of the Commission allowing the appeal and we would like to have counsel examine that.

Chairman Bond: Very well, send that up here to the bench after counsel has examined it.

Mark Adams: If the Commission please, the application of the Palmer Oil Corporation, Protestant, ask for certification of facts to the Supreme Court and has been identified as Exhibit 126 and we would like to have this admitted in evidence.

Chairman Bond: Received.

Mark Adams: If the Commission please, Protestant having given notice of appeal to the Supreme Court of the [fol. 1823] State of Oklahoma, the Protestant, The Palmer Oil Corporation, at this time would like to file application before the Corporation Commission of the State of Oklahoma to fix the terms and amount of suspending or supersedeas bonds to suspend operation of Order 20289, that the Commission made herein on the 5th day of September, 1947, pending appeal therefrom to the Supreme Court of Oklahoma and we would like to show the admission of this application as Exhibit No. 127.

Chairman Bond: Received.

Reford Bond, Jr.: We desire to join in the application of the appeal of the Palmer Oil Corporation to fixing supersedeas bond.

Chairman Bond: Let the record so show.

Jack Page: We also join in that request.

Floyd Green: We will have to take testimony on that, a time should be fixed, they can do that, they are entitled to take testimony.

Chairman Bond: The Commission will hear you on the law now and we will hear testimony at any time.

Floyd Green: They have a right to supersede the order, it's the amount that has to be fixed, I think that you should take some testimony on it before you fix the amount.

[fol. 1824] Chairman Bond: The Commission would like to act as promptly as possible and the Court Reporters are working every day in court and have to make a record at night and if the sixty days expire, they have no jurisdiction and would have to go to the Supreme Court for additional time, you might save the trouble by having an early hearing and not having to go to the Supreme Court for time in addition to the sixty days.

Floyd Green: Under House Bill 339, the Order cannot become executive for sixty days, prior to that time we should have an early hearing.

Chairman Bond: Call the secretary and we will look at the docket and if he wants an early hearing, we will give you one and we will defer all other cases and give this case the right-of-way. Counsel may ask today that the record

be prepared and the Reporters prepare same as quickly as possible. (To the Reporters) Observe all requests and prepare the transcript as rapidly as possible and come within the sixty days and you are instructed that, if it is not possible to have the record ready, please advise counsel in [fol. 1825] plenty of time so that they can go to the Supreme Court and get additional time for preparing the record.

Mark Adams: If the Commission please, the Commission will recall that there are a great number of exhibits in this case and I believe that there were a great many exhibits concerned with the records that were not necessary, but were for merely the purpose of refreshing the witnesses memories and perhaps a great deal of time would be saved and some expense from this if it were possible for the counsel to stipulate as to various exhibits that would not be necessary to take to the Supreme Court; of course, we want to have a full and complete record, but there are a number of duplications in the exhibits which were used for the purpose of refreshing witnesses memories, and, of course, we want to be sure and have all the essential exhibits that should be included in the record. If that is agreeable with the Commission and Counsel for other protestants, we would like to have an opportunity to reach such a stipulation.

Chairman Bond: The Commission will respect any stipulation that you make with other counsels and you can prepare your record as economical as possible.

[fol. 1826] Mark Adams: We want it to be complete, but I do believe that there are some exhibits concerning which there was oral testimony and probably these particular exhibits are not essential to the record.

R. M. Williams: We will work with you every way possible.

Reford Bond, Jr.: If the Commission please, I didn't want to interrupt Mr. Adams awhile ago when he was offering his various motions. I would like at this time to give notice of appeal for my client from the Order of the Commission of overruling the motion for a new trial and the royalty owners as they appear in the pleadings and Tom Potter and Clyde Kahle and Bob White Oil Company hereby give notice of appeal from the Order of the Cor-

poration Commission overruling their motion for a new trial to the Supreme Court of the State of Oklahoma and request that proper entry be made on the proper docket of the Corporation Commission showing their intention to appeal and that an extension of sixty days be allowed for the filing of a transcript.

Chairman Bond: Let the record so show and that counsel gave notice of appeal after the Order of the Corporation Commission was given and counsel gave notice of appeal after a motion for a new trial was denied.

[fol. 1827] Jack Page: Let the record so show as to Johnson and McIntyre.

Chairman Bond: Hearing on testimony for fixing a bond has been agreed upon by counsel and set by the Commission for October 2, 1947 at 10:00 o'clock a.m.

Is there anything further in this matter?

Reporter's Note: Whereupon, all parties announced nothing further.

Chairman Bond: The Commission will close this case and we will have further hearing on October 2nd as to the fixing of Supersedeas Bond.

[fol. 1828] BEFORE THE CORPORATION COMMISSION OF THE STATE OF OKLAHOMA

[Title omitted]

TRANSCRIPT OF HEARINGS ON FIXING SUPERSEDEAS BOND

On October 2, 1947, at 10:00 a.m., this cause came on for further hearing upon the application of the protestants, Palmer Oil Corporation, for the Oklahoma Corporation Commission to seek Supersedeas Bond in this cause for application to the Supreme Court of the State of Oklahoma. The Oklahoma Corporation Commission is in session in the Court Room, Capitol Office Building, Oklahoma City, Oklahoma, all members being present.

The parties appeared as follows: Mark H. Adams, Wichita, Kansas; Coleman Hayes, Oklahoma City, Oklahoma for Palmer Oil Corporation; R. M. Williams, Russell G. Lowe, W. H. Brown, and Booth Kellough, attorneys

being present and appearing for the applicants in the proceedings; Floyd Green, appearing for the Oklahoma Corporation Commission.

The following proceedings were had, to-wit:

[fol. 1829] Vice Chairman Weems: Gentlemen, you may proceed.

Mark H. Adams: If the Commission please, we are in a position to offer testimony to show that there will be no loss or damage due to the Supersedeas Bond, we are not sure what disposition the Commission will be or what you would like to have presented. It is our belief that here is a new law which is untried and unquestioned, but what it substantially effects their valuable property rights, it's our belief that the Commission certainly feels that we are sincere in our belief that the law has no proper application. Nor does the plan that the Commission has approved to the Medrano sections of the West Cement field, and that when we say that we are going to appeal promptly to the Supreme Court of the State of Oklahoma, from the Commission's order, we believe that we are entitled to be believed that we are sincere in our position and intend to proceed diligently to ascertain from the court determination, subsequently the only bond that should be required in this undertaking should be one that will assure the payment of the costs and the further assurance of good faith on our part. If the Commission feels that there is any question about our sincerity, or if the Commission feels that it cares to have evidence submitted, we will be glad to submit it, but we don't wish to uselessly take the time of the Commission unless such evidence is [fol. 1830] desired.

Commissioner Weems: Mr. Green, will you state the position of the Commission.

Floyd Green: As I understand such a supersedeas bond, that is a bond to make those persons protected that might be damaged. In event the order is set aside, I don't know the proponent's position and you should try to measure and assume that it will be a year before this lawsuit is settled in the Supreme Court. The purpose of supersedeas is to see that no one is hurt. It's the question of the Commission as to who could be hurt and the amount of time that you

assume that the court will pass on the case. If no one is hurt, then, the bond could be nominal.

Mr. Williams: There is no question about the sincerity of Mr. Adams or his client, Mr. Tom Palmer, and Mr. Adams here, we assume that they are sincere, but after weeks of hearing the Commission has said that unitization is for this pool. A great deal of proof has already been introduced as to amount of oil and gas and amounts that will be lost if that method of operation is not adopted. The record in itself is sufficient to show great damage of any delay of unitization. We know that Mr. Palmer is sincere in his desire to appeal, nevertheless it's been determined by the Commission that unitization is the proper method of operation. The proponents should have protection from the damage that they will suffer by reason of the [fol. 1831] appeal. If Mr. Palmer is correct, and the Commission's order is subject to reversal, of course there is no liability under the bond, but if he is not correct, as this Commission has already found, then he should support his sincerity by some financial guaranty by a good bond. Other parties will be damaged, but his sincere efforts should not enter into it. We are in a position to show that any delay will institute damage on the part of the pool. That is the purpose of the supersedeas bond and the law contemplates that the parties would appeal. He should post a bond to protect the other parties from damage that they might sustain. I see no option, you must fix an amount that will protect the other parties, that is what the hearing is about today, of course, these parties throughout the hearing asserted that there will be no damage if we never adopt unitization of the pool. They say that in the law there is no damage. The Commission had already ruled against them on that basic contention.

[fol. 1832] Whereupon, HENRY KEPLINGER, of lawful age, being first duly sworn, testified as follows, to-wit:

Witness examined.

By Mark H. Adams:

Q. State your name, please, sir.

A. C. H. Keplinger.

Q. You are the same Mr. Keplinger who is a petroleum engineer and geologist and testified in this hearing in chief, are you?

A. Yes, sir.

Q. I assume that the Commission will not require qualification of this witness.

Commissioner Weems: That is right.

Mr. Williams: We admit his qualifications.

Mr. Adams continues with the witness:

Q. Mr. Keplinger, do you have an opinion as to whether or not the production now being had under present operations of the Medrano sand sections in the West Cement pool in Caddo County, Oklahoma, is being had without waste?

A. I do.

Q. Will you state what that opinion is.

A. That the operation of the West Cement Medrano field is not being operated without waste under the present order of the Corporation Commission.

Q. State if you know whether or not the reservoir pressures in the gas and in the oil zone of the Medrano sections in the West Cement field are being maintained at this [fol. 1833] time under the present orders of the Commission in equalized positions.

A. In June, effective June 5th, the Commission made an order which reduced the gas allowable from the gas wells in the Medrano sections of the West Cement pool from some 26 million cubic feet per day. On May 2nd 4,408,000 barrels per day. In June, and since June 1st, has maintained allowable at 4,408,000 cubic feet per day, as a result of this reduction in gas allowable, the voidage from the gas area is reduced approximately 5.5 times and on the basis of the present allowable from the oil zone in the Medrano section

of the West Cement field, the voidage of gas in the gas cap and the voidage of oil from the oil zone is approximately the same. It means that in the gas area the present volume of production is the same approximately as the oil removal from the oil sections so that there can be no removal waste of oil by movement underground into the gas section, as might have previously existed. The greatest damage in what approximately equal voidage in the gas area and from the oil area is for the gas-oil contact to move downward, the gas to move downward into the oil section because the gravity damage, effect the specific gravity or the distance of the oil is so much greater than comparable volume of gas under present reserve pressures that the area would move downward, and therefore it would be impossible to have any waste of oil by movement into the gas zone.

Q. Accordingly, if I understand your statement, Mr. Keplinger, and your opinion, to summarize it is, as long as [fol. 1834] oil and gas is produced from the Medrano sand sections in accordance with present orders of this Commission, and assuming that these orders are maintained, all recoverable oil that might be reasonably expected to be recovered will be recovered without waste, is that correct?

A. That is correct.

Q. Now you are not, when you make that statement, you are not taking into consideration the tail end, so to speak, that might be recovered if there is water injection, is that right?

A. Yes, sir, that is correct, or the time that will be required.

Q. Now as to the time that will be required under present operations, what other elements should be considered in determining the time factor, if any, is it a question of further development?

A. Yes, sir.

Q. The Commission has records showing the weighted average pressure drop in this area for each month, does it not, from the operations, is that correct?

A. Yes, sir, the Commission each month published the gas allowables for the individual wells and for the period they have taken gas pressure tests on each producing gas well in the Medrano sections.

Q. Do you have, for the months of August and September, 1947, the reports of this Commission in that respect?

A. I do.

[fol. 1835] Q. I hand you then what the reporter has marked and identified as exhibits, handing you Exhibits 128 and 129, will you state what these two exhibits are, please, for the record?

A. These exhibits were obtained from the Conservation Department of the Corporation Commission, Exhibit 128 is the gas allowable report for August, 1947. It listed the wells, the acreage attributed to each well, the potential, the pressure as determined by the Corporation Commission and the allowable, the same information is shown on Exhibit 129, but for the month of September.

Q. 1947?

A. 1947.

Mark H. Adams: We offer as evidence Exhibits 128 and 129.

Chairman Bond: Received.

Mark H. Adams continues with the witness:

Q. Referring to exhibits 128 and 129, have you made the computation as to the per cent and drop of weighted average pressure with respect to production of the Medrano sand section for 30 days?

A. I have.

Q. Will you state what that approximate is.

A. The approximate per cent is approximately 2¾ths of 1 per cent drop in pressure.

Q. The pressure as of September report, Exhibit 129, is what amount, is it 880 point what?

A. The weighted pool pressure in September in the September report is 688.9536 pounds.

[fol. 1836] Q. In your opinion, the drop for thirty days, is what per cent, what part of one per cent?

A. Approximately ⅔rds of one per cent, that is, between the August pressures which had a weighted average of 693.1432 pounds and the September weighted average pressure of 688.9536 pounds.

Q. In your opinion, is that an appreciable drop or not?

A. The drop is approximately 4 pounds per month and

over one year's time it will be approximately 50 pounds for one year's time.

Q. Will that, in your opinion, result in the loss of any recoverable oil of the Medrano sand section that might otherwise ultimately be recovered?

A. There might be some loss, but it would not be appreciable.

Q. You made a study as an engineer, did you not, of the gas withdrawals per barrel of oil from the Medrano section of the West Cement field, as is all the same factors in relation to production in the West Edmond pool?

[fol. 1837] A. Yes.

Q. I wonder, for the benefit of the Commission, if you would state the difference in respect to the amount of gas produced, per barrel of oil, in the two areas I have just mentioned.

A. In the West Edmond Hunton Lime Pool the original gas-oil ratio was between 900 and 1000 cubic feet of gas per barrel of oil.

Q. Now, when you say "ratio," you mean that much was produced——

A. That much was produced and that much had dissolved, was dissolved in each barrel of oil in the reservoir. The production of the West Edmond Pool, at the present time, has resulted in the production of such a quantity of oil as to deplete the reservoir to the point where at the present time the average gas-oil ratio will approximate 7500 to 8000 cubic feet of gas per barrel of oil. That means that each barrel of oil that is being produced, in addition to the amount of original gas that was in that barrel of oil, is producing along with it a large volume of gas from other barrels of oil that are not being produced.

Q. That's in the West Edmond Pool?

A. Yes.

Q. Now, tell us about the Medrano sand section.

A. In the Medrano sand section we have between 425 and 570 cubic feet of gas dissolved in a barrel of oil originally,— in the Medrano section of the West Cement Field we have approximately half of the amount of gas dissolved in each [fol. 1838] barrel of oil that we had originally present in the West Edmond pool. The production from the Medrano

section of the West Cement Field, as of October 1, 1947, is approximately 8,550,000 barrels of oil. With the production of this large volume of oil there would be little or no increase, there has been I should say,—little or no increase in the gas-oil ratio in the later wells. The last survey made by the Corporation Commission indicates that at the present time each barrel of oil being produced from the oil zone is producing its original volume of gas that was contained in the oil when the field was discovered, so that there is no oil being produced in the Medrano section of the West Cement field, and gas which isn't,—the production of oil is not robbing gas from oil which is not being produced.

Q. Will you state to the Commission, briefly, in your opinion, the effect, if any, on the viscosity of the oil from the Medrano section by the continuation of operation under the present order of the Commission.

A. The viscosity of the oil in the Medrano reservoir, at 120 degrees Fahrenheit, would probably not be appreciably changed according to laboratory, precision instruments. The original viscosity was approximately 1.8 centipoise from which—the reduction of pressure of the viscosity has increased over the period of a year. The increase in viscosity in the Medrano section over a period of a year would hardly be appreciably measurable.

Q. You mean there would be no material change?

[fol. 1839] A. In the oil viscosity.

Q. What effect does the viscosity of the oil have in the production of oil in the Medrano section?

A. The viscosity has this relationship, in common terms, —the higher the viscosity the more energy will be required to push the oil through the formations.

Q. In your opinion, the viscosity in this particular effect, has not changed in any appreciable amount?

A. No, and will not under the present gas allowable and oil allowable of the Commission. That's assuming that your present conservation measures will be maintained and those conservation measures have been in effect ever since June 1st of this year.

Cross-examination.

By Mr. Williams:

Q. Mr. Keplinger, your testimony here today is substantially a restatement of your testimony at the hearing and that no loss is to be sustained in this field even if we never got unitization,—is that correct?

A. No, that isn't exactly right.

Q. You testified at that time that no advantage would be obtained from unitization, in any event.

A. That's correct.

Q. And your testimony is today that since no advantage will be gained through unitization then there will be no loss through its delay?

A. No, that isn't my testimony.

[fol. 1840] Q. I believe you testified that in the West Edmond field a large amount of oil is being robbed of its gas by reason of high ratios?

A. That is correct.

Q. What did you testify was the average ratio in that field?

A. At the present time?

Q. Yes, you gave some figures.

A. After the original dissolved gas was between 900 and 1000.

Q. Well, what was the gas-oil ratio in the month of September of this year?

A. I estimated the average gas-oil ratio last month,—I have the calculations here, but I don't think I have September figures, but at the end of July or August, it was approximately 7500 to 8000 cubic feet of gas per barrel of oil.

Q. Do you know what the gas-oil ratio of the West Edmond field is today?

A. No, I don't.

Q. As a matter of fact, don't you know that the gas-oil ratio is approximately 3000 cubic feet of gas per barrel of oil per day, under unitization?

A. I don't know, I haven't checked it.

Q. In the West Edmond field, you testified that there would be no advantage resulting from unitization?

A. That's correct.

Q. And you say the reduction of the gas-oil ratio from approximately 7000 or 7500 to 3000, today, under unitization [fol. 1841] is no advantage?

Mr. Adams: We object to that as not proper cross examination.

Mr. Williams: We'll withdraw the question,—that's all.

Mr. Adams: That's all.

Witness excused.

[fol. 1842] HERMAN H. KAVELER, called as a witness, being first duly sworn, testified as follows:

Direct examination.

By Mr. Williams:

Q. State your name.

A. My name is Herman H. Kaveler.

Q. You are the same Mr. Kaveler who has testified on previous occasions in this matter?

A. Yes, sir, I am.

(Mr. Williams addressing Mr. Adams:) Will you admit his qualifications?

Mr. Adams: Yes.

Q. Mr. Kaveler, have you made any calculation as to the probable loss that will result to the operators and royalty owners in the West Cement Medrano field as a result of delay in the proposed program of unitization?

A. I have.

Q. I wonder if you will state briefly, to the Commission, the result of those calculations.

Mr. Adams: We object unless it is restricted solely to the amount the operators and royalty owners will lose, we are not interested in what the Phillips Petroleum Company will lose by reason of delay in the program,—but we are interested in the loss of recoverable oil.

Mr. Williams: We'll exclude that,——

Q. And please exclude, Mr. Kaveler, any profit the Phil-
[fol. 1843] lips Petroleum Company will make by reason of being the operator.

A. (Witness goes to blackboard) The analysis I have made of the loss that might result from delay in beginning the unitized operation is based on the following facts which I desire to summarize as a predicate for the estimate,—If the field is not operated as a unit, I mean.

There are 19 gas wells in the field. Taking your current allowable, in excess of 4 million cubic feet per day and proceeding on the theory that during the course of the delay the Commission will not increase that allowable, and if gas is worth 5 cents per thousand, and if gas were produced or sold from the field that amount represents the volume of gas which will have to be repurchased and brought back by the operators and put back into the ground at a cost, say, that gas is worth to the operator ten cents per thousand cubic feet. There is an estimated loss to the operators of gas representing a value of 400 dollars per day. There are 33 oil wells in the field, three of which are Palmer's, so there are 30 wells not Palmers, each of which produce about 1800 barrels. There is approximately 4 million cubic feet of gas. The field is producing today about 480 barrels of oil, if the field were operated as a unit that could be increased to 1200 barrels of oil per day. The 1200 barrels of oil loss on hand, which is valued at $2,000.00, there would be a loss of approximately $2,000.00 in oil income.

Q. Now, you referred to oil in the hands of the opera-
[fol. 1844] tors,—does that include also royalty oil?

A. Yes, that includes royalty oil,—eighth-eighths of the oil, seven-eighths to the operator and one-eighth to the royalty owner. Now, to be fair about this analysis, let's assume that this $2000.00 wouldn't be lost forever, but would be delayed, and let's say 25 per cent of that figure and see,—that would be a present loss of $500.00 a day in oil. Now, when these figures are totalled there is a loss of $1150.00 a day of real money,—income to the operators and income to the royalty owners. Calculating the monthly price of gas at approximately $34,500.00, and if one wishes to spread the total loss over ten months—there would be a loss for ten months from that source of income of $345,-

000.00 and in twelve months it will be $414,000.00. Taking into account the present loss and taking into account the gas that would have to be repurchased and reinjected into the ground in order to maintain pressure for the proposed unit operation. Now, one may wish to look at it from this standpoint,—that 95 million barrels of oil is the oil in that pool,—about 7 million barrels have been produced,—that the unitized operation will produce 17 million barrels,—the testimony in the hearing indicated that if unitized, the recovery would be 24 million barrels, minimum. I am sure that it would be 50 million barrels. To unitize, it is necessary to maintain pressure, so if a delay of 12 months is had the present operation might be charged with a loss of some part of 50 million barrels. One might say that [fol. 1845] the loss of 50 million barrels or a part of 50 million barrels is a percentage figure. Say, if it were 1 per cent, it would reach 500,000 barrels of oil in addition to the direct financial loss of 1000 barrels a day. If one were permitted to use the figure of $2.00 per barrel, there would be 2 million dollars in twelve months, that amount would be about $414,000.00,—take $414,000.00 in twelve months . . .

Cross-examination.

By Mr. Green:

Q. Then it is your opinion that a year's delay will actually result in a loss of a half million dollars?

A. Between $500,000 and $700,000, yes, sir.

Q. That figure you used of ten cents for the gas,——

A. Yes, Mr. Green, that's the cost of the gas, I mean the purchase price and the reproduction of the gas in the ground.

Q. Well, shouldn't you take that from that $414,000 figure, the amount you would get for that gas for the period?

A. That's probably right,—if that's right.

Q. This $2,000 daily,—assuming you wouldn't lose that, that you would eventually get that oil, even though it was delayed a year,—if you should, instead of taking 25 per cent, if you should merely add in the interest costs rather

than $500,—don't you think that would be more nearly correct?

A. I don't think so, because the cash in hand to the operators and royalty owners would represent a greater value than the present six per cent interest figure.

[fol. 1846] Q. That is assuming that you are eventually going to recover all the oil?

A. Yes.

Q. You took out 25 per cent?

A. Yes.

Q. Well, in other words, you mean the oil is needed now?

A. The oil is needed now, the oil companies need the money in order to carry on the program of drilling wells and conducting their operations.

Q. This reduction of that percentage by reason of the delay,—that might be 1 or 1½ per cent?

A. Or 5 or 10.

By Mr. Adams:

Q. It could be none too, couldn't it, Mr. Kaveler?

A. Well, I doubt anyone could believe there would be no loss.

Q. Well, I'm talking about the recovery of oil.

A. Well, if you want to ignore the expense involved, we could mine that field and get every drop of that oil.

Witness excused.

[fol. 1847] (Mr. Kaveler is on the stand and Mark H. Adams is examining.)

A. The solution of gas is around 800 cubic feet per barrel, 800 to 900.

Q. Will you write, that is Hartshorn No. 2, put it on the board?

A. Whatever you say.

Q. Do you know what the original amount of gas is per barrel in solution in the Fletcher No. 6?

A. If it is 800 cubic feet per barrel in Hartshorn No. 6, it is the same as Fletcher.

Q. That is right?

A. Assuming the initial conditions were the same.

Q. Write that down.

A. 800.

Q. What about Phillips-Oaks No. 2?

A. If it is 800 in Hartshorn No. 2, it also is in Oaks No. 2.

Q. You are hardly answering the question, do you know what it is in Phillips-Oaks No. 2?

A. Under original conditions?

Q. Do you have an opinion?

A. The bottom hole solution analysis indicates that that figure is in error and the gas in solution in West Cement Medrano field originally is about 460 cubic feet per barrel, or in that neighborhood.

Q. That is substantially different when you say 800.

A. I refreshed my memory and find the correct answer is 460.

[fol. 1848] Q. What about Phillips-Hartshorn No. 1, will you write that down, please, sir?

A. 460.

Q. Asking the same question with respect to Phillips-Oaks No. 4.

A. 460, if I understood you, Mr. Adams, you want the amount of gas in solution of each barrel of oil under original conditions of the West Cement Medrano pool.

Q. You understand that I refer to these particular leases?

A. Yes.

Q. You understand that our contention is that it is not a single pool, referring to Phillips-Margaret No. 1, will you please place that on the board and state for the record your answer.

A. Approximately 460 cubic feet under original conditions of the West Cement pool.

Q. Opposite each of those on this side (indicating to right), state if you can what the present amount of gas is as reflected in each barrel of oil with regard to those separate leases in accordance with the last Corporation Commission survey on February, 1947, I believe.

A. That answer could be easily derived.

Q. Do you know, let's get the facts. Do you know what the facts are?

A. Yes, sir.

Q. Let's just state the facts.

A. The reservoir pressures must be known of each of the wells.

[fol. 1849] Q. Let's take the measurement.

A. You want it for February, 1947?

Q. As reported by the Corporation Commission engineer.

A. I will have to get the reservoir pressures.

Q. If I read them to you would that sufficiently give the information to you, would that sufficiently refresh your memory and help you?

A. If you read the facts, yes, sir.

Q. Isn't it a fact, that in regard to the Hartshorn No. 2 it is 321 cubic feet of gas.

A. I assume that that is correct, that is solution of gas in February, 1947.

Q. Amount of gas produced?

A. Oh, gas-oil ratio, you desire to write down the gas-oil ratio of Phillips-Hartshorn No. 2?

Q. 321 cubic feet.

A. I will adopt that.

Q. Fletcher No. 6, 191 cubic feet.

A. Yes, sir.

Q. Oaks, No. 2—288 cubic feet.

A. Yes, sir.

Q. Hartshorn No. 1, 367 cubic feet.

A. I will accept that as correct.

Q. Oaks No. 4 is 351 cubic feet, Margaret No. 1, 156 cubic feet, Phillips-Fletcher No. 7, originally had gas-oil ratio of 460 cubic feet.

[fol. 1850] A. Now, that is the amount of gas dissolved under original reservoir conditions.

Q. Now, as to gas-oil ratios in February, 1947, is that approximately 312 cubic feet?

A. If your figures show that, I will accept that.

Q. We prefer, Mr. Kaveler, that you verify those figures there.

A. I verify them and they are correct.

Q. Now the last column of figures which is referred to as gas-oil ratios is the number of cubic feet of gas that is actually being produced in February, 1947, with each barrel of oil, isn't that what it means there?

A. Yes, sir.

Q. As I understand, it was testified at some length in the West Edmond Hunton compulsory unitization hearing before this Commission, how does the gas-oil ratio, with respect to the Medrano sections in the West Cement field, compare with the gas-oil ratios of oil produced in the West Edmond Hunton Lime?

A. The producing gas-oil ratios in Hunton lime is higher.

Q. How much?

A. Any figures—it could be 100 times or 1000 times or 50 times, it's ratio is on the average of 7000 to 200. It's 35 times.

Q. So that is a very substantial difference, isn't it?

A. Yes, it's a substantial difference as between the pools, every pool in the world is substantially different.

[fol. 1851] Q. And there is also a very substantial difference in the original gas-oil ratio reflecting a much greater per cent loss in the West Edmond than there is in the Medrano?

A. I can't answer that because I don't know what you mean by "reflecting a substantial loss."

Q. Well, in other words, there is proportionately a much greater increase in the proportion of gas as the gas compared against the oil produced in the West Edmond over there, which has occurred in the Medrano section of the West Cement field.

A. Yes, the Almighty Creator gave each pool an individuality.

Q. But in the Medrano section, in the West Cement, you are not robbing gas from unproduced oil in the oil which is being produced, isn't that true?

A. Well, I suppose in a narrow point of view that statement is accepted as generally correct. That doesn't go to the question as to whether that production results in waste.

Q. I believe you testified in this hearing, Mr. Kaveler, in the hearing proper, that the operations which were being conducted in the Medrano section of the West Cement field were, in all respects, in conformity with the best practices of the oil fraternity?

A. Except that they were not in conformity to unitization as representing the best practice.

Q. There was no waste occurring from operation of the [fol. 1852] Medrano sections of the West Cement field?

A. Yes, sir.

Q. Is Phillips Petroleum Company committing waste?

A. Not individually, the operators are collectively.

Q. And your company has produced more gas, as it is in proportion with the oil, than any other company has, that is the same amount of oil and the same amount of gas in that area?

A. Yes, sir, that may be a consequence of lease-ownership.

Q. You would not suppose the figures that you have on the black-board as to whether gas is being robbed from gas in place or from the present oil there.

A. I don't know the purpose of your question. I understand that Mr. Keplinger said that the gas cap has volumetric oil area and no longer moving to the gas area.

Q. Do you agree to that?

A. I think that is within a reasonable conclusion of engineering judgment with allowable set at 4 million cubic feet of gas, that is substantially correct.

Q. And if that is continued for the next year, that same situation should continue to exist, isn't that a fact?

A. The question isn't whether or not under the present allowable or value as set by the Commission as to whether gas will move toward oil or oil toward gas, the question is whether the continued production of gas will result in the ultimate recovery of oil — continued production of gas by [fol. 1853] delay will substantiate the loss of oil.

Q. With no further production of the oil-production of the Medrano sand, there would be a delay in the production of oil, recoverable oil, assuming that pressures remain.

A. If the presumption is correct,—that the presumption is not correct.

Q. You mean there will be no delay, that Phillips Petroleum Company should not drill its offsets?

A. I don't understand what you mean by that inquiry.

Q. That is all.

Mr. Williams examines the witness:

Q. You have been asked about six wells that have low ratios,—representative of all the wells in the pool?

A. No, sir.

Q. There are higher ratio wells in the pool?

A. Yes, sir.

Q. Hugh, you didn't inquire about the higher ratio wells in the pool?

A. No, sir.

Q. Are there higher ratio wells in the pool?

A. Yes, sir.

Q. I notice that Margaret No. 1 well had 460 cubic feet of gas in solution of 1 barrel of oil.

A. Yes.

Q. And presently this ratio of 156.

A. Yes.

[fol. 1854] Q. Does that mean that presently it has 156 cubic feet of gas?

A. Approximately.

Q. Each one of those barrels of oil with the 156 cubic feet had 460 cubic feet, what became of the balance of gas in each solution of barrel of oil?

A. That is taken from a barrel of oil and passed to the low pressures in the field and represents the volume of gas depleted as to pressure decline.

Q. Does that have any value as to the remaining oil?

A. Yes, if it is there.

Q. That has come about through competitive methods of operation?

A. Not necessarily competitive operations, but trying to keep oil in the pool.

Q. That is what you are trying to avoid through unitization?

A. Yes.

Mark H. Adams examines the witness:

Q. You speak about the high and low ratio wells, are the oil wells in the gas zone there?

A. Yes.

Q. They are partially gas and oil wells and partially oil and gas wells?

A. That is correct.
Q. I mean that it has gone into the gas zone.
A. There is partial movement up toward the gas, and [fol. 1855] it has probably taken a lot of the oil in the gas zone and is not recoverable.
Q. And there is none being picked up now?
A. Not if Mr. Keplinger is right.
Q. Is there any now?
A. There probably is.
Q. That is all.

Witness excused.

Chairman Bond: The Commission will recess for five minutes.

[fol. 1856] Lloyd Gray, called as a witness, being first duly sworn, testified as follows:

Examination.

By Mr. Williams:

Q. State your name.
A. Lloyd Gray.
Q. By whom are you employed.
A. The Phillips Oil Corporation.
Q. In what capacity?
A. As superintendent of production.
Q. What is your educational background?

Mr. Adams: We'll admit Mr. Gray's qualifications as production engineer to save time.

Q. Mr. Gray, your company has properties in the West Cement Medrano field?
A. Yes.
Q. Have you made a study of that field?
A. Yes, I have.
Q. And have you made a study of the benefits to be derived and of the probable loss of recovery of oil and gas to the operators and royalty owners of that pool as a result of delay in unitization of the pool?
A. I have.

Q. Will you state briefly the result of your calculations, reducing it to dollars and cents?

A. Delay in the effective date of unitization will cause a [fol. 1857] substantial amount of gas to be produced that would reduce the amount of recoverable oil left in the reservoir. There are three types of gas involved here,—I have been advised that the time loss by carrying this case to the Supreme Court would be between four months and twelve months, which would be an average of eight months. The normal allowable gas in the reservoir for that period would be 1,059,000,000 cubic feet. Placing a value on that gas, in my opinion, it should be a replacement value and not the value that would be received for the gas when it was sold. We buy that gas from gas lines, gas companies, at prices ranging from a low of nine cents to thirty-five cents per thousand. Assuming the value of nine cents, the value of gas to be purchased would be $95,310.00. In addition, the gas that would be returned from the gas company, would be at a pressure lower than would be necessary to reinject it, so that would cost 2 to 2½ cents, or $21,180.00, making a total of $116,490.00 allowable gas for a period of eight months. The underage which is accumulated over some period of time and since the reduction of the daily allowable from approximately 23,000,000 feet per day down to 2,400,000 feet per day amounts to 2,311,000,391 cubic feet, which would be reasonably expected to be made up in a year,—the total for underage gas, -46,228, with replacement gas, $254,253.00,—in addition there would be the gas produced from the oil in the oil wells, on the basis of the present allowable, 4800 barrels per day, the replacement gas at nine cents would be $186,570.00. Now, if it was unitized, we [fol. 1858] would have to take that gas and put it back in anyway, so it cannot be a proper charge, so the total of all gas re-injected into the reservoir is $557,313.00.

Q. That is gas that would not be purchased, rather if it were unitized.

A. That would be re-injected into the reservoir. Now, in addition there would be a loss of the gasoline content of the gas that would be produced with the oil and the value of that would be $25,008.00. There is another minor loss, which would be additional operating expense as a result

of competitive operation as compared with unitized operation and taking the same figures that were used in the engineering committee report, the difference would be $15,500.00.

Q. Did you make any estimate as to the loss in recoverable oil due to the delay in inaugurating the unit plan?

Mr. Adams objected to,—he hasn't said there would be any loss.

Q. Have you made a study as to whether or not there would be an increase in recovery due to unitization?

A. Yes.

Q. Have you made a study as to whether there would be a decrease in production due to delay in the plan?

A. I have.

Q. What are your figures in that regard?

A. The amount of the loss in ultimate recovery due to [fol. 1859] the time lag in starting unitization and re-injection of gas, is somewhat intangible, and I think it would be better to use a known figure or one based on judgment rather than to get into,—there is approximately 100,000,000 barrels of oil in the reservoir, about 86 of which could be probably recovered. The loss from reduction of ultimate recovery and the cost due to replacement of gas or loss of gas to the reservoir—take $507,000 for the loss of gas and $658,000 for the loss of oil,—the gasoline content is a definite loss, the operating expense and the loss in ultimate production, a total of $698,598.00. In addition to that there is also the loss Mr. Kaveler mentioned in present production out there.

Q. Everything considered, would you say that $500,000 to $600,000 loss would be a fair estimate?

A. The total loss would be right at one million dollars.

Examination.

By Mr. Adams:

Q. There are several other producing horizons in the West Cement field, are there not?

A. Yes.

Q. Do you know what they are?

A. One is the Marchand.

Q. And the Kistler?

A. I don't know about that one.

Q. Do you know what could be produced in gas from those horizons?

A. No, I do not.

[fol. 1860] Q. Do you know that the gas produced from these other horizons is selling at 4 cents per thousand cubic feet?

A. That's reasonable.

Q. So your price of 9 cents per thousand is rather high, is it not?

A. I don't know of any contract that is,——

Q. Well, don't the proponents know here, who know the Medrano,—don't they know,—don't they own these other horizons?

A. I don't know anything about their sales of gas.

Q. You don't know that.

A. I don't know,—on this 9 cent gas, I figure that the volume of it would have something to do with it and they would say between 9 and 20 cents per thousand to insure a supply, otherwise I don't think there would be a sure supply.

Q. Did you say that you are familiar with the capabilities of the various well that are producing from the oil zones in the Medrano section, sufficient to testify in respect thereto?

A. I don't believe I testified to that.

Q. Isn't it a fact, Mr. Gray, that there are several wells producing from the oil zones that are capable of producing a substantial amount of gas in excess of the allowable?

A. That's right.

Q. Do you think it would be a good idea if the Commission reduced the gas-oil ratio on those combination wells in this field? And save for the field a very great amount of [fol. 1861] the gas which is now being produced from those wells?

A. I don't think that would be legal.

Q Well, forget that part of it.

A. Well, there are several things—correlative rights to consider in the interim period,——

Q. Don't you think a gas-oil ratio of 1800 cubic feet of gas to the barrel of oil would be proper.

A. 1800 is probably higher than——

Q. Don't you think it should be reduced?

A. Considering the correlative rights and all other conditions, I don't think it should be.

Q. You put correlative rights above waste, do you?

A. Well,——

Q. You have the viewpoint that waste shouldn't be reduced?

A. Well, if this thing is going to be put through,——

Q. Well, forget that,—do you think that under normal operation of the Medrano sand it should be reduced to prevent waste?

A. I think it should be unitized.

Q. Forget the unitization,—if there was no unitization, do you believe the gas-oil ratio under the present order in the Cement Medrano field should be reduced?

A. Under present circumstances, I don't think so.

Q. You don't think there is waste there now?

A. Yes, there is waste.

Q. You don't think it can be avoided?

[fols. 1862-1863] A. It is reasonable to avoid it under the circumstances.

Examination of Witness.

By Mr. Williams:

Q. Mr. Gray, do you have an opinion as to what would be a reasonable amount of bond in this case to protect against this loss?

Mr. Adams: Just a minute, we object to that as an attempt to invade the province of the commission.

Chairman Bond: I think you invaded the province of the Commission when you put that question to him, when you asked him about the gas-oil ratio,—you may answer.

A. I have stated above the total of the loss under the three items, gasoline content, loss of ultimate recovery and operating expenses,—keeping in mind that we have thrown out all the gas figures, I think a reasonable bond would be in the neighborhood of from $500,000 to $700,000.

Witness excused.

Chairman Bond: Any further testimony,—if not the Commission will close the case and take it under advisement.

[fol. 1864] BEFORE THE CORPORATION COMMISSION OF THE STATE OF OKLAHOMA

[Title omitted]

REPORT OF THE COMMISSION FIXING SUPERSEDEAS BOND—Filed October 8, 1947

This cause came on for hearing before the Corporation Commission of Oklahoma on the 2nd day of October, 1947, at 10 o'clock, a.m., in the Commission's Court Room, Capitol Office Building, Oklahoma City, Oklahoma; the Honorable Reford Bond, Chairman; Ray O. Weems, Vice-Chairman, and Ray C. Jones, Commissioner, sitting. Mark Adams, Attorney of Wichita, Kansas, and Coleman Hayes, Attorney of Oklahoma City, appeared for the Palmer Oil Company; R. M. Williams, Attorney of Bartlesville, appeared for the Phillips Petroleum Company; Russell G. Lowe, Attorney of Tulsa, appeared for the Gulf Oil Corporation; W. H. Brown, Attorney of Oklahoma City, appeared for Anderson Prichard Oil Corporation; Floyd Green, Conservation Attorney and John Blanton, Assistant Conservation Attorney, appeared for the Commission.

The matter came on for hearing on the application of the respondents to fix supersedeas bond since notice has been given of intention to appeal to the Supreme Court. [fol. 1865] The Commission heard the testimony and argument and is of the opinion that the supersedeas bond should be fixed at $250,000, in order to properly protect all interested parties and the State of Oklahoma.

[fol. 1866] ORDER

It is therefore ordered by the Corporation Commission of Oklahoma that supersedeas bond in the amount of $250,000 be filed in this cause, said bond to be made payable

to the State of Oklahoma for use and benefit of all parties that might be aggrieved by the appeal lodged in this cause.

It is further ordered that the Corporation Commission retain jurisdiction of this cause for the purpose of refixing the supersedeas bond at some future date in the event the final decision in this cause is unusually delayed or there is a change of conditions relating to the operation of the West Cement Medrano common source of supply of oil and gas in Caddo County, Oklahoma.

Done and performed this the 3rd day of October, 1947.

Corporation Commission of Oklahoma, (Signed) Reford Bond, Chairman; Ray O. Weems, Vice Chairman; Ray C. Jones, Commissioner.

Attest: (Signed) Tom McMurray, Secretary. (Seal.)

[File endorsement omitted.]

[fol. 1867] [File endorsement omitted]

BEFORE THE CORPORATION COMMISSION OF THE STATE OF OKLAHOMA

[Title omitted]

CHAIRMAN'S CERTIFICATE TO TRANSCRIPT OF RECORD

I, Reford Bond, Chairman of the Corporation Commission of the State of Oklahoma, do hereby certify that the above and foregoing is a true and correct transcript of the record made before the Corporation Commission in Cause CD-1308, above entitled,—That said Record consists of:

Volumes 1, 2, 3 and 4 of oral testimony, pleadings and certain instruments which are pleadings but also offered and received as exhibits,—

Volumes 1, 2 and 3 of Exhibits, as indicated by the index of Exhibits which immediately follows the General Index,—seven volumes in all.

I further certify that said record contains all of the pleadings filed in said cause, all of the evidence offered and

considered in the trial of said cause by the Corporation Commission, including all objections and Motions directed to the introduction of testimony, the rulings of the Commission thereon and all orders, with exceptions of counsel to such rulings and orders made by the Commission during the course of said hearing. Said record contains all of the facts, all of the testimony, oral and documentary, upon which the Findings of Fact, Conclusions of Law, and the Report and Order of the Commission, Order No. 20289, were based and is in all respects a true, correct and complete transcript of all of the record and proceedings had in said cause before the Corporation Commission of the State of Oklahoma.

Given under my hand and the Seal of the Corporation Commission of the State of Oklahoma, this 9th day of October, 1947.

Reford Bond, Chairman.

Attest: Tom McMurray, Secretary.

BEFORE THE CORPORATION COMMISSION OF THE STATE OF OKLAHOMA

Cause C D No. 822

Order No. 16170

In the Matter of the Application of J. J. O'LOUGHLIN, Conservation Officer, for Establishment of Rules and Regulations for Governing Production, Conservation, Ratable Taking, and Transportation of Natural Gas from the East and West Cement and Chickasha Gas Fields

REPORT OF THE COMMISSION

This cause came on for hearing before the Corporation Commission of the State of Oklahoma in its court room in the Capitol Office Building, Oklahoma City, Oklahoma, on the 18th day of November, 1942, at 10 o'clock, A.M., upon an application filed by the Conservation Officer and pursuant to order of the Commission setting the same for hearing and notice published as required by law; at which time by proper order of the Commission the cause was continued for hearing on the 10th day of December, 1942, at 10 o'clock, A.M., when testimony was heard and the cause continued for further hearing on the 12th, 15th and 16th days of December, at which hearing the following appearances were made: for Ray Stephens Inc. Howard B. Hopps. Waldo E. Stephens, Wayne Stephens, J. F. Swain, Tom Ragsdale, and John M. Shoeppel; for Oklahoma Natural Gas Company, I. J. Underwood, C. H. Hale, and Gilbert Estill; for Magnolia Petroleum Company, W. R. Wallace; for Phillips Petroleum Company, E. G. De Parade; for Sinclair Prairie Oil Company, O. E. Dougherty and Walter Crandall; for the Ohio Oil Company, Frank Louis; for State Fuel and Supply Company, R. K. Osborn and Raymond A. [fol. 3] Tolbert; for Little Nick Oil Company, Jim Hatcher; for Darby Petroleum Corporation, D. C. Bothwell and John H. Nelimark; for Tom Palmer, John H. Nelimark, and Tom Palmer in person; Earl Foster, Conservation Attor-

ney, represented the Corporation Commission and evidence was deduced; whereupon the Commission closed the case and took the matter under advisement.

Now, on this 4th day of January, 1943, the Corporation Commission, being fully advised in the premises, finds as follows:

Findings

1. That notice by publication of the filing of the application herein, the time and place of the hearing thereon, and the purpose of said hearing, has been regularly given in all respects as required by law, and the Commission has jurisdiction of the subject matter embraced in said application and of the parties interested therein, and jurisdiction to issue and promulgate the hereinafter prescribed order.

2. That the provisions of this order are limited to the Medrano Sand of the West Cement Gas Field, located in Caddo County, Oklahoma, which is separate and distinct from all other sources of supply; that the first well was drilled in said common source of supply in 1936; that at the present time there are fifteen producing wells, which are owned by the following companies:

Darby Petroleum Corporation	2
Magnolia Petroleum Company	6
Palmer Oil Company	1

[fol. 4]

Phillips Petroleum Company	2
Ray Stephens, Inc.	4

3. That by the drilling of said wells the productive area of the Medrano Sand has been reasonably determined, and it now appears that the productive portion of the Medrano Sand underlies an area shown on the plat attached hereto, marked Exhibit "A", and made a part hereof; that the drilling of additional wells may show a change in the boundaries of said common source of supply; that said exhibit also shows the number and the location of all wells heretofore drilled into said sand.

4. That there are other wells drilled in the area which are producing from separate and distinct common sources

of supply, and some of the wells which are now producing from said Medrano Sand are also producing from other horizons; that the Medrano Sand should be separated from all other horizons and the production therefrom kept separate and distinct.

5. That the Medrano Sand is found at a depth varying from 4300 to 5200 feet beneath the surface; that the virgin shut-in well head pressure was approximately 1750 pounds per square inch, which has been materially decreased by the production of gas; that the producing horizon is from 20 to 200 feet in thickness, and the natural flow potentials of the wells vary from 10,000 cubic feet to 300,000,000 cubic feet per day; that the producing horizon consists of sand and sandy shale, which varies in porosity and permeability and thickness throughout the common source of supply.

[fol. 5] 6. That pressure differentials or gradients exist which indicate that there is a migration of gas from certain wells and leases to other wells and leases; that certain portions of the field have been more uniformly developed than other portions, as is shown by Exhibit "A" hereto attached.

7. That the full production of gas from the West Cement Field and from the Medrano Sand thereof is in excess of the market demand therefrom.

8. That in the years 1913 and 1915 the Legislature of the State of Oklahoma enacted laws governing the production and ratable taking of natural gas, prohibiting waste thereof, and providing that the Corporation Commission may take into consideration the acreage drained by each well in prorating gas production, and authorizing and directing the Corporation Commission to promulgate rules and regulations for determination of the natural flow of wells and taking of natural gas from the common sources of supply of gas within the State so as to prevent waste, protect the interests of the public and of all those having a right to produce therefrom, and to give to each owner or lessee an opportunity to produce all the natural gas that is located in its original state under the property owned by him; that in the years 1933 and 1935 the Legislature enacted additional statutes, which pertained principally to the production of oil, but in general providing that production of

oil or gas in such manner and under such conditions as to constitute waste is prohibited, and the Corporation Com- [fol. 6] mission was given authority and charged with the duty to make rules and regulations and orders for the prevention of such waste.

9. That pursuant to said statutes the Corporation Commission in the year 1916 adopted general rules and regulations providing for the taking of potentials and ratable taking of gas which were and are applicable to all gas fields in this state; that same have been amended in only a few particulars since that time.

10. That in order to carry out the laws of the State of Oklahoma and to perform the duties and obligations placed upon the Corporation Commission thereby, it is necessary to amend the said general rules and regulations and to provide and promulgate additional regulations for production of gas from the Medrano Sand of the West Cement Pool in order to prevent waste, insure ratable taking, protect the interests of the public and all parties interested therein, and to give to all royalty owners, lessees, and others interested therein an opportunity to recover approximately the amount of gas originally underlying the surface of the land owned by him.

11. That in order to accomplish as nearly as possible the objects set out in the preceding paragraph, formulas should be adopted by the Commission for the allocation of gas produced, which should take into consideration productive acreage, natural flow, and the pressure factor; and the Commission should promulgate rules and regulations to determine the natural flow of gas wells and to determine [fol. 7] the pressure factor, all of which is hereinafter set out in detail in this order.

12. That a well in the Medrano Sand will drain at least 160 acres, and this acreage unit should be considered in determining the proportion that each well should be allowed to produce in order to insure ratable taking and to prevent waste.

13. That in order to insure ratable taking in said Medrano Sand, the Commission should determine the total amount of gas to be produced from all of the producing horizons in

the West Cement Field, and should allocate to the Medrano Sand eighty-five per cent (85%) thereof.

14. That the use of the formulas hereinafter set out will provide for ratable taking and prevent waste of natural gas in said pool, and will protect the interests of the public and all parties interested in said common source of supply.

15. That in taking pressures and determining the natural flow of the wells, each operator in said Medrano Sand should have a representative present and participating, and each operator should be requested to designate such representative, to be approved by the Conservation Officer, and to serve on a committee known as the "Operators Committee"; that the Bureau of Mines is making an investigation of conditions in said field, and should be invited and requested to have a representative on said committee; that the Oil and Gas Conservation Department should give full consideration to every suggestion made by said committee for determination of potentials and pressures, but final [fol. 8] determination should be made by the Conservation Department.

16. That all of the operators in the Medrano Sand have agreed in open court that all of the findings herein are true and correct.

Order

It is therefore ordered by the Corporation Commission of the State of Oklahoma as follows, to-wit:

1. That this order shall be effective only as to the Medrano Sand of the West Cement Gas Field, located in Caddo County, State of Oklahoma; that the productive area of said Medrano common source of supply, as used in this order, shall be all of the acreage located within the limits of said source of supply as found and determined by this Commission, and as reflected by Exhibit "A" attached hereto, and hereby made a part of this order.

2. That gas produced from the Medrano Sand must be segregated from any and all other sources of supply so that there shall be no commingling of gas or gases from any other source or sources of supply with gas from the Medrano Sand in any well bore.

3. That each well producing gas from the Medrano Sand

shall have allocated to it each month as its ratable portion of the total take of gas from the Medrano separate common source of supply that proportion of the entire monthly allocation to said common source if supply as shall be reflected under the monthly calculation of the allocation formula; that the "allocation formula" shall be "productive acreage" times "natural flow potential" times "pressure factor" for each individual well.

[fol. 9] 4. That each operator in said common source of supply shall divide his acreage into units; and a "unit" as used in this order shall be any square or rectangle of surface acreage of not to exceed one hundred and sixty (160) acres and upon which there exists one well only producing from the Medrano Sand; that if more than one well is located on any tract of 160 acres, or less, the units in said tract shall be of equal surface acreage.

5. That "productive acreage" to be used as a factor in the allocation formula provided in this order shall be such portion of the total acreage of the unit as is within the productive area of the Medrano common source of supply.

6. *Potential Factor*—That "natural flow potential" shall be that volume of gas capable of being produced in a twenty-four hour period measured at standard conditions of sixty degrees (60°) Fahrenheit temperature, and at four (4) ounce pressure above atmospheric pressure assumed to be 14.4 pounds per square inch pressure, or at 14.65 pounds per square inch pressure absolute, and with atmospheric pressure at the sand face as provided by the Bureau of Mines Monagraph Seven (7) back pressure method, corrected to such volume as a seven inch (7") outside diameter twenty-four pound (24#) casing will deliver at the well head against atmospheric pressure.

That natural flow potential tests taken as hereinabove provided shall be immediately made by or under the supervision of and in the presence of an authorized representa-[fol. 10] tive of the Oil and Gas Conservation Department, and the official results of said tests shall be determined by said department; that immediately after completion of the tests of all wells in the Medrano Pool, such tests shall be filed of record in the offices of the Conservation Department; that subsequent natural flow potential tests shall be

taken by or under the supervision of and in the presence of an authorized representative of said Department at such times as may be provided by law and directed by order of the Corporation Commission, or as may be agreed upon by all of the operators of wells in Medrano Pool, with the approval of the Conservation Officer, or his representative; provided that, a new potential may be taken on any well or wells at the request of the owner or operator, in which event the open flow test so taken shall be effective regardless of whether it is more or less than the then effective tests; that before taking such test, notice must be given to all other operators and purchasers for a sufficient time to give them opportunity to be present; that all such subsequent natural flow potentials shall be effective as of the first day of the month succeeding the date on which the potential is taken.

7. *Pressure Factor*—That "pressure factor" shall be the value obtained by taking the maximum shut-in casinghead pressure of each well minus ninety-five one-hundreds (0.95) times the areal weighted average shut-in casinghead pressure of the pool divided by the areal weighted average shut-in casinghead pressure of the pool minus ninety-five-one-hundredths (0.95) times the areal weighted [fol. 11] average shut-in casinghead pressure of the pool, or as expressed by the fraction: $\frac{P - 0.95F}{F - 0.95F}$

"P" of said fraction being the maximum shut-in casinghead pressure in pounds per square inch gauge obtained within a twenty-four (24) hour shut-in period, and "F" of said fraction being the areal weighted shut-in casinghead pressure in pounds per square inch gauge of all Medrano Sand gas wells in the pool; that the areal weighted average shut-in casinghead pressure shall be determined by the summation of the quantities obtained by multiplying the maximum shut-in casinghead pressure of each Medrano gas well by the number of productive acres in each well's acreage unit, all divided by the summation of the number of productive acres in each well's acreage unit.

That shut-in casinghead pressures for use in "pressure

factor'' may be measured by a deadweight test gauge at the casinghead, or may be calculated at each operator's option by obtaining the pressure at the sand base or bottom casing perforation in the Medrano Sand with a bottom hole pressure bomb and by deducting therefrom the weight of a column of dry gas extending from the casinghead to the point of such bottom hole pressure measurement.

That the shut-in casinghead pressures to be used in the ''pressure factor'' for gas allocation purposes shall be determined each calendar month between the 20th and 30th day of the month; that same shall be filed in the office of the Conservation Department on or before the [Fol. 12] first day of the succeeding month; that the monthly shut-in casinghead gas pressure shall be taken by or under the supervision of and in the presence of an authorized representative of the Oil and Gas Conservation Department, and such pressures so obtained shall be substituted in the ''pressure factor'' of the gas allocation formula of each well to allocate the gas production for the succeeding month.

8. That in order to carry out the provisions of this order it is necessary that all operators, lessees, contractors, drillers, gun perforators, and others who perform any service or keep any reports, should furnish to the Oil and Gas Conservation Department, or to any of its representatives, a complete report of their records in regard to the physical status and log of the well, and especially depths and thicknesses of the sand, perforation points, casing records, cementing records, and like information; that upon request of the Conservation Officer such reports shall be filed in the office of the Oil and Gas Conservation Department.

9. That all gas wells producing from the Medrano Sand shall be equipped with tubing in such manner that the wells can be properly conditioned for the taking of natural flow potential tests of the Medrano Sand; provided that all tubing shall be at least two inches (2″) in diameter and free from any obstruction that would prevent the use of a bottom hole gauge; that said wells shall be equipped for the taking of bottom hole pressure gauges at the face of said sand.

10. That after the first natural flow potentials and shut-in

[fol. 13] casinghead pressures on all Medrano Sand wells have been completed under this order for gas allocation purposes; the allowable gas production shall be calculated as herein provided, and shall be effective as of December 31, 1942, until the first day of the month succeeding the date of completion of said natural flow and shut-in casinghead pressure tests by the Oil and Gas Conservation Department; that all wells underproduced or overproduced during the aforesaid period, as determined by the calculated gas allowables, shall be adjusted in succeeding months, as may be hereafter determined by the Conservation Department, but shall not extend beyond June 30, 1943, so that such underproduction or overproduction will be eliminated in such manner as will minimize variation of current shut-in casinghead pressures by reason of such adjustment.

11. That when the first natural flow potential tests and the first shut-in casinghead pressure tests on the Medrano Sand wells are completed under and pursuant to this order, and commencing with the time that gas allocations are calculated in advance monthly for each well, all overproduction or underproduction of gas occurring in any month, as determined by calculation from the allowable gas production of each well, as provided for by this order, shall be adjusted in the allowable for said well for the ensuing month, and the production from such well shall be regulated to conform with same during said ensuing month, unless otherwise ordered by the Commission.

[fol. 14] 12. That any well hereafter completed in the Medrano Sand shall, upon completion in said separate source of supply, be subject to all of the provisions of this order, except as hereinafter provided; that the gas allowable for any such well shall become effective on the day that the connections with the pipe line are made and it begins producing gas; and after the natural flow potential test and casinghead pressure for gas allocation purposes has been determined, if it appears at the first hearing before the Commission thereafter that said well during such period has produced more or less than its just proportion, then the same shall be adjusted in the same manner as is provided above for adjustment in the case of underproduction or overproduction.

13. That gas allocation volumes shall be based upon a correction of sixty degrees (60°) Fahrenheit temperature and two (2) pounds per square inch gauge above an assumed atmospheric pressure of fourteen and four-tenths (14.4) pounds per square inch absolute or to sixteen and four-tenths (16.4) per square inch absolute pressure.

14. That each operator in said pool shall select a representative, to be approved by the Conservation Officer, to serve on an Operators Committee; and the Conservation Officer shall request the Bureau of Mines to select a representative to serve on said Committee.

15. That the Operators Committee shall be given an opportunity to be present and observe the taking of all natural flow gauges and casinghead pressure tests, and to make [fol. 15] recommendations and suggestions and render all possible assistance to the Conservation Department; that the Conservation Officer, or his representative, shall make every possible effort to secure the unanimous approval of the Operators Committee, including the representative of the Bureau of Mines, as to all natural flow gauges and casinghead pressure tests taken by him; but in case of failure to agree, the determination of the Conservation Officer shall be final and effective.

16. That nothing in this order shall affect the rights of any operator to present any claim to this Commission or to any court for failure to comply with the provisions of the law concerning the price to be paid for gas in said pool.

17. That nothing in this order shall affect or prejudice the rights of any operator, producer, or taker of gas to claim an adjustment before this Commission or before any court because of the failure of any other person to take gas ratably prior to January 1, 1943.

18. That this order and the rules and regulations herein promulgated shall be effective as of the 1st day of January, 1943, until further order of this Commission.

19. That the Commission shall hold regular monthly hearings after due and proper notice, to all producers and purchasers, at which time each purchaser of gas in the West Cement Field shall notify the Conservation Department of the volume of gas such purchaser anticipates taking from said West Cement Field during the ensuing

[fol. 16] month, and the Commission shall thereupon determine the ratable proportion of the gas to be produced from the Medrano Pool to be allocated to each well, making adjustments as to overage and underage as hereinabove set out; provided that, if during the month the amount of gas which a purchaser desires to take from said West Cement Field decreases or increases from the amount originally stated to the Commission, said purchaser shall immediately notify the Conservation Department, and that Department is hereby directed to prepare and issue a new allocation for all wells in the pool so that each well will receive its ratable and proportionate part during that month.

20. That the hearing on all other common sources of supply of gas in the East and West Cement and Chickasha Fields is hereby continued to the 20th day of January, 1943, at 10 o'clock, A.M.

Done and Performed by the Corporation Commission at its offices in the Capitol Office Building, Oklahoma City, Oklahoma, this 4th day of January, 1943.

Corporation Commission of the State of Oklahoma, Reford Bond, Chairman; Ray O. Weems, Vice Chairman, —— —— Commissioner.

[fol. 17] EXHIBIT 13

BEFORE THE CORPORATION COMMISSION OF THE STATE OF OKLAHOMA

Cause C D No. 837

Order No. 16342

In the Matter of the Application of WALKER T. POUND, Conservation Officer, for Establishment of Rules and Regulations Governing Production, Ratable Taking, Conservation, and Transportation of Natural Gas from the MEDRANO SAND of the WEST CEMENT GAS FIELD.

REPORT OF THE COMMISSION

This cause came on for hearing before the Corporation Commission of the State of Oklahoma in its court room in

the Capitol Office Building, Oklahoma City, Oklahoma, on the 26th day of February, 1943, at 11 o'clock, A. M., upon an application filed by the Conservation Officer and pursuant to order of the Commission setting the same for hearing and notice published as required by law; at which time by proper order of the Commission the cause was continued and same came on for hearing on the 27th day of March, 1943, at 9 o'clock, A. M., when the following appearances were made: Phillips Petroleum Company by E. G. DeParade; Magnolia Petroleum Company by W. R. Wallace; Oklahoma Natural Gas Company by Clyde H. Hale; the Ohio Oil Company by Frank Louy, Jr.; Gulf Oil Corporation by D. D. Adams; Ray Stephens, Inc. by Howard B. Hopps; and Earl Foster, Conservation Attorney, represented the Commission, and evidence was adduced; whereupon the Commission closed the case and took the matter under advisement.

Now, on this 13th day of April, 1943, the Corporation [fol. 18] Commission, being fully advised in the premises, finds as follows:

Findings

1. That notice by publication of the filing of the application herein, the time and place of the hearing thereon, and the purpose of said hearing, has been regularly given in all respects as required by law, and the Commission has jurisdiction of the subject matter embraced in said application and of the parties interested therein, and jurisdiction to issue and promulgate the hereinafter prescribed order.

2. That on the 4th day of January, 1943, the Commission promulgated its Order No. 16170 in Cause C. D. No. 822, which provided rules and regulations for the taking of potentials, pressure gauges, and fixing allowables for all wells producing from the Medrano Sand of the West Cement Gas Field; that since the issuance of said order potential tests have been made on all but two wells in said pool, and pressure gauges have been taken on all but one well; that from the information obtained from the taking of said tests and from other testimony it appears from the record in this cause that certain rules and regulations set

out in said Order No. 16170 should be modified and changed, as hereinafter specifically set out in this order.

3. That schedules should be issued allocating the gas to be produced from said field to the various wells for the last half of April, 1943, pursuant to said Order No. 16170, as amended by this order, and overages and underages [fol. 19] should be calculated from and after April 16, 1943.

4. That in determining the allowables to be given to each Medrano Sand well, the total anticipated production for the month of April, 1943 of 2,730,200 MCF, as shown by the record in this cause, should be divided by 30 to obtain the daily anticipated production of 91,007 MCF, and the formula set out in said order should be applied thereto, subject to changes as changes in production occur.

5. That the changes in Order No. 16170 as hereinafter made, and the allowables and schedules as hereinafter ordered would be fair and equitable to all operators, producers, and royalty owners and others interested in said common source of supply, and would tend to prevent waste, increase the ultimate recovery of gas, and equitably divide the production from said common source of supply, as required by the laws of the State of Oklahoma and rules and regulations of the Corporation Commission.

Order

It is therefore ordered by the Corporation Commission of Oklahoma as follows:

1. That Paragraph 7 of the Order No. 16170, issued in Cause C. D. No. 822, be, and the same is hereby, amended to read as follows:

> "7. *Pressure Factor*—That "Pressure factor" shall be the value obtained by taking the maximum shut-in casinghead pressure of each well minus eighty one-hundredths (0.80) times the areal weighted average shut-in casinghead pressure of the pool divided by the [fol. 20] areal weighted average shut-in casinghead pressure of the pool minus eighty one-hundredths (0.80) times the areal weighted average shut-in casing-

head pressure of the pool, or as expressed by the fraction:

$$\frac{P - 0.80F}{F - 0.80F}$$

"P" of said fraction being the maximum shut-in casinghead pressure in pounds per square inch gauge obtained within a twenty-four (24) hour shut-in period, and "F" of said fraction being the areal weighted shut-in casinghead pressure in pounds per square inch gauge of all Medrano Sand gas wells in the pool; that the areal weighted average shut-in casinghead pressure shall be determined by the summation of the quantities obtained by multiplying the maximum shut-in casinghead pressure of each Medrano gas well by the number of productive acres in each well's acreage unit, all divided by the summation of the number of productive acres in each well's acreage unit.

"That shut-in casinghead pressures for use in "pressure factor" may be measured by a deadweight test gauge at the casinghead, or may be calculated at each operator's option by obtaining the pressure at the sand base or bottom casing perforation in the Medrano Sand with a bottom hole pressure bomb and by deducting therefrom the weight of a column of dry gas extending from the casinghead to the point of such bottom hole pressure measurement.

[fol. 21] "That the shut-in casinghead pressures to be used in the "pressure factor" for gas allocation purposes shall be determined each calendar month between the 20th and 30th day of the month; that same shall be filed in the office of the Conservation Department on or before the first day of the succeeding month; that the monthly shut-in casinghead gas pressure shall be taken by or under the supervision of and in the presence of an authorized representative of the Oil and Gas Conservation Department, and such pressures so obtained shall be substituted in the "pressure factor" of the gas allocation formula of each well to allocate the gas production for the succeeding month."

2. That Paragraph 10 of said Order No. 16170 be, and same is hereby, amended to read as follows:

"10. That after the first natural flow potentials and shut-in casinghead pressures on all Medrano Sand wells have been completed under this order for gas allocation purposes, the allowable gas production shall be calculated as herein provided, and shall be effective as of April 16, 1943, at 7 o'clock, A. M.; and all over-production and underproduction shall be determined from and after April 16, 1943."

3. That Paragraph 11 of said Order No. 16170, be, and same is hereby, amended to read as follows:

"11. That from and after April 16, 1943, at 7 o'clock, A. M., all overproduction and underproduction of gas [fol. 22] occurring in any month on wells producing in said Medrano Sand, as determined by calculations from the allowable gas production of each well, as provided by this order, shall be adjusted in the allowable for said well for the ensuing month after the report of said well is received by the Conservation Department, and the production from said well shall be regulated to conform with same during said ensuing month, unless otherwise ordered by the Commission."

4. That Paragraph 12 of said Order No. 16170, be, and same is hereby, amended to read as follows:

"12. That any well hereafter completed in the Medrano Sand shall, upon completion in said separate source of supply, be subject to all of the provisions of this order, except as hereinafter provided; that the gas allowable for any such well shall become effective on the day that the connections with the pipe line are made and it begins producing gas; and after the natural flow potential test and casinghead pressure for gas allocation purposes has been determined, if it appears at the first hearing before the Commission thereafter that said well during such period has produced more or less than its just proportion, then the same shall be adjusted in the same manner as provided above for adjustment in the case of underproduction

or overproduction; provided that, in making the allocation for any such well not more than a fifteen-day allocation shall be allowed for the period from the [fol. 23] date when connection with the pipe line is made and it begins producing gas to the date the potential is made."

5. That any well in the Medrano Sand that has not been reconditioned by setting tubing and separating the Medrano Sand from other producing horizons, as provided in said Order No. 16170, on the 16th day of April, 1943, shall be shut in and granted no allowable until it has been properly reconditioned and connected with the pipe line and begins to produce gas; provided that, if a well has not taken a potential test within fifteen days after it has been reconditioned, then no further allowable will be given until the potential gauge is taken.

6. That schedules shall be prepared showing the allowable for each Medrano Sand well for the period from April 16, 1943, at 7 o'clock, A. M., to May 1, 1943, at 7 o'clock, A. M., based upon the formulas set out in said Order No. 16170, as amended hereby, and upon an anticipated production of 91,007 MCF per day, as shown by the testimony in this case, and subject to the changes in schedule as provided in said order.

7. That a copy of said schedules and allowables shall be furnished to each operator, producer and purchaser of gas in said Medrano Sand source of supply.

Done and performed by the Corporation Commission at its offices in the Capitol Office Building, Oklahoma City, Oklahoma, this 13th day of April, 1943.

[fol. 24] Corporation Commission of the State of Oklahoma; Reford Bond, Chairman; Roy O. Weems, Vice Chairman; ——, Commissioner.

[fol. 25] EXHIBIT 14

BEFORE THE CORPORATION COMMISSION OF THE STATE OF OKLAHOMA

Cause CD No. 843

Order No. 16388

In the Matter of the Application of WALTER T. POUND, Conservation Officer, for establishment of Rules and Regulations Governing the SOUTHWEST CEMENT OIL FIELD.

REPORT OF THE COMMISSION

This cause came on for hearing before the Corporation Commission of the State of Oklahoma in its court room in the Capitol Office Building, Oklahoma City, Oklahoma, on the 28th day of April, 1943, at 11 o'clock, A. M., upon an application filed by the Conservation Officer and pursuant to an order of the Commission setting the same for hearing and notice published according to law; at which time the Conservation Officer and Conservation Attorney were present and the following appearances were made: Ray Stephens by Howard B. Hopps; Phillips Petroleum Company by E. G. DeParade; Magnolia Petroleum Company by W. R. Wallace; and Anderson-Prichard Oil Corporation by Ralph Fillmore; whereupon evidence was presented, and the Commission, being fully advised in the premises, granted the following order, finding as follows:

Findings

1. That notice by publication of the filing of the application herein, the time and place of the hearing thereon, and the purpose of said hearing, has been regularly given in all respects as required by law, and the Commission has [fol. 26] jurisdiction of the subject matter embraced in said application and of the parties interested therein, and jurisdiction to issue and promulgate the hereinafter prescribed order.

2. That on or about the 9th day of March, 1943, Ray Stephens completed an oil well in the Southeast Quarter of the Southwest Quarter of the Southeast Quarter of Sec-

tion 35, Township 6 North, Range 10 West, Caddo County, Oklahoma, at a total depth of 5,753 feet, with an initial production of 589 barrels of oil in eight hours from the Medrano Sand; that said Pierson #1 well is located on the south flank of the West Cement Gas Field and it has not been definitely established that the oil produced from said well and the gas produced from the Medrano Sand of the West Cement Gas Field are from the same common source of supply, although many facts and circumstances indicate that the oil and gas are produced from the same reservoir.

3. That other wells are now being drilled into said oil producing horizon and no doubt additional wells will be drilled; that in order to conserve the reservoir energy and protect the producing horizon a drilling and casing program should be adopted at this time, and the Commission should retain jurisdiction of the cause for the purpose of hearing additional testimony on the application and making such orders, rules and regulations as the Commission may then deem advisable.

4. That the Ray Stephens Pierson #1 well was completed by setting approximately 300 feet of surface casing, [fol. 27] with 7" casing set at the bottom of the well and perforated, and by equipping the well with 2½" tubing; that all wells in said pool should be completed and equipped in approximately the same manner, with the additional requirements and exceptions hereinafter set out in this order, and all production and potentials should be through tubing.

Order

It is therefore ordered by the Corporation Commission of the State of Oklahoma as follows:

1. All oil wells drilled into the Medrano Sand of the Southwest Cement Oil Field shall be equipped with not less than 300 feet of surface casing, cemented from top to bottom. The size of the flow string of casing shall be at the discretion of the operator, but same shall be set at the bottom of the hole and cemented with not less than 1,000 sacks of cement, and perforated. If any operator runs a string of casing other than 7", it is understood that he shall not receive any advantage, nor will any disadvantages

be considered, in taking potentials and making other rules and regulations governing this field. If an operator sets a flow string of casing above the base of the Medrano Sand and later deepens the well, then a liner shall be set in the additional hole, and same shall be cemented and perforated as required for the original flow string.

2. All production and potentials shall be through 2½" tubing, the bottom of which shall be set not higher than [fol. 28] the top of the producing horizon.

3. Jurisdiction over this cause is hereby retained and the cause is hereby continued until the 13th day of May, 1943, at 10 o'clock, A. M., for the purpose of hearing testimony and making such orders, rules and regulations for said oil pool as the Commission may deem advisable.

Done and performed by the Corporation Commission at its offices in the Capitol Office Building, Oklahoma City, Oklahoma, this 28th day of April, 1943.

Corporation Commission of the State of Oklahoma; Reford Bond, Chairman; Ray O. Weems, Vice-Chairman; Wm. J. Armstrong, Commissioner.

[fol. 29] EXHIBIT 15

BEFORE THE CORPORATION COMMISSION OF THE STATE OF OKLAHOMA

Cause C D No. 842

Order No. 16378

In the Matter of the Application of WALKER T. POUND, Conservation Officer, for Orders, Rules and Regulations Governing the Production of Oil and Gas in the WEST CEMENT FIELD

Report of the Commission

This cause came on for hearing before the Corporation Commission of the State of Oklahoma in its court room in the Capitol Office Building, Oklahoma City, Oklahoma, on

the 28th day of April, 1943, at 11 o'clock, A.M., upon an application filed by the Conservation Officer and pursuant to an order of the Commission setting the same for hearing and notice published as required by law; at which hearing the Conservation Officer and Conservation Attorney were present and the following appearances were made: Oklahoma Natural Gas Company by Gilbert Estill, E. McAninch, and O. P. Elkins; Ray Stephens Inc. by Howard B. Hopps, Waldo E. Stephens and C. W. Stephens; Magnolia Petroleum Company by R. D. Hanley, J. F. Lewis, W. H. Speaker, and W. R. Wallace; Cities Service Gas Company by Del Howard and Lane Ferguson; Phillips Petroleum Company by E. G. DeParade, C. W. Buckley, and H. H. Kaveler; Darby Petroleum Corporation by D. C. Bothwell; Gulf Oil Corporation by D. D. Adams; The Pure Oil Company by Alvin Richards; and Petroleum Administration for War by C. C. Brown and Seth W. Herndon; whereupon evidence was presented, and the Commission took the matter under advisement.

Now, on this 5th day of May, 1943, the Commission, being fully advised in the premises, finds as follows:

Findings

1. That notice by publication of the filing of the application herein, the time and place of the hearing thereon, and the purpose of said hearing, has been regularly given in all respects as required by law, and the Commission has jurisdiction of the subject matter embraced in said application and of the parties interested therein, and jurisdiction to issue and promulgate the hereinafter prescribed order.

2. That on the 4th day of January, 1943, this Commission issued its Order No. 16170 in Cause C D No. 822, which in substance provided a method for determination of potentials and pressures for the West Cement Gas Field Medrano Sand gas wells, and provided a formula for allocation purposes, which formula takes into consideration productive acreage and potential, in order that there may be ratable taking, prevention of waste, and protection for the public and all interested parties.

3. That said order provides that monthly hearings shall

be held by the Commission for the purpose of receiving nominations of purchasers as to the volume of gas they anticipate taking from the Medrano Sand of the West Cement Field during the ensuing month.

4. That the anticipated demand from the Medrano Sand during the month of May 1943 is 102,700 MCF daily, which amount should be divided among the wells producing from the Medrano Sand according to the formula set out in Order No. 16170, as amended by Order No. 16342.

5. That such allocation would be fair and equitable to operators, purchasers, and royalty owners, would protect the interests of the public and all persons interested therein, [fol. 30] prevent waste, conserve the reservoir energy, and permit each operator to obtain currently his proportionate part of the gas and ultimately obtain the approximate amount of gas originally underlying his land.

6. That the Commission does not have sufficient evidence at this time to grant other requests set out in the application, and this cause should be continued for further hearing so that additional testimony may be introduced and additional recommendations made.

Order

It is therefore ordered by the Corporation Commission of the State of Oklahoma as follows:

1. The anticipated demand for gas from the Medrano Sand wells in the West Cement Gas Field during the month of May, 1943, of 102,700 MCF per day, shall be divided among the said wells according to the formula adopted by the Commission in Order No. 16170, as amended by Order No. 16342, and schedules shall be issued setting out the allowables as soon as possible, giving to each operator the allocation for each well.

2. Jurisdiction is hereby retained over this cause for the purpose of hearing additional testimony for the making of other orders, rules and regulations governing the Medrano Sand, and this cause is continued for hearing on the 13th day of May, 1943, at 10 o'clock, A. M., at which time all persons, firms and corporations should introduce evidence supporting any rules and regulations prayed for in said application.

Done and performed by the Corporation Commission this 5th day of May, 1943.

Corporation Commission of the State of Oklahoma, Reford Bond, Chairman; Ray O. Weems, Vice-Chairman; —— — ——, Commissioner.

[fol. 31] EXHIBIT 16

BEFORE THE CORPORATION COMMISSION OF THE STATE OF OKLAHOMA

Cause C D No. 842

Order No. 16399

In the Matter of the Application of WALKER T. POUND, Conservation Officer, for Orders, Rules and Regulations Governing the Production of Oil and Gas in the WEST CEMENT FIELD

Report of the Commission

This cause came on for hearing before the Corporation Commission of the State of Oklahoma in its court room in the Capitol Office Building, Oklahoma City, Oklahoma, on the 13th day of May, 1943, at 10 o'clock, A. M., upon the Amended Application filed by the Conservation Officer and pursuant to an order of the Commission setting the same for hearing and notice published as required by law; at which hearing the Conservation officer and Conservation Attorney were present and the following appearances were made: Oklahoma Natural Gas Company by Gilbert Estill, E. C. McAninch, and Arnold F. Parr; Cities Service Gas Company by Del Howard and O. R. Stites; Phillips Petroleum Company by D. R. McKeithan, H. H. Kaveler, E. G. DeParade, and C. W. Binckley; Ray Stephens, Incorporated, by Ray Stephens and Howard B. Hopps; Magnolia Petroleum Company by W. R. Wallace, J. F. Lewis, and R. D. Hanley; Darby Petroleum Corporation by John H. Nelimark; Palmer Oil Company by John H. Nelimark; and

Petroleum Administration for War by David M. Logan, Joe Cannon, and Seth W. Herndon; whereupon evidence was presented, and the Commission, being fully advised in the premises, finds as follows:

Findings

1. That notice by publication of the filing of the application herein, the time and place of the hearing thereon, and the purpose of said hearing, has been regularly given in all respects as required by law, and the Commission has jurisdiction of the subject matter embraced in said application and of the parties interested therein, and jurisdiction to issue and promulgate the hereinafter prescribed order.

2. That in the Medrano Sand of the West Cement Field in Caddo County, Oklahoma, several wells have been drilled, which wells have varied potentials and bottom hole and casinghead pressures; that the Conservation Department and the Bureau of Mines and the various companies interested in said common source of supply have for several months prior hereto made a diligent study of said field, and pursuant thereto the Commission did on the 4th day of January, 1943, issue its Order No. 16170, which prescribed rules and regulations for the production and ratable taking of gas from said Medrano Sand; that recently Ray Stephens drilled an oil well in the south flank of the West Cement Field which is producing oil from the Medrano Sand with a capacity of approximately 1,000 barrels per day; that numerous tests have been made for the purpose of ascertaining whether or not said oil well is producing from the same horizon as the gas from the Medrano Sand, and it appears from the testimony that the oil well is producing from the common source of supply that at least some of the gas wells are producing from; that owing to the difference in pressures in the gas wells it has not been definitely determined whether the Medrano Sand, as now defined by the orders of this Commission and as generally understood by the experts, is all producing from the same horizon or whether there are different and separate common sources of supply in said field.

3. That in order to promulgate proper rules and regulations for the conservation of the natural gas in said field, to

prevent waste thereof, and to protect the correlative rights of the parties interested, it is necessary to have additional [fol. 32] information, and in order to protect the oil producing horizon which appears to be located on the south flank of said field, additional information is necessary so that proper rules and regulations may be issued to conserve the reservoir energy in the oil field, protect the rights of those interested, and prevent the waste of oil in said field.

4. That from the testimony introduced at this hearing it appears to the Commission that the best method to obtain the necessary information for promulgation of proper orders, rules and regulations, would be to shut in the gas wells producing from the Medrano Sand for a period of two weeks, in order to permit the Conservation Officer and his deputies, the United States Bureau of Mines and the operators in said field to make a study of the conditions existing therein; that the shutting in of said wells is necessary for protection of the reservoir energy of both oil and gas, prevention of waste, and protection of correlative rights.

5. That both oil and gas are vital to the war effort, and it appears that the Petroleum Administrator for War and his assistants have duly considered this matter and are of the unanimous opinion that the best possible method for obtaining necessary information so that the oil field and the gas field producing from the Medrano Sand may be produced in a manner that will best promote the war effort, is the shutting down of the gas wells as herein ordered.

Order

It is therefore ordered by the Corporation Commission of the State of Oklahoma as follows:

1. That beginning at 7 o'clock, A. M., on the 18th day of May, 1943, all wells producing gas from the Medrano Sand of the West Cement Field in Caddo County, Oklahoma, be shut in, and that no gas be produced therefrom for a period of two weeks, or until 7 o'clock, A. M., on the 1st day of June, 1943.

2. The Conservation Department is hereby directed to make a diligent, complete, and exhaustive study of the conditions in said field, including bottom hole pressures, and obtain all possible data that may be gained by the shutting in of said wells; and the Bureau of Mines and the Petroleum

Administration for War and all the operators interested in said field are hereby requested to make a diligent, complete, and exhaustive study of the conditions in said gas field and make that information available to this Commission so that proper rules, regulations and orders may be issued governing the production of oil and gas from the Medrano Sand of the West Cement Field.

3. Jurisdiction is hereby retained of this cause for the purpose of issuing any orders, rules and regulations that the Commission may deem necessary and proper from the evidence obtained.

Done and performed by the Corporation Commission at its offices in the Capitol Office Building, Oklahoma City, Oklahoma, this 13th day of May, 1943.

Corporation Commission of the State of Oklahoma, Reford Bond, Chairman; Ray O. Weems, Vice-Chairman; ——— ———, Commissioner.

[fol. 33] EXHIBIT 17

BEFORE THE CORPORATION COMMISSION OF THE STATE OF OKLAHOMA

Cause C D No. 849

Order No. 16422

In the Matter of the Application of WALKER T. POUND, Conservation Officer, for Orders, Rules and Regulations Governing the Production of Oil and Gas in the WEST CEMENT FIELD

Report of the Commission

Now, on the 1st day of June, 1943, the above entitled matter comes on to be heard upon the application of the Conservation Officer for the issuance of a temporary order as prayed for in the application filed in this cause, and the Conservation Officer and Conservation Attorney appearing, the Commission, having heard the evidence and being otherwise advised in the premises, finds as follows:

Findings

1. That several orders have been heretofore issued by this Commission for the purpose of preventing waste, protecting correlative rights, and providing for ratable taking of both oil and gas from the Medrano Sand of the West Cement Field; and that on the 13th day of May, 1943, the Commission issued Order No. 16399 in Cause C D No. 842, which required that all wells producing gas from the Medrano Sand be shut down for a period of fifteen days, beginning as of the 18th day of May, 1943, at 7 o'clock, A. M., and until June 1, 1943.

2. That during said shut down period the Conservation Department and the Bureau of Mines and the operators in said pool have made numerous tests and study of the conditions in said Medrano Sand for the purpose of recommending rules and regulations for the prevention of waste of oil and gas in said field, and conferences have been held between the Bureau of Mines and the Conservation Officer and the various operators, and the conditions existing have been thoroughly considered, and it appears that if all of the gas wells in said field were permitted to produce without restriction and to produce all the gas for which there is a firm market demand it would cause the waste of both oil and gas in said field, injure the reservoir energy, and cause uncompensatable drainage between the wells and leases in said field.

3. That in order to prevent such waste and drainage, protect correlative rights, and insure ratable taking, it is necessary that the production of gas from the Medrano Pool be restricted and that the wells be allowed to produce only fifty per cent of their allowable production as shown by the records of the Corporation Commission for the last fifteen days of the month of April 1943, and that three wells be entirely shut down until further order of the Commission, to-wit: the Ray Stephens Wilhite #3 in order to determine whether it is producing from a different common source of supply, and the Magnolia Henley #2 and Medrano #6 wells, which are located so near to the oil wells producing in said pool that they may be producing from the same source of supply as the oil wells.

[fol. 34] Order

It is therefore ordered by the Corporation Commission of the State of Oklahoma as follows:

1. That the Ray Stephens Wilhite #3, the Magnolia Henley #2 and Medrano #6 wells shall be shut down and no gas produced therefrom beginning as of June 1, 1943, until otherwise ordered by the Commission.

2. That all other wells producing gas from the Medrano Sand of the West Cement Field shall be restricted to fifty per cent of their daily allowable production for the last fifteen days of the month of April 1943, as shown by the records of the Corporation Commission, and allocated pursuant to the Commission's Order No. 16170 issued on January 4, 1943, and subsequent orders, to be effective as of 7 o'clock, A. M., June 1, 1943, until June 15, 1943, at 7 o'clock, A. M., unless otherwise ordered by the Commission.

3. That this order is a temporary order and issued as an emergency under the conditions fully set out herein and issued without notice by publication, and this cause be, and it is hereby, set down for hearing on June 14, 1943, at 10 o'clock, A. M., in the Commission's court room in the Capitol Office Building, Oklahoma City, Oklahoma, and due and lawful notice thereof shall be given by publication, at which time the Commission will hear testimony for the purpose of approving and confirming this temporary order and for the further purpose of receiving testimony on which to base rules and regulations for the prevention of waste, protection of correlative rights, and provide for ratable taking in said pool, at which time and place all persons interested should appear and adduce evidence; that unless otherwise ordered by this Commission this temporary order shall be of no force and effect after June 15, 1943.

Done and performed by the Corporation Commission at its offices in the Capitol Office Building, Oklahoma City, Oklahoma, this 1st day of June, 1943.

Corporation Commission of the State of Oklahoma, Reford Bond, Chairman; Ray O. Weems, Vice-Chairman; Wm. J. Armstrong, Commissioner.

[fol. 35] EXHIBIT 18

BEFORE THE CORPOLATION COMMISSION OF THE STATE OF OKLAHOMA

Cause C D No. 849

Order No. 16462

In the Matter of the APPLICATION OF WALKER T. POUND, Conservation Officer, for Orders, Rules and Regulations Governing the Production of Oil and Gas in the WEST CEMENT GAS FIELD

Report of the Commission

This cause came on for hearing before the Corporation Commission of the State of Oklahoma in its court room in the Capitol Office Building, Oklahoma City, Oklahoma, on the 14th day of June, 1943, at 10 o'clock, A. M., upon an application filed by the Conservation Officer and pursuant to an order of the Commission setting the cause for hearing and notice published as required by law; at which hearing the Conservation Officer and Conservation Attorney were present and the following appearances were made: Magnolia Petroleum Company by W. R. Wallace; Phillips Petroleum Company by E. G. DeParade; Ray Stephens Incorporated by Ray Stephens and C. W. Stephens; Darby Petroleum Company by D. C. Bothwell; Gulf Oil Corporation by D. D. Adams; and the Petroleum Administration for War by C. C. Brown and D. W. Logan; whereupon evidence was adduced, and the Commission, being fully advised in the premises, granted the following order, finding as follows:

Findings

1. That notice by publication of the filing of the application herein, the time and place of hearing thereon, and the purpose of said hearing, has been regularly given in all [fol. 36] respects as required by law, and the Commission has jurisdiction of the subject matter embraced in said ap-

plication and of the parties interested therein, and jurisdiction to issue and promulgate the hereinafter prescribed order.

2. That several orders have heretofore been issued by this Commission for the purpose of preventing waste, protection of correlative rights, and providing for the ratable taking of gas from the Medrano Sand of the West Cement Field, and on the 13th day of May, 1943, the Commission issued its Order No. 16399 in Cause C D No. 842, which required all producing wells in the Medrano Sand to be shut down for a period of fifteen days, beginning as of the 18th day of May, 1943; that on the 1st day of June the Commission issued its temporary order in this cause the same being Order No. 16422, which in substance restricted the production of the Medrano Sand wells from the 1st day to the 15th day of June to fifty per cent of their daily allowable production for the last fifteen days of April, 1943, with the exception of the Ray Stephens Wilhite #3, the Magnolia Henley #2 and Medrano #6 wells, which were ordered shut down and no gas produced therefrom beginning as of June 1, 1943, until further order of the Commission.

3. That during said shut-down period and the period during which the wells have been restricted to fifty per cent of their April production, the Conservation Department and the Bureau of Mines and the operators in said pool have made numerous tests and exhaustive study of the [fol. 37] conditions existing in said pool, but it is still undetermined whether the oil wells located on the south edge of the Medrano Sand of the West Cement Field are producing from the same common source of supply as the gas wells; that there is considerable indication that at least part of the gas wells are producing from the same horizon as the oil wells, and in order to protect the oil wells and to prevent waste in the production of oil, it is necessary that additional information be obtained, and it is necessary to continue the restrictions on gas production in order to avoid unreasonable dissipation of gas pressure necessary for producing the oil.

4. That it appears that the pressure in the gas wells is

materially declining, and that waste may occur if said wells are permitted to produce at their full capacity; that in order to prevent the waste of both oil and gas in the field and to obtain the information necessary to conserve the gas energy, the production of gas from said field should be restricted to fifty per cent of its production during the last fifteen days of April, 1943, and said restriction should continue until further order of this Commission; provided, however, that the Magnolia Henley #2 well should be shut in entirely until the 1st day of July, 1943, and that the Ray Stephens Wilhite #3 and the Magnolia Medrano #6 wells should be allowed to produce only their current daily allowable until the 1st day of July, 1943.

Order

It is therefore ordered by the Corporation Commission [fol. 38] of the State of Oklahoma as follows:

1. That the production of gas from the Medrano Sand of the West Cement Field shall be restricted to fifty per cent of its daily allowable production for the last fifteen days of the month of April, 1943, as shown by the records of the Corporation Commission, and allocated pursuant to the Commission's Order No. 16170 and subsequent orders equitably and ratably among the wells in said pool; provided, however, that the Magnolia Henley #2 well shall be shut in and not allowed to produce any gas until the 1st day of July, 1943, and the Ray Stephens Wilhite #3 and Magnolia Medrano #6 wells shall be allowed to produce only their daily current allowable from the date hereof until the 1st day of July, 1943.

2. That the temporary order issued by this Commission on the 1st day of June, 1943, same being Order No. 16422, issued in the above styled cause, be, and the same is hereby, approved and confirmed.

3. That this order shall remain in force and effect from and after this date until further order of the Commission after application filed and due notice given by publication as required by the laws of this State and the rules and regulations of the Commission.

Done and performed by the Corporation Commission at its offices in the Capitol Office Building, Oklahoma City, Oklahoma, this 14th day of June, 1943.

[fol. 39] Corporation Commission of the State of Oklahoma, Reford Bond, Chairman; Ray O. Weems, Vice-Chairman; Wm. J. Armstrong, Commissioner.

[fol. 40] EXHIBIT 19

BEFORE THE CORPORATION COMMISSION OF THE STATE OF OKLAHOMA

Cause C D No. 865

Order No. 16682

In the Matter of the APPLICATION OF WALKER T. POUND, Conservation Officer, for Amendment of the Rules and Regulations Governing the MEDRANO SAND of the WEST CEMENT FIELD, and Allocation of Production from Said Field and the Lower Charlson Sand of the Chickasha Field for the Month of October 1943

Report of the Commission

This cause came on for hearing before the Corporation Commission of the State of Oklahoma in its court room in the Capitol Office Building, Oklahoma City, Oklahoma, on the 30th day of September, 1943, at 10 o'clock, A. M., upon an application filed by the Conservation Officer and pursuant to order of the Commission setting the same for hearing and notice published as required by law, at which hearing the Conservation Officer and Conservation Attorney were present and the following appearances were made: Phillips Petroleum Company by E. G. DeParade; Gulf Oil Corporation by R. S. Knappen; Ray Stephens, Incorporated, by J. B. Dudley; Darby Oil Company by D. C. Bothwell; Amerada Petroleum Corporation by C. V. Millikan;

Sinclair Prairie Oil Company by O. E. Dougherty; Anderson-Prichard Oil Corporation by W. H. Brown; Magnolia Petroleum Company by W. R. Wallace; and Oklahoma Natural Gas Company by Gilbert Estill; whereupon testimony was heard and the Commission continued the cause for further hearing on the 1st day of October, 1943, at 10 o'clock, A. M., when further testimony was heard, and the Commission made the order hereinafter prescribed and continued the cause for hearing on all other matters involved to the 11th day of October, 1943, at 10 o'clock, A. M.

Now, on this 1st day of October, 1943, the Commission, having considered the testimony introduced in this cause as of this date, and being otherwise fully advised, finds as follows:

Findings

1. That notice by publication of the filing of the application herein, the time and place of the hearing thereon and the purpose of said hearing, has been regularly given in all respects as required by law, and the Commission has jurisdiction of the subject matter embraced in said application and of the parties interested therein, and jurisdiction to issue and promulgate the hereinafter prescribed order.

2. That on the 4th day of January, 1943, the Commission promulgated its Order No. 16170 in Cause C. D. No. 822, which prescribed rules and regulations governing production from the Medrano Gas Sand of the West Cement Field, and on the 13th day of April, 1943, the Commission amended said order by its Order No. 16342 issued in Cause C D No. 837, and thereafter issued its allocation orders based thereon.

3. That since the promulgation of said Order No. 16170 it appears from the drilling of additional wells in said field and from geological, engineering, and other scientific information that the boundaries of the acreage which is productive of gas only, as defined in said Order No. 16170, should be changed, and that said productive gas acreage should be as defined by Exhibit "A", attached hereto and made a part hereof.

[fol. 41] 4. That from the evidence introduced in this cause it appears that the Medrano Sand of the West Cement

Gas Field and the Medrano Sand of the West Cement Oil Field (heretofore designated in Order No. 16388 as the Southwest Cement Oil Field) are both in fact one common source of supply, and that all wells located within the area shown on Exhibit "A" are wells producing gas only from said Medrano Sand, and that all other wells producing from said Medrano Sand are producing oil; that said field should hereafter be known as the West Cement Medrano Pool.

5. That since there are wells in said common source of supply which produce gas only and other wells that produce oil, in order to protect the oil reserves, prevent waste, and insure the greatest ultimate recovery of oil, it is necessary to restrict the gas production from those wells producing gas only, as hereinafter set out in this order.

6. That in order to fix the allocation to wells producing gas only based upon the amount of production during the month immediately preceding, it is necessary that reports thereon be filed by the takers and purchasers with the Corporation Commission on or before the 5th day of the succeeding month, and as soon thereafter as possible the Conservation Department should issue its allocation schedules for the month based upon the actual production for the preceding month.

7. That all operators in said field agree that this order is necessary and proper and should be issued by the Commission.

Order

It is therefore ordered by the Corporation Commission of the State of Oklahoma as follows:

1. The productive area of the gas producing portion of the West Cement Medrano Pool is hereby defined as shown on Exhibit "A" attached hereto, and made a part of this order.

2. The total production from all wells producing gas only in the West Cement Medrano Pool for the month of October 1943 shall be restricted to one-fourth of the amount allowed to be produced during the last fifteen days of April 1943, same being one-half of the amount allowed to be produced during the months of August and September, 1943, which is 23,626 MCF per day; that said amount shall be

allocated to the wells producing gas only pursuant to the orders of this Commission, taking into consideration the overage and the underage charged or credited to each well.

3. Takers and purchasers of gas from those wells producing gas only in said pool shall file reports with the Conservation Department of the amount of gas produced from each well during any month on or before the 5th day of the succeeding month, and as soon as possible thereafter the Conservation Department shall issue reports showing the allocation to each well for the current month, using the production of the immediately preceding month to calculate the overage and underage.

Done and performed by the Corporation Commission at its offices in the Capitol Office Building, Oklahoma City, Oklahoma, this 1st day of October, 1943.

Corporation Commission of the State of Oklahoma, Reford Bond, Chairman; Ray O. Weems, Vice-Chairman; Wm. J. Armstrong, Commissioner. (Seal.)

BEFORE THE CORPORATION COMMISSION OF THE STATE OF OKLAHOMA

Cause C D No. 865

Order No. 16683

In the Matter of the Application of WALKER T. POUND, Conservation Officer, for Amendment of the Rules and Regulations Governing the MEDRANO SAND of the WEST CEMENT FIELD, and Allocation of Production from Said Field and the Lower Charlson Sand of the Chickasha Field for the Month of October, 1943

Report of the Commission

This cause came on for hearing before the Corporation Commission of the State of Oklahoma in its court room in the Capitol Office Building, Oklahoma City, Oklahoma, on the 30th day of September, 1943, at 10 o'clock, A. M., upon an application filed by the Conservation Officer and pursuant to order of the Commission setting the same for hearing and notice published as required by law, at which hearing the Conservation Officer and Conservation Attorney were present and the following appearances were made: Phillips Petroleum Company by E. G. DeParade; Gulf Oil Corporation by R. S. Knappen; Ray Stephens, Inc., by J. B. Dudley; Darby Oil Company by D. C. Bothwell; Amerada Petroleum Corporation by C. V. Millikan; Sinclair Prairie Oil Company by O. E. Dougherty; Anderson-Prichard Oil Corporation by W. H. Brown; Magnolia Petroleum Company by W. R. Wallace; and Oklahoma Natural Gas Company by Gilbert Estill; whereupon testimony was heard and the Commission continued the cause for further hearing on the 1st day of October, 1943, at 10 [fol. 45] o'clock, A. M., at which time the Commission made certain orders and continued the cause for hearing on the 11th day of October, 1943, at 10 o'clock, A. M., for the taking of additional testimony, and again continued the cause for hearing on the 12th day of October, 1943, at 1:30 o'clock, P. M., when the Commission closed the case and

took the same under advisement as to all matters not decided on the 1st day of October.

Now, on this 13th day of October, 1943, the Commission, having considered all of the evidence in this cause and being fully advised in the premises, finds as follows:

Findings

1. That notice by publication of the filing of the application herein, the time and place of the hearing thereon, and the purpose of said hearing, has been regularly given in all respects as required by law, and the Commission has jurisdiction of the subject matter embraced in said application and of the parties interested therein, and jurisdiction to issue the hereinafter prescribed order.

2. That on the 4th day of January, 1943, the Commission promulgated its Order No. 16170 in Cause C D No. 822, which prescribed general rules and regulations governing production of gas from the Medrano Sand of the West Cement Field, and on the 13th day of April, 1943, the Commission amended same by its Order No. 16342 in Cause C D No. 837; and on the 28th day of April, 1943, the Com-[fol. 46] mission issued its Order No. 16388 in Cause C D No. 843, governing oil production from the Southwest Cement Oil Field.

3. That it now appears, as set out in the order issued in this cause on October 1, 1943, that the Medrano Sand of the West Cement Gas Field and the Medrano Sand of the West Cement Oil Field (heretofore designated in said Order No. 16388 as the Southwest Cement Oil Field) are both in fact one common source of supply; that all wells located within the area shown on Exhibit "A" attached hereto and made a part hereof, are wells producing gas only from said Medrano Sand, and that all other wells producing from said Medrano Sand are producing oil; that said field should hereafter be known as the West Cement Medrano Pool.

4. That in the years 1943 and 1935 the Oklahoma Legislature enacted statutes authorizing the Corporation Commission to promulgate rules and regulations governing the production of natural gas in order to prevent waste, provide for ratable taking, and protect correlative rights;

that in the years 1933 and 1935 the Legislature enacted statutes authorizing the Commission to promulgate rules and regulations for like purposes in the production of oil and gas, which statutes pertain principally to the production of oil and specifically define what constitutes the waste of gas produced from a common source of supply of oil.

5. That the orders above mentioned should be amended and revised and new regulations are necessary in order to carry out the purposes of the statutes of Oklahoma, and all of the rules and regulations hereinafter prescribed are [fol. 47] pursuant to the authority vested in the Commission by the statutes above mentioned.

Overage and Underage

6. That the manner and method of computing overage and underage by the Conservation Department under previous orders of this Commission has been fair and equitable to all producers, purchasers and takers of gas in said pool, and the method so employed is hereby approved by this Commission, and the present standing of all wells as of October 1, 1943, should remain unchanged as shown by the records of the Commission.

7. That certain wells are overproduced more than their October, 1943, current monthly allowable, to-wit: Phillips Petroleum Company Garn #5; Magnolia Petroleum Company Medrano #7; Ray Stephens, Inc., Melton #1 and #4; Wilhite #3 and Farwell #2; that the Phillips well and the Ray Stephens wells above named are at this time shut in and have been producing no gas since on or about the 17th day of September, 1943, and that each of said wells and the Magnolia Petroleum Company Medrano #7 well should remain shut in until all of the overage shown by the records of the Commission is made up; that upon failure of the operator so to keep said wells shut in, the Conservation Officer should shut in the same.

8. That in the future any well having an overage of more than its monthly current allowable, as hereinafter defined, should be immediately shut in by the operator until such overage is made up by future allocations; and in event [fol. 48] such operator fails to shut in said well, the Con-

servation Officer should shut in the same until such overage is made up.

9. That any underage which accumulates to any well producing gas only should be made up within three months from time of its accumulation, and should be made up within said time in addition to its current monthly allowable based upon its daily production; and in event it is not made up within the time and in such manner same should be canceled; provided that, no well should produce underage in excess of an amount equal to its monthly current allowable, as hereinafter fully set out in this order.

10. That the manner of determining each well's current allowable beginning with November 1, 1943, should be as hereinafter set out in this order, and such method will be fair to all operators and persons in said pool.

11. That the Medrano Sand should be separated and segregated from all other producing horizons, and no well should be allowed to produce gas or be open when the well is open in the Medrano Sand and any other source of supply at the same time; that the Phillips Petroleum Company Garn #5 and Ray Stephens, Inc., Farwell #2 are at this time open in the Medrano gas producing formation and in other formations; and the producing horizons in said wells should be immediately separate and segregated and no gas produced therefrom until such segregation is effected, which should be done within a reasonable time whether any gas is produced or not.

[fol. 49] 12. That the evidence fails to disclose that the Ray Stephens, Inc., Melton #4 well is not producing gas from the Medrano Sand; that from all of the geological and scientific evidence introduced it appears that the production or lack of production of gas from other wells producing in the Medrano Sand affect the production and pressure of said Melton #4 well, and that if there is no break between the formation from which the Melton #4 is producing and the other wells in the Medrano Sand, there are other wells drilled into and now producing from both horizons, which would cause migration from one well to the other, even though the horizons were separated originally; that it has been considered by the Commission from the time the wells were first brought in that the Melton #4 was a Medrano Sand well, and it now appears that it would

best protect the interests of all parties concerned to leave the well classified as a Medrano well.

13. That the method employed by the Chief Clerk of the Conservation Department in determining the allowables for all gas wells producing in the Medrano Sand during the month of May, 1943 was the correct method and was fair and equitable as between all the operators and purchasers, and that the method should be approved by the Commission.

14. That all rules and regulations included in Order No. 16170, as amended by Order No. 16342, which are not specifically amended by this order, should continue in force and effect and be made a part of this order.

[fol. 50] 15. That in order to clarify Order No. 16388, same should be amended as hereinafter set out, and the findings of said order are hereby adopted as a part of the findings in this cause.

Gas-Oil Ratio

16. That in order to conserve the reservoir energy of the oil wells and to insure the greatest ultimate recovery of oil therefrom, it is necessary that the Commission establish a gas-oil ratio therefor, and that the ratio as hereinafter set out in this order will prevent waste and will protect the correlative rights of all interested parties and be fair and equitable.

17. That in allocation of gas to wells producing gas only in said pool, the territory as shown by Exhibit "A" attached hereto should be effective from and after October 1, 1943, until further order of the Commission.

18. That all of the findings in Order No. 16170, as amended by Order No. 16342, which are not herein specifically changed or modified, are hereby adopted as part of the Findings in this order.

19. That from the evidence introduced in this cause it appears that in order to carry out the provisions of the statutes of the State of Oklahoma, in order to prevent the waste of oil and gas in said West Cement Medrano Pool, to protect the reservoir energy and insure the greatest ultimate recovery, and to provide for ratable taking of both oil and gas therefrom and to protect the correlative rights

[fol. 51] of all persons interested therein, it is necessary to amend the rules and regulations heretofore promulgated and to promulgate additional rules and regulations as hereinafter fully set out in this order; that the order hereinafter promulgated will as nearly as possible insure to each producer, royalty and lease owner, opportunity to obtain from the common source of supply the approximate amount of oil and gas that originally underlaid the surface of his land, and to produce currently his ratable and equitable share of same, and will be fair and equitable to all persons interested.

20. That the order hereinafter prescribed is divided into two parts: Wells Producing Gas Only, and Oil Wells.

Order

It is therefore ordered by the Corporation Commission of the State of Oklahoma as follows:

1. The West Cement Medrano Pool, located in Caddo County, State of Oklahoma, is one common source of supply in which some wells already drilled produce gas only and some produce oil.

Gas Production

2. Effective October 1, 1943, the productive area of said common source of supply which produces gas only shall be all of that acreage located within the limits of said common source of supply as found and determined by the Commission on October 1, 1943, and reflected by Exhibit A, hereto attached and made a part of this order.

[fol. 52] 3. The Medrano Sand shall be separated from all other gas producing horizons, and no well shall produce gas until such segregation is effected. If any gas well is open in the Medrano Sand and any other producing horizon, it must be segregated within a reasonable time even though no gas is produced therefrom. The Phillips Petroleum Company Garn #1 well and Ray Stephens, Inc., Farwell #2 well shall not be permitted to produce gas until the Medrano Sand is segregated, and such segregation shall take place within a reasonable time from the date hereof even though no gas is produced therefrom.

4. Each well producing gas only from said Medrano Sand shall have allocated to it each day its ratable proportion of all the gas allocated by the Commission to said common source of supply, as reflected under the calculation of the allocation formula herein prescribed, which allocation formula shall be "productive acreage" times "natural flow potential" times "pressure factor" for each individual well.

5. *Acreage Factor*—Each operator of wells in the gas producing area of said Medrano Pool shall divide his acreage into units; and a "unit" as used in this order shall be any square or rectangle of surface acreage of not to exceed 160 acres and upon which there exists only one well producing gas only from the Medrano Sand. If more than one well is located on any tract of 160 acres, or less, the units in said tract shall be of equal surface acreage.

[fol. 53] "Productive acreage" to be used as a factor in the allocation formula prescribed in this order shall be such portion of the total acreage of the unit as is within the productive area of the gas producing portion of the Medrano common source of supply, as set out in Exhibit "A."

6. Potential Factor—"Natural flow potential" of a well producing gas only shall be that volume of gas capable of being produced in a twenty-four hour period measured at standard conditions of sixty degrees (60°) Fahrenheit temperature, and at four (4) ounce pressure above atmospheric pressure assumed to be 14.4 pounds per square inch pressure, or at 14.65 pounds per square inch pressure absolute, and with atmospheric pressure at the sand face as provided by the Bureau of Mines Monograph Seven back pressure method, corrected to such volume as a seven inch (7") outside diameter twenty-four pound (24#) casing will deliver at the well head against atmospheric pressure.

Natural flow potential tests taken as hereinabove provided shall be made by or under the supervision of and in the presence of an authorized representative of the Oil and Gas Conservation Department, and the official results of said tests shall be determined by said department. Such tests shall be filed of record in the offices of the Conservation Department; and all subsequent natural flow potential tests shall be taken by or under the supervision of and

in the presence of an authorized representative of said Department at such times as may be provided by law and directed by order of the Corporation Commission, or as [fol. 54] may be agreed upon by all of the operators of wells in the Medrano Pool, with the approval of the Conservation Officer or his representative; provided that a new potential may be taken on any well or wells at the request of the owner or operator, in which event the open flow test so taken shall be effective regardless of whether it is more or less than the then effective test. Before taking such test, notice must be given to all other operators and purchasers in sufficient time to give them opportunity to be present. All such subsequent natural flow potentials shall be effective as of the first day of the month succeeding the date on which the potential is taken.

7. Pressure Factor—"Pressure factor" of a well producing gas only shall be the value obtained by taking the maximum shut-in casinghead pressure of each well minus eighty one-hundredths (0.80) times the areal weighted average shut-in casinghead pressure of the pool divided by the areal weighted average shut-in casinghead pressure of the pool minus eighty one-hundredths (0.80) times the areal weighted average shut-in casinghead pressure of the pool, or as expressed by the fraction: $\frac{P - 0.80F}{F - 0.80F}$ "P" of said fraction being the maximum shut-in casinghead pressure in pounds per square inch gauge obtained within a twenty-four (24) hour shut-in period; and "F" of said fraction being the areal weighted shut-in casinghead pressure in pounds per square inch gauge of all Medrano Sand gas wells in the pool. The areal weighted average shut-in casinghead pressure shall be determined [fol. 55] by the summation of the quantities obtained by multiplying the maximum shut-in casinghead pressure of each Medrano gas well by the number of productive acres in each well's acreage unit, all divided by the summation of the number of productive acres in each well's acreage unit.

Shut-in casinghead pressures for use in "pressure factor" may be measured by a deadweight test gauge at the casinghead, or may be calculated at each operator's option

by obtaining the pressure at the sand base or bottom casing perforation in the Medrano Sand with a bottom hole pressure bomb and by deducting therefrom the weight of a column of dry gas extending from the casinghead to the point of such bottom hole pressure measurement.

Shut-in casinghead pressures to be used in the pressure factor for gas allocation purposes shall be determined each calendar month between the 20th and 30th days of the month. Same shall be filed in the office of the Conservation Department on or before the first day of the succeeding month. The monthly shut-in casinghead gas pressure shall be taken by or under the supervision of and in the presence of an authorized representative of the Oil and Gas Conservation Department, and the pressure so obtained shall be substituted in the pressure factor of the gas allocation formula of each well to allocate the gas production for the succeeding month.

8. Tubing—All gas wells in the Medrano Sand shall be equipped with tubing in such manner that the wells can be properly conditioned for the taking of natural flow [fol. 56] potential tests. All tubing shall be at least two inches (2") in diameter and free from any obstruction that would prevent the use of a bottom hole gauge. Said wells shall be equipped for the taking of bottom hold pressure gauges at the face of said sand.

9. Current Allowables—Each well shall have its ratable share of the allocation set up by the Commission based on the allocation formula hereinbefore prescribed. The daily production from wells producing gas only in said common source of supply as determined by the Commission shall be multiplied by the number of days in the ensuing month to determine the monthly allocation for each well.

10. Reports—Each taker and purchaser of gas from wells producing gas only shall file with the Conservation Department reports of the gas taken from each well during any month on or before the 4th day of the succeeding month.

11. Overage and Underage—Effective November 1, 1943, all overproduction or underproduction of gas occurring in any month as determined by calculations on the allocation formula prescribed in this order shall be adjusted in

the allowable for said well for the ensuing month. All overage shall be deducted from the well's current allowable, and any well that is overproduced as much as its monthly current allowable shall be shut-in immediately by the operator, and no gas shall be produced therefrom until said overage is made up. In case an operator fails or refuses to shut-in the said well, the Conservation Officer [fol. 57] is hereby directed to shut in the well, place a seal thereon, and keep the same shut in until the overage is completely made up. In producing underage, no well shall produce accumulated underage in any one month in an amount in excess of an amount equivalent to said well's current monthly allocation; and underage that may hereafter accrue to a well in any month which is not produced by said well within three succeeding months in addition to said well's current monthly allocations shall be canceled, unless otherwise specifically ordered by the Commission.

12. Any well hereafter completed in the Medrano Sand shall, upon completion in said separate source of supply, be subject to all of the provisions of this order, except as hereinafter provided. The gas allowable for any such well shall become effective on the day that the connections with the pipeline are made and it begins producing gas; and after the natural flow potential test and casinghead pressure for gas allocation purposes has been determined, if it appears at the first hearing thereafter before the Commission that said well during said period has produced more or less than its just proportion, then same shall be adjusted in the same manner as provided above for adjustment in the case of underproduction or overproduction; provided that, in making the allocation for any such well not more than a fifteen day allocation shall be allowed for the period from the date when connection with the pipeline is made and it begins producing gas to the date the [fol. 58] potential test is made.

13. In order to carry out the provisions of this order, it is necessary that all operators, lessees, contractors, drillers, and perforaters, and others who perform any service or keep any reports furnish to the Oil and Gas Conservation Department, or to any of its representatives, a complete report of their records in regard to the physical

status and log of the well, and especially depths and thicknesses of the sand, perforation points, casing records, cementing records, and like information. Upon request of the Conservation Officer such reports shall be filed in the office of the Conservation Department.

14. Gas allocation volumes shall be based upon a correction of sixty degrees (60°) Fahrenheit temperature and two pounds per square inch gauge above an assumed atmospheric pressure of fourteen and four-tenths (14.4) pounds per square inch absolute or to sixteen and four-tenths (16.4) per square inch absolute pressure.

15. Each operator in said pool shall select a representative to be approved by the Conservation Officer, to serve on an Operators Committee, and the Conservation Officer shall request the Bureau of Mines to select a representative to serve on said committee. Said Operators Committee shall be given an opportunity to be present and observe the taking of all natural flow gauges and casinghead pressure tests, and to make recommendations and render all possible assistance to the Conservation Department. The [fol. 59] Conservation Officer, or his representative, shall make every possible effort to secure the unanimous approval of the Operators Committee, including the representative of the Bureau of Mines, as to all natural flow gauges and casinghead pressure tests taken by him; but in case of failure to agree, the determination of the Conservation Officer shall be final and effective.

16. Nothing in this order shall affect the rights of any operator to present any claim to this Commission or to any court for failure to comply with the provisions of the law concerning the price to be paid for gas in said pool; and nothing in this order shall affect or prejudice the rights of any operator, producer, or taker of gas to claim an adjustment before this Commission or before any court because of the failure of any other person to take gas ratably prior to April 16, 1943.

17. The Commission shall hold regular hearings, after due and proper notice to all producers and purchasers, at which time the Commission shall determine the amount of gas to be produced from the wells that produce gas only in the West Cement Medrano Pool.

Oil Production

18. All oil wells drilled into the West Cement Medrano Pool shall be equipped with not less than 300 feet of surface casing, cemented from top to bottom. The size of the flow string of casing shall be at the discretion of the operator, and same shall be set through the producing formation or at the bottom of the hole and cemented with not less [fol. 60] than 1,000 sacks of cement, and not less than 30 feet of cement shall be left inside said casing immediately above the casing shoe to serve as a plug. The pipe shall be perforated so that the production will come only through the perforations. If an operator runs a string of casing other than 7", it is understood that he shall not receive any advantage, nor will disadvantages be considered, in taking potentials and making other rules and regulations governing this pool. If an operator sets a flow string of casing above the base of the Medrano Sand and later deepends the well, then a liner shall be set in the additional hole, and same shall be cemented and perforated and the cement plug left in, as required for the original flow string.

19. All production and potentials shall be through 2½" tubing, the bottom of which shall be set not higher than the top of the producing formation.

20. Gas-Oil Ratio—There is hereby established for the production of oil in said pool a gas-oil ratio of not to exceed 2,000 cubic feet of gas to 1 barrel of oil produced; provided, however, if the gas is delivered into a pipeline and used for ordinary purposes, the gas-oil ratio shall not exceed 3,000 cubic feet of gas to 1 barrel of oil. The gas-oil ratio shall be determined by the Conservation Officer by not to exceed an actual 24-hour gauge taken each month in the manner in which an operator will normally produce his allowable through a meter of standard and [fol. 61] accepted installation, the volume corrected as is now customary for gas potentials in the pool; and during the same period the amount of oil produced shall be measured in tanks.

The allowable production of each well with a high gas-oil ratio shall be multiplied by the gas-oil ratio herein fixed, and divided by the actual gas-oil ratio of each well

to determine the number of barrels of oil to be produced from each well. "Allowable production" as used herein shall mean the amount of oil which the Commission allocates to any well, or its full production if the well is incapable of making such allowable.

22. The amount of oil to be produced from wells in said pool shall be governed by the monthly allocation orders of the Commission.

23. The Medrano Sand, as used in this order, shall for all purposes include the conglomerate sand found at the base of the Medrano Sand.

24. All parts of this order, unless otherwise specifically stated, shall be effective as of October 1, 1943.

25. Jurisdiction over this cause is hereby retained for the purpose of changing, modifying, or altering this order if at any further hearing in this cause or from other evidence adduced before the Commission it appears that such modification should be made.

26. The several provisions of this order are separable and the validity of any one is in nowise dependent upon [fol. 62] the validity of any other. If any provision, section, paragraph, sentence, or clause of this order shall be held to be invalid or void for any reason, the same shall in no manner affect the validity of any other provision of this order.

Done and performed by the Corporation Commission at its offices in the Capitol Office Building, Oklahoma City, Oklahoma, this 13th day of October, 1943.

Corporation Commission of the State of Oklahoma.

[fol. 63] EXHIBIT 21

BEFORE THE CORPORATION COMMISSION OF THE STATE OF OKLAHOMA

Cause C D No. 870

Order No. 16771

In the Matter of the Application of Walker T. Pound, Conservation Officer, for Allocation of Gas in the West Cement Medrano Pool and the Lower Charlson Sand of the Chickasha Field for the Month of December 1943, and Amendment of Rules and Regulations Governing Said Fields—AMENDMENT OF ORDER No. 16683

Report of the Commission

This cause came on for hearing before the corporation Commission of the State of Oklahoma in its court room in the Capitol Office Building, Oklahoma City, Oklahoma, on the 30th day of November, 1943, at 11 o'clock, A. M., upon the application of the Conservation Officer and pursuant to an order of the Commission setting the cause for hearing and notice thereof published as required by law; at which hearing the Conservation Officer and Conservation Attorney were present and the following appearances were made: W. T. Crandall for Sinclair Prairie Oil Company; T. L. Regan for Stanolind Oil and Gas Company; R. E. Cullison for Cities Service Gas Company; E. G. DeParade and C. W. Binckley for Phillips Petroleum Company; R. B. Curran for The Carter Oil Company; J. Schoeppel and R. G. Holland for Ray Stephens, Incorporated; and E. C. McAninch for Oklahoma Natural Gas Company; whereupon evidence was introduced and the Commission made the following order, finding as follows:

Findings

1. That notice by publication of the filing of the application herein, the time and place of the hearing thereon, and the purpose of said hearing, has been regularly given in all respects as required by law, and the Commission has jurisdiction of the subject matter embraced in said application and of the parties interested therein, and jurisdiction to issue and promulgate the hereinafter prescribed order.

2. That on the 13th day of October, 1943, the Commission promulgated Order No. 16683 in Cause C D 865, paragraph 6 of which provides for the manner and method of taking natural flow potentials of wells producing gas only in the West Cement Medrano Pool, which method requires in substance that all such gas wells shall take potentials through tubing.

3. That in said pool there are some wells producing gas only from the Medrano Sand and from other sands found at a lower depth; that in order to take potentials on such dually completed wells it is necessary to raise the tubing from the lower sand into the Medrano Sand, which process is very hazardous and costly; and it appears that in such dually completed wells it would be to the best interest of all parties and would be fair and equitable to permit potentials in the Medrano Sand to be taken through the annular space; that taking of potentials through the annular space, as hereinafter set out, would fairly represent the capacity of the wells to produce from the Medrano Sand in those wells which are dually completed.

4. That all the operators in said Medrano Pool who were present at the hearing agree that the method hereinafter set out would be the best means for determining the potentials and would be fair and equitable to all operators, producers, royalty owners, and others interested.

[fol. 64] 5. That Paragraph 6 of Order No. 16683 should be amended as hereinafter set out but in all other respects said order should remain in force and effect.

Order

It is therefore ordered by the Corporation Commission of the State of Oklahoma as follows:

1. That Paragraph 6 of Order No. 16683, heretofore issued in Cause C D No. 865, be, and the same is hereby, amended by addition of the provisions for potentials on dually completed wells in the West Cement Medrano Pool, to read as follows, to-wit:

> "6. *Potential Factor*—'Natural flow potential' of a well producing gas only shall be that volume of gas

capable of being produced in a twenty-four hour period measured by standard conditions of sixty degrees (60°) Fahrenheit temperature, and at four (4) ounce pressure above atmospheric pressure assumed to be 14.4 pounds per square inch pressure, or at 14.65 pounds per square inch pressure absolute, and with atmospheric pressure at the sand face as provided by the Bureau of Mines Monograph Seven back pressure method, corrected to such volume as a seven inch (*6"*) outside diameter twenty-four pound (24#) casing will deliver at the well head against atmospheric pressure.

"In wells that are dually completed, potentials in the Medrano Sand shall be taken through the annular space, and the absolute open flow of each connected well in the field shall be determined as follows: The well shall be produced into the pipeline for six (6) hours, during which time the working pressure at the well head shall be maintained at seventy-five per cent (75%) of the shut in well head pressure of the well, expressed in pounds per square inch gauge, or as closely thereto as operating conditions in the field will permit. In no case shall the working well head pressure during the test be more than ninety per cent (90%) of the shut in well head pressure of the well being tested, unless it can be shown to the satisfaction of the Conservation Officer that it is impractical to maintain the pressure within the above described limits and that the accuracy of the test will not be unduly affected by failure to do so. Flow shall be measured by approved meter throughout the six-hour test period, and the well head pressure shall be measured by dead weight gauge at the close of the test period. The rate at which the well is producing at the end of six hours shall be considered the stabilized producing rate corresponding to the working well head pressure existing at that time, provided such rate is not greater than the average producing rate for the entire six-hour period. The observed stabilized producing rate shall be converted to absolute open flow by use of the following formula:

$$AOF = R \left\{ \frac{P_t^2}{P_t^2 - P_s^2} \right\} .85$$

AOF—Absolute Open Flow
R —Observed producing rate
P_t —Shut-in pressure of the well, pounds absolute at the face of the sand
P_s —Working well head pressure at rate R, pounds absolute at the face of the sand

Shut-in well head pressure shall be measured by dead weight gauge after the well has been shut in for twenty-four hours.

[fols. 65-66] "Natural flow potential tests taken as hereinabove provided shall be made by or under the supervision of and in the presence of an authorized representative of the Oil and Gas Conservation Department, and the official results of said tests shall be determined by said department. Such tests shall be filed of record in the offices of the Conservation Department; and all subsequent natural flow potential tests shall be taken by or under the supervision of and in the presence of an authorized representative of said Department at such times as may be provided by law and directed by order of the Corporation Commission, or as may be agreed upon by all of the operators of wells in the Medrano Pool, with the approval of the Conservation Officer or his representative; provided that, a new potential may be taken on any well or wells at the request of the owner or operator, in which event the open flow test so taken shall be effective regardless of whether it is more or less than the then effective test. Before taking such test, notice must be given to all other operators and purchasers in sufficient time to give them opportunity to be present. All such subsequent natural flow potentials shall be effective as of the first day of the month succeeding the date on which the potential is taken."

2. That with the exception of the addition of the provisions for taking potentials on dually completed wells as

above set out, Order No. 16683 shall remain in full force and effect.

Done and performed by the Corporation Commission at its offices in the Capitol Office Building, Oklahoma City, Oklahoma, this 30th day of November, 1943.

Corporation Commission of the State of Oklahoma, Reford Bond, Chairman; Ray O. Weems, Vice-Chairman; Wm. J. Armstrong, Commissioner.

[fol. 67] EXHIBIT 22

BEFORE THE CORPORATION COMMISSION OF THE STATE OF OKLAHOMA

Cause CD No. 963

Order No. 17736

In the Matter of the Application of RAY STEPHENS, INCORPORATED, for Amendment of Rules and Regulations Governing the Medrano Gas Sand Production of the West Cement Gas Field

REPORT OF THE COMMISSION

This cause came on for hearing before the Corporation Commission of the State of Oklahoma in its court room in the Capitol Office Building, Oklahoma City, Oklahoma, on the 10th day of April, 1945, at 10 o'clock, A. M., upon application filed by Ray Stephens, Incorporated, and pursuant to order of the Commission setting the same for hearing and notice published as required by law; at which hearing, Chairman Reford Bond and Commissioners Ray O. Weems and Wm. J. Armstrong sitting, Duke Duvall appeared for applicant, W. R. Wallace appeared for Magnolia Petroleum Company, and R. H. Gwinner appeared for Sunray Oil Company, evidence was presented, and the Commission, being fully advised in the premises, announced the granting of the following order, finding as follows:

Findings

1. That notice by publication of the filing of the application herein, the time and place of the hearing thereon, and the purpose of said hearing, has been regularly given in all respects as required by law, and the Commission has jurisdiction of the subject matter embraced in said applica- [fol. 68] tion and of the parties interested therein, and jurisdiction to issue and promulgate the hereinafter prescribed order.

2. That on the 4th day of January, 1943, the Commission promulgated its Order No. 16170 in Cause CD No. 822, which prescribed rules and regulations governing production from the Medrano Gas Sand of the West Cement Field, and on the 13th day of April, 1943, the Commission amended said order by its Order No. 16342 issued in Cause CD No. 837, and thereafter and on the 1st day of October, 1943, issued its Order No. 16682 in Cause CD No. 865 amending said orders, and since said date has issued its allocation orders based thereon.

3. That since the promulgation of said Order No. 16682, it appears from the drilling of additional wells in said field and from geological, engineering, and other scientific information that the boundaries of the acreage which is productive of gas only, as defined by said Order No. 16682, should be changed, and that said productive gas acreage should be as defined by Exhibit "a" attached hereto and made a part hereof.

4. That from the evidence introduced in this cause it appears that the Medrano Sand of the West Cement Gas Field and the Medrano Sand of the West Cement Oil Field (heretofore designated in Order No. 16388 as the Southwest Cement Oil Field) are both in fact one common source of supply, and that all wells located within the area shown on Exhibit "A" are wells producing gas only from said Medrano Sand, and that all other wells producing from said [fol. 69] Medrano Sand are producing oil; that said field should hereafter be known as the West Cement Medrano Pool.

5. That since there are wells in said common source of supply which produce gas only and other wells which produce oil, in order to protect the oil reserves, prevent waste, and insure the greatest ultimate recovery of oil, it is neces-

sary to restrict the gas production from those wells producing gas only as hereinafter set out in this order.

6. That in order to fix the allocation to wells producing gas only based upon the amount of production during the month immediately preceding, it is necessary that reports thereon be filed by the takers and purchasers with the Corporation Commission on or before the 5th day of the succeeding month, and as soon thereafter as possible the Conservation Department should issue its allocation schedules for the month based upon the actual production for the preceding month.

7. That all operators in said field agree that this order is necessary and proper and should be issued by the Commission.

ORDER

It Is Therefore Ordered by the Corporation Commission of the State of Oklahoma as follows:

1. The productive area of the gas producing portion of the West Cement Medrano Pool is hereby defined as shown on Exhibit "A" attached hereto, and made a part of this order.

[fol.70] 2. This order shall become effective as of May 1, 1945, and when well allowables are calculated, the acreage attributable to a well as shown on Exhibit "A" attached hereto shall be used in the allocation formula.

3. Takers and purchasers of gas from these wells producing gas only in said pool shall file reports with the Conservation Department of the amount of gas produced from each well during any month on or before the 5th day of the succeeding month, and as soon as possible thereafter the Conservation Department shall issue reports showing the allocation to each well for the current month, using the production of the immediately preceding month to calculate the overage and underage.

Done and Performed by the Corporation Commission at its offices in the Capitol Office Building, Oklahoma City, Oklahoma, this 10th day of April, 1945.

Corporation Commission of the State of Oklahoma.
Reford Bond, Chairman; Ray O. Weems, Vice-Chairman; Wm. J. Armstrong, Commissioner.

[fol. 71] EXHIBIT 23

BEFORE THE CORPORATION COMMISSION OF THE STATE OF OKLAHOMA

Cause CD No. 865

Order No. 18017

In the Matter of the Application of WALKER T. POUND, Conservation Officer, for Amendment of the Rules and Regulations Governing the Medrano Sand of the West Cement Field

Report of the Commission

This cause came on for hearing before the Corporation Commission of the State of Oklahoma in its court room in the Capitol Office Building, Oklahoma City, Oklahoma, on the 24th day of July, 1945, at 10 o'clock, A. M., upon application filed by the Conservation Officer and pursuant to order of the Commission setting the cause for hearing and notice published as required by law; at which hearing the Conservation Officer and Conservation Attorney were present, and E. G. De Barade appeared for Phillips Petroleum Company; whereupon the cause was continued for hearing on the 26th day of July, 1945, at 10 o'clock, A. M., evidence was presented, and the Commission, being fully advised in the premises, announced the granting of the following order, finding as follows:

Findings

1. That notice by publication of the filing of the application herein, the time and place of the hearing thereon, and the purpose of said hearing has been regularly given in all respects as required by law, and the Commission has jurisdiction of the subject matter embraced in said application and of the parties interested therein, and jurisdiction to issue the hereinafter prescribed order.

2. That under date of October 13, 1943, the Commission issued its Order No. 16683 in this cause, promulgating rules and regulations governing production of oil and gas from the West Cement Medrano Pool.

3. That subsequent development has shown that Section 20 of said order relating to gas-oil ratio should be amended

to provide (1) a gas allowable for high gas-oil ratio wells produced in a pipeline; (3) time of making gas-oil ratio tests; (3) application of the pressure factor to high gas-oil ratio wells produced in a pipeline.

4. That in the interest of conservation and for the purpose of securing the greatest ultimate recovery of oil and gas from said pool, said Section 20 of Order No. 16683 should be amended to read as set out in the hereinafter prescribed order.

Order

It is therefore ordered by the Corporation Commission of the State of Oklahoma as follows:

(1) That Section 20 of Order No. 16683 issued by the Commission on the 13th day of October, 1943, being the general rules and regulations governing the West Cement Medrano Pool, be, and the same is hereby, amended to read as follows:

[fol. 72] "20. *Gas-Oil Ratio*—There is hereby established for the production of oil in said pool a gas-oil ratio of not to exceed 2,000 cubic feet of gas to 1 barrel of oil produced; provided, however, if the gas is delivered into a pipeline and used for ordinary purposes, the gas-oil ratio shall not exceed 3,000 cubic feet of gas to 1 barrel of oil. The gas-oil ratio shall be determined by the Conservation Officer by not to exceed an actual 24-hour gauge taken in the manner in which an operator will normally produce his allowable through a meter of standard and accepted installation, the volume corrected as is now customary for gas potentials in the pool; and during the same period the amount of oil produced shall be measured in tanks.

"All high gas-oil ratio wells which are being produced into a gas pipeline and the gas used for ordinary purposes shall be given a gas allowable production of 3,000 times the daily oil allowable established by the Commission for said pool, and such oil allowable as can be produced with such daily gas allowable.

"The allowable production of each well with a high gas-oil ratio which is not being produced into a pipeline and the gas used for ordinary purposes shall be multi-

plied by the gas-oil ratio herein fixed, and divided by the actual gas-oil ratio of each well to determine the number of barrels of oil to be produced from each well. 'Allowable production' as used herein shall mean the amount of oil which the Commission allocates to any well, or its full production if the well is incapable of making such allowable.

"All oil producing wells in the pool, with the exception of high ratio wells producing into a pipeline, shall be tested for gas-oil producing ratio once each six months' period or at more frequent time as the Conservation Officer may deem necessary.

"The monthly shut-in pressure tests prescribed by Section 7 of Order No. 16683 shall be taken on all high ratio wells producing into a pipeline at the same time and in the same manner that such tests are taken on the gas wells in said pool; and the pressure factor prescribed by said Section 7 shall be applied to reduce the gas allowable on such wells if and when their respective shut-in pressures fall below the weighted average of the gas wells in the pool, including such high ratio wells."

(2) This order shall be effective as of the 1st day of August, 1945, at 7 o'clock, A. M.

Done and performed by the Corporation Commission at its offices in the Capitol Office Building, Oklahoma City, Oklahoma, this 26th day of July, 1945.

Corporation Commission of the State of Oklahoma.

In re: West Cement Medrano Pool—Consideration of Unit Operation.

The Operators of the West Cement Medrano Pool.

GENTLEMEN:

Under date of June 29, 1945 a letter was addressed to the Operators in the West Cement Medrano Pool setting forth a proposal to unitize the Medrano Pool. A meeting of the operators was held in Oklahoma City and a meeting was held in Tulsa in which the letter was informally discussed. It was the concensus of the operators that Phillips Petroleum Company should address this letter and ask the operators: (1) to reply in writing and state whether or not the proposal to unitize was of sufficient interest to warrant a meeting to consider the preliminary proposal further, and, (2) to forward a tabulation of the distribution of working interest in their respective leases so that a complete list of working interest owners might be available for use at the proposed next meeting.

The Gulf Oil Corporation has already replied to the effect that they regard the Medrano Pool unitization of sufficient interest to warrant taking such steps as are necessary to develop the matter further and have forwarded a distribu-[fol. 74] tion of their working interest. In order that we may have the reaction of the entire group, we would be pleased to receive at your very earliest convenience a further statement from you with respect to the questions in this letter. If interest is sufficient, and we believe it will be, a meeting of the operators will be called at an early date in Oklahoma City.

Very truly yours, C. P. Dimit (ss).

In re: Unitization of the Medrano Sand, West Cement hearing December 23, 1946.

DEAR SIR:

You are advised, that I am, as Trustee for the Estate of Charles B. Cooke, one of the royalty owners in the above area, do hereby hardily agree that the proposed plan be

carried through, as I am inclined to think there will be more recoverage of oil by virtue of such plan.

Yours very truly, E. A. Fariss, Apco Tower, Oklahoma City, Okla.

GENTLEMEN:

I have been studying very carefully, and watching very closely, the Unitization program in the Caddo County Cement area and I would like to go on record that it seems to be an ideal program and is going to be of great benefit to both producers and to individual royalty owners. Also, I will be happy to help in this program in any manner possible. My holdings, together with my associates consist of the following:

West Pell Tract	—44 acres	R. I.
" " "	—22 "	O.R.R.I.
East Pell Tract	—44 "	R. I.
Wilhite Tract	—90 "	R. I.
" "	—1/16 of 7/8	O.R.R.I.
Farwell Tract	—1/16 of 7/8	O.R.R.I.
Loose Tract	—25 acres	R. I.
Sames Tract	—20 acres	R. I.
Medrano Tract	—15 acres	R. I.

[fol. 79] Hoping that your program will be successfully completed in the very near future, I am

Very truly yours, M. B. Ettlinger (ss).

P. S. I am writing this letter at the suggestion of my at-

torney, Mr. Clifton H. Davis, who has been kind enough to forward to me a copy of your plans.

Address: M. B. Ettlinger, 50 Broad Street, New York.

Oklahoma State Corporation Commission,
Oklahoma State Capitol,
Oklahoma City, Okla.

Gentlemen:

It is my understanding a hearing will be held on the unitization of the royalty under the Medrano sand produc-

tion in the Cement Pool, Caddo County, Oklahoma, on November 7, 1946. I regret it will be impossible for me to be in attendance at this hearing and I wish to express to the Commission my views regarding this matter as a royalty owner.

We experienced a similar situation as royalty owners in the Cotton Valley Pool, Louisiana, and after five years' experience, there can be no question but what the unitization of the pool was extremely beneficial to the royalty owners.

I own royalty under the Phillips-Garner lease and under the Anderson-Prichard-Pickard lease, both of which will be in the proposed Medrano sand unit, and I would like to go on record as a royalty owner favoring the forming of this unit.

Study of it leads me to believe it will be beneficial to the royalty owners, to the operators and to the State and that the ultimate recovery will be greater under the unitization plan outlined than it would be by individual operation.

Very respectfully yours, (S.) Roy M. Smith.

Re: West Cement-Medrano Sand Communitization

Gentlemen:

I am the owner of a small mineral interest in the Medrano sand pool of West Cement, and therefore interested in the pending proposal to communitize this reservoir. I am a petroleum geologist, having been actively engaged in oil

and gas work during the past 25 years. My education for this work was acquired at our University of Oklahoma.

I am in favor of the principle of communitization of oil and gas reservoirs from the standpoint of conservation of reserves and the greater ultimate production that will accompany such projects. Equitable allocation of the reserves to the various owners seems, to me, to be the only real problem to such a plan. It is my conviction that any reasonably fair plan will work for the economic benefit of all concerned, because such a program appears almost certain to materially increase the ultimate production from the reservoir.

The various interests can be estimated as to their ratios with the whole, with a reasonably small amount of error. [fol. 89] This will not work out in exactly the same proportion of benefit to each separate owner, but the benefit should be of such magnitude that every interest, what ever its proportion of the whole, will be materially benefited.

I have had nothing to do with the formulation of the pending proposal to communitize this reservoir. I have made some investigation of this plan though, and have investigated the allocation to the property in which I own an interest and the allocations to the tracts adjoining my interest. They appear quite reasonable to me. I am impressed by the thoroughness of the geological investigations that have been made, and by the obvious effort and intention to equitably allocate the interests to the various owners. It is my belief that every individual owner will benefit materially by this plan, and also that the State and Nation will be enriched by the greater ultimate production that will eventuate.

My only interests in this proposal are that of a small royalty owner who stands to gain or lose by it, and my interest in seeing that our natural resources are conserved for the most benefit of all.

Respectfully yours, (S). Noel Evans.

December 23, 1946

Honorable Corporation Commission
State Capitol
Oklahoma City 5, Okla.

Messrs. Bond, Weems and Armstrong

Re: The Unitization of the Medrano sand of the West Cement Pool, Caddo County, Oklahoma.

Gentlemen:

I wish to take this opportunity to express my sentiments in regard to the unitization of this pool, which is now being presented before the Corporation Commission by the various leasehold interests. Because of some royalty owners' lack of familiarity with the geological and production problems in connection with the Medrano sand, and also because of the leadership of this organization by Mr. L. A. Davis of Chickasha, Oklahoma, these royalty owners have misunderstood the tremendous benefits which will come to them and to the State of Oklahoma. It is entirely possible that 60% to 70% more oil may be recovered from this horizon under

a unitized repressuring program than would be produced under the past and present conventional methods.

As I understand it, the Corporation Commission has the legal authority to order such unitized operation. It is my opinion that should the operators of the oil and gas pools fail to practice such repressuring methods and unitized programs . . . particularly when the laws of the State of [fol. 95] Oklahoma have provided for such a procedure, then and in that event it is entirely possible that eventually the government of the United States will probably take over such operations, managing them under the Bureau of Mines, in order to prevent the loss of approximately 60% of the oil and gas that might be otherwise recovered.

Therefore, as an owner of a considerable amount of royalty under the unitized acreage and as a geological engineer, I respectfully request that you issue the order covering such unitization.

Yours very truly, (S.) Farris L. Rookstool.

FLR-McM.

Phillips Petroleum Company, represented by R. G. Moss, A. J. Montgomery, I. Curtis Hicks.

Stephens Petroleum Company, represented by P. A. Wallace.

Sunray Oil Corporation, not represented by their consent.

[fol. 97] Introduction

This report written in October, 1945, is the result of the consideration by this committee of geological data pertaining to the unitization of production from the Medrano Sand in the West Cement Field, Caddo County, Oklahoma. Correlations and interpretations as shown are the result of the combined opinion of the committee from all the geological information available at the present.

Medrano Sand

Medrano Zone: The attempt to define the stratigraphic age of the Medrano is not a consideration of this committee. For practical purposes, the top of the Medrano Zone is considered as the top of the main body of conglomerate and/or sand from sample determination and electrical logs. The base of the Medrano is placed at the base of the sand as determined in the same manner. The zone is composed of sand, conglomerate and shale.

Medrano Sand: The Medrano sand is that portion of the Medrano zone composed of sand and conglomeratic sand. The productive sand is that portion having sufficient porosity and permeability to form a reservoir and proven to be productive.

Areal Extent: The north and northeast boundaries have been defined under the Corporation Commission Order No. 17736 as of April 10, 1945. Extension of this boundary was made to the southeast and to the northwest as shown on the maps presented with this report. Points where the sand is absent by faulting or pinch-out are shown as zero points or [fol. 98] connected by zero lines. The Pool is limited on the south and west by water.

Structural Influence on Reservoir

Faults: The presence of a number of faults in the West Cement Medrano Pool have been proven by geologic evidence. Only those of sufficient importance to influence production have been considered and these divide the pool into five segments as shown on the map:

The Sherritt Fault was cut by Gulf #3 Sherritt, 33-6N-10W.

The Sterba Fault was cut by Phillips #2 Oaks, 34-6N-10W, Palmer #5 and #6 Sterba and Magnolia #2 Cement Henley, in Section 35-6N-10W.

The Hartshorne Fault was cut by Phillips #1 Hartshorne in 2-5N-10W and Magnolia #11 Medrano and #10 Lindsey in 36-6N-10W.

The Edwards Fault was cut by Magnolia #6 Edwards, 1-5N-10W.

Five of the wells cited above missed the Medrano sand because of faults shortly above the zone.

Barriers: The Edwards fault is believed to form a complete barrier between the production east of the fault and that west of the fault. There is no definite geologic evidence to prove or disprove communication between the other segments but it is agreed that pressure measurements indicate the lack of free communication between segments.

[fol. 99] Four maps, included with the report, illustrate the findings of the committee. The maps are as follows:

Contours on top of Medrano sand;
Contours on base of Medrano sand;
Isopach map showing thickness of gas productive sand;
Isopach map showing thickness of oil productive sand.

The map contoured on top of the sand was constructed first and the other maps were constructed by super-imposing them over it. It will be noticed that thickness between the top of the sand and the base of the sand was not always the net thickness used because of omission of formations which are discussed elsewhere in this report.

Certain lines on the maps which may be defined as boundaries, barriers or faults are shown by long dashes. These dashed lines are ones which subsequent information may change or confirm. The solid lines are lines either established by Corporation Commission Order or established because it is believed additional data will only confirm them.

Gas-Oil Contact

The gas-oil contact was cored in Magnolia #5 Henley and Phillips #7 Fletcher. On the basis of information obtained during the drilling and completion of these wells, the con-

tact of the original gas-oil zone was agreed upon as a minus datum of 4000 for the portion of the structure west of the Edwards Fault. However, Phillips #7 Fletcher obtained [fol. 100] some evidence that the gas-oil contact was at a minus datum of 3970 at the time of completion. For that part of the structure east of the Edwards Fault, a minus datum of 4050 was agreed upon. Evidence for this was based on Anderson Prichard #1-A Prentice which was a distillate well at a minus datum of 4050 on the base of the sand.

Oil-Water Contact

This committee set up what was believed to be an original oil-water contact for that portion of the structure west of the Edwards Fault. This data was obtained in Amerada #2 Hartshorne, which found the contact between white water bearing sand and brown oil bearing sand by cores at a minus datum of 4741. This well produced both oil and water above this datum. The water from this well is believed to be water that has migrated into the oil column due to withdrawal of oil and gas up-dip.

Other wells, Amerada #1 Beemer, Gulf #4 Sherritt, and Amerada #1 Hartshorne just barely reached the water at its present position in the sand.

For that part of the structure east of the Edwards fault, the committee has agreed upon an arbitrary minus datum of 4450. This was established by taking the interval between the Anderson Prichard #1-A Walker, which had white water sand, and their #2-A Walker, which was an oil producer, and moving up one-third of the distance.

On the west edge of the structure, the I. T. I. O. #1 Dome-[fol. 101] Bo, a dry hole, although structurally high enough to produce oil, was tested and abandoned. The committee recognizes two possibilities to explain this situation: (1) There may be a barrier and a consequent change in the oil-water contact between this well and the rest of the field; and (2) The sand commonly considered to be Medrano in this well may not be Medrano sand.

Data Sheets

Data for constructing the maps submitted herewith were assembled in tabular form and the accompanying tables are

self-explanatory. The following erro-s should be noted and corresponding corrections made:

Section 26-6N-10W, Stephens #4 Melton—Top Gross Zone and Top Net Sand Sub-sea Elevations should be -2860 instead of -2870.

Section 28-6N-10W, Stephens #4 Wilhite—Top Gross Zone and Top Net Sand Sub-sea Elevations should be -4167 instead of -4168.

Section 33-6N-10W, Stephens #1 Polhman—Sub-sea Elevation Base Net Sand should be -4555 instead of -4565.

Section 1-5N-10W, Stephens #1-A Tom Walker—Sub-sea Elevation Base Net Sand should be -4244 instead of -4242. [fol. 102] Section 2-5N-10W, Amerada #1 Hartshorne—Sub-sea Elevation Base Net Sand should be -4671 instead of -4631.

Recommendations

Because numerous discrepancies have appeared in the location of wells in this Pool, it is recommended that a survey be made to determine the exact location of all wells producing from the Medrano Sand and that a map be constructed showing such locations together with the boundaries and areas of leases. Until such survey is made, minor discrepancies must be admitted.

Conclusions

The data compiled and interpretations made of the geology of the Medrano Sand as herewith presented, has been shared in by the entire committee. This, despite the fact that each company representative differs from the others in many of the decisions; However, with the idea of unitization in mind, each representative has readily conceded many of his own ideas for the sake of the whole, and has faced the assemblage and interpretation of this data with frankness, fairness, and sincerity.

[fol. 103] NOTE RE EXHIBIT 69

Whereupon, Exhibit 69, being an Exhibit which cannot be reproduced, parties perfecting appeal to State Supreme

Court will bring Exhibit 69 into Court for State Supreme Court to see and examine.

[fol. 107] I. Introduction

This Reservoir study of the West Cement Medrano Pool has been made for the purpose of investigating the feasibility of initiating a pressure maintenance program by gas injection under unit operation.

The content of the report briefly describes the history and geology of the pool, summarizes the work done by the Sub-Committee in predicting future reservoir performance, summarizes the economics of primary and gas injection operations, tabulates the conclusions reached as a result of the study, and makes recommendations for future procedure.

In the appendix of the report a more detailed discussion of methods used to obtain the results is given. Also presented in the appendix is a tabulation of each lease participation and each operator's interest in accordance with the plan originally formulated by a meeting of the operators on October 18, 1945.

II. Conclusions

1. Ultimate oil and gas recovery by primary operation will require approximately 28 more years and is calculated to return a future net revenue to operators of about $20,749,000. Operators' future net profit is calculated to be $14,644,000 after deducting operating and investment costs. (These figures are based on the assumption that the same relative pore volume is voided in the gas cap as in the oil zone, thereby resulting in similar pressure declines in each zone. This is not true at the present time because current gas pore volume voidage is at a rate of 4.9 times that of the relative oil zone voidage. A continuance of present gas production rates will reduce pressures in the reservoir prematurely, thus reducing primary oil recovery, which in turn will result in a lower net revenue than indicated above.)

[fol. 108] 2. Ultimate oil recovery from a unitized gas injection program is calculated to yield a future net revenue to operators of $31,789,000. This will require a gas injection period of approximately 21 years and an additional 7 years production thereafter. This figure is considered to be a minimum expectancy. Undoubtedly, gravity segregation will contribute additional oil recovery both for primary and gas injection operations; however, the effect will be larger under a pressure maintenance program. Such a program will permit the pool to be produced with greater efficiency by selective control of oil wells and reduced operating expenses. Operators' future net profit after deducting operating and investment costs is calculated to be $25,914,000.

3. The total investment required for gas injection is estimated to be approximately $1,160,000. This consists of an initial investment of $330,000 for plant, dehydrator, gathering lines, and injection lines; investment for additional plant facilities, amounting to $90,000 in each the fifth, twelfth, and fifteenth years, totaling $270,000; and invest-

ment of $560,000 for drilling additional wells starting the first year and continuing at a rate of one per year until 7 are completed.

4. Under a unitization program, initial investment for gas injection facilities and additional drilling will pay out in the third year after commencement of unit operation. At the end of the fifth year, additional net profit over primary recovery to the unit will be about $1,191,000 with $340,000 future investment in plant and drilling costs yet to be made. At depletion of the pool, 28 years hence, net profit over primary recovery to the unit is calculated to be $11,270,000.

[fol. 109] III. Recommendations

The Engineering Sub-Committee unanimously recommends that the West Cement Medrano Pool be unitized at the earliest possible date and that the following program be initiated:

1. Discontinue production from the gas cap.
2. Install proper facilities and return produced gas to the gas cap.
3. Drill additional wells for more efficient operation and the maintenance of higher recovery rates, as necessary.

IV. Discussion

A. History of Pool

The West Cement Medrano Pool was discovered with the completion of Magnolia Petroleum Company's Medrano No. 6 gas well in the SE NE SW of Section 36-6N-10W in October, 1936. Development of the gas cap proceeded, but it was not until March, 1943, after some 30 billion cubic feet of gas had been produced, that oil was discovered by Stephen Petroleum Company's Pierson No. 1 in the SE SW SE of Section 35-6N-10W. To date there have been 35 commercial oil wells and 20 commercial gas wells completed in the Medrano sand. Gross production as of March 1, 1946, amounted to 5,621,000 barrels of oil and 60,168 MMcf of gas from the gas cap. This production amounts to about 5.8% of the original stock tank oil in place and 54% of the original gas in the gas cap. It has been estimated that 4,681 MMcf of solution gas has also been produced. Spacing is on

an irregular 40-acre pattern for the oil zone and an irregular 160-acre pattern for the gas zone.

Allowable oil production was 300 barrels per well per day until March, 1946 at which time it was lowered to 175 bar-
[fol. 110] rels per well per day. In both cases a maximum of 2,000 cubic feet per barrel gas-oil ratio was allowed without penalty unless gas was marketed, in which case 3,000 cubic feet per barrel was allowed. Gas allowable for the field since October, 1943 has been maintained at 23,626 Mcf per day.

B. Geology

The only producing horizon in the West Cement Pool that was considered in this study is the Medrano sand of the Pennsylvanian series. Although this sand contains some thin shale laminations, it is considered to be fairly homogeneous. Porosity throughout the productive pay section is very uniform, and permeability which averages about 300 MD is reasonably uniform even though it varies considerably in some instances.

A real extent of the pool is 1,300 acres for the oil zone and 1,980 acres for the gas zone. The oil zone averages approximately 2000′ in width and 6 miles in length running southeast and northwest. The gas cap extends the length of the oil zone with its widest part approximately in the center of the field where it extends to a width of about one mile. Boundaries to the north and east are established by a discontinuance of productive sand and to the south and southwest by edgewater.

The sand body dips rather uniformly to the southwest, and has a closure of approximately 1800′ of which 750′ is in the oil zone. Average depth is 3500′ subsea for the gas zone and 4375′ subsea for the oil zone. Average thickness of the gas zone is 66′ and average thickness of the oil zone is 95′.

Transverse faults divide the pool into five segments herein designated as Segments A, B, C, D, and E, lettered from west to east. The oil-water contact has been placed at 4741′ subsea in all segments but Segment E where it is at 4465′ subsea. Gas-oil contact has been placed at 4000′ sub-
[fol. 111] sea in all segments except but Segment E where it is at 4050′ subsea.

Two structural maps contoured on the top and base of the Medrano sand, and two isopachous maps contoured on the productive pay interval in the oil and gas zones were prepared by a Sub-Committee of geologists and copies were distributed to the operators.

C. Work of the Sub-Committee

1. Isopachous Maps

The isopachous maps of the oil and gas zones, as prepared by the Geological Sub-Committee, were used to determine the total sand volume in each zone for each lease. An aerial map was used to verify correctness of well locations.

2. Isobaric Map

Pressures at the top of the sand were contoured on an isobaric map of the pool, and weighted average pressures in both oil and gas zones were determined for each lease. The pressures used were those from the general pressure survey of November 1945.

3. Core Data

All available core data were carefully analyzed, and a weighted average porosity was determined for each segment. The value of porosity so determined for each segment is tabulated in Table IX.

4. Reservoir Fluids

The characteristics of the reservoir oil as determined from bottom hole sample analyses of oil from Gulf-Sherritt No. 1 and Stephens-Pierson No. 1 are shown in Figures Nos. 11 and 12. These data include the gas solubility, shrinkage, and reservoir oil viscosity. The relative gas density was calculated from gas analysis data on Phillips-Oaks No. 1 and is shown in Figure No. 14. Gas viscosity was obtained from "Viscosity of Natural Gases" by Bicher [fol. 112] and Katz. Thirteen analyses of gasoline content in the casinghead gas by physical test are tabulated in Table XIII.

5. Pressure Data

In addition to the isobaric map constructed as of November 1945, other pressure data *was* collected and studied to

determine the original reservoir pressure, and the reservoir pressures at the time of oil discovery in each segment. These data are shown in Table IX.

6. Production Data

Production data for both oil and gas wells were obtained from the operators in the pool.

7. Oil Originally in Place at Time of Oil Discovery

Using the basic information as cited above, the stock tank oil in place at the time of oil discovery in each segment was calculated, the details of which are shown in Table IX.

8. Reservoir Performance Calculations

Calculations of future reservoir performance in regard to gas-oil ratios, pressure declines, and oil recoveries were made for each segment. Predictions were made for (1) primary operation, (2) gas cap shut in, and (3) gas injection into the reservoir. The results of the calculations are shown in Figures 1, 2, 3, 4, and 5. Future oil and gas production rates, future reservoir pressures, and future gas injection rates were estimated for gas injection operation and are illustrated in Figures 6, 7, 8, 9, and 10, and Tables II, III, IV, V, VI, and VII. Present relative oil zone and gas zone pore volume voidage rates were calculated and the results are shown in Table VIII.

9. Reservoir Economics

Future net revenue and future net profit, after lifting and [fol. 113] investment costs, were determined for both primary and gas injection programs. The results of this analysis are shown in Tables I and I-A.

D. Discussion of Results

Table I is a recapitulation of reservoir performance and economics. It sums up the possibilities of gas injection under a unit program as compared to the very best possibilities of primary recovery. Future recovery for primary operation as shown in the table can only be realized if gas production from the gas cap is sufficiently curtailed to permit the same relative pore volume voidage from both the gas cap and the oil zone. The recovery figures shown on

the table for gas injection are considered conservative. The additional net profit gained by unitization, as shown in the table, is therefore considered a minimum expectancy. To obtain this additional profit by unitization it will be necessary to control reservoir performance in four ways:

1. Discontinue gas cap production.
2. Return produced gas to the formation at the most efficient rate.
3. Drill 7 additional wells at suitable locations.
4. Reduce average pool gas-oil ratios by selective control of oil wells.

This can only be done to best advantage by a unit program since selective production, gas injection, and an arbitrary consideration of property lines for the purpose is necessary.

Table VIII compares relative pore volume voidage of the gas zone and oil zone. Obviously, primary production of oil from the reservoir will suffer to great extent unless this inequity of a gas voidage 4.9 times that of oil zone voidage is corrected.

[fol. 114] Table IX shows such information as the acre feet of sand, porosity, original reservoir pressure at gas-oil contact, pressure at gas-oil contact at the time of oil discovery, volume of evolved gas at time of oil discovery, percent connate water, oil saturation at time of oil discovery and stock tank oil in place at time of oil discovery for each segment. The method used in calculating each item is also shown on the table.

[fol. 140] Appendix

A. Reservoir Performance Calculations

Reservoir performance calculations were made, using a differential equation formulated by Dr. M. Muskat in "The Production Histories of Oil Producing Gas Drive Reservoirs," Journal of Applied Physics, Vol. 16, No. 3, March 1945. All basic data necessary for these calculations are included in this report.

The relative permeability—saturation relationship curve is shown in Figure No. 13, and was obtained from Leverett and Lewis, "Steady Flow of Gas-Oil-Water Mixtures Through Unconsolidated Sands," A. I. M. E. Transactions, Vol. 142, 1941. Reservoir oil characteristics were obtained from bottom-hole sample analyses of oil from Gulf-Sherritt No. 1 and Stephens-Pierson No. 1 as shown in Figures 11 and 12. These data include the gas solubility, shrinkage, and reservoir oil viscosity. Relative gas density was calculated from gas analysis data on Phillips-Oaks No. 1 and is shown in Figure No. 14. Gas viscosity data *was* obtained from Bicher and Katz, "Viscosity of Natural Gases," A. I. M. E. Transactions, Vol. 155, 1944.

For the purpose of these calculations, the oil saturation in the gas cap and the volume of dissolved gas in the oil in the gas cap was neglected, because the influence on the results would be almost negligible. All calculations that were made assumed that there would be no change in the gas-oil contact as determined by the Sub-Committee of geologists.

Performance calculations were made for each segment for the operating conditions of (1) gas cap producing, (2) gas cap shut in, and (3) gas injection into the gas cap. In some cases several different injection rates were computed, but due to uncertainties as to the amount of gas available [fol. 141] for injection and the economics of injection, a conservative rate of 60% of the produced gas in Segments A, C, D, and E and 40% in Segment B was selected. Segment B has a very much larger ratio of gas cap volume to oil zone volume than the other segments. Accordingly, gas-oil ratios would be expected to rise much higher than in the other segments, neglecting the influence of gravity segrega-

tion. It is intended that all calculations made for this report should be considered only as a guide as to what may be anticipated by a conservative gas injection program. If a unit is formed, it will be necessary to closely follow the performance history and adjust oil production rates and gas injection rates to obtain a maximum economic recovery of oil from the reservoir. The influence of gravity segregation will modify the results obtained, but it cannot be calculated to what degree this will affect the recovery. It would probably be good practice in the beginning to return all available gas after fuel for pumping equipment, fuel for the plant, line losses, and gas lift operations, if any, have been satisfied. Thereafter, reservoir performance will dictate the requirements as the program progresses. At this time it is believed sufficient to show that a very substantial return on the investment is indicated by the conservative program outlined in this report.

The theoretical calculations of gas-oil ratios and pressure declines were adjusted to conform with past performance of the reservoir. In some cases adjustments were minor and in other instances a substantial adjustment was necessary. It will be noted that the curves are shown specifically to be plotted as bottom-hole pressure vs. pore volume rather than reservoir pressure vs. pore volume. The theoretical calculations indicated that actual reservoir pressures were on the order of 200 psi in excess of actual measured bottom-hole pressures. This condition is, of [fol. 142] course, as would be expected, and in order to conform with known values, the pressure curves were shifted to correspond with bottom-hole pressures. However, this modification would not be expected to change the results of the calculations. The performance calculations were first carried to depletion of the reservoir, and then modified by stopping injection of gas at about 21 years and allowing the pool to deplete without further benefit of additional energy. At this time gas-oil ratios were quite high, and even though 7 years is shown for this depletion, it will be noted that the relative amount of oil recovery is very small. The modification of this phase of the performance was done without calculation, because the overall error in recovery would be small in either case.

Undoubtedly, gravity drainage will play some part in the recovery mechanism of this reservoir, and all performance calculations must be given latitude in this respect.

The production rates shown in the figures and tables were assigned arbitrarily in accordance with the amount of oil recoverable, conservative estimates of well capacities, and depletion of the reservoir in a reasonable length of time. The starting point of the program was assigned to be a production of 175 barrels per day per well since that figure is the present allowable. For ease of calculation, a 5-year stepwise decrease of productive rates was assumed. All segments but Segment E were computed at rates which would deplete them in 28 years. Segment E being of thin sand section will decline more rapidly if high production rates are used as indicated in Figure No. 10 and Table II.

It was intended that oil production rates should be declined in a manner that would make it possible to maintain reasonably uniform gas volumes to the compressor plant as [fol. 143] gas-oil ratios are increased. This was not entirely accomplished but it is believed that the volumes shown will require a plant investment near the minimum.

The Sub-Committee is of the opinion that an initial oil production rate of 225 barrels per well per day would be well within the present production capacity of the pool, and would be more desirable than the present allowable of 175 barrels per day. This initial rate would mean a more rapid decline in oil production and would shorten the period required to deplete the reservoir.

B. Economics

Future net revenue shown in Table I is the revenue to operators 7/8 interest less 5% gross production tax. The price of oil under both primary and gas injection programs is $1.27 per barrel. Future net revenue from gas for primary recovery is based on a net price of 5¢ per Mcf above well-head pressure of 500 psi and a net price of 3¢ per Mcf, assuming 2¢ per Mcf compression charges, below a well-head pressure of 500 psi. Future net revenue from gas sales under a gas injection program is based on a net price of 3¢ per Mcf.

From data in Table XIII it was estimated that an average

of a 0.1 GPM of gasoline could be obtained by compression during the life of the project. The total net revenue at $1.27 per barrel would thus be $387,000.

Pay-out of a gas injection program is shown in Table I-A. It is based on the additional oil recovery by gas injection operations over that expected from primary recovery, assuming that both programs would have a productive life on the order of 28 years. It will be noted that primary oil recovery rates would be expected to decline much more rapidly than if gas were injected into the reservoir. Gas allowables were decreased in the second year under primary [fol. 144] operation in accordance with relative voidage rates in Table VIII.

Investment costs for primary recovery include $300,000 for a compressor plant to compress gas when well head pressures fall below pipe line pressure. At present, the pressure is declining in the gas cap at a rate of 131 psi per year. Although not indicated in Table I-A, this added investment will probably have to be made within 5 years. During primary operations it is expected that two more oil wells will be drilled at an average cost of $80,000 per well.

Investment costs under a gas injection program include $600,000 for compression equipment and $560,000 to drill 7 more oil wells at $80,000 each. Compression equipment includes an initial plant investment of $200,000 for two 600 horsepower compressors and building, $25,000 for a dehydrator, $78,000 for gathering lines and orifice meter settings, $27,000 for discharge lines, and in addition three 600 horsepower compressors at $90,000 each to be added in the fifth, twelfth, and fifteenth years. Total investment is $1,160,000. The additional 7 oil wells are to be drilled in favorable locations low on the structure. These wells will be used to help maintain production rates when high gas-oil ratio wells are shut in. It is estimated that an average of 31 wells can then be produced during the life of the project.

Cost of operations, including district expense and total lifting cost for primary production at present rates, was estimated at $540 per well month for oil wells and $75 per well month for gas wells. Under a gas injection program $450 per well month was estimated as total lifting cost and

district expense, and in addition $2,500 per month was added for gas injection costs.

[fol. 145] C. Participating Interest of Operators in a Unit Operation

In a meeting of the Operators on October 18, 1945, it was recommended that participating interest in a unit program be based on the dollar value of recoverable hydrocarbons presently in place under each lease. The ratio of this value to the whole would be the participation of that lease in the unit program.

Recoverable oil, valued at $1.27 per barrel, was determined by applying a 50% recovery factor to the oil in place in accordance with the meeting of October 18, 1945. The oil in place for each segment was determined as shown in Table IX. The stock tank oil in place on each lease in each segment was computed as being the ratio that the acre feet under that lease bears to the total acre feet in that segment. Recoverable stock tank oil was then calculated to be 50% of the oil in place minus the cumulative production. This oil was valued at $1.27 per barrel.

Recoverable gas was computed by applying a factor of 95% to the gas remaining on each property, as calculated by pore volume corrected for present pressure. This gas was valued at 5¢ per Mcf. The total dollar value of hydrocarbons for each lease, expressed as a percentage of the pool total, is the participating interest of each lease in the unit program. Table X shows the steps in computing the value of hydrocarbons under each lease.

Table XI shows participating interest of all leases in a unit program. It also shows operators working interest in various leases and in the pool total. Partners in working interest not shown in Table XI are shown in Table XII.

(Here follow 3 Pasters, side folios 146-151)

West Cement Medrano Operators Committee

Minutes of Meeting

April 10, 1947

The West Cement Medrano Operators Committee convened at the Biltmore Hotel at 10:00 A.M., April 10, 1947 with the following present:

Palmer Oil Company, Tom Palmer.
Magnolia Petroleum Company, C. H. Hudson.
Ray Stephens, Inc., Ray Stephens.
Amerada Petroleum Corp., Charley Millikan.
Caddo Oil Company, Mr. Moran.
Cities Service Oil Company, Doc Dow.
Gulf Oil Corporation, S. G. Sanderson.
Anderson-Prichard Oil Corp., Mr. Richards.
Sunray Oil Corporation, Russell Gwinner.
Phillips Petroleum Co., H. H. Kaveler.

The meeting was concerned with the following four suggestions with the action taken on each suggestion as noted:

1. The distribution of equities to separately-owned tracts should be carefully re-examined particularly in the light of objections raised at the hearing. Such re-examination should be directed particularly toward tracts:

[fol. 158]

No. 1	0.180%
No. 3	0.078%
No. 4	3.454%
No. 5	2.662%
No. 21	0.775%

on the principle that well potentials of wells on tracts 4 and 5 are low, and that tracts 1, 3, and 21 have no producing wells upon them. The thought was further expressed that the equity of tracts 66 and 70 should be re-examined for reasons that they have no producing wells upon them.

On Motion duly made and carried it was agreed that the Engineering and Geological Committees should meet to

study this suggestion and report back to the Operators Committee.

2. The tracts lying wholly in the gas-cap area should be granted an increased equity as credit for the "energy" contained in the gas-cap gas. It was suggested that a 10% increase in equity would be appropriate.

On Motion duly made and passed the Committee agreed that such an equity adjustment should not be made.

3. The allowable to gas wells in the Medrano Pool should be reduced to a reservoir volumetric equivalence to the oil allowable.

On Motion duly made and passed the Committee adopted [fol. 159] the suggestion and made a request of the Gulf Oil Corporation to file an application for hearing seeking to accomplish such a reduction in the gas well allowable.

4. The division of equity as between Palmer Oil Company and Gulf Oil Corporation (Tracts 30 and 31) be withdrawn from the plan and the equity distribution be combined and given to the tract, subject finally to whatever settlement Palmer and Gulf ultimately arrive at in respect to the division of the equity of that tract.

The Committee favored such an amendment to the Unit Application but final action was postponed until the next meeting of the Operators.

The meeting adjourned at 12:00 noon until 10:00 A.M. Thursday, April 17 when the report of the Engineering and Geological Committees would be received.

Respectfully submitted, (Signed) H. H. Kaveler,
Acting Chairman.

Plugging Record

Mail to Oklahoma Corporation Commission, Oil and Gas Conservation Department, Oklahoma City, Oklahoma.

Notice: All questions on this form must be satisfactorily answered.

Company Operating: Indian Territory Illuminating Oil Co.

Office Address: Box 1251, Bartlesville, Oklahoma.

County: Caddo, Sec. 29, Twp. 6N, Range 10W.

Location in Section: ¼ West Side Cement Field.

Farm Name: Community Darby, Well No. 1, Field:

Character of Well (whether oil, gas or dry) *Dry.*

Commenced Plugging: Jan. 11, 1938. Finished: March 1, 1938. Total Depth: 6900'.

Was permission obtained from the Corporation Commission or its agents before plugging was commenced: U.S.G.S.

Name of Conservation Officer who supervised plugging of this well: Mr. R. W. King.

Show depth and thickness of all fresh water, ~~oil and~~ gas formations.

Sand or Zone Records				Casing Records		
Formation	Content	From	To	Size	Put In	Pulled Out
Not available				13-3/8"	290'	None
				9-5/8"	4965'	1500'
				6-5/8"	6758'	4016'

Describe in detail the manner in which the well was plugged, indicating where the mud fluid was placed and the methods used in introducing it into the hole. If cement or other plugs were used, state the character of same and depth placed:

[fol. 161] Work commenced January 11 and completed March 1, 1938. Set and cemented 6⅝" OD, 24#, 10 Thd. standard seamless steel casing at 6706' with 1,100 sacks cement. Drilled cement plug to 6652'. Perforated 6⅝" casing with 48 holes from 6560' to 6650'. Result: Approximately 6 bbls. of water per hour, no show of oil or gas. Set Lane Wells bridging plug at 6480'. Plug would not hold.

Ran second Lane-Wells brid-ing plug and set at 6435'. Dumped 6 sacks of cement to 6407' and swabbed to cement plug. *Tested dry.*

Perforated 6 5/9" casing from 6055' to 6100' with 89 holes. Result: approximately 3.6 bbls. of water per hr., trace of dead oil, no gas showing. Set a Lane-Wells brid-ing plug at 5800' and dumped 6 sacks of cement to 5765'. *Tested dry.*

Perforated 6⅝" casing from 5470' to 5498', with 13 holes. Result: 49 bbls. of water per hr., no oil or gas showing. Set Lane-Wells bridging plug at 5450' and dumped 6 sacks of cement to 5410'. *Tested dry.*

Perforated 6⅝" casing from 5330' to 5346' with 10 holes. Results: 54 bbls. water per hr., no show of oil or gas. Set Lane-Wells bridging plug at 5300' and dumped 6 sacks of cement to 5252'. *Tested dry.*

Perforated 6⅝" casing from 5040' to 5045' with 5 holes. Results: 63.6 bbls. of water per hr., no oil or gas showing. Set plug at 4900', filled hole with rock to 4890' and dumped 6 sacks of cement to 4850'. Shot off and pulled 4016' of 6⅝" casing. Set plug at 4002' and dumped 6 sacks of cement to 3990'.

[fol. 162] Perforated 9⅝" from 3480' to 3507' with 19 holes. Results: 15.6 bbls. of water per hr., *with no show of oil or gas.* Set a wood plug at 3517' and dumped rock to 3508' and cement to 3459'. Shot off and pulled 1500' of 9⅝" casing, keeping the hole filled with mud while pulling. Filled hole with mud and capped with 3 sacks of cement.

W. R. King, Duncan, Oklahoma, Conservation Officer, supervised plugging.

The Law requires that adjacent lease, royalty and land-owners be notified; give their names with their addresses below:

No offset operators.

Received Mar. 16, 1938. Corporation Commission Conservation Dept.

Remarks: Why plugged? *Dry hole.*

Correspondence regarding this well should be addressed to:

Indian Territory Illuminating Oil Company.

Box #1251—Bartlesville, Oklahoma.

I, the undersigned, being first duly sworn upon oath, state that this well record is true, correct and complete according to the records of this office and to the best of my knowledge and belief.

(Signed) J. L. Turner, Chief Clerk, Name and title of representative of company, Prod. & Eng. Div'ns.

Subscribed and sworn to before me this the 14th day of March, 1938. My Commission expires: July 11, 1939. (Signed) Emmet Ely, Notary Public. (Seal.)

[fol. 163] EXHIBIT 78

Plugging Record

Mail to Oklahoma Corporation Commission, Oil and Gas Conservation Department, Oklahoma City, Oklahoma.

Notice: All questions on this form must be satisfactorily answered.

Company operating: Ray Stephens, Incorporated.

Office Address: 1716 First National Building, Okla. City, Okla.

County: Caddo, Sec. 28, Twp. 6 North, Range 10 West.

Location in Section: SW¼ SE¼ NW¼.

Farm Name: Brown, Well No. 1, Field: Cement.

Character of Well (whether oil, gas or dry) Dry.

Commenced Plugging: Aug. 7, 1940. Finished: August 8th, 1940.

Total Depth: 5951.

Was permission obtained from the Corporation Commission or its agents before plugging was commenced: Yes.

Name of Conservation Officer who was supervising plugging of this well: Fencher, Duncan, Okla.

Name of producing sand: None.

Casing Records

Size	Put In	Pulled Out
16" OD	297' 8"	None
9-5/8"	3842	160'

Describe in detail the manner in which the well was plugged, indicating where the mud fluid was placed and

the methods used in introducing it into the hole. If cement or other plugs were used, state the character of same and depth placed:

[fol. 164] From bottom to 3842' heavy mud pumped in hole. 9⅝" cemented with 700 sacks cement. Inasmuch as recovery was not below the bottom of the surface pipe, the hole was filled full of heavy mud and cement plug run on top of 16' and welded shut. Does the above conform strictly to the oil and gas regulations: Yes.

Received Oct. 1, 1940. Conservation Dept. Corporation Commission.

Remarks: Why Plugged? Dry. If abandoned oil or gas well, state amount and date of last production: None.

Correspondence regarding this well should be addressed to: Ray Stephens, Incorporated, 1716 First National Building, Oklahoma City, Oklahoma.

I, the undersigned, being first duly sworn upon oath, state that this well record is true, correct and complete according to the records of this office and to the best of my knowledge and belief.

Signed: C. W. Stephens, Supt., Name & Title of Representative of Company.

Subscribed and sworn to before me this 30th day of September, 1940. My Commission expires: August 11, 1942. Signed: Clariece Anderson, Notary Public. (Seal.)

[fol. 165] EXHIBIT 92

March 31, 1944.

In re: Application for Exception to P.A.O. No. 11 West Cement Medrano Oil Pool.

Petroleum Administration for War, District #2, Blum Building, Chicago 5, Illinois.

Attention of Mr. C. C. Brown, Director of Production

Gentlemen:

In accordance with paragraph (1) of Petroleum Administrative Order No. 11, as amended, a P.A.W. Form 3 appli-

cation is hereby submitted, requesting an exception to said order, to permit additional development in the Medrano Oil Sand of the West Cement Field, Caddo County, Oklahoma.

1. Name and address of applicant: Phillips Petroleum Company, Bartlesville, Oklahoma.

2. Location of proposed operations: This application relates to the Medrano sand oil reservoir of the West Cement Field, Caddo County, Oklahoma. The limits of Medrano Sand oil production are now reasonably well defined in most of the field except in that area to the southeast of the NW/4 Section 1-5N-10W. The data available from present development does not establish the stratigraphy of the southeast end of the reservoir. Attached hereto and [fol. 166] marked Exhibit A, is a map which shows the area covered by this application outlined in red.

3. Nature and description of proposed operations. Applicant proposes that the present drilling restrictions applicable to the West Cement Medrano Sand Oil reservoir, under the exception to P.A.O. No. 11, Case No. 4803, be modified so as to allow a 20 acre density flexible plan of development. With this objective in mind, it is requested that the present pool-wide order be revised sufficiently to permit the drilling of a maximum of two oil wells on each quarter-quarter section (40 acres), and with only the following limitations being placed on the location of the wells:

> (a) Each such well to be at least 330′ from every lease line, property line, or subdivision line which separates unconsolidated property interests and from every boundary of the quarter-quarter section upon which such well is located, and (b) Each such well be drilled at least 660′ from every other drilling or producible Medrano Sand oil well.

This plan of spacing will naturally give the operator much latitude in the location of wells for the establishment of the most effective drainage pattern on each lease. How- [fol. 167] ever, it is felt that even with these liberal restrictions, the average operator will probably confine the actual location of his wells to the approximate centers of the ten acre quarters contained in each 40-acre unit, as illustrated on Exhibit A.

4. Point of exception: The present exception under P.A.O.-11, case No. 4803, dated August 19, 1943, provided for the drilling of only one well to each quarter-quarter section in the Medrano Sand oil reservoir with three optional locations permitted as follows:

(a) Within 100′ of the center of the NE 10 acres, or

(b) Within 100′ of the center of the SW 10 acres, or

(c) Within 150′ of the center of a quarter-quarter section.

A further restriction in the present order contrary to the proposal, as set out in 3 above, is the requirement that each well must be at least 900′ from every other drilling or producible Medrano Sand oil well spudded subsequent to the effective date of the order.

5. Lease and Reservoir data: On August 4, 1943, a group of interested operators, including applicant, filed a joint application (case No. 4803) with the Petroleum Administration for War. At that time all available geological and [fol. 168] reservoir information was presented. Since then, however, much additional information has been revealed by subsequent drilling. Such supplemental data is now presented on Exhibits A, B, C, and D.

From Exhibit A it should be noted that the interpretation of the general geological features have not been changed greatly except for the now proven existence of cross-faults, of which there is evidence of at least four. These cross-faults are known to exist both from pressure and stratigraphic data. Such faults have various displacements and the one traversing the S/2 of Section 35-6N-10W is known to have a displacement of some 500 to 700 feet. The two wells drilled in the fault zone missed the Medrano Sand entirely. The strike and displacement of the other three faults is not so well established but the interpretation here presented readily accounts for the difference in reservoir pressures.

The portion of the pool covered by this application is divided into four fault-segments, each of which has varying characteristics and varying degrees of exploitation. To facilitate presentation of data, these fault-segments have

been designated as segments A, B, C, and D, and the limits of each shown on Exhibit A.

The gas/oil contact is now considered to be approximately [fol. 169] minus 4000′ while the oil/water contact has been established in the Amerada #1 Hartshorn (NE of Section 2-5N-10W) at 4660-70 feet and the Gulf #4 Sherritt (NE of Section 33-6N-10W) at 4706′. From this evidence, Exhibit A shows the boundary lines of the anticipated oil productive area and also a representative cross-section illustrating the relative position of gas, oil and water. The two inside contours represents the extent of the reservoir that is completely saturated with oil from the top to the base of the Medrano Sand section. It should be noted that the fully saturated oil band only averages about one fourth mile in width and in this type reservoir it is obvious that wells must be located in this relatively narrow oil column for the most efficient operation. In Section 34-6N-10W there is nearly 200′ of saturated sand, but the sand thins out both to the east and west of this point. At present, there is no evidence of an effective water drive.

At present there are 20 completed producers and 5 drilling wells in the Medrano Oil Pool. In the four segments covered by this application it is estimated that 984 acres are proven for oil production and Exhibit E, attached, shows an estimate of oil reserves based on a flexible 20-acre plan of development. It is the applicant's firm belief that [fol. 170] ultimate recoveries will be considerably smaller than the amount set out on Exhibit E if present restrictions remain in effect.

6. Supporting data: The reasons for 20-acre well densities and greater flexibility in the pattern of development of this reservoir were presented in the original application, case No. 4803 but for added emphasis, the following points are stressed:

(a) That estimated average recoveries of 29,100 barrels per acre (Exhibit E) amply justifies 20-acre development.

(b) That the Medrano Sand Oil Zone in the West Cement Field is very unusual and different structurally from most other pools in that it is a narrow oil column

around the edge of a large gas cap on a steep dipping formation.

(c) That it is well recognized that on such a structure, it is not only desirable but is also necessary to efficient and economical development that great flexibility, in preference to a uniform surface pattern of spacing, will result in more proper development and in better drainage.

(d) That the peculiarity of the structure in the Medrano Sand Oil Zone presents a problem quite similar to the Piercement-Dome structures of the Gulf Coast Region where the P.A.W. has properly seen fit to grant much greater flexibility than is afforded [fol. 171] under the present rules in the Medrano Sand Oil Zone. Like flexibility in the location of wells in this pool will doubtless eliminate the drilling of many dry or non-commercial wells and will certainly result in a greater ultimate recovery of oil.

(e) That the program here suggested and recommended will, in the opinion of the applicant, definitely insure the most effective utilization of critical materials and will result in a greater amount of much needed crude oil being produced in the immediate future, and will also promote a greater ultimate recovery from the reservoir.

A copy of this application is being mailed to each interested operator with a request that they individually express to P.A.W. their position on this application.

It is submitted that the proposed development is necessary and appropriate in the public interest and to promote the war effort. Applicant, therefore, respectfully requests authorization to use material required for developing the West Cement Medrano Oil Pool as outlined in Section 3 above.

Certification

The undersigned hereby certifies to the Petroleum Administrator for War that:

(a) The foregoing application has been executed on behalf of and by authority of the above named applicants; [fol. 172] (b) The facts stated in the foregoing applica-

tion are, to the best of my knowledge and belief, true and correct;

(e) If the authorization hereby applied for is granted, use of material existing in stock or obtained by means of any applicable allotment number or preference rating will be made solely in accordance with the terms of the authorization which has been granted, and with the provisions of Petroleum Administrative Order No. 11, as amended from time to time.

Yours very truly, (Signed) C. P. Dimit, Vice President in Charge of Production.

NOTICE

C. D. No. 1308

Before the Corporation Commission of the State of Oklahoma

In the Matter of the Petition for the Creation of the WEST CEMENT MEDRANO UNIT Having for Its Purpose the Unitized Management, Operation and Further Development of the WEST CEMENT MEDRANO Common Source of Supply of Oil and Gas in Caddo County, Oklahoma; the Defining of the Unit Area Thereof and the Prescribing of the Plan of Unitization Applicable to Such Unit and Unit Area

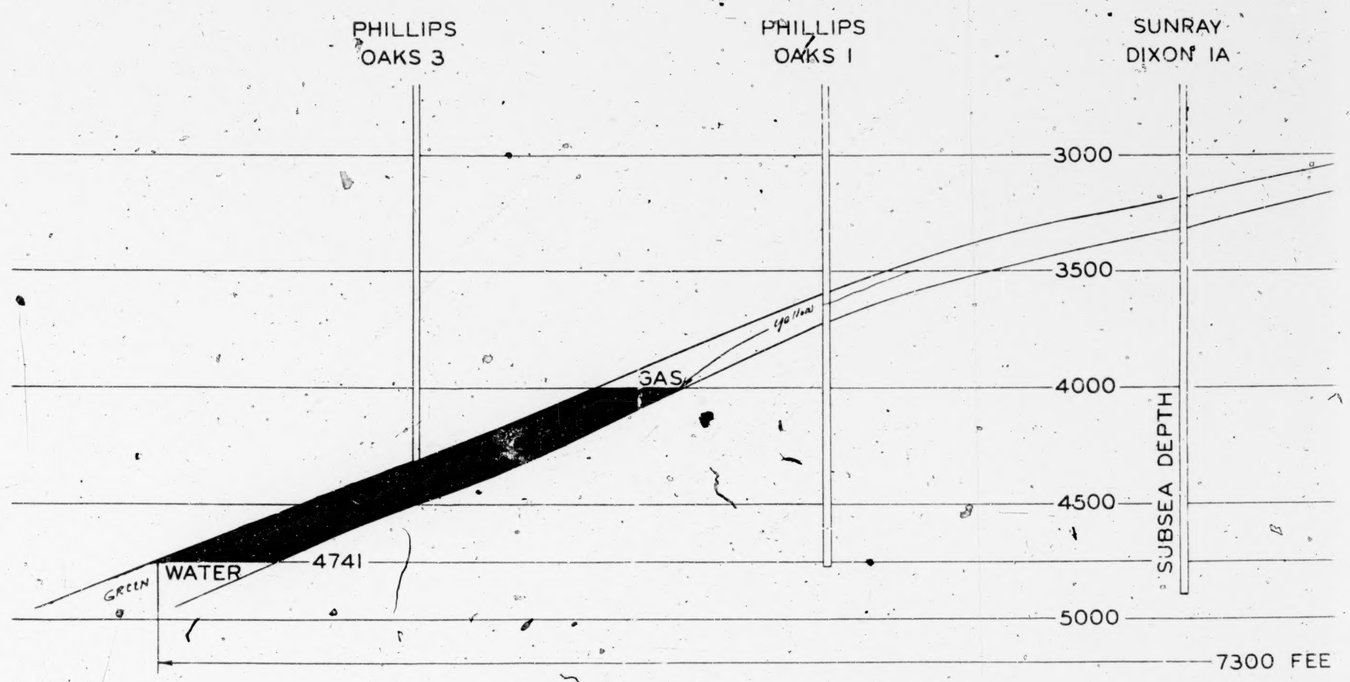
The State of Oklahoma to all persons, firms, corporations, partnerships, trusts, trustees, guardians, executors, ad-

ministrators, fiduciaries of every kind, the State of Oklahoma and all agencies and subdivisions thereof and all other beings or entities owning oil and gas rights or otherwise interested in the common source of supply of oil and gas known as the West Cement Medrano Pool underlying the hereinafter described lands located in Caddo County, Oklahoma, or in the production, handling or marketing of the oil and gas that may be located therein or produced therefrom, or having the right to share and participate, either directly or indirectly, in the benefits of such production:

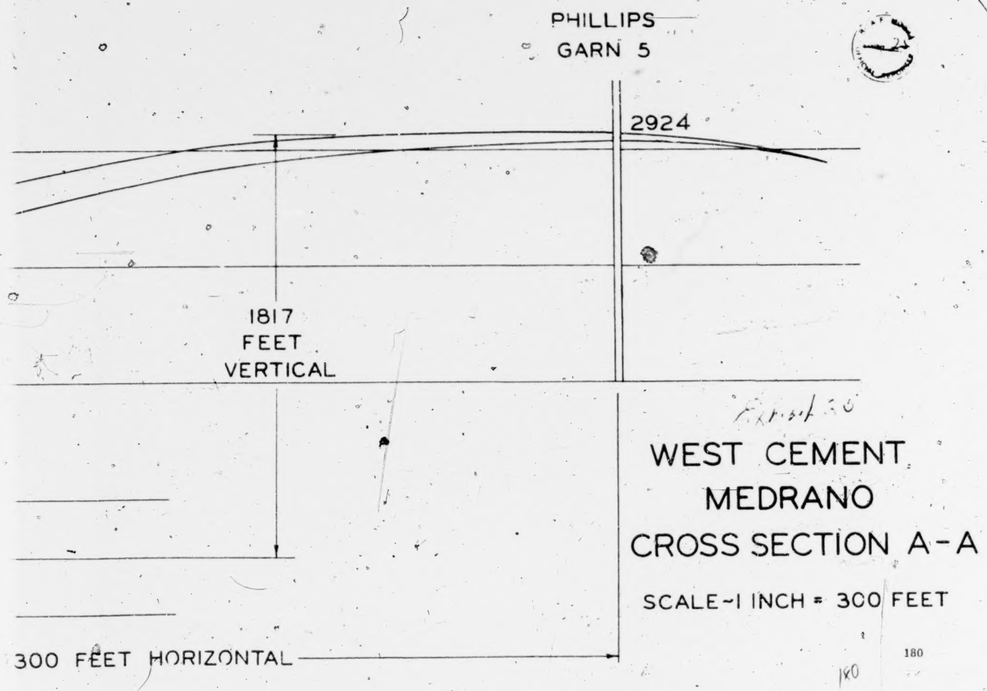
Notice is hereby given that Amerada Petroleum Corporation, et al., Lessees of record of more than 51% of the area of the aforesaid common source of supply of oil and gas, did on the 18th day of July, 1947, file with the Corporation Commission of the State of Oklahoma an amendment to the original petition filed in said cause by amending the [fol. 179] proposed plan of unitization attached thereto in the particulars set forth in said amendment.

That said amendment has been set for hearing before the Corporation Commission at its court room in the State Capitol Office Building at Oklahoma City, Oklahoma, at 10:00 o'clock A. M. on the 29th day of July, 1947.

That all those to whom this notice is addressed, and any and all other persons who claim that they will be affected by the amendment, or the petition as amended, shall have the right to be present and participate at said hearing, and shall be granted the opportunity at said time and place to offer evidence and be heard in support of, or in opposition to, the amendment or petition as amended, and in regard to any other matter or thing pertaining to said amendment or petition as amended.



Corporation Commission of Oklahoma, by Reford Bond, Chairman; Ray C. Jones, Commissioner. (Seal.)



Tom McMurray, Secretary.

[fol. 181] EXHIBIT 34

This Agreement made in duplicate this 6th day of September, 1938, between Gulf Oil Corporation, a Pennsylvania corporation, with offices at Tulsa, Oklahoma, first party, hereinafter called "Gulf", and The Palmer Oil Corporation, of Wichita, Kansas, second party, hereinafter called "Palmer",

Witnesseth, that

Whereas, Gulf is the owner and holder of an oil and gas mining lease dated February 12, 1936, executed by Paul Sterba and Gertrude K. Sterba, his wife, and Helen Catherine Jackson, nee Sterba, and Clifford Jackson, her husband, as lessors, to Chris Pearson, as lessee, covering the

> Southwest Quarter (SW¼) of Section 35, Township 6 North, Range 10 West, Caddo County, Oklahoma,

and filed for record in the office of the County Clerk of Caddo County, Oklahoma, February 26, 1936 at 11:00 o'clock A. M., and recorded in book 75 at page 316; and,

Whereas, Gulf has agreed to assign the lease without covenants of warranty to Palmer and the oil, gas and other minerals above the depth of 6000 feet, retaining an overriding royalty, in consideration of the covenants and promises and agreements hereinafter contained:

Now, therefore, in consideration of the premises and the mutual covenants and agreements hereinafter set out, it is agreed as follows, to-wit:

1. Palmer agrees within thirty (30) days from the date of the execution of this contract to commence drilling operations for oil and gas, or either of them, in the center of the

> Northeast Quarter (NE¼) of the Northeast Quarter (NE¼) of the Southwest Quarter (SW¼) of Section 35, Township 6 North, Range 10 West, Caddo County, Oklahoma,

and with diligence and dispatch and at its sole cost and expense drill said well to a total depth of six thousand (6000) feet unless oil and gas, or either of them, or igneous rock or other impenetrable formation is encountered at a lesser depth.

2. During drilling operations, Palmer shall at all times afford Gulf free access to said well and the records thereof, and once each week shall forward to W. R. Thawley, P. O. Box 661, Tulsa, Oklahoma, written report showing all formations encountered, including the depth thereof, and [fol. 182] upon request and in receptacles furnished by Gulf, send to W. R. Thawley samples or cuttings of formations and waters penetrated. In event said well shall be completed to a dry hole, Palmer shall forthwith measure the depth of said well by running a steel measuring line therein, and shall notify Gulf of its intention to measure said well in time for Gulf to have a representative at the well to witness the measurement thereof. Upon completion of said well Palmer shall furnish Gulf with complete certified log thereof and samples and cuttings of formations saved in the course of drilling, and such other information disclosed by said drilling as may be demanded by Gulf.

3. In event Palmer shall fail to commence and complete the aforesaid well, or cease drilling operations on the same for a period of more than ten (10) days, unless such delay is due to the Act of God or the public enemy, then all rights of Palmer under this agreement shall forthwith terminate.

4. If the aforesaid well shall be drilled and shall be found dry, Palmer shall promptly plug the same at its sole cost and expense and retain all salvage from said well as his own, said work to be performed in compliance with the laws of the State of Oklahoma and the Rules and Regulations of any regulatory body having jurisdiction in the State of Oklahoma.

5. Before plugging any well and abandoning the same, Palmer shall give notice of such intention to Gulf at least ten (10) days before the date on which said well shall be plugged and abandoned, during which ten (10) days Gulf shall have the right, but shall not be obligated so to do, to take over said hole by paying Palmer the cost of drilling such hole, plus the cost of the equipment in the well as reflected by the books and records of Palmer, and thereupon such hole and equipment therein shall become the property of Gulf, it being understood and agreed that in event Gulf takes over the hole, Palmer shall deliver the hole to Gulf free, clear and discharged of all encumbrances, and in event

there are any debts or claims unpaid, Gulf shall have the power and authority to pay such indebtedness out of the purchase price of such hole, accounting to Palmer for the balance due, if any.

6. Palmer agrees to comply with the Workmen's Compensation Laws of the State of Oklahoma and furnish satisfactory evidence of such compliance, and further agrees to save harmless and indemnify Gulf from and on account of all liabilities of every kind or character either to person or [fol. 183] property incurred during the performance of this agreement.

7. Gulf further promises and agrees, upon full compliance with all the covenants, conditions and agreements herein contained, and completion of the test well to the depth of six thousand (6000) feet, unless oil and gas, or either of them, are found in commercial quantities at a lesser depth, or igneous rock or other impenetrable formation is encountered at a lesser depth, and upon satisfactory proof that all debts have been paid, it will assign the oil and gas mining lease hereinabove described, without covenants of warranty, insofar as it covers the oil, gas and other minerals above the depth of six thousand (6000) feet, retaining and reserving the oil and gas and other minerals below the depth of six thousand (6000) feet, and also retaining an overriding royalty of 1/16th of the 7/8ths working interest in the oil produced when the total daily production from the leased premises is fifty (50) barrels or less per day, and 1/8th of the 7/8ths working interest in the oil produced, saved and marketed from the premises when the total daily gross oil produced from the leased premises exceeds fifty (50) barrels per day; also reserving and retaining an overriding royalty of 1/8th of the 7/8ths working interest in the gas and casinghead gas produced, saved and marketed or used off the premises, which overriding royalty is to be paid in the following manner, to-wit:

Palmer agrees to run the oil produced, saved and marketed from the premises to the pipe line or pipe lines to which it may connect the well or wells under division orders placing to the credit of the Gulf 1/16th of the 7/8ths working interest in the oil produced, saved and marketed from the premises, when the total gross oil produced from the leased premises is fifty (50) barrels or less per day, and

1/8th of the 7/8ths working interest in the oil produced, saved and marketed from the premises during the time the total gross oil produced, saved and marketed from the premises exceeds fifty (50) barrels per day, and to pay Gulf 1/8th of the proceeds of the 7/8ths working interest in the gas and casinghead gas produced, saved and marketed from the premises, payment to be made on the 20th day of each month for the gas and casinghead gas produced and sold from the premises or used off the premises during the preceding month. The overriding royalty hereinabove shall be in addition to the royalty provided in the lease and payable to the lessor or their assigns.

[fol. 184] The daily production shall be ascertained and determined, for the purposes of this contract, by taking the gross pipe line runs for the month and dividing into the same the number of days in such month, and the quotient shall be considered the total daily production from the leased premises for such month. If the test well comes into production after the first of any month, the daily production for such month shall be ascertained and determined by taking the pipe line runs for the number of days the oil is run for such month and dividing into the same the number of such days, and the quotient shall be the daily production for such month for such portion of the month.

8. Palmer agrees to furnish Gulf copies of daily run tickets, to be mailed to Gulf Oil Corporation, P. O. Box 661, Tulsa, Oklahoma, once each week, enclosing the daily run tickets for the preceding weeks, and, at the close of the month and as soon as obtainable, production tickets for the entire month. Palmer further agrees to furnish Gulf copies of all tank tables.

9. Palmer promises and agrees to produce and market each month the total allowable production for such month and if for any reason Palmer fails, neglects or refuses to produce and market such allowable, Palmer shall promptly advise Gulf in writing, furnishing in detail the reasons for not producing and running the allowable for such month.

10. After the execution of the foregoing assignment, Palmer agrees to perform all of the covenants, express and implied, in the lease insofar as oil and gas development or offsets of oil and gas wells are concerned, and to save

harmless Gulf from any claims on the part of the lessors or any of them, or royalty owners on account of any alleged failure to perform any such obligation, and further agrees to defend any suits that may be filed against Gulf on account of such failure, and to pay any judgment that may be obtained against Gulf, and in event Palmer shall fail to offset any paying oil or gas well, Gulf shall have the right and option, but shall not be obligated so to do, it being purely optional with it, to drill such well if Palmer shall fail to commence actual operations on the land for the drilling of such well or wells within forty-five (45) days after demand in writing by Gulf to Palmer, and shall thereafter diligently continue the drilling of such well, and in such case, if Gulf drills such well or wells, it shall have the sole right in such leases as to each well drilled, including a plot [fol. 185] of ground in square form containing ten (10) acres, the center of which shall be the well.

11. It is further agreed that if at any time Palmer desires to abandon any oil or gas well drilled by it on the leased premises, or desires to abandon the entire leased premises, Gulf shall be given (30) days' notice of such intention and during such 30 days Gulf shall have the option to take over such well or wells or Palmer's interest in the entire leased premises by paying Palmer the salvage value of the equipment in the well or wells, and/or the leased premises and, upon Gulf exercising such option, Palmer shall assign to Gulf its interest in the leased premises as to the well or wells taken over or the entire leased premises, as the case may be, free, clear and discharged of all liens or encumbrances of whatsoever kind or nature. In event Gulf does not elect to take over any well or wells Palmer has drilled on the leased premises and/or the entire leased premises, Gulf shall be entitled, if it so demands, to a re-assignment of the lease free, clear and discharged of all liens and encumbrances and Palmer shall be entitles to the salvage value of the equipment placed thereon; Provided, in event Gulf shall take over a well or wells as herein provided and not the entire leased premises, the re-assignment shall extend only to a tract of land surrounding each well containing ten (10) acres in a square form, the center of which shall be the well taken over.

12. It is further agreed between the parties that Palmer will at all times keep said lease free, clear and discharged of all liens, charges or encumbrances of whatsoever kind or character and protect and save harmless and indemnify Gulf on account of any loss, damage, or liability it may suffer or sustain, or become subject to, on account of the operation of the premises by Palmer.

13. It is further agreed that Palmer shall not assign or release the lease, or any interest therein, without procuring the consent of Gulf in writing.

14. This contract is entered into in accordance with and shall at all times be subject to the laws of the State of Oklahoma, and the rules and regulations of the Corporation Commission, the laws of the United States, and the rules and regulatory orders of any Board, Federal or State, having jurisdiction in the premises.

[fol. 186] 15. All notices necessary to be given under the terms of this agreement shall be in writing, by registered mail, addressed to the Gulf Oil Corporation, P. O. Box 661, Tulsa, Oklahoma, and The Palmer Oil Corporation, Wichita, Kansas.

Witness the signatures of the parties hereto the day and year first above written.

Gulf Oil Corporation, by Rush Greenslade, Vice-President.

Attest: D. B. Catterlin, Assistant Secretary.

The Palmer Oil Corporation, by Tom Palmer, President.

Attest: Otto H. Schnepel, Secretary.

[fol. 187] STATE OF OKLAHOMA,
County of Tulsa, ss:

Before me, the undersigned notary public in and for said county and state, on this 7th day of September, 1938, personally appeared Rush Greenslade, to me known to be the identical person who subscribed the name of the Gulf Oil Corporation, a corporation, the maker thereof, to the within

and foregoing instrument as its Vice President, and acknowledged to me that he executed the same as his free and voluntary act and deed and as the free and voluntary act and deed of such corporation, for the uses and purposes therein set forth.

Witness my hand and seal the day and year last above written.

E. G. Grear, Notary Public.

My commission expires Dec. 31, 1941.

STATE OF KANSAS,
County of Sedgwick, ss:

Before me the undersigned notary public in and for said county and state, on this 6th day of September, 1938, personally appeared Tony Palmer, to me known to be the identical person who subscribed the name of The Palmer Oil Corporation, a corporation, the maker thereof, to the within and foregoing instrument as its President, and acknowledged to me that he executed the same as his free and voluntary act and deed and as the free and voluntary act and deed of such corporation, for the uses and purposes therein set forth.

Witness my hand and seal the day and year last above written.

Jewell Thompson, Notary Public.

My commission expires March 3, 1941.

OIL, GAS AND MINERAL LEASE

THIS AGREEMENT made this 17th day of April 1941 between Lucy G.Hartshorn,a widow;Eula M.Thom & Jack B.E.Thom,her husband;Hazel R.Snavely,a widow; Mabel M.Hartshorn,a single person; & Mona F.Baldwin,nee Hartshorn, & Don E.Baldwin,her husband

Lessor (whether one or more), and Phillips Petroleum Company Lessee, WITNESSETH:

1. Lessor in consideration of One and No/100---------- Dollars ($1.00,) in hand paid, of the royalties herein provided, and of the agreements of Lessee herein contained, hereby grants, leases and lets exclusively unto Lessee for the purpose of investigating, exploring, prospecting, drilling and mining for and producing oil, gas and all other minerals, laying pipe lines, building tanks, power stations, telephone lines and other structures thereon to produce, save, take care of, treat, transport and own said products, and housing its employees, the following described land in Caddo County, Oklahoma, to wit:

NE NE (Lots 1 & 2) Section 2-5N-10W,

and containing 80 acres, more or less. In the event a resurvey of said lands shall reveal the existence of excess and/or vacant lands lying adjacent to the lands above described and the lessor, his heirs, or assigns, shall, by virtue of his ownership of the lands above described, have preference right to acquire said excess and/or vacant lands, then in that event this lease shall cover and include all such excess and/or vacant lands which the Lessor, his heirs, or assigns, shall have the preference right to acquire by virtue of his ownership of the lands above described as and when acquired by the lessor; and the lessee shall pay the lessor for such excess and/or vacant lands at the same rate per acre as the cash consideration paid for the acreage hereinabove mentioned.

2. Subject to the other provisions herein contained, this lease shall be for a term of ~~ten (10) years~~ July 27 1946 (called "primary term") and as long thereafter as oil, gas or other mineral is produced from said land hereunder.

3. The royalties to be paid Lessor are: (a) on oil, one-eighth of that produced and saved from said land, the same to be delivered at the wells or to the credit of Lessor into the pipe line to which the wells may be connected; Lessee may from time to time purchase any royalty oil in its possession, paying the market price thereof, prevailing for the field where produced on the date of purchase, (b) on gas, including casinghead gas or other gaseous substance, produced from said land and sold or used off the premises or in the manufacture of gasoline or other product therefrom, the market value at the well of one-eighth of the gas sold or used, provided that on gas sold at the wells the royalty shall be one-eighth of the amount realized from such sale, where gas from a well producing gas only is not sold or used, Lessee may pay as royalty $30.00 per well per year, and upon such payment it will be considered that gas is being produced within the meaning of Paragraph 2 hereof, and (c) all other minerals mined and marketed, one-tenth either in kind or value at the well or mine, at Lessee's election, except that on sulphur the royalty shall be fifty cents (50c) per long ton. Lessor to have gas free of cost from any such well for all stoves and all inside lights in the principal dwelling on said land during the same time, by making lessee's own connections with the well at lessee's own risk and expense. Lessee shall have free use of oil, gas, coal, wood and water from said land, except water from lessor's wells, for all operations hereunder, and the royalty on oil, gas and coal shall be computed after deducting any so used.

4. If operations for drilling are not commenced on said land on or before ~~the first anniversary~~ July 27 1942 this lease shall then terminate as to both parties, unless on or before such ~~anniversary~~ date Lessee shall pay or tender to Lessor or to the credit of Lessor in Anadarko Bank & Trust Company Bank at Anadarko, Oklahoma, (which bank and its successors are Lessor's agent and shall continue as the depository for all rentals payable hereunder regardless of changes in ownership of said land or the rentals) the sum of Eighty and No/100---------- Dollars ($80.00,), (herein called rentals), which shall cover the privilege of deferring commencement of drilling operations for a period of twelve (12) months. In like manner and upon like payments or tenders annually the commencement of drilling operations may be further deferred for successive periods of twelve (12) months each during the primary term. The payment or tender of rental may be made by the check or draft of Lessee mailed or delivered to said bank on or before such date of payment. If such bank (or any successor bank) should fail, liquidate or be succeeded by another bank, or for any reason fail or refuse to accept rental, Lessee shall not be held in default for failure to make such payment or tender of rental until thirty (30) days after Lessor shall deliver to Lessee a proper recordable instrument, naming another bank as agent to receive such payments or tenders. The down cash payment is consideration for this lease according to its terms and shall not be allocated as mere rental for a period. Lessee may at any time execute and deliver to Lessor or to the depository above named or place of record a release or releases covering any portion or portions of the above described premises and thereby surrender this lease as to such portion or portions and be relieved of all obligations as to the acreage surrendered, and thereafter the rentals payable hereunder shall be reduced in the proportion that the acreage covered hereby is reduced by said release or releases.

5. If prior to discovery of oil or gas on said land Lessee should drill a dry hole or holes thereon, or if after discovery of oil or gas the production thereof should cease from any cause, this lease shall not terminate if Lessee commences additional drilling or re-working operations within sixty (60) days thereafter or (if it be within the primary term) commences or resumes the payment or tender of rentals on or before the rental paying date next ensuing after the expiration of three months from date of completion of dry hole or cessation of production. If at the expiration of the primary term oil, gas or other mineral is not being produced on said land but Lessee is then engaged in drilling or re-working operations thereon, the lease shall remain in force so long as operations are prosecuted with no cessation of more than thirty (30) consecutive days, and if they result in the production of oil, gas or other minerals so long thereafter as oil, gas or other mineral is produced from said land.

6. Lessee shall have the right at any time during or after the expiration of this lease to remove all property and fixtures placed by Lessee on said land, including the right to draw and remove all casing without the consent of Lessor. When required by Lessor, Lessee will bury pipe lines below ordinary plow depth.

7. The Lessee agrees to promptly pay to the owner thereof any damages to crops, or improvements, caused by or resulting from any operations of Lessee.

8. The rights of either party hereunder may be assigned in whole or in part and the provisions hereof shall extend to the heirs, successors and assigns, but no change or division in ownership of the land, rentals, or royalties, however accomplished, shall operate to enlarge the obligations or diminish the rights of Lessee. No sale or assignment by Lessor shall be binding on Lessee until Lessee shall be furnished with a certified copy of recorded instrument evidencing same. In event of assignment of this lease as to a segregated portion of said land, the rentals payable hereunder shall be apportionable as between the several leasehold owners ratably according to the surface area of each, and default in rental payment by one shall not affect the rights of other leasehold owners hereunder. If any one or more parties become entitled to royalty hereunder, Lessee may withhold payment thereof unless and until furnished with a recordable instrument executed by all such parties designating an agent to receive payment for all.

9. Lessee is hereby given the right and power to pool or combine the acreage covered by this lease or any portion thereof with other land, lease or leases in the immediate vicinity thereof when, in Lessee's judgment it is necessary or advisable to do so in order properly to develop and operate said premises in compliance with the spacing rules of any lawful authority, or when to do so would, in the judgment of Lessee, promote the conservation of the oil and gas in and under and that may be produced from said premises, such pooling to be into a unit or units not exceeding 40 acres each, except that in cases where it may be necessary or convenient to conform a unit to survey subdivisions such unit may contain not to exceed 41 acres. Lessee shall execute in writing an instrument identifying and describing the pooled acreage. The entire acreage so pooled into a tract or unit shall be treated, for all purposes except the payment of royalties on production from the pooled unit, as if it were included in this lease. If production is found on the pooled acreage, it shall be treated as if production is had from this lease, whether the well or wells be located on the premises covered by this lease or not. In lieu of the royalties elsewhere herein specified, Lessor shall receive on production from a unit so pooled only such portion of the royalty stipulated herein as the amount of his acreage placed in the unit or his royalty interest therein bears to the total acreage so pooled in the particular unit involved. Provided, Lessee shall be under no obligation whatsoever, express or implied, to drill more than one well to each such unitized tract, regardless of whom, where or by whom offset wells may be drilled.

10. The breach by Lessee of any obligation arising hereunder shall not work a forfeiture or termination of this lease nor cause a termination or reversion of the estate created hereby, nor be grounds for cancellation hereof, in whole or in part, save as herein expressly provided. If at any time a dispute shall be determined by judicial ascertainment that Lessee is obligated or required to drill a well or wells upon the leased premises or any area pooled or unitized in accordance with the provisions hereof, Lessee shall have ninety days after such judicial determination within which to commence the drilling of such well or wells.

11. Lessor hereby warrants and agrees to defend the title to said land and agrees that Lessee at its option may discharge any tax, mortgage or other lien upon said land and in event Lessee does so, it shall be subrogated to such lien with the right to enforce same and apply rentals and royalties accruing hereunder toward satisfying same. Without impairment of Lessee's rights under the warranty in event of failure of title, it is agreed that if Lessor owns a less interest in the above described land than the entire undivided fee simple estate therein, then the royalties and rentals to be paid Lessor shall be only in the proportion that his interest bears to the whole and undivided fee.

OIL AND GAS LEASE

AGREEMENT, Made and entered into the 4th day of June 1941

by and between Mrs. Margaret F. Holland, a widow,

of Anadarko, Oklahoma, party of the first part, hereinafter called lessor (whether one or more)

and Phillips Petroleum Company party of the second part, hereinafter called lessee.

WITNESSETH, That the said lessor, for and in consideration of One and No/100---------- DOLLARS, cash in hand paid, receipt of which is hereby acknowledged and of the covenants and agreements hereinafter contained on the part of lessee to be paid, kept and performed, has granted, demised, leased and let and by these presents does grant, demise, lease and let unto the said lessee, for the sole and only purpose of mining and operating for oil and gas, and laying pipe lines, and building tanks, powers, stations and structures thereon to produce, save and take care of said products, all that certain tract of land situate in the County of Caddo State of Oklahoma, described as follows, to-wit:

N½ NW¼ (Lots 3 & 4) Section 2-5N-10W,

and containing 80 acres, more or less.

It is agreed that this lease shall remain in force for a term of ending August 5, 1946 and as long thereafter as oil or gas or either of them, is produced from said land by the lessee, or the premises are being developed or operated.

In consideration of the premises the said lessee covenants and agrees:

1st. To deliver to the credit of lessor free of cost, in the pipe line to which he may connect his wells, the equal to one-eighth part of all oil produced and saved from the leased premises.

2d. To pay the lessor one-eighth value of gas from each well where gas only is found, while the same is being used off the premises, and lessor to have gas free of cost from any such well for all stoves and all inside light in the principal dwelling-house on said land during the same time by making his own connections with the wells at his own risk and expense.

3d. To pay lessor for gas produced from any oil well and used off the premises or for the manufacture of casing-head gas one-eighth, at the market price for the gas so used, for the time during which such gas shall be used, said payments to be made Quarterly

If no well be commenced on said land on or before the 6th day of August 1942 this lease shall terminate as to both parties, unless the lessee on or before that date shall pay or tender to the lessor, or to the lessor's credit in the Anadarko Bank and Trust Company Bank at Anadarko, Oklahoma, or its successors, which shall continue as the depository regardless of changes in the ownership of said land, the sum of $80.00 Eighty and No/100---------- DOLLARS, which shall operate as a rental and cover the privilege of deferring the commencement of a well for 12 months from said date. In like manner and upon like payment or tenders the commencement of a well may be further deferred for like period of the same number of months successively. And it is understood and agreed that the consideration first recited herein, the down payment, covers not only the privileges granted to the date when said first rental is payable as aforesaid, but also the lessee's option of extending that period aforesaid, and any and all other rights conferred.

Should the first well drilled on the above described land be a dry hole, then and in that event, if a second well is not commenced on said land within twelve months from the expiration of the last rental period which rental has been paid, this lease shall terminate as to both parties, unless the lessee on or before the expiration of said twelve months shall resume the payment of rentals in the same amount and in the same manner as hereinbefore provided. And it is agreed that upon the resumption of the payment of rentals, as above provided that the last preceding paragraph hereof, governing the payment of rentals and the effect thereof, shall continue in force just as though there had been no interruption in the rental payments.

If said lessor owns a less interest in the above described land than the entire and undivided fee simple estate therein, then the royalties and rentals herein provided shall be paid the lessor only in the proportion which his interests bears to the whole and undivided fee.

Lessee shall have the right to use, free of cost, gas, oil and water produced on said land for its operations thereon, except water from wells of lessor.

When requested by lessor, lessee shall bury its pipe lines below plow depth.

No well shall be drilled nearer than 200 feet to the house or barn now on said premises, without the written consent of the lessor.

Lessee shall pay for damages caused by its operations to growing crops on said land.

Lessee shall have the right at any time to remove all machinery and fixtures placed on said premises, including the right to draw and remove casing.

If the estate of either party hereto is assigned, and the privilege of assigning in whole or in part is expressly allowed—the covenants hereof shall extend to their heirs, executors, administrators, successors or assigns, but no change in the ownership of the land or assignment of rentals or royalties shall be binding on the lessee until after the lessee has been furnished with a written transfer or assignment or a true copy thereof, and it is hereby agreed that in this event this lease shall be assigned as to a part or as to parts of the above described lands and the assignee or assigns of such part or parts shall fail or make default in the payment of the proportionate part of the rents due from him or them, such default shall not operate to defeat or affect this lease in so far as it covers a part or parts of said lands upon which the said lessee or any assignee thereof shall make due payment of said rental.

Lessor hereby warrants and agrees to defend the title to the lands herein described, and agrees that the lessee shall have the right at any time to redeem for lessor, by payment, any mortgages, taxes or other liens on the above described lands, in the event of default of payment by lessor, and be subrogated to the rights of the holder thereof, and lessor hereby agrees that any such payments made by the lessee for the lessor shall be deducted from any amounts of money which may become due the lessor under the terms of this lease.

OIL AND GAS LEASE

COLLECTION as SPECIAL T.C.P. N.B.T.U.S.A. Okla. Prods. Tulsa, Okla.

Agreement, Made and entered into the 12th day of February, 1936 by and between Paul Sterba and wife Gertrude K. Sterba, and Helen Catherine Jackson, nee Sterba, and husband Clifford Jackson, of Kay County & Canadian County, Oklahoma hereinafter called lessor (whether one or more), and Chris Pearson hereinafter called lessee:

Witnesseth: That the said lessor, for and in consideration of One & 00/100 Dollars, cash in hand paid, the receipt of which is hereby acknowledged, and of the covenants and agreements hereinafter contained on part of lessee to be paid, kept and performed, has granted, demised, leased and let and by these presents does grant, demise, lease and let unto the said lessee for the sole and only purpose of mining and operating for oil and gas and of laying of pipe lines, and of building tanks, powers, stations and structures thereon to produce, save and take care of said products, all that certain tract of land situate in the County of Caddo State of Oklahoma described as follows, to-wit:

the southwest quarter

of Section 35 Township 6N Range 10W and containing 160 acres, more or less.

It is agreed that this lease shall remain in force for a term of five years from this date, and as long thereafter as oil or gas or either of them is produced from said land by lessee.

In consideration of the premises the said lessee covenants and agrees:

1st. To deliver to the credit of lessor, free of cost, in the pipe line to which lessee may connect wells on said land, the equal one-eighth part of all oil produced and saved from the leased premises.

2nd. To pay lessor one-eighth (⅛) of the gross proceeds each year, payable quarterly, for the gas from each well where gas only is found, while the same is being used off the premises, and if used in the manufacture of gasoline a royalty of one-eighth (⅛), payable monthly at the prevailing market rate for gas; and lessor to have gas free of cost from any such well for all stoves and all inside lights in the principal dwelling on said land during the same time, by making lessor's own connections with the well at lessor's own risk and expense.

3rd. To pay lessor for gas produced from any oil well and used off the premises or in the manufacture of gasoline or any other product a royalty of one-eighth (⅛) of the proceeds, at the mouth of the well, payable monthly at the prevailing market rate.

If no well be commenced on said land on or before the 12th day of February, 1937, this lease shall terminate as to both parties, unless the lessee shall on or before that date pay or tender to the lessor or to the lessor's credit in the The Security Bank at Ponca City, Okla., or its successors, which shall continue as the depository regardless of changes in the ownership of said land, the sum of One hundred sixty & 00/00 Dollars, which shall operate as a rental and cover the privilege of deferring the commencement of a well for twelve months from said date. The payment herein referred to may be made in currency, draft, or check at the option of the lessee; and the depositing of such currency, draft or check in any post office, with sufficient postage and properly addressed to the lessor, or said bank, on or before said last mentioned date, shall be deemed payment as herein provided. In like manner and upon like payments or tenders, the commencement of a well may be further deferred for like periods of the same number of months successively. And it is understood and agreed that the consideration first recited herein, the down payment, covers not only the privilege granted to the date when said first rental is payable as aforesaid, but also the lessee's option of extending that period as aforesaid, and any and all other rights conferred.

Should the first well drilled on the above described land be a dry hole, then, and in that event, if a second well is not commenced on said land within twelve months from the expiration of the last rental period for which rental has been paid, this lease shall terminate as to both parties, unless the lessee on or before the expiration of said twelve months shall resume the payment of rentals, in the same amount and in the same manner as hereinbefore provided. And it is agreed that upon the resumption of the payment of rentals as above provided, that the last preceding paragraph hereof governing the payment of rentals and the effect thereof, shall continue in force just as though there had been no interruption in the rental payments, and if the lessee shall commence to drill a well within the term of this lease or any extension thereof, the lessee shall have the right to drill such well to completion with reasonable diligence and dispatch, and if oil or gas, or either of them, be found in paying quantities, this lease shall continue and be in force with like effect as if such well had been completed within the term of years first mentioned.

If said lessor owns a less interest in the above described land than the entire and undivided fee simple estate therein, then the royalties and rentals herein provided for shall be paid the said lessor only in the proportion which lessor's interest bears to the whole and undivided fee.

Lessee shall have the right to use, free of cost, gas, oil and water produced on said land for lessee's operations thereon, except water from the wells of lessor.

When requested by lessor, lessee shall bury lessee's pipe lines below plow depth.

No well shall be drilled nearer than 200 feet to the house or barn now on said premises without written consent of lessor.

Lessee shall pay for damages caused by lessee's operations to growing crops on said land.

Lessee shall have the right at any time to remove all machinery and fixtures placed on said premises, including the right to draw and remove casing.

If the estate of either party hereto is assigned—and the privilege of assigning in whole or in part is expressly allowed—the covenants shall extend to their heirs, executors, administrators, successors or assigns, but no change in the ownership of the land or assignments of rental or royalties shall be binding on the lessee until after the lessee has been furnished with a written transfer or assignment or a true copy thereof; and it is hereby agreed that in the event this lease is assigned as to a part or as to parts of the above described lands and the assignee or assignees of such part or parts shall fail or make default in the payment of the proportionate part of the rents due from him or them, such default shall not operate to defeat or affect this lease in so far as it covers a part or parts of said lands upon which the said lessee or any assignee thereof shall make due payment of said rental, and this lease shall never be forfeited for non-payment of any rental due until after at least ten days written notice by registered mail or in person shall have been given the lessee.

Lessor hereby warrants and agrees to defend the title to the lands herein described, and agrees that the lessee shall have the right at any time to redeem for lessor, by payment, any mortgages, taxes or other liens on the above described lands, in the event of default of payment by lessor, and be subrogated to the rights of the holder thereof, and the undersigned lessors, for themselves and their heirs, successors, and assigns, hereby surrender and release all right of dower and homestead in the premises described herein, insofar as said right of dower and homestead may in any way affect the purposes for which this lease is made, as recited herein.

GULF OIL CORPORATION OF PENNSYLVANIA
BOX 661

[fol. 227] EXHIBIT 35

12-1-1938 Jacob Roessler Lease No. 29,873 RGL.W

Assignment

This Assignment, made in duplicate, this 6th day of December, 1938, between Gulf Oil Corporation, a Pennsylvania corporation, with offices at Tulsa, Oklahoma, hereinafter referred to as "Gulf, first party, and The Palmer Oil Corporation, of Wichita, Kansas, second party," hereinafter called "Palmer",

Witnesseth That

Whereas, Gulf is the owner and holder of an oil and gas mining lease dated February 12, 1936, executed by Paul Sterba and wife, Gertrude K. Sterba, and Helen Catherine Jackson, nee Sterba, and husband, Clifford Jackson, as lessors, to Chris Pearson, as lessee, covering the Southwest quarter of Section 35, Township 6 North, Range 10 West, Caddo County, Oklahoma, filed for record in the office of the County Clerk of Caddo County, Oklahoma on February 26, 1936 at eleven o'clock A. M. and duly recorded in Book 75 at page 316; and,

Whereas, on the 6th day of September, 1938 a contract was entered into between Gulf Oil Corporation as first party and The Palmer Oil Corporation as second party by the terms of which Gulf was to assign the lease to Palmer, hereinabove referred to, to the depth of 6,000 feet, retaining and reserving the oil and gas mining lease as to all oil, gas and other minerals below the depth of 6,000 feet, together with an overriding royalty; and,

Whereas, Palmer has complied with the contract in so far as to entitle it to an assignment of the lease in accordance with the terms of the contract;

Now, therefore, in consideration of the premises, Gulf hereby sells, assigns, transfers and sets over to Palmer, without covenants of warranty, all of its right, title and interest in and to the above described lease to the depth of 6,000 feet, retaining the lease as to the oil, gas and casing-[fol. 228] head gas, together with all the rights, privileges and appurtenances thereunto belonging, below the depth of 6,000 feet.

To have and to hold the same, subject to all the covenants, conditions and provisions in said lease contained.

Gulf hereby reserves and retains the lease as to the oil, gas and casinghead gas below the depth of 6,000 feet, together with an overriding royalty of 1/16th of the 7/8ths working interest in the oil produced from the leased premises when the total daily production from the leased premises is fifty (50) barrels or less, per day, and 1/8th of the 7/8ths working interest in the oil produced, saved and marketed from the premises when the total daily production from the leased premises exceeds fifty (50) barrels per day, also reserving and retaining an overriding royalty of 1/8th of the 7/8ths working interest in the gas and casinghead gas produced, saved and marketed or taken off the premises, which overriding royalty shall be paid in the following manner, to-wit:

Palmer agrees to run the oil produced, saved and marketed from the premises to the pipe line, or pipe lines, to which it may connect the well, or wells, under division orders placing to the credit of Gulf 1/16th of the 7/8ths working interest in the oil produced, saved and marketed from the premises, when the total gross oil produced from the leased premises is fifty (50) barrels, or less, per day, and 1/8th of the 7/8ths working interest in the oil produced, saved and marketed from the premises during the time the total gross oil produced, saved and marketed from the premises exceeds fifty (50) barrels per day, and to pay Gulf 1/8th of the proceeds of the 7/8ths working interest in the gas and casinghead gas produced, saved and marketed from the premises, payment to be made on the 20th day of each month for the gas and casinghead gas produced and sold from the premises, or used off the premises, during the preceding month. The overriding royalty hereinabove shall be in addition to the royalty provided in the lease and payable to the lessors or their assigns.

The daily production shall be ascertained and determined, for the purposes of this contract, by taking the gross pipe line runs for the month and dividing into the same the number of days in such month, and the quotient shall be considered the total daily production from the leased premises for such month. If the test well comes into production

[fol. 229] after the first of any month, the daily production for such month shall be ascertained and determined by taking the pipe line runs for the number of days the oil is run for such month and dividing into the same the number of such days, and the quotient shall be the daily production for such month for such portion of the month.

8. Palmer agrees to furnish Gulf copies of daily run tickets, to be mailed to Gulf Oil Corporation, P. O. Box 661, Tulsa, Oklahoma, once each week, enclosing the daily run tickets for the preceding week, and, at the close of the month and as soon as obtainable, production tickets for the entire month. Palmer further agrees to furnish Gulf copies of all tank tables.

9. Palmer promises and agrees to produce and market each month the total allowable production for such month and if for any reason Palmer fails, neglects or refuses to produce and market such allowable, Palmer shall promptly advise Gulf, in writing, furnishing in detail the reasons for not producing and running the allowable for such month.

This Assignment is made subject to contract of September 6th, 1938 between Gulf Oil Corporation, first party, and The Palmer Oil Corporation, second party, which contract is hereby referred to and made a part hereof, the same as if herein copied in full.

It is further agreed that any assignment by Palmer shall by reference incorporate the contract of September 6, 1938 as a part thereof and specifically provide for the payment of the overriding royalty to Gulf.

Dated the day and date first above written.

Gulf Oil Corporation, By Rush Greenslade, Vice-President. The Palmer Oil Corporation, By Tom Palmer, President.

Attest: D. B. Catterlin, Assistant Secretary.
Attest: Otto H. Schnepel, Secretary.

October Term, 1951

[Title omitted]

Stipulation Covering Printing of Record, Hearing, and Presentation of Cases—Filed September 18, 1951

For the purpose of avoiding the printing of duplicate and unnecessary records in the appeals of the above entitled cases, the convenience of briefing, and in order to expedite and facilitate the consideration thereof by the Court, all

parties Appellants and Appellees in the above entitled causes desire to and do hereby jointly request the Court, pursuant to this Stipulation, to order that the record be printed and said cases briefed, heard and presented upon the following terms:

First: That a single record be printed for use in both cases embodying that part of the record in each case as the parties designate by this Stipulation and that forty (40) copies of such record be printed for the use of the Court and the parties.

Second: That the cases be consolidated for the purpose of filing briefs and for argument and be heard together, except that any of the several parties shall have the right to file separate briefs should they so desire.

Third: That Appellants collectively and Appellees collectively each be allowed a minimum of two (2) hours for argument, which the parties agree is essential to a fair and adequate presentation of the two appeals.

[fol. 232] Fourth: That the following parts of the record should be printed by the Clerk of the Supreme Court of the United States:

A. All of the one volume Transcript of Record certified August 16, 1951, by Andy Payne, Clerk of the Supreme Court of Oklahoma.

B. All of Volume 1 of the Original Records containing 503 pages, filed October 18, 1947, including Petition in Error of The Palmer Oil Corporation, Petition in Error of Tom Potter, Petition in Error of Kit C. Farwell, et al., Petition in Error of Clyde Kahle and Maud Kahle, his wife, and Bob White Oil & Gas Company, and Petition in Error of B. E. Johnson, et al., *except the following portions thereof:*

That part of the Plan of Unitization (between pages 6 and 7 of said Volume) consisting of the Index and pages 1 to 25, inclusive, pages 27 and 28, and Exhibits "A", "B-II", and "C", for the reason that said parts of said Plan and the Exhibits referred to are the same as said Plan and Exhibits attached as Appendix "E" of the Jurisdictional Statement of The Palmer Oil Corporation, Paul Sterba and Paul Sterba, Jr., and Exhibit "B" of Jurisdictional Statement of Kit C. Farwell, et al., the only differences being

certain amendments which will be clearly reflected by printing only page 26 of the Plan, Exhibit "B-I", and Exhibit "D", as contained in said Volume 1 of Original Records.

C. All of Volume 2 of the Original Records, pages 504 to 1026, inclusive.

D. All of Volume 3 of the Original Records, pages 1026(a) to 1459, inclusive.

E. All of Volume 4, of the Original Records, pages 1460 to 1867, inclusive.

F. All of Original Records, Volume 1 of Exhibits, *except the following portions thereof:*

1. Exhibit 74, being well log on Gregory #1.
2. Exhibit 93, being article in The Anadarko Daily News dated September 17, 1939.
3. Exhibit 94, being an article in The Chickasha Daily Express, dated September 7, 1938.

[fol. 233] 4. Exhibit 104, being Application before the Corporation Commission of Oklahoma showing medrano sand of the West Cement Field.

5. Exhibit 105, being Order on Application.
6. Exhibit 106, not offered in evidence.
7. Exhibit 111, being article in The Petroleum Engineer, dated August, 1944.
8. Exhibit 112, not offered in evidence.
9. Exhibit 114, being Geological Report on West Cement Field May 1, 1919.
10. Exhibit 115, being old map of West Cement Field.
11. Exhibit 118, being N. T. Plummer lease dated April 1, 1939.
12. Exhibit 119, being Assignment of said lease.

G. Only those Exhibits or parts thereof contained in Original Records, Volume 2 of Exhibits, as follows:

1. Exhibit 25, being West Cement Cross Section A-A.
2. Exhibit 34, being photostatic copy of Contract between Gulf Oil Corporation and The Palmer Oil Corporation.
3. Exhibit 53 as to the following parts only:

(a) Sheets 1 and 2 of Table 1, West Cement Medrano Unit Value of Recoverable Oil & Gas Oil at $1.52 per barrel, and gas at $0.05 MCF.

(b) Pages 1 and 2, Table 2, West Cement Medrano Unit percentage of interest in Unit.

(c) Page 1, Table 3, West Cement Medrano Unit, Current Income.

4. Exhibit 53 R as to the following parts only:

(a) Sheets 1 and 2 of Table 1, West Cement Medrano Unit, Value of Recoverable Oil and Gas.

(b) Pages 1 and 2, West Cement Medrano Unit, Percentage of Interest in Unit, Table 2.

(c) Page 2, Table 4, West Cement Medrano Unit, Average Daily Current Income.

5. Exhibit 54, Map of West Cement Medrano Unit by Committee of Geologists being Structural Geological Map Datum Top of the Medrano Sand.

20. Exhibit 81, Map of Southwest Quarter of Section 35, Township 6 North, Range 10 West, by J. P. McKee, Structural Geological Map, datum Top of Medrano Sand.

[fol. 235] 21. Exhibit 82, Map of Southwest Quarter of Section 35, Township 6 North, Range 10 West, by J. P. McKee, Isopachous Map showing thickness of Net Medrano Oil Sand.

22. Exhibit 83, showing Tract number, name and interest of certain land and mineral owners.

23. Exhibit 90, Composite Exhibit showing Cross-Section and Isopachous Maps Exhibits 75, 76, and 77 on the SW¼ Sec. 35, T. 6 N.-R. 10W.

H. Only those Exhibits or parts thereof contained in Original Records, Volume 3 of Exhibits, as follows:

1. Photostatic copy of oil and gas lease dated April 17, 1941, running from Lucy G. Hartshorn, a widow; Eula M. Thom and Jack B. E. Thom, her husband; Hazel R. Snavely, a widow; Mabel M. Hartshorn, a single person; and Mona F. Baldwin, nee Hartshorn and Don E. Baldwin, her husband, as lessors, to Phillips Petroleum Company, recorded Book 95, page 231, in the office of the Register of Deeds of Caddo County, Oklahoma, covering the North Half of the Northeast Quarter of Section 2, Township 5 North, Range 10

West, in said County and State, being the first instrument attached to Exhibit 26.

2. Photostatic copy of oil and gas lease dated April 17, 1941, running from Mrs. Margaret F. Holland, a widow, as lessor, to Phillips Petroleum Company, as lessee, recorded in book 72, page 597, in the office of the Register of Deeds of Caddo County, Oklahoma, covering the North Half of the Northwest Quarter (Lots 3 and 4), Section 2, Township 5 North, Range 10 West, in said County and State, being the twelfth instrument attached to Exhibit 26.

3. Exhibit 32, being photostatic copy of oil and gas lease from Paul Sterba and Gertrude K. Sterba, his wife; Helen Catherine Jackson, nee Sterba, and Clifford Jackson, her husband, as lessors, to Chris Pearson, as lessee, recorded in Book 75, page 316, in the office of the Register of Deeds of Caddo County, Oklahoma, covering the Southwest Quarter of Section 35, Township 6 North, Range 10 West, in said County and State.

4. Exhibit 33, being photostatic copy of Assignment of said oil and gas lease dated February 15, 1936, from Chris [fol. 236] Pearson to Gulf Oil Corporation, recorded Book 75, page 319, in the office of the Register of Deeds of Caddo County, Oklahoma.

5. Exhibit 35, being photostatic copy of assignment of said oil and gas lease from Gulf Oil Corporation to The Palmer Oil Company, dated December 6, 1938.

It is stipulated that the oil and gas leases referred to under H-1, 2 and 3 above, are representative in form and provisions of each of the approximately seventy-two leases involved in the unitization of the Medrano Sand of the West Cement Field.

Dated this 7th day of September, 1951.

[fol. 239] IN THE SUPREME COURT OF THE STATE OF OKLAHOMA

No. 33336, No. 33708—Consolidated

[Title omitted]

ORDER DENYING APPLICATION OF PLAINTIFF IN ERROR TO RECALL MANDATE AND TO WITHDRAW OPINION FILED—Filed January 5, 1952

Now on this 7th day of December, 1951, the Court has before it the motion of plaintiff in error to recall mandate and to withdraw opinion filed, and the response of defendant in error objecting to any such action as requested and urging denial of the said motion of plaintiff in error.

And it appearing that the Court promulgated its opinion herein on the 20th day of March, 1951, and that mandate finally issued on the 6th day of July, 1951, and that such opinion has become and is final, and it further appearing that plaintiff in error seeks the recall of such opinion in order that this Court may adjudicate and determine the effect on the matters raised in these appeals of the legisla-
[fol. 240] tive act adopted May 26, 1951, Senate Bill 203, Tit. 52, Chap. 3a, Secs. 1-16, inc., S. L. 1951, p. 136; 52 O. S. 1951, § 287.1-287.15, which act in effect reenacted with some changes the former 1945 act, Okla. Supp. 1949, Tit. 52, Secs. 286.1-286.17, and then by appropriate language repealed the 1945 act which had been so superseded by the 1951 act.

And upon consideration of the motion and response, and being fully advised in the premises, the Court finds that the motion should be denied by order. The following reasons and considerations enter into our present determination and direct and support our order, to-wit:

1. The 1951 act above mentioned does not and cannot have any effect on the matters raised in these appeals, nor on our opinion promulgated herein as aforesaid.

2. The controlling question in these appeals is whether the 1945 act was constitutional as held by the majority opinion, or unconstitutional as reasoned and concluded by the minority.

3. The contentions of the parties were solely aimed at the 1945 act and based upon the 1945 act, and a determination as to which side has the right to prevail must be based solely on the 1945 act as tested by constitutional provisions and measured by the police power of the State, and upon the evaluation of that act as to its impact upon constitutional rights.

4. The 1951 act was actually a continuation in effect of the 1945 act with some additions thereto and changes therein. Since it was a complete superseding of the 1945 act and a reenactment thereof, any further retention of the 1945 act in the statute would be surplusage, and useless repetition, and that accounts for its formal repeal in Sec. 16 of the 1951 act.

5. Art. V, Sec. 54, Oklahoma Constitution, provides:

> "Repeal of statute—Effect. The repeal of a statute shall not revive a statute previously repealed by such statute, nor shall such repeal affect any accrued right, or penalty incurred, or proceedings begun by virtue of such repealed statute."

[fols. 241-242] Therefore a repeal of the 1945 act would not affect the proceedings under the 1945 act insofar as concerns the creation of this unitized management unit or area, nor settle or affect the constitutionality of the 1945 act, nor affect the rights of the parties to participation in the unitization if the 1945 act is finally held constitutional, nor affect the rights of the parties in the various properties if the 1945 act is held unconstitutional.

6. The rule of Thompson v. Nickle, 113 Okla. 44, 239 Pac. 649, as follows:

> "This court has jurisdiction to recall a mandate only when it clearly appears from the record that same was issued through inadvertence or mistake and in violation of the rules of this court."

is still in full force and effect and no showing is made of any inadvertence in the issuance of the mandate herein.

7. With the mandate outstanding and our final opinion pending on appeal to the Supreme Court of the United States, or being in or upon attempted appeal to that court, we should not promulgate any further formal opinion on or in the case.

Therefore, it is ordered that the application of plaintiff in error to recall mandate and withdraw our opinion herein be and the same is hereby denied.

This order authorized and adopted by the Court in conference and ordered filed in this case this 7th day of December, 1951.

Harry L. S. Halley, Acting Chief Justice.

Clerk's Certificate to foregoing paper omitted in printing.

CORPORATION COMMISSION OF OKLAHOMA, et al.,

Defendants

STATEMENT AS TO JURISDICTION

In compliance with Rule 12 of the Rules of the Supreme Court of the United States, as amended, The Palmer Oil Corporation, (hereinafter referred to as "Palmer"), as

appellant in Cause No. 33336 above, and Paul Sterba and Paul Sterba, Jr., a minor, by and through his father and next friend, Paul Sterba, and The Palmer Oil Corporation, a corporation, appellants in Cause No. 33708 above, submit herewith their statement, particularly disclosing the basis upon which it is contended the Supreme Court of the United States has jurisdiction upon appeal to review the final judgment, decree and decision of the Supreme Court of Oklahoma in the above captioned causes consolidated in said Court, the highest Court of the State of Oklahoma, in which a decision could be had.

I.

Opinion Below and Date of Finality and Date of Petition for Appeal Therefrom

With respect to the foregoing judgment, decree and decision of the Supreme Court of Oklahoma, the same was entered March 20, 1951, the opinion of the Court being reported in —— Okla. ——, 231 Pac. 2d 997, but the finality thereof was stayed by the order of said Court allowing appellants until May 4, 1951 in which to file petition for rehearing, such petition for rehearing having been filed in accordance with such order on May 3, 1951. Such petition for rehearing having been denied by the Supreme Court of Oklahoma without opinion on May 22, 1951, the finality of the judgment, decree and decision of said Court was further stayed by the filing and presentation by appellants on Monday, May 28, 1951 of appellants' application for leave to file second petition for rehearing pursuant to and in accordance with Rule 29 of the Supreme Court of the State of Oklahoma, as amended, the pertinent portion of which reads as follows:

APPLICATION FOR SECOND PETITION FOR RE-HEARING;

"Within five days after a petition for re-hearing is denied, an application for a second petition for re-hearing may be made, but not filed except by leave of Court."

Appellants' application for leave to file second petition for rehearing was, without opinion, denied by the Supreme Court of Oklahoma June 5, 1951, and its judgment, decree and decision became final upon said date.

A true and correct copy of the opinion of the Supreme Court of Oklahoma above referred to including dissenting opinions with respect thereto is hereto attached as Appendix "A"; a true and correct copy of appellants' Petition for Rehearing filed with respect to such opinion is hereto attached as Appendix "B"; a true and correct copy of appellants' Application for Leave to File Second Petition for Re-hearing and brief in support thereof filed with respect to such opinion are hereto attached as Appendix "C".

Appellants' Petition for Appeal from such final judgment, decree and decision was presented and allowed on the 30th day of July, 1951, within ninety (90) days from the final judgment, decree and decision sought to be reviewed herein, and hence such appeal is timely. (Title 28, U. S. Code, Revised, Sec. 2101.)

II.

Basis on Which It Is Contended the Supreme Court of the United States Has Jurisdiction

The final judgment, decree and decision of the Supreme Court of Oklahoma upheld as valid Order No. 20289 of the Corporation Commission of the State of Oklahoma approving a written Plan of Compulsory Unitization

limited solely to the Medrano Sand bodies in the West Cement Oil and Gas Field in Caddo County, Oklahoma, affecting approximately 3700 oil and gas lease surface area acres with an estimated 98,000,000 barrels of oil in place in such sand bodies therein, the result of which was to compel non-assenting lease owners (including "Palmer") and landowners and royalty owners (including "Sterbas") to join in such unitization. In rendering such final judgment, decree and decision, the Supreme Court of Oklahoma construed certain statutes of the State of Oklahoma as authorizing such Order, denying thereby the specific and timely contentions of each of the appellants herein that said statutes and said Order as construed and applied to each of the appellants, their property rights and operations with respect thereto under the undisputed and indisputable evidence in the record, were repugnant to and violated the due process, equal protection and contract clauses of the United States Constitution and did not constitute a proper exercise of police power.

III.

Statutory Provisions and Decisions Believed to Sustain Jurisdiction

The statutory provision vesting the Supreme Court of the United States with jurisdiction of this appeal is Section 1257 of Title 28, United States Code Revised, the material parts thereof providing:

> "Final judgments or decrees rendered by the highest court of a state in which a decision could be had, may be reviewed by the Supreme Court as follows:
>
> * * *
>
> "(2) By appeal, where is drawn in question the validity of a statute of any state on the ground of its

being repugnant to the constitution, treaties or laws of the United States, and the decision is in favor of its validity."

The following decisions sustain the jurisdiction of the Supreme Court of the United States to review said final judgment, decree and decision of the Supreme Court of the State of Oklahoma on direct appeal in this case:

Champlin Refining Co. v. *Corporation Commission*, 286 U. S. 210, 52 S. Ct. 559, 76 L. Ed. 1062, 86 A. L. R. 403;

Bandini Petroleum Co. v. *Superior Court of Los Angeles County*, 293 P. 899, 110 Cal. App. 123, 284 U. S. 8, 52 S. Ct. 103, 76 L. Ed. 136, 78 A. L. R. 826;

Thompson v. *Consolidated Gas Utilities*, 300 U. S. 55, 57 S. Ct. 364, 81 L. Ed. 510;

Henderson Co. v. *Thompson*, 300 U. S. 632, 57 S. Ct. 29, 74 L. Ed. 625;

Hunter Co. v. *McHugh*, 11 So. 2d 495, 202 La. 97, 64 S. Ct. 19, 320 U. S. 222, 88 L. Ed. 5.

IV.

The State Statutes and the Order of the Corporation Commission of the State of Oklahoma Issued Thereunder, Including the Written Plan of Unitization, the Validity of Which Is Involved

Order No. 20289 of the Corporation Commission of the State of Oklahoma (hereinafter referred to as "Commission") entered September 5, 1947, is based upon and was made pursuant to delegated legislative and judicial power granted to private parties by House Bill No. 339 of the 1945 Oklahoma Legislature (O. S. Supp. 1949, Title 52, Sec. 286.1 to Sec. 286.17, inclusive) hereinafter called the "Compulsory Unitization Act". A full, true and correct

copy of such House Bill No. 339 is attached hereto as Appendix "D".

The statutes involved became effective July 26, 1945, such Act being the first of its kind to be enacted by any state. Generally the "Compulsory Unitization Act" requires the Corporation Commission of the State of Oklahoma to approve any written plan of unitization for any oil and gas field in Oklahoma, which written plan has been formulated and petitioned for by 50 per cent (in area ownership) of the oil and gas leaseholds sought to be unitized. Upon approval of such written plan by the Commission the Plan and Order can be nullified by 15 per cent (in area ownership) of the oil and gas lease owners, or the Unit Plan may be amended by 10 per cent (in area ownership) of the oil and gas lease owners, or enlarged by 15 per cent (in area ownership) of the oil and gas lease owners. In this particular case the unit operations carried forth under the written plan are subject to control by 66⅔rds per cent in ownership of the interests (oil and gas lease owners) in the Unit as vested by the written plan. The royalty owners as such have no authority under the statute to initiate, alter or control any such compulsory unitization.

A full, true and correct copy of Order No. 20289 of the Corporation Commission of the State of Oklahoma, including its findings of fact and the Written Plan of Unitization by such Order approved is hereto attached as Appendix "E".

V.

Statement and Nature of Case and Rulings of the Supreme Court of Oklahoma Bringing Said Case Within the Jurisdictional Provisions Relied Upon

Cause No. 33336 in the Supreme Court of Oklahoma was originally commenced before the "Commission" by the filing of a petition on October 22, 1946, by Amerada Petroleum Corporation, Anderson-Prichard Oil Corporation, Phillips Petroleum Company, Ray Stephens, Inc., Stephens Petroleum Company and Magnolia Petroleum Company (herein referred to as proponents) to enforce a compulsory unitization of all oil and gas leases and royalty rights in an area alleged to contain the "Medrano Sand" of the West Cement Field in Caddo County, Oklahoma, by means of a written plan submitted by said petitioners in accordance with the authority purportedly granted by the "Compulsory Unitization Act".

Appellant, Palmer, owner of an oil and gas leasehold within the area sought to be unitized, filed a written protest to said petition and proposed Plan of Unitization, alleging, among other things, that such compulsory unitization would contravene and violate the due process, equal protection and contract clauses of the Constitution of the United States as an improper exercise of police power and that said Medrano Sand did not constitute a single common source of supply of oil and gas.

Hearings were held before the "Commission" at various times beginning December 9, 1946, and ending July 25, 1947. The initial Plan of Compulsory Unitization was amended by its proponents on July 18, 1947, in order to give effect to a change of information or facts occasioned by the drilling and completion of Palmer's Sterba No. 7 well, on or about February 2, 1947. On September 5,

1947, the "Commission" entered its report and Order No. 20289 granting the petition and approving the Plan of Compulsory Unitization, as amended.

Palmer's oil and gas leasehold interest on 160 acres of land was derived through an oil and gas lease executed by Paul Sterba, and others (landowners-lessors) on February 18, 1936, to Chris Pearson, as lessee, who, in turn, assigned said lease to Gulf Oil Corporation. In September, 1938, Gulf Oil Corporation assigned its rights under said lease to Palmer to a depth of 6,000 feet, retaining an overriding royalty. The oil and gas lease under which Palmer acquired its leasehold interest is a customary form used in Oklahoma, which provides for many rights, duties and obligations as between lessor and lessee, with covenants, both express and implied. Said oil and gas lease did not provide for either unitization or pooling of the premises, and generally speaking required the lessee owner of the lease to drill, develop and operate the premises, paying or delivering to the landowner-royalty owner, 1/8th of the oil or gas, or proceeds therefrom, free and clear of expense of production. If oil and gas were not produced within the term of the lease, or if production was secured and thereafter ceased upon the premises, the lease, by its own terms, would end. The lessee, under the terms of said lease, had the right to use such surface area of the land reasonably necessary to drill, develop and operate the leased premises. The number of wells the lessee was required to drill, develop and operate and the location thereof was controlled by the "Commission" under the adequate Oklahoma Oil Conservation Statutes (Appendix "I") and the implied covenants of the lease. A full, true and correct copy of said oil and gas lease is hereto attached as Appendix "F".

The first oil and gas test well drilled in the area of the West Cement Field was completed on October 17, 1917 (being completed in a horizon other than the Medrano Sand). The first test well which resulted in production of gas in the Medrano Sand of the West Cement Field was completed October, 1936, on land located in the next governmental section to Palmer's leasehold, and the first well producing oil from the Medrano Sand in said Field, was discovered in March, 1943, on a quarter section adjacent to Palmer's leasehold.

Palmer completed its first well on its leasehold in October, 1938, which produced oil from the "Niles Sand" at a total depth of 3545 feet; completed its second well in May, 1939, which produced oil from the "Rowe Sand" at a total depth of 3401 feet; completed its third well in October, 1940, which produced gas from the "Medrano Sand" at a total depth of 5260 feet; completed its fourth well in June, 1943, which produced oil from the "Medrano Sand" at a total depth of 5995 feet; completed its fifth well in August, 1943, to a total depth of 6000 feet, as a dry hole, being drilled into a fault; completed its sixth well on November 7, 1943, to a total depth of 6425 feet, as a dry hole, it having also been drilled into the same fault; and on May 21, 1947, completed its seventh well, which produced oil from the "Medrano Sand" at a total depth of 5992 feet.

It will be observed that "Palmer" had assumed the risks and expenditures incident to the drilling of six wells for oil or gas on its "Sterba" lease prior to the enactment of the "Compulsory Unitization Act".

The Written Plan of Unitization approved by Order No. 20289 of the "Commission" embraced 72 separate tracts of land comprising 3700 surface acres. Palmer's "Sterba" oil and gas lease is in the approximate center thereof. At

the time of the entry of the "Commission" Order No. 20289 each of Palmer's "Sterba" Medrano Sand oil wells were being allowed to produce 200 barrels of oil per day by the "Commission" under the General Oil and Gas Conservation Laws of the State of Oklahoma and were capable of producing such oil without waste. The Medrano Sand bodies underlying this area dip sharply from the Northeast to the Southwest ranging from an approximate depth below the surface of 4500 feet to about 6000 feet, the thickness of the sand bodies pinching out at the top of the structure but thickening at the bottom of the structure to a maximum estimated 125 foot thickness. The gas zone or zones are in the upper portions of the sand bodies with the oil zones immediately below the gas zones and water below the oil zones.

The evidence conclusively showed that the production of oil and gas in the West Cement Field had been and still remained under the jurisdiction of the "Commission" pursuant to the General Oil and Gas Conservation Statutes of the State of Oklahoma (Appendix I) and that "Palmer" had, at all times, drilled, developed and operated its said leasehold in accordance with the best known practices and procedures and without waste and in accordance with such conservation statutes.

Although the surface of the land covered by "Palmer's" leasehold represented only approximately 4 per cent of the Unit Surface Area, the division of interest formula used in connection with the Written Plan of Unitization shows that there was attributed to it in excess of 5,000,000 barrels of oil in place in the Medrano Sand bodies. The Plan originally assigned to "Palmer" 5.45 per cent of the production from the Unit Area, which, after the drilling and completion by "Palmer" of its seventh well above mentioned was shown to be in error to the extent that the

proponents of the Plan increased "Palmer's" per cent to 5.51614, the increase representing in excess of 175,000 barrels of oil in place.

The proponents in determining the division of interest between the various tracts within the Unit gave no consideration in the Plan either to (a) the comparative oil lifting costs involved in the production from each of the respective tracts, (b) the comparative efficiency of the respective operations on separate leaseholds, (c) the expense of any operator which, like "Palmer", had the misfortune to encounter faults resulting in dry holes in drilling for Medrano production, nor (d) the comparative operations of the respective operators of the respective leaseholds concerning their respective prior compliance or lack of compliance with the implied covenants of their respective leases to properly develop said leases and protect the same by drilling of said wells thereon—with which implied covenants "Palmer" had carefully complied.

While Gulf Oil Corporation (one of the proponents of the Unit) had never assumed the risk of drilling any well on the "Sterba" lease, proponents of the Plan assigned to Gulf Oil Corporation from the "Sterba" lease 2.15688 per cent of the total estimated Unit production on an assumption not based on fact that that portion of the Medrano oil under said "Sterba" lease was below the depth of 6000 feet and on the further assumption not based on law that "Palmer" has no drainage rights to that portion of the Medrano Sands below 6000 feet but which might be produced from a well completed above the depth of 6000 feet.

All of the known facts clearly show that the Medrano Sand in the West Cement Field was traversed by four geological phenomena known as "Faults" which completely segregated and separated such Sand into five seg-

ments or separate common sources of supply; that the great variation in gas pressure in said five separate segments showed there was no communication of oil or gas between said segments. Proponents stated purpose to compel unitization was for the conservation of gas energy; however, the evidence conclusively showed that two-thirds of all the gas within the Medrano Sand bodies had been produced or consumed before the Order of the "Commission" was made approving Compulsory Unitization.

Appellants, Paul Sterba and Paul Sterba, Jr., although owning an undivided 1/8th royalty right under their land and the "Sterba" lease, were not, under the provisions of the "Compulsory Unitization Act" given any voting voice and did not appear as parties in said cause before the "Commission", or participate therein.

After the Order No. 20289 of the "Commission" on September 5, 1947, "Palmer" moved to set aside the findings of fact made by the "Commission" which are shown in its report and findings (see Appendix "E") and requested the "Commission", among other things, to make the following findings of fact:

> ". . . SECOND: The Medrano Sand Horizon in the West Cement Oil Field in Caddo County, Oklahoma, is completely separated into two or more common sources of supply from and between which there is no communication of oil or gas, by reason of the presence of faults extending through such horizon constituting sealed barriers. . . .
>
> "FOURTH: That unitized management, operation and further development for and of oil and gas from the several separate common sources of supply thereof in the Medrano sand in the West Cement Oil Field in Caddo County, Oklahoma, will not substantially increase the recovery of oil and gas therefrom, or decrease the time in which the same will be recovered, adequate conservation measures now in force and ef-

fect being continued in force and effect by the Corporation Commission of the State of Oklahoma in respect thereto. . . .

"ELEVENTH: The division of interest or formula for the apportionment and allocation of the purported unit production among the several separately owned tracts within the proposed unit area under the plan of compulsory unitization here proposed, if adopted, is not fair, reasonable or equitable."

"Palmer's" motion to set aside findings of fact made by the "Commission" was denied and within due time "Palmer" perfected its appeal to the Supreme Court of the State of Oklahoma, which was there docketed as Cause No. 33336.

In Cause No. 33708, Paul Sterba and Paul Sterba, Jr., a minor, by and through his father and next friend, Paul Sterba, and The Palmer Oil Corporation, a corporation, as petitioners, on the 1st day of July, 1948, filed an application direct in the Supreme Court of Oklahoma against the Corporation Commission of Oklahoma, and the Unit operating Committee consisting of Phillips Petroleum Company, a corporation; Amerada Petroleum Corporation, a corporation; Anderson-Prichard Oil Corporation, a corporation; Ray Stephens, Inc., a corporation; Stephens Petroleum Company, a corporation; Gulf Oil Corporation, a corporation; Magnolia Petroleum Company, a corporation; Cities Service Oil Company, a corporation; Foster Petroleum Corporation, a corporation; and Sunray Oil Corporation, a corporation, as defendants, to assume original jurisdiction on petitioners' petition for Writ of Prohibition to prohibit and restrain the defendants from enforcing the Commission's Order No. 20289, which application to assume original jurisdiction was sustained and docketed as Cause No. 33708 and was consolidated with

Cause No. 33336, by Order of the Supreme Court of Oklahoma on September 25, 1948, reading as follows:

"IN THE SUPREME COURT OF THE STATE OF OKLAHOMA

"No. 33,708

"PAUL STERBA, *et al.*,
Petitioners,

v.

"CORPORATION COMMISSION, *et al.*,
Respondents

ORDER

"IT IS ORDERED that the application of the petitioners for the Court to assume original jurisdiction in the above cause for the purpose of determining whether a writ of prohibition should issue against the respondents above named, be, and the same is hereby sustained.

"IT IS FURTHER ORDERED that the above cause be consolidated with cause No. 33,336—In the Matter of the Petition for the Creation of the West Cement Medrano Unit, and that the respondents above-named be granted until October 15, 1948, to respond to the application of the petitioners for a writ of prohibition.

"DONE BY ORDER OF THE SUPREME COURT IN CONFERENCE this 25th day of September, 1948.

THURMAN S. HURST,
Chief Justice."

ENDORSEMENTS ON ORDER:
"Filed in the Supreme Court
of Oklahoma Sep. 25, 1948
ANDY PAYNE—*Clerk.*"

A true and correct copy of the Application to Assume Original Jurisdiction and Petition For Writ of Prohibition Or Other Proper Relief is attached hereto as Appendices "G", and "H".

Complete transcript of the record and all exhibits were duly filed in the Supreme Court of the State of Oklahoma

in said consolidated cause, abstracts and briefs by all parties in interest were duly filed and the consolidated causes argued on April 19, 1949, and thereafter (by the Supreme Court of Oklahoma) taken under advisement with the final judgment, decree and decision subsequently made and entered as hereinbefore stated.

The Supreme Court of the State of Oklahoma, in its final judgment, decree and decision, held the "Compulsory Unitization Act" and the Order of the "Commission" were in all respects constitutional, affirmed Order No. 20289 of the "Commission" and denied the Writ of Prohibition in the cause as consolidated.

VI.

Stage in the Proceedings Before the Corporation Commission of the State of Oklahoma and the Supreme Court of the State of Oklahoma at Which, and the Manner in Which, the Federal Questions Sought to Be Reviewed Were Raised and Passed Upon and Excerpts from the Record Showing Jurisdiction of the Supreme Court of the United States

Appellant, Palmer, first raised the Federal issues here involved by specific averments in its Response and Protest filed with the "Commission" on December 23, 1946, in respect to the petition filed to approve the Plan of Unitization for the Medrano Sand bodies of the West Cement Field. Palmer, in such Response and Protest, made express averments as follows:

> "FOURTH: (c) That the proposed unit plan and the statutory Act (House Bill No. 339 of the 1945 Legislature of the State of Oklahoma) are invalid, illegal and of no force and effect for the reasons:
>
> "1. That they are in violation of the due process clauses of the Fourteenth Amendment to the Constitu-

tion of the United States and Section 7, Article II of the Constitution of the State of Oklahoma.

"2. That they deny to respondent and protestant the equal protection of laws guaranteed by the Fourteenth Amendment to the Constitution of the United States. . . .

"4. That they impair the obligation of the contracts of respondent and protestant in violation of Section 10, Article I of the Constitution of the United States and Section 15, Article II of the Constitution of the State of Oklahoma. . . .

"(d) That said unit plan submitted in said application and petition is inequitable, unfair and unjust insofar as it has application to the legal and equitable rights and interests of this respondent and protestant.

"(e) That said unit plan submitted and the application and petition for the creation of such proposed unit does not reflect facts justifying or permitting the approving of the proposed plan of unitization; that the proposed area for unitization is not one common source of supply."

The constitutional questions were not passed upon or considered at any time by the "Commission".

On September 5, 1947, "Palmer", after the overruling by the "Commission" of motions for new trial, filed its notice of appeal and its application for certification of facts to the Supreme Court of Oklahoma. On the same date the "Commission", in accordance with the applicable statutes, entered its Order, which, without formal parts, is as follows:

"Journal Entry Allowing Appeal

"Now on this 5th day of September, 1947, it appears to the Corporation Commission of the State of Oklahoma, that The Palmer Oil Corporation, a corporation, protestant in the above styled and numbered cause, has filed herein written notice of its intention to appeal to the Supreme Court of the State of Okla-

homa from the order of this Commission rendered herein on the 5th day of September, 1947, granting the application and petition for unitization herein, and that The Palmer Oil Corporation, a corporation, has requested this Commission to certify the entire record in this cause to the Supreme Court of the State of Oklahoma, as prescribed by law.

"Now, THEREFORE, it is ordered by the Commission that said appeal be granted and that the Secretary of the Corporation Commission of the State of Oklahoma cause the entire record in this case to be transcribed and submitted to the Chairman of the Commission for certification at the earliest possible date.

"DONE at the office of the Corporation Commission, Capitol Office Building, Oklahoma City, Oklahoma, this 5th day of September, 1947."

Thereafter, and in due time, "Palmer" filed its petition in error with the Supreme Court of the State of Oklahoma, stating and alleging, among other things, as follows:

". . . 1. The Statutes of Oklahoma, Title 52, Sections 286.1 to 286.17, Oklahoma Statutes Annotated (H. B. 339 of the 1945 Legislature) upon which said Commission based its authority to make its order and judgment, are invalid, illegal and of no force and effect for the following reasons:

"(a) That said statutes are in violation of the due process of law clause contained in the Fourteenth Amendment to the Constitution of the United States and Section 7, Article II of the Constitution of the State of Oklahoma.

"(b) That said statutes deny to this plaintiff-in-error equal protection of the Laws guaranteed by the Fourteenth Amendment to the Constitution of the United States. . . .

"(d) That said statutes impair the obligation of the contract between this plaintiff-in-error and the lessors of its oil and gas mining lease in violation of Section 10, Article I of the Constitution of the United

States, and Section 15, Article II of the Constitution of the State of Oklahoma. . . .

"2. (a) That said statutes, as applied by the Commission in the approval of said plan of compulsory unitization, are in violation of the due process of law clause contained in the Fourteenth Amendment to the Constitution of the United States and Section 7, Article II of the Constitution of the State of Oklahoma.

"(b) That said statutes, as applied by the Commission in the approval of said plan of compulsory unitization, deny to this plaintiff-in-error equal protection of the Laws guaranteed by the Fourteenth Amendment to the Constitution of the United States.

"(d) That said statutes, as applied by the Commission in the approval of said plan of compulsory unitization, impair the obligation of the contract between this plaintiff-in-error and the lessors of its oil and gas mining lease, in violation of Section 10, Article I of the Constitution of the United States, and Section 15, Article II of the Constitution of the State of Oklahoma, and

"(e) That said statutes, as applied by the Commission in the approval of the plan of compulsory unitization, authorize and permit and the order and judgment of the Commission constitutes an unlawful delegation of power in violation of Section 1, Article IV and Article V of the Constitution of the State of Oklahoma. . . ."

Appellants, Paul Sterba, Paul Sterba, Jr., and "Palmer" specifically raised the same Federal issues as hereinabove set forth in their Petition for Original Writ of Prohibition and Brief filed in support thereof on the 1st day of July, 1948, and docketed as Cause No. 33,708.

The Federal issues and questions here involved were also expressly argued and discussed at length by brief filed by appellants in the Supreme Court of Oklahoma in the consolidated cause.

The Federal issues and questions here involved were

again presented by way of oral argument when said consolidated cause was argued before the Supreme Court of the State of Oklahoma on April 19, 1949.

The Federal issues and questions here involved under the Constitution of the United States were again presented in the Petition for Rehearing filed by appellants (see Appendix "B") and in the Application for leave to file second petition for rehearing and brief in support thereof (see Appendix "C").

VII.

Ground Upon Which It Is Contended the Federal Questions Involved Are Substantial

The issues involved in this appeal are far reaching and of great importance to the entire oil and gas industry and particularly to that business as it is conducted within the State of Oklahoma, one of the great oil producing states.

The oil and gas industry in the State of Oklahoma has been for many years and is now being conducted subject to the supervision of the "Commission" under the broad and comprehensive general conservation statutes relating to the production of oil and gas, which statutes (O. S. 1941, Title 52, Secs. 81 to 279, incl., as amended, to and including the year 1947, O. S. 1949 Supp., Tit. 52, 84 to 127.2) for the convenience of the Court are made a part hereof as Appendix "I". Under such general conservation statutes and the Rules and Regulations of the "Commission" adopted pursuant thereto, every purpose sought to be accomplished under the Written Plan of Unitization here under consideration could be accomplished, except compulsory unitization of an entire oil field and as a result and a part thereof the determination and assignment by private parties of the expenses and the participating rights under such compulsory uitization. (*Denver*

Producing and Refining Co. v. *State, et al.*, 199 Okla. 171, 184 P. 2d 961). These general conservation statutes were originally sustained by the Supreme Court of the United States in the case of *Champlin Refining Co.* v. *Corporation Commission of Oklahoma*, 52 S. Ct. 559, 286 U. S. 210, 76 L. Ed. 752.

The Compulsory Unitization Act is not one of the Oklahoma General Conservation Statutes administered by the "Commission" but rather is a special statute which can only be made effective by the action of private parties. In this case by the actions of private parties, the appellants' oil and gas leasehold and royalty rights have been taken from them and their contractual rights impaired under the guise of the Compulsory Unitization Act, which from a conservation standpoint accomplished no more than was being accomplished under the general conservation laws.

The impact of the Written Plan of Unitization approved by "Commission" Order No. 20289 on appellant "Palmer" is to take from it and give to private parties the operation of "Palmer's" oil and gas leasehold estate, such private parties, without "Palmer's" consent but over its objection, determining the proportion of the benefits, if any, to which "Palmer" will be entitled, thus putting "Palmer", an independent oil producer, off of its property and completely out of business in the field involved. The impact of the Written Plan of Unitization approved by "Commission" Order No. 20289 on appellants "Palmer" and "Sterba" is to completely abrogate the lease contract agreement, completely destroying "Sterba's" (lessor's) right to compel performance of the lessee's contractual obligations under such lease contract, private parties again determining the assigned benefits to "Sterba" without his right to participate in any percentage vote with respect to

the creation or functioning of the "Written Plan of Unitization".

The Assignment of Errors in itself constitutes a statement clearly showing the grounds upon which appellants contend the Federal questions involved are substantial, and for the convenience of the court the Assignment of Errors is here set out at length, namely:

"ASSIGNMENT OF ERRORS

"The Supreme Court of the State of Oklahoma erred in deciding that Order No. 20289 of the Corporation Commission of Oklahoma, in Cause CD 1308, and the Plan of Compulsory Unitization approved thereby and the statutes (House Bill 339 of the 1945 Legislature, Title 52, Oklahoma Statutes Supplement 1949, Sections 286.1 to 286.17, both inclusive), upon which said Court determined said Order and Plan were authorized, as construed and applied to appellants by the decision and judgment of said Court under the undisputed and indisputable evidence in the record, did not deprive appellants of their property without due process of law or deny to them the equal protection of the laws in contravention to the provisions of Section I of the Fourteenth Amendment to the Constitution of the United States, and did not impair the obligation of appellants' leasehold contract in contravention of Section 10, Article I of the Constitution of the United States, because

(a) Said Order, Plan and statutes are an unreasonable exercise of the police power.

(b) Said Order and the findings in support thereof are contrary to the undisputed and indisputable evidence in the record in that the record shows no waste of oil or gas, as defined or contemplated by the Oklahoma Conservation Statutes (Appendix "I"), was being committed, that correlative rights of producers, landowners and royalty owners in and to oil and gas were being protected and conserved in accordance with the general conservation statutes of the State of

Oklahoma and the subsisting Orders of the Commission thereunder.

(c) Said Order, Plan and statutes completely deprive appellants of their property and places it in the hands of private parties to control its management, further development and operation.

(d) Said Order, Plan and statutes completely divest personal, property and contract rights vested and established long before the making of said Order and Plan and the enactment of said statutes.

(e) Said statutes are too broad, vague and unspecific to constitute any reasonable guide to the Commission in making of any Order approving any Plan of Unitization thereunder.

(f) The undisputed evidence establishes that there was no single common source of supply of oil and gas, which is necessary to justify any type of oil and gas conservation statutes.

(g) Said Order, Plan and statutes provide for and constitute more than mere regulations of the business of producing oil and gas, completely taking away from appellants their contractual rights under the oil and gas lease and their rights to possess and develop the property for oil and gas, substituting therefor merely a right to share in the proceeds arising from oil and gas production from the entire Unit.

(h) Appellants, Paul Sterba and Paul Sterba, Jr., as owners of the land and royalty, are not, under the statutes, Order or Plan of Unitization, given any voice in respect to any matter concerning the compulsory unitization.

(i) Said statutes, Order and Plan of Unitization provide for the taking of private property not for a public use or public purpose, but for private purposes and private gain.

(j) Under said statutes percentages of private parties are authorized to decide whether a particular oil and gas field should be unitized and, if so, the type or plan of unitization, and their private decision, at their will, is submitted to the Commission for approval; if approved by the Commission, a certain per-

centage of private parties still have the right to completely nullify the Plan or amend the Plan, or enlarge the Plan, and in any event, control the future operations under the Plan and the winding up and closing thereof; the Commission has no right of its own to initiate the proceedings or formulate the Plan, amend or change the Plan, or otherwise control the Plan, except its power under the general conservation laws.

(k) Said statutes, Order and Plan provide for an unlawful delegation to private parties of the authority to determine legislative policy on any oil field within the State of Oklahoma, and particularly the West Cement Field.

(l) Said statutes, Order and Plan of Unitization unlawfully delegate arbitrary legislative authority to certain percentages of private persons to determine the legislative policy in respect to any oil field within the State of Oklahoma, and particularly the West Cement Field.

(m) Said statutes, Order and Plan unlawfully delegate to private parties the judicial power of determining the rights of royalty owners and minority lessees in respect to any oil field within the State of Oklahoma, and particularly the West Cement Field.

(n) Said Order and Plan unlawfully delegate arbitrary judicial and legislative power to private parties to determine the rights of royalty owners within any oil field of the State of Oklahoma, and particularly the West Cement Field.

(o) Said statutes, Order and Plan provide for drastic changes in contractual and property rights which are not reasonably necessary to promote conservation of oil and gas or prevent waste thereof.

(p) Said statutes, Order and Plan provide for arbitrary, unreasonable and capricious procedures and methods by which private parties determine rights of other private parties in and to any oil field of the State of Oklahoma, and particularly the West Cement Field.

(q) The Order and Plan are unreasonable, arbitrary and capricious and are not based upon the undisputed and indisputable evidence in the record.

(r) The undisputed and indisputable evidence showed conclusively that geological faults separated the Medrano Sand in the West Cement Field into several, separate common sources of supply."

For the purpose of clarity, it may be said, without waiving any of the Assignment of Errors, as referred to, that the fundamental contention of appellants is that the "Compulsory Unitization Act", the order No. 20289 entered by the "Commission" approving the Written Plan of Unitization, as applied to the business and property of appellants, constitutes an unreasonable and discriminatory exercise of the police power. Without intention to limit appellants' contentions in this respect, the unreasonable, arbitrary and discriminatory features of the "Compulsory Unitization Act", the Order No. 20289 of the "Commission" and the written Plan of Unitization approved by said Order, may be grouped and discussed under subheads as follows:

(a) The "Compulsory Unitization Act", the Order of the "Commission" and the Written Plan of Unitization, as applied to the rights of the appellants, are more drastic than reasonably necessary in the taking away of vested contract and property rights.

The taking of property, the impairment of obligation of contract or the unequal protection of law, resulting from a statute operating prospectively, is never as serious a matter as the injury done to owners of vested property rights by a statute which has a retroactive operation. The "Compulsory Unitization Act" (Sec. 286.2) does not apply to any field where the discovery well was drilled twenty years prior to the effective date of the Act, or to any field which, on the effective date of the Act, operated under pressure maintenance, repressuring, or secondary methods of operation. Although the West Cement Field

was discovered in the year 1917, the discovery was not in the Medrano Sand Zone and the "Commission" held that the Medrano Zone was within the provisions of the law, even though the Medrano Sand was discovered in 1936, more than ten years before the petition was filed to unitize the Medrano Sand bodies.

No reason is shown on the face of the Act why the "Compulsory Unitization Act" should have any retroactive effect, or as to why it should have a retroactive effect for a period of twenty years rather than ten years, or five years or any other period, or why it should exclude existing fields being operated under pressure maintenance and not fields which may be operated after the effective date of the Act under voluntary pressure maintenance.

While the pronounced purpose of the "Compulsory Unitization Act" is to secure greater recovery through pressure maintenance and secondary recovery operations, the matter of pressure maintenance is completely out of the picture in respect to the Medrano Sand, as more than two-thirds of the gas in place was produced or dissipated prior to the "Commission's" Order of September 5, 1947.

The leasehold contract between Sterbas and Palmer had been vested and developed many years before the enactment of the Unitization Act and their rights were completely eliminated and reduced to that of sharing in a fractional percentage of the gross production from the Unit. "Palmer" lost its right to drill, develop and operate its own leasehold. Sterbas lost their rights to have "Palmer" drill, develop and operate such leasehold and compel performance of the express and implied covenants of the lease, including the right to control the use of the surface as might be reasonably necessary to operate the premises. The matter of pressure maintenance and secondary recovery operations do not require that these con-

tract and property rights be entirely taken away with a mere right to share in a portion of the production being substituted therefor. Pressure maintenance and secondary recovery operations could be carried forth without denying appellants the right to possess and operate their own property.

The further drilling, operation and development of the Unit is entirely within the discretion of the operator, subject to the control of the Operating Committee by a vote of 66⅔rds per cent. The operator under the control of the Operating Committee could drill, produce or abandon any oil and gas test wells at any place on the premises at any time in its discretion and could change any or all methods of operation and completely wind up and disunitize the unit at any time within its discretion without being subject in any way to the voice or desire of appellants.

(b) The "Compulsory Unitization Act" is completely lacking in due process and equal protection in respect to the rights of royalty owners.

The rights of royalty owners under oil and gas leases have been for many years recognized under the laws and judicial decisions of Oklahoma as being substantially equal to the rights of lessees. The royalty owners usually, as in this case, own ⅛th of the oil and gas produced, free and clear of costs of production and lessees own ⅞ths, subject to the cost and expense of production. The lessors, under repeated judicial decisions, are entitled to compel the lessees to comply with all express and implied covenants of the oil and gas lease.

Under the "Compulsory Unitization Act" the royalty owners have no right to petition for unitization, to set aside any unitization Order, enlarge or amend a Unit.

The "Sterbas" appeared in this matter for the first time when they joined with "Palmer" in their application before the Supreme Court of Oklahoma to take original jurisdiction of their Petition for Writ of Prohibition to prohibit further enforcement of Order No. 20289.

(c) The Unitization Act provides for an unreasonable and unlimited delegation of legislative and judicial power to private parties.

The "Compulsory Unitization Act", the Order of the "Commission" and the written Plan of Unitization were not merely matters of delegated legislation—they are also a delegation of judicial power and authority. There is involved the legislative policy of determining whether a particular oil and gas field should be unitized and, if so, the judicial power of determining the manner in which such field should be unitized and the interest to be assigned to the respective owners thereof.

The matter of determining policy may be legislative but the matter of completely taking away contractual and property rights and substituting therefor something entirely different, even with notice to the lessees, is a judicial determination of rights. Judicial power was also exercised when it was determined that there existed a single common source of supply which could be subject to unitization.

The legislative and judicial power delegated is not a delegation to a state agency, but is rather a delegation to private parties. These private parties have the power in the first instance to decide the policy of whether a field should be unitized; the "Commission" or State agency has no authority in this respect. When these private parties once determine, as a matter of policy, that the Medrano Sand bodies of the West Cement Field should be unitized, then as a part thereof, they also decide the manner in

which it should be unitized, and what should be assigned to each party as his interest in such unit. The only power vested in the "Commission" is to approve or reject the unitization as recommended by private parties. The "Commission" has no authority to enlarge a unit plan, to amend, alter or change such plan, or to supervise operations under the plan, except at the will of private parties. The delegation of legislative and judicial power to private parties under the provisions of the "Compulsory Unitization Act", and as approved by Order No. 20289, and the Plan of Unitization, is a vicious and dangerous type of delegation, arbitrary and unreasonable. The unlawfulness of this delegation is discussed and referred to in an annotation in 3 A. L. R. (2d) 188.

The legislative declaration set forth in Sec. 286.1 of the "Compulsory Unitization Act" is:

> "It is desirable and necessary . . . to authorize and provide for unitized management and operation of oil and gas properties . . . to which the act is applicable, to the end that a greater ultimate recovery of oil and gas may be had therefrom, waste prevented and the correlative rights of the owners in a fuller and more beneficial enjoyment of oil and gas rights, protected."

The declaration sounds good, but means nothing. What is the standard of "greater ultimate recovery?" The word "waste" is nowhere defined in the "Compulsory Unitization Act". The word "waste" is defined in the general conservation law, but it is admitted by all parties that no waste was occurring in the operation of the Palmer-Sterba lease in the Medrano Sands of the West Cement Field.

The words "fuller and more beneficial enjoyment" likewise are undefined and have no definite meaning.

The so-called facts required to be found under Sec. 286.7

of the "Compulsory Unitization Act" and after a finding, of which the "Commission" is required to enter an Order approving the Unit, are not facts in any sense of the word, but are merely generalities which could not operate as standards or guides for any specific plan of unitization. See *Bandini Petroleum Company* v. *Supreme Court*, 293 P. 899, 110 Cal. App. 123, affirmed 284 U. S. 8, 52 S. Ct. 103, 76 L. Ed. 136.

(d) The "Compulsory Unitization Act" provides for a discriminatory delegation of legislative and judicial powers to a certain percentage in interest of private parties.

The legislative and judicial power delegated under the "Compulsory Unitization Act" and approved by Order No. 20289, and the Written Plan of Unitization, is not only one to private parties, but to a stated percentage of interest in private parties. 50 per cent of the lessees initiate and recommend the Plan (Sec. 286.5), 15 per cent may nullify any Order made or Plan approved by the "Commission" (Sec. 286.6), 10 per cent may petition to amend the Plan (Sec. 286.11) and 15 per cent (Sec. 286.12) may seek to enlarge the unit. 66⅔rds per cent control all future drilling, development and operations under the Plan, and the dissolution thereof.

Any Unitization Act, the life, existence and operation of which depends upon the will of a percentage in interest of the private parties having interests therein, is, on its face, arbitrary and unreasonable as to those who do not have a sufficient percentage in interest to protect or enforce their own rights and views. See *Carter* v. *Carter Coal Company*, 298 U. S. 238, 80 L. Ed. 1160, and *State of Washington, ex rel.* v. *Roberge*, 278 U. S. 116, 73 L. Ed. 210.

(e) The findings of the "Commission" were unsupported by the evidence and the basic fact—the

existence of a common source of supply or common property—necessary to be established before any type of conservation legislation can be sustained under the police power, was a matter of serious dispute, and all known facts which were undisputed, clearly showed there were separate common sources of supply within the Medrano Sands of the West Cement Field, and, therefore, there was no common property to be unitized.

All reports of the geological and engineering committees were prepared and presented on the theory that the Medrano Sand of the West Cement Field was separated into five separate segments caused by geological faults which traversed the sand. Pressures were different in each segment. Dry holes established these faults completely through the oil zones.

In all cases where conservation legislation has been sustained, as a reasonable exercise of the police power, the crucial fact—the existence of a common source of supply or common property—has been established without doubt or question. See annotations in 78 A. L. R. 834.

(f) The methods and procedures used in this case in defining the Unit and in determining the interests in the Unit, were unreasonable, arbitrary and unfair and were not reasonably related to conservation or the potection of correlative rights.

There were included within the Unit at least 1020 acres of land under tracts upon which no oil and gas wells had been drilled to a depth sufficient to encounter the Medrano Sand and such tracts were assigned definite interests in the Unit. There were included within the Unit tracts upon which dry holes were drilled and completed to the Medrano Sand, and such tracts were assigned interests in the Unit.

The private parties who formulated the Written Plan and presented the same to the "Commission" and who are

the holders of the operating rights thereunder pursuant to the percentage provisions of the "Compulsory Unitization Act" endeavored to justify the percentage allocation of benefits, if any, thereunder by a formula which was unsound, unreasonable and arbitrary.

On May 26, 1951, Enrolled Senate Bill No. 203, having been passed by both Houses of the Oklahoma Legislature, approved and signed by the Governor as an emergency measure, repealed Title 52, Chapter 3 (b), Sections 1 to 17, inclusive, Session Laws 1945 (which is the "Compulsory Unitization Act"), here complained of. A full, true and correct copy of Senate Bill No. 203 is attached hereto as Appendix "J".

Senate Bill No. 203 appears to be prospective in its application and reflects a recognition on the part of the Oklahoma Legislature of the invalidity of the former "Compulsory Unitization Act", irrespective of any objections which we have raised against the Order of the Commission and the Written Plan of Unitization, removing in this new Act not one but each and every one of the unconstitutional provisions in the former "Compulsory Unitization Act" to which we have objected.

Article V, Section 54 of the Constitution of the State of Oklahoma reads as follows:

> "The repeal of a statute shall not revive a statute previously repealed by such statute, nor shall such repeal affect any accrued right, or penalty incurred, or proceedings begun by virtue of such repealed statute."

Accordingly, Appellants, to have relief, must secure the reversal of the Final Order, Judgment and Decree of the Supreme Court of the State of Okahoma, here on appeal, irrespective of the repeal by the Legislature of the State

of Oklahoma of the "Compulsory Unitization Act" of 1945, complained of.

WHEREFORE, it is respectfully submitted that the Supreme Court of the United States has jurisdiction of this appeal under Title 28, U. S. Code revised, Sec. 1257.

Dated this 30th day of July, 1951.

APPENDIX "A"

OPINION OF THE SUPREME COURT OF OKLAHOMA, INCLUDING DISSENTING OPINIONS

(Filed in Supreme Court of Oklahoma Mar. 20, 1951. Andy Payne, Clerk.)

IN THE SUPREME COURT OF THE STATE OF OKLAHOMA

No. 33336

THE PALMER OIL CORPORATION, a corporation, et al.,
Plaintiffs-in-Error,

vs.

PHILLIPS PETROLEUM COMPANY, a corporation, et al.,
Defendants-in-Error,

and

No. 33708

PAUL STERBA and PAUL STERBA, JR., a minor, by and through his father and next friend, PAUL STERBA, and THE PALMER OIL CORPORATION, a corporation,
Petitioners,

vs.

CORPORATION COMMISSION OF OKLAHOMA, et al.,
Defendants.

SYLLABUS

1. The Legislature is itself the judge of the conditions which warrant legislative enactments, and they are only to be set aside when they involve such palpable abuse of power and lack of reasonableness to accomplish a lawful end that they may be said to be arbitrary, capricious,

and unreasonable, and hence irreconcilable with the conception of due process of law. Whether the enactment is wise or unwise, whether it is based on sound economic theory, whether it is the best means to achieve the desired result, whether, in short, the legislative discretion within its prescribed limits should be exercised in a particular manner, are ordinarily matters for the judgment of the legislature, and the earnest conflict of serious opinion does not suffice to bring them within the range of judicial cognizance.

2. The police power of the State extends to defining the correlative rights of owners in a common source of oil and gas supply, providing for the management, operation and further development of such common source of supply and distributing the proceeds thereof among those entitled thereto.

3. House Bill 339 of the 1945 Legislature (Tit. 52 O. S. Supp. 1947, secs. 266.1 to 286.17), known as the Unitization Act is not violative of secs. 7, 15, 23 or 24 of Art. II, or sec. 1 of Art. IV or secs. 1 or 51 of Art. V, of the Constitution of the State of Oklahoma, nor violative of sec. 10 of Art. I of or of the Fifth or Fourteenth Amendments to the Constitution of the United States.

4. The Unitization Act does not involve any unconstitutional delegation of legislative power by the provision which requires the petition of lessees of record of more than fifty percent of the area of the common source of supply in order to give the Commission jurisdiction under the Act.

5. Order No. 20289 of Corporation Commission is not contrary to either the law or the evidence.

Proceedings before the Corporation Commission by Phillips Petroleum Company and others, lessees, who petition for the creation of a unit, having for its purpose the unitized management, operation and further development of what is termed the West Cement Medrano common source of supply of oil and gas. The Palmer Oil Corporation and others, lessees, lessors and royalty owners, pro-

tested. From an Order of the Commission creating the unit protestants appeal.

ORDER AFFIRMED

Original action by The Palmer Oil Corporation, et al. against Corporation Commission for Writ of Prohibition.

WRIT DENIED

Claude Monett, Coleman Hayes and Hart Brown, all of Oklahoma City, Oklahoma and Mark H. Adams, Charles E. Jones and Wm. I. Robinson, all of Wichita, Kansas, For Plaintiff-in-Error, The Palmer Oil Corporation.

Hatcher & Bond, of Chickasha, Jack W. Page, of Oklahoma City, For Plaintiffs-in-Error, Tom Potter, et al.

Harry D. Page and Booth Kellough, both of Tulsa, Oklahoma, For Defendant-in-Error, Amerada Petroleum Corp.

Brown, Darrough & Ball, of Oklahoma City, For Defendant-in-Error, Anderson-Prichard Oil Corp.

Wm. C. Liedtke, Russell G. Lowe, Redmond S. Cole, Cyrus L. Billings, James B. Diggs, Jr., and Charles L. Follansbee, all of Tulsa, For Defendant-in-Error, Gulf Oil Corporation.

Walace Hawkins, of Dallas, Texas, W. R. Wallace, Oklahoma City, Okla., For Defendant-in-Error, Magnolia Petroleum Co.

Don Anderson, Oklahoma City, For Defendants-in-Error, Stephens Petroleum Co. and Ray Stephens, Inc.

Don Emery, Rayburn L. Foster, R. B. F. Hummer, R. M. Williams, all of Bartlesville, and Harry D. Turner, of Oklahoma City, For Defendant-in-Error Phillips Petroleum Co.

GIBSON, J.

Cause No. 33,336 is an appeal from an Order of the Corporation Commission providing for the unitized manage-

ment, operation and further development of what is designated as "West Cement Medrano Unit", located in Caddo County, Oklahoma, made in pursuance of the provisions of 52 O. S. Supp. 1945, secs. 286.1 to 286.17. Cause No. 33,708 is an original action for a Writ prohibiting the Corporation Commission from exercising further jurisdiction in the matter of said unitization. Since the question of the issuance of the writ depends upon the issues involved on the appeal the same will be disposed of following determination of the appeal.

Involved on the appeal are two major questions. One, the constitutionality of said sections of the statute which, as a whole, constitute what is known as the Unitization Act (H. B. 339 of the 1945 Oklahoma Legislature). The other, the legality of the order of the Commission if authorized under the Act to effect unitization. These questions will be considered in the order stated.

The nature of the Act and the purposes sought to be accomplished thereby are clearly reflected in the legislative declaration made in the first section thereof, as follows:

> "Sec. 286.1. The Legislature finds and determines that it is desirable and necessary, under the circumstances and for the purposes hereinafter set out, to authorize and provide for unitized management, operation and further development of the oil and gas properties to which this Act is applicable, to the end that a greater ultimate recovery of oil and gas may be had therefrom, waste prevented, and the correlative rights of the owners in a fuller and more beneficial enjoyment of the oil and gas rights, protected."

Plaintiffs-in-error recognize that the subject-matter of the Act is one within the police power of the State and that the constitutional questions presented are whether the Act constitutes a reasonable exercise thereof.

We will refer to and state or quote the particular provisions of the Act involved on considering the arguments directed thereto.

The plaintiffs-in-error, though numerous, represent but three classes in interest: lessors, lessees and those having, severally, royalties interest which are in excess of one-eighth of the total production.

On behalf of the lessees it is contended that the Act is violative of Art. II, sections 7, 15, 23 and 24 of the Constitution of the State of Oklahoma, and of Art. I, sec. 10, of and the Fourteenth Amendment to the Constitution of the United States. For the purpose of the presentation, there is no segregation of the contentions as to each of said constitutional provisions for the expressed reason the grounds relied on have common application to all. Two grounds are relied on. One, the Act as a whole is unreasonable. The other, the Act constitutes an unauthorized delegation of legislative power.

On behalf of the lessors it is contended that the Act is violative of all of said constitutional provisions and of sec. 51 of Art. V of the Constitution of the State of Oklahoma. The several violations are referable to definite grounds which have common application and there is no occasion to segregate the contentions as to each. Five grounds are relied on. One, the Act constitutes an unauthorized delegation of legislative power, which ground is the same as lessees' ground number Two and is urged on the same bases. Two, that both in the formation of the unit and in the committee management thereof lessees only are recognized and therefore to the exclusion of the lessor. Three, the Act imposes an unauthorized burden upon the royalty interest in the production. Four, the Act imposes an unauthorized burden upon the leased premises of the lessor. And, fifth, the Act is violative of the obligations of contracts.

The substance of lessees' ground One is that the Act is unreasonable because it does not require as a condition to the establishment of the unit a finding by the Commission that, for the purpose of conservation, the application of Act will be more effective than that of the existing laws. In support thereof attention is called to the fact that under the provisions of the Act the unit may be established in

fields where production has been had for nearly twenty years; that unitization, in which gas energy is a prime factor for operation, would be less satisfactory by reason of the expenditure thereof during operations prior to unification and would disturb the multitude of rights that had become established on the basis of the methods being employed under the existing laws. There is then declared:

> "It is our earnest contention that a compulsory unitization statute which clearly disrupts the existing law and existing rights can only be justified where the advantages to be gained far offset the losses to be sustained to property or individual rights."

There are then recited the findings required of the Commission by the Act, and it is stated that thereunder "the Commission could approve a plan of unitization which definitely could not result in an increased recovery of oil and gas over that being accomplished by present methods of operation under the general conservation law." It is then declared that, by reason thereof:

> "We submit that any compulsory unitization law, competing with the general conservation law whose real purpose is exactly the same, should not be given constitutional sanction under the police power unless it specifically provides that the Commission finds that any plan of unitization approved thereunder will accomplish the conservation of oil and gas with substantially greater results than is being accomplished under the general conservation law still in full force and effect."

The findings required by the Act appear in section 286.4 as follows:

> "If upon the filing of a petition therefor and after notice and hearing, all in the form and manner and in accordance with the procedure and requirements hereinafter provided, the Commission shall find (a) that the unitized management, operation and further de-

velopment of a common source of supply of oil and gas or portion thereof is reasonably necessary in order to effectively carry on pressure-maintenance or repressuring operations, cycling operations, water-flooding operations, or any combination thereof, or any other form of joint effort calculated to substantially increase the ultimate recovery of oil and gas from the common source of supply; and (b) that one or more of said unitized methods of operation as applied to such common source of supply or portion thereof are feasible, will prevent waste and will with reasonable probability result in the increased recovery of substantially more oil and gas from the common source of supply than would otherwise be recovered; and (c) that the estimated additional cost, if any, of conducting such operations will not exceed the value of the additional oil and gas so recovered; and (d) that such unitization and adoption of one or more of such unitized methods of operation is for the common good and will result in the general advantage of the owners of the oil and gas rights within the common source of supply or portion thereof directly affected, it shall make a finding to that effect. . . ."

As indicated in the contention, the Act does not authorize the Commission to withhold establishment of unification where in the opinion of the Commission oil conservation may be accomplished better under existing laws. It limits the findings required of the Commission to the ascertainment of definite facts which in the opinion of the Legislature are sufficient to justify application of the law.

There is no contention that the standards prescribed are insufficient in any respect other than in not including the suggested finding. Therefore, it necessarily follows that the contention challenges the authority of the Legislature in dealing with matters of policy, which is a realm that is without the scope of judicial inquiry. The Supreme Court of the United States, in C. B. & Q. Railroad Com-

pany, et al. v. McGuire, 219 U. S. 549, 55 L. Ed. 328, 339, said:

> "* * * The scope of judicial inquiry in deciding the question of *power* is not to be confused with the scope of legislative considerations in dealing with the matter of *policy*. Whether the enactment is wise or unwise, whether it is based on sound economic theory, whether it is the best means to achieve the desired result, whether, in short, the legislative discretion within its prescribed limits should be exercised in a particular manner, are matters for the judgment of the legislature, and the earnest conflict of serious opinion does not suffice to bring them within the range of judicial cognizance."

This Court, in In re Application of Richardson, 199 Okla. 406, 184 Pac. (2d) 642, said:

> "The Legislature is itself the judge of the conditions which warrant legislative enactments, and they are only to be set aside when they involve such palpable abuse of power and lack of reasonableness to accomplish a lawful end that they may be said to be merely arbitrary, capricious, and unreasonable, and hence irreconcilable with the conception of due process of law."

To the same effect see Herrin v. Arnold, Judge, 183 Okla. 392, 82 Pac. (2d) 977; Jack Lincoln Shops, Inc. v. State Dry Cleaners' Board, 192 Okla. 251, 135 Pac. (2d) 332; Phelps et al. v. Childers, State Auditor, 184 Okla. 421, 89 Pac. (2d) 782; City of McAlester v. Jones, 181 Okla. 77, 72 Pac. (2d) 371; Barnes 1. Smith, Judge, 179 Okla. 71, 64 Pac. (2d) 1217; Grable v. Childers, State Auditor, 176 Okla. 360, 56 Pac. (2d) 357.

Though not necessary to so state, the Act reflects that the Legislature not only considered operations had and being had under existing laws but gave recognition to those methods employed which it considered to better serve the over-all purpose of conservation by withholding

the application of the Act thereto. Such is reflected in second section of the Act (52 O. S. Supp. 1945, sec. 286.2), which we quote:

> "This Act shall apply only to common sources of supply of oil, oil and gas, or gas distillate in this State.
>
> "The provisions of this Act shall not apply to any common source of supply of oil, oil and gas, or gas distillate or any part or parts thereof which at the effective date of this Act are being operated by or under pressure maintenance, repressuring, or secondary recovery methods or operations, provided, that nothing contained in this Act shall prevent the voluntary inclusion and extension of areas in which are located such existing pressure maintenance, repressuring, or secondary recovery methods or operations as unit areas under the provisions of this Act. Provided this Act shall not apply to any field where the discovery well has been drilled twenty (20) years prior to the effective date of this Act."

Lessees' ground number Two and lessors' ground number One, both to the effect the Act constitutes an unauthorized delegation of legislative power, have reference to the force of the following provisions of the Act:

> "* * * To give the Commission jurisdiction hereunder, the petition shall be filed by, or with the authority of, lessees of record of fifty percent (50%) or more of the area of the common source of supply or portion thereof sought to be unitized. The petition shall set forth a description of the proposed unit area with a map or plat thereof attached, must allege the existence of the facts required to be found by the Commission as hereinabove provided and shall have attached thereto a recommended plan of unitization applicable to such proposed unit area and which the petitioners consider to be fair, reasonable and equitable. (Sec. 286.4).
>
> * * * *

"If at any time after the filing of a petition for the creation of a unit and within sixty (60) days after the entry of an order by the Commission approving the creation of the same, lessees of record of fifteen percent (15%) or more of the proposed unit area, if prior to the entry of the order by the Commission, or lessees of record of fifteen percent (15%) or more of the unit area as defined by the approved plan of unitization and order of the Commission, if after the entry of such order, shall file written protest with the Commission against the creation of the unit, the Commission shall vacate all action of any kind theretofore taken and dismiss the proceedings for the creation of such unit." (Sec. 286.6).

It is contended that, since the fact of the legislation is made dependent upon the will of a majority of those to be affected thereby, there is a delegation of legislative power. As supporting the contention that there has been an unauthorized delegation of legislative power and a violation of due process by reason thereof the cases of Carter v. Carter Coal Company, 298 U. S. 238, 80 L. ed. 1160, and State of Washington ex rel. v. Roberge, 278 U. S. 116, 73 L. ed. 210, are relied on. In the Carter case the donees of the power were given authority to make decisions determinable of the rights of others and in the Washington case the donees were given an arbitrary power to veto the exercise by others of their unquestioned rights. Neither situation obtains herein.

In the first place, the powers so granted can neither establish nor disestablish the unitization when established because the power of establishment rests with the Corporation Commission. In such situation there is not a trace of legislative power exercised. This conclusion is fortified by the fact that even if the establishment were dependent upon the will of the lessees their exercise thereof would not be the exercise of legislative authority. The reason for this is clearly reflected in the opinion of the

Supreme Court of the United States in Currin v. Wallace, 306 U. S. 1, 83 L. ed. 441. Therein it is said:

> "So far as growers of tobacco are concerned, the required referendum does not involve any delegation of legislative authority. Congress has merely placed a restriction upon its own regulation by withholding its operation as to a given market 'unless two-thirds of the growers voting favor it.' Similar conditions are frequently found in police regulations. Thomas Cusack Co. v. Chicago, 242 U. S. 526, 530, 61 L. ed. 472, 475, 37 S. Ct. 190, L. R. A. 1918A, 136, Ann. Cas. 1917C, 594. This is not a case where a group of producers may make the law and force it upon a minority (see Carter v. Carter Coal Co., 298 U. S. 238, 310, 318, 80 L. ed. 1160, 1188, 1192, 56 S. Ct. 855) or where a prohibition of an inoffensive and legitimate use of property is imposed not by the legislature but by other property owners (see Washington ex rel. Seattle Title Trust Co. v. Roberge, 278 U. S. 116, 122, 73 L. ed. 210, 214, 49 S. Ct. 50, 86 A. L. R. 654). Here it is Congress that exercises its legislative authority in making the regulation and in prescribing the conditions of its application. The required favorable vote upon the referendum is one of these conditions. The distinction was pointed out in J. W. Hampton, Jr. & Co. v. United States, 276 U. S. 394, 407, 72 L. ed. 624, 629, 48 S. Ct. 348, where, in sustaining the so called 'flexible tariff provision' of the Act of September 21, 1922, and the authority it conferred upon the President, we said: 'Congress may feel itself unable conveniently to determine exactly when its exercise of the legislative power should become effective, because dependent on future conditions, and it may leave the determination of such time to the decision of an Executive, or, as often happens in matters of state legislation, it may be left to a popular vote of the residents of a district to be affected by the legislation. While in a sense one may say that such residents are exercising legislative power, it is not an exact statement, because the power

has already been exercised legislatively by the body vested with that power under the Constitution, the condition of its legislation going into effect being made dependent by the legislature on the expression of the voters of a certain district."

This type of legislation is not uncommon and has been applied in a variety of situations where community of interest obtains. Frequent examples are acts dealing with water rights and drainage. In Oklahoma it is reflected in 82 O. S. 1941, sections 111-273, providing for creation of Irrigation Districts upon petition of fifty or a majority of the holders of title to lands susceptible of irrigation; in 82 O. S. 1941, sections 281-382, providing for creation of Drainage Districts upon petition of five or more residents and further providing (sec. 311) that upon protest of 50% of the landowners, or owners of 50% of the total acreage embraced in the district, the proceedings are to be dismissed; in 82 O. S. 1941, sections 541-687, providing for creation of Oklahoma Conservancy District Act, upon petition of percentage of property owners and the dismissal of the proceedings upon protest of a percentage of the landowners; and 82 O. S. 1941, sections 721 et seq., providing for creation of Water Improvement District upon petition of fifty or a majority of the holders of title to lands in the proposed district. Under authority of these Acts districts have been created and thereafter have functioned. It does not appear that the constitutionality of any has been challenged upon the ground that the operation of the law is predicated upon the will of those whose interests are involved although the question of rights controlled by the Acts has been involved in litigation and the validity of the Acts recognized by this court. (Fry v. Swift, 164 Okla. 4, 22 Pac. (2d) 94; Seikel v. Grimes, County Treas., 189 Okla. 658, 119 Pac. (2d) 59). That question, however, has been presented frequently in other jurisdictions and, so far as we have noted, the uniform holding is to the effect there is no delegation of legislative power and in the briefs herein there have been cited no cases in

point holding to the contrary. State v. Drainage District No. 1, 123 Kan. 191, 254 Pac. 372; Barrett v. City of Osawatomie, 131 Kan. 50, 289 Pac. 970; Tarpey v. McClure, 190 Cal. 593, 213 Pac. 983; City of Dawson v. Bolton, 166 Ga. 232, 143 S. E. 119; Boagni v. Mayor and Bd. of Aldermen of City of Opelousas, 177 La. 835, 149 So. 494; Field v. Barber Asphalt Paving Co., 194 U. S. 618, 48 L. ed. 1142.

We are of the opinion that lessors' ground number Two is without merit. The basis of the conclusion is that there is not granted to the royalty owners like power of petition and protest as that granted to the lessees. Under the Act the landowners who have not leased their acreage are classed as lessees.

The question is not the wisdom of granting the right of protest to the lessees while withholding it from the royalty owners but whether it was within the power of the Legislature so to do. It was within the power of the Legislature to do so because being within its police power to enact the law without the consent of either lessees or royalty owners it was optional with it to require the consent of either. Where privilege is granted to some in such situation the Constitution is satisfied if all similarly situated are treated alike. This statement of the law has been declared in many decisions. A clear-cut statement thereof is made in Taggart v. Claypool, 145 Ind. 590, 32 L. R. A. 586, 44 N. E. 18. The United States Supreme Court, in Field v. Barber Asphalt Paving Co., supra, said:

> "The exact point of objection is that the improvement is not to be made if a majority of the resident owners of the property liable to taxation therefor shall file with the city clerk a protest against such improvement, which privilege of protest is not given to non-resident owners, thereby discriminating against them. It is well settled, however, that not every discrimination of this character violates constitutional rights. It is not the purpose of the 14th Amendment, as has been frequently held, to prevent the states from classifying the subjects of legislation and making

different regulations as to the property of different individuals differently situated. The provision of the Federal Constitution is satisfied if all persons similarly situated are treated alike in privileges conferred or liabilities imposed. (Citations omitted). The alleged discrimination is certainly not an arbitrary one; the presence within the city of the resident property owners, their direct interest in the subject-matter, and their ability to protest promptly if the means employed are objectionable, place them on a distinct footing from the nonresidents, whom it may be difficult to reach. Furthermore, there is no discrimination among property owners in taxing for the improvement. When the assessment is made it operates upon all alike. It has been held to be within the power of the legislature of Missouri to authorize the council to order the improvement to be made without consulting property owners. Buchan v. Broadwell, 88 Mo. 31. If the legislature saw fit to give to those most directly interested, and whose consent could be most readily obtained, the right to protest, such action did not deprive the other persons of rights guaranteed by the Constitution."

Involved under the Act are the plural rights of production from the common pool. The purpose of the Act is to so adapt the exercise of such rights that the value of the reservoir may be realized to the fullest degree possible by those entitled thereto and according to their respective shares therein. This can be done only through an intelligent control of the drilling operations. The royalty owners are those who have committed to lessees their right to produce in exchange for a definite share in the production. Such rights have been so committed in reliance upon the ability of the lessees to produce. Neither the fact of nor the amount of the royalty interest presents any problem for solution in establishing unification because same is recognized and fixed by the law. The real problem involves an appraisal and adaptation of the existing prob-

lems that rest upon the shoulders of the lessees. By reason of their responsibility the lessees have an interest that is distinctive from that of the royalty owners but it is not adverse thereto because the interests of the latter are dependent upon and must rise or fall with that of the lessees. By reason of their knowledge of the problems they, necessarily, are in a better position than the royalty owners to appraise the practicability and hence the wisdom of unification. To realize that the information they possess is deemed vital to a determination of the question of unification one needs only to read the showing that is required by the Act to be made. By reason of their activity the lessees are in a position to both attest the wisdom or lack of wisdom of unification and produce the evidence that is determinative thereof. The royalty owners, who by their own acts have completely divorced themselves from the activity, are often not conveniently accessible and could afford little if any helpful information if available, but they are granted the right of an appeal from the action of the Commission, and this case is an example of its exercise. The distinction between the lessees and the royalty owners as classes in interest and the reason why the Legislature should extend a privilege so responsible to one and not the other is so manifest that it precludes any idea that in doing so the legislative Act was capricious. Such being true there is no basis for holding the Act unconstitutional for that reason.

Lessors' ground Three, that the Act imposes an undue burden upon the royalty, has reference to the provisions of the Act which treats the royalty interest that is in excess of one-eighth of the production as a part of the lessees' working interest which is considered to be seven-eighths of the production. It is contended that, under the lease contract, the lessor is entitled to the full amount of the royalty run to his credit free from liability for operating expense. That his right in that respect is impaired because such royalty in excess of one-eighth of production is made liable for operating expense.

Under the Act an one-eighth part of the unit production

allocated to each separately owned tract is to be regarded as royalty and to be distributed to or among the royalty owners free and clear of unit expense; and the remaining seven-eighths is designated as a leasehold interest and made liable for the unit expressly chargeable to such tract. The effect of the unitization upon any royalty interest in excess of one-eighth under any existing lease and the provision made therefor is reflected in the following (52 O. S. Supp. 1945, sec. 286.9):

> "Subject to such reasonable limitations as may be set out in the plan of unitization, the unit shall have a first and prior lien upon the leasehold interest only in the unitized common source of supply (exclusive of a one-eighth (1/8) royalty interest) in and to each separately-owned tract, the interest of the owners thereof in and to the unit production and all equipment in the possession of the unit, to secure the payment of the amount of the unit expense charged to and assessed against such separately-owned tract. The interest of the lessee or other persons who by lease, contract or otherwise are obligated or responsible for the cost and expense of developing and operating a separately-owned tract for oil and gas in the absence of unitization shall, however, be primarily responsible for and charged with any assessment for unit expense made against such tract and resort may be had to overriding royalties, oil and gas payments, royalty interests in excess of a one-eighth (1/8) of the production, or other interests which otherwise are not chargeable with such cost, only in the event the owner of the interest primarily responsible fails to pay such assessment or the production to the credit therefor is insufficient for that purpose. In the event the owner of any royalty interest, overriding royalty, oil and gas payment or other interest which under the plan of unitization is not primarily responsible therefor pays in whole or in part the amount of an assessment for unit expense for the purpose of pro-

tecting such interest, or the amount of the assessment in whole or in part is deducted from the unit production to the credit of such interest, the owner thereof shall to the extent of such payment or deduction be subrogated to all of the rights of the unit with respect to the interest or interests primarily responsible for such assessment."

The importance of the segregation of a definite amount of the total production as royalty is manifest and it is further attested by the fact it is made an integral part of all leases where the cost of operation is to be borne by the lessee. It follows that such segregation is as fully important where the operation is unitized and operated as one lease. In such situation the question is whether the proportion of the production to be regarded as royalty is reasonable. The amount thereof is not called in question so far as the same affords the basis of the unit operation, but it is held that the effect thereof is to impose an unlawful burden on any royalty interest in excess of the one-eighth, if such there be. Considering as we must that the one-eighth royalty prescribed is reasonable to accomplish the over-all purpose, it follows that the right to the exceptional royalty as such must yield to the extent it militates against the plan but should be preserved to the extent it may be done consistently with such plan. We hold that the Act gives full recognition to such right and only varies the method prescribed in the lease for its enjoyment. Prior to unitization such a lessor would be entitled to receive the entire royalty share free from the cost of production. The enjoyment of this right, however, was based upon the obligation of the lessee to produce and so deliver. Under the unitization such obligation obtains upon the unit to the extent of an one-eighth royalty and the obligation of the lessee to account for the remainder is recognized and declared. The liability of any excess royalty is made possible because for the plan of operation it is accorded the status of a leasehold interest. But by reason of the lease contract treating it as royalty

the liability is made secondary and could only obtain where there was a breach of the obligation of the lessee to discharge the operation cost allowable thereto as part of the leasehold interest. We take it that the extent of the right and the assurance of its enjoyment is in substance preserved.

In support of lessors' ground number Four it is urged that the Act authorizes the unit to burden the leased premises beyond the right of the lessee thereof to do so.

If it be true that the Act authorizes the unit to burden any premises beyond the right of the lessee thereof and at the same time in excess of what would be justified for the operation of the unit, such fact, appertaining to be a matter of detail in the operation of the unit, could not be held to affect the integrity of the Act as a whole because, by the terms of the Act, the provisions are made severable (52 O. S. Supp. 1945, sec. 286.16). Though the Act may authorize such an additional burden it does not require that such burden be placed thereon in derogation of the lessors' rights. And we cannot anticipate that those charged with the operations of the unit will exercise the powers granted in an unlawful manner.

The 50 per cent provision of Sec. 286.4 has hereinbefore been considered. No rights have been exercised under the 15 per cent provision of Sec. 286.6, though its validity is questioned here. It is unnecessary to determine the constitutionality of this provision at this time. The same is true of the 10 per cent provision of Sec. 286.11 providing for reconsideration by the Commission of the plan in operation and fixed correlative rights thereunder. These undetermined questions are reserved.

Bearing upon the contentions that the order of the Commission is contrary to the evidence there is said:

> "The petition and amended plan of unitization and order of Commission approving the same in form follows generally the requirements of the statutes under which they were prepared and made. The broad issue raised by The Palmer Oil Corporation and other peti-

tioners in error is that the order of the Commission approving the plan of unitization was contrary to the clear weight of the evidence in one or more respects. The petitioners in error also raise the question of constitutionality."

The Act provides that one aggrieved by the order may appeal to this Court and defines the jurisdiction and duty of this court on appeal, as follows:

"* * * The Supreme Court on appeal shall have jurisdiction and authority and it shall be its duty to review the record of proceedings and transcript of evidence and to consider the validity of the order of the Commission appealed therefrom. On appeal the order of the Commission appealed from shall be regarded as prima facie valid, fair, reasonable and equitable, but if the order is found to be contrary to the clear weight of the evidence, in any one of such respects, the same shall be vacated and set aside and the cause referred to the Commission for further proceedings not inconsistent with the judgment of the court; otherwise the said order shall be affirmed." (Sec. 286.7)

By reason of the presumption which is expressly made to attend the order of the Commission there is cast upon plaintiffs in error the burden of showing that the order in the respects challenged is contrary to the weight of the evidence and we have repeatedly so held. Croxton v. State, 186 Okla. 249, 97 Pac. (2d) 11; Grison Oil Corp. v. Corporation Commission, 186 Okla. 548, 99 Pac. (2d) 134; Oklahoma Cotton Ginners' Ass'n. v. State, 174 Okla. 243, 51 Pac. (2d) 327; Denver Producing & Refining Co. v. State, 199 Okla. 171, 184 Pac. (2d) 961.

The importance of the rule lies in the fact that the formulation and execution of the legislative policy has been entrusted to the Commission because it is thought to be peculiarly experienced and fitted for the purpose and it is not to be contemplated that the courts may substitute

their notions of expediency and fairness for that of the Commission. Peppers Refining Co. v. Corporation Commission, 198 Okla. 451, 179 Pac. (2d) 899; Denver Producing & Refining Co. v. State, supra.

In the light of these governing rules we consider the several alleged grounds of error in making the order.

It is contended that the area of the West Cement Medrano Unit is not limited to one "common source of supply."

Under the Act, a unit must be limited to a common source of supply. The Act does not in express terms define a common source of supply, but there was at the time of the enactment a legislative definition of the term (52 O. S. 1941, sec. 84(c), now 52 O. S. Supp. 1947, sec. 86.1(c)), and we construe such definition as a part of the Act. Therein, the term is thus defined:

> "(c) The term 'Common Source of Supply' shall comprise and include that area which is underlaid or which, from geological or other scientific data, or from drilling operations, or other evidence, appears to be underlaid, by a common accumulation of oil or gas or both; provided, that, if any such area is underlaid, or appears from geological or other scientific data, or from drilling operations, or other evidence, to be underlaid by more than one common accumulation of oil or gas or both, separated from each other by a strata of earth and not connected with each other, then such area, as to each said common accumulation of oil or gas or both, shall be deemed a separate common source of supply;".

That more than one common source of supply may exist in a given sand appears to be recognized in the statute and in H. F. Wilcox Oil & Gas Co. v. State, 162 Okla. 89, 19 Pac. (2d) 347, we held that more than one common source of supply could obtain in such sand by reason of faults that constitute impervious barriers between segments thereof.

The existence of faults in the unit area is recognized and the question before Commission was whether the segments of the sand were disconnected by reason of the faults. The findings of the Commission (in paragraph 2) which is directly responsive to the issue is as follows:

> "* * * that the said Medrano sandstone underlying said above described lands as aforesaid constitutes a single common source of supply of oil and gas, all parts of which are permeably connected so as to permit the migration of oil or gas or both from one portion of said common source of supply to another wherever and whenever pressure differentials are created as a result of the production or operations for the production of oil or gas from said producing formation; that although faults are known to exist in parts of said common source of supply said faults do not prevent substantial migration of oil and gas and of pressures from one part of said common source of supply to another; that said common source of supply of oil and gas has heretofore been designated by the Commission and is generally known as the West Cement Medrano Pool."

The question of the faults in the area and the effect thereof had previously been before the Commission a number of times, and the study and hearings thereon had culminated in orders wherein the Commission found that the whole of the Medrano sand as then developed was in fact one common source of supply. At the hearing herein the testimony adduced was chiefly that of petroluem engineers and geologists who testified on the basis of both personal surveys made and of an interpretation of the accumulated data in the hands of the Commission. The testimony of these experts was in direct conflict but that of each was positive upon the issue. Under the circumstances the objection is necessarily addressed to only the weight of the evidence. Under the holding of this court and that of courts generally (Chicago, R. I. & P. Ry. Co. v. Pruitt, 67 Okla. 219, 170 Pac. 1143; 22 C. J. 728, sec. 823) the

weight to be given opinion evidence is, within the bounds of reason, entirely for the determination of the jury or of the court, when trying an issue of fact, it taking into consideration the intelligence and experience of the witness and the degree of attention he gave to the matter. The rule should have peculiar force herein where by the terms of the Act the Commission is recognized as having peculiar power in weighing the evidence. Since the evidence before the Commission was competent and sufficient, if believed, to sustain the order we must, and do, hold that the order is sustained by the evidence and that the contention is without merit. Ft. Smith & W. Ry. Co. v. State, 25 Okla. 866, 108 Pac. 407; Bromide Crushed Rock Co. v. Dolese Bros. Co., 121 Okla. 40, 247 Pac. 74.

It is contended that the proposed area of the Medrano sand included within the unit has not been reasonably defined by actual drilling operations.

52 O. S. Supp. 1947, sec. 286.5, provides, in part, as follows:

> "The order of the Commission shall define the area of the common source of supply or portion thereof to be included within the unit area and prescribe with reasonable detail the plan of unitization applicable thereto.
>
> "Each unit and unit area shall be limited to all or a portion of a single common source of supply. Only so much of a common source of supply as has reasonably been defined by actual drilling operations may be so included within the unit area."

Paragraph 4 of the Commission's Findings of Fact, to which attention is called, is as follows:

> "That the outer boundaries of said common source of supply of oil and gas underlying and by this Order included within the foresaid Unit Area have been reasonably defined by actual drilling operations, both by the drilling of wells within and the drilling of wells outside said Unit Area; that said Unit Area consists of approximately 3700 acres of land."

It is urged (1) that the Commission does not find that "all portions of the alleged common source of supply included within the unit area has been reasonably defined by actual drilling operations", and (2) that there is included within the unit areas wherein the common source of supply has not been defined by actual drilling operations.

There is no merit in the first ground. Paragraph 2 of the Commission's findings, hereinbefore quoted and discussed, expressly finds that the sand constitutes a common source of supply throughout the area of the unit. The presumption is that same was made on the basis of the required statutory showing. And the Commission in effect so declares in Finding No. 12, where it is said that the plan of unitization "in all respects conforms to and complies with the requirements of H. B. 339 of the 1945 Oklahoma Legislature."

The limits of the pool and of the unit area were determined by the productive boundaries reflected in exhibits prepared by the Geological Committee and based on data and information gained from wells actually drilled to the Medrano sand or to depths sufficient to encounter the sand if present.

Within the unit there are numerous tracts on which no wells have been drilled into the Medrano sand. The source of the common supply thereunder, which is reflected in said exhibits, was predicated on the evidentiary force of drilling operations had in other areas.

It is not contended that the exhibits do not reflect the common source of supply under the undrilled tracts nor that the wells drilled elsewhere were not sufficient to show the existence of the supply thereunder—in fact, the expert witnesses of both plaintiffs in error and defendants in error testified that the drilling operations had were sufficient therefor. The contention is that actual drilling upon the tracts is required by the Act in order to justify a finding of the common source of supply. The contention is thus stated:

> "Our interpretation of the statute requires the Commission to find that the common source of supply has

been reasonably defined by actual drilling operations in respect not only to the outer boundaries but also all tracts therein included, as well as the depth of the common source of supply."

The theory advanced is that the words of the statute, "reasonably defined by actual drilling operations", negative the idea that the finding can be predicated upon drilling operations had elsewhere, and that independently of the statutory provision opinion evidence of the existence of the common source of supply under such tracts based on the wells drilled elsewhere is mere conjecture. As supporting the latter contention Myers et al. v. Shell Petroleum Corporation, 153 Kan. 287, 110 Pac. (2d) 810, is cited as holding that the opinion evidence of an expert geologist on geological conditions at a point one-half mile distant from the control point was mere conjecture and could not be accepted as law. The court there did not expressly nor in substance hold that such distance from the control point, as a matter of law, made the opinion conjecture, but that by reason thereof and other facts which would preclude the evidentiary force thereof the same was not permitted to go to the jury. However, even if the construction of the holding were justified it would not be persuasive as authority herein where the particularity which is required in a court of law does not obtain. Peppers Refining Co. v. Corporation Commission, supra.

Actual drilling upon the undrilled tracts or within a definite proximity thereto is neither prescribed by the statute nor by law. In fact, we are of the opinion that each is negatived, the first by the language of the statute and the other by the holding in the Peppers case, supra.

The alleged mandatory force of the statute is predicated upon the use of the word "reasonably" as used in the statute. We think the use of the word precludes rather than justifies the construction claimed. If the word "reasonably" were omitted the words "defined by actual drilling operations" would import absoluteness. The effect of prefixing the word "reasonably" to the words "been de-

fined'' necessarily qualifies the import of absoluteness which would obtain without it. In prescribing the formula the Legislature must have had in mind the impracticability of accomplishing the full purpose of the Act if its operation was to be conditioned upon actual drilling on all tracts. There is no prescription touching the places of the drilling operation nor the depth of the wells nor of what must be reflected therein. The only prescription is that the source of supply must have reasonably been defined thereby. The drilling operations required are simply those the evidentiary force of which is sufficient to justify a conclusion, by those capable in law of weighing the facts as to the existence of the source of supply. There is unanimity in the testimony herein that the wells drilled afforded sufficient evidence to define the common source of supply within the unit area and the Commission so found. We hold that said attack under the order is without merit.

It is contended that the discovery well in the West Cement field was drilled and completed more than twenty years prior to the effective date of the Unitization Act and, therefore, the Act does not apply to such field and, by reason thereof, there is no authority in law for the order of the Commission.

There is involved a construction of sec. 286.2 of the Act, quoted above.

The West Cement Medrano sand, which is the common source of supply of the unit, was discovered October 15, 1936. The first discovery of oil and gas in the area of the unit was on or about October 17, 1917, but same was in a sand different from the Medrano sand. The question is, which of the wells is the discovery well within contemplation of the statute. If it be the well drilled in 1917 the Commission was without authority to establish the unit. If it be the well drilled in 1936 the authority to establish the unit is beyond question. Such was the issue before the Commission, and thereon it held:

> ''That the West Cement Medrano pool is a field within the meaning of that term as used in the second

paragraph of Section 2 of H. B. 339 of the 1945 Oklahoma Legislature; that the term 'field' in ordinary usage has no fixed or definite meaning but is sometimes used to refer to the general area where a number of oil or gas producing formations are found and at other times used to refer to a particular common source of supply or pool; that as used by the Legislature aforesaid, the term was intended to relate to the particular common source of supply or pool sought to be unitized under the Act and not to any general area which in a broader sense could be termed a field; that in effect said Act throughout relates to and deals only with single common sources of supply of oil and gas."

It is said that the word "field" has a commonly accepted meaning which denotes the surface area where there is a production and carries no significance as to the sand from which the production is had and that, in absence of a different meaning, apparent or obvious from the statute or definitely indicated thereby, the word should be construed in accordance with said commonly accepted meaning. It is further said that since the term "common source of supply" is used frequently in the Act while the word "field" is used but once, as indicated, it must be presumed that the word reflected a different meaning than that of the term "common source of supply".

Defendants in error recognize the fact that the ordinary meaning of the word "field" is as contended and that the word appears only once in the Act. They do not question the correctness of said rules of construction where the force thereof is not limited. They contend that the rules are subservient and therefore subordinate to the fundamental rule of construction that the legislative intent is to be gathered from the entire Act. And, as declaring said rule and, at the same time giving an apt illustration of the limitations upon the rules relied on by plaintiffs in error, there is quoted from Meads et al. v. Human, 84 Okla. 82, 202 Pac. 797, the first paragraph of the syllabus, which is as follows:

"In considering a legislative enactment it is not safe to base a construction upon a particular word or phrase, for the language of legislative enactments is not always precise and accurate, and, besides, one portion may frequently be designed to extend, qualify, or limit another so that the meaning of one portion of a statute may depend upon the effect of another. Hence, it is an established rule in the exposition of statutes that the intention of the law-giver is to be deduced from a view of the whole and of every part of a statute taken and compared together. The several provisions of the statute should be construed together in the light of the general purpose and object of the act and so as to give effect to the main intent and purpose of the Legislature as therein expressed. If possible a statute should be so construed as to render it a consistent and harmonious whole; if different portions seem to conflict, they should, if practicable, be harmonized, that construction being favored which will render every word operative rather than one which makes some words idle and nugatory."

In the light of this rule the question is what construction is consonant with the general purpose and object of the Act. That the functions of the Act have reference to a definite sand as the source of common supply and is without reference to other sand or sands that may afford another source of supply within the same field, is without question. As indicated in sec. 286.2, quoted above, the fact of previous development had in the area constituting the unitized pool, the extent thereof and the methods employed are taken into consideration and the functioning of the unitization plan is required to yield thereto in designated instances. It thus appears that the extent of development in the source of supply that is made subject to unification was within the legislative mind. If the well drilled in the field in 1917 had discovered the West Cement Medrano sand the Act would not authorize the unitization. The Act, in terms, makes no reference to any development

in any sand other than that to which the unitization is made to apply and it cannot be gathered from the Act that the fact of discovery of other production in the field is material to the operation of the unit. We are of the opinion that the only logical deduction to be made, when considering the Act as a whole, is that the discovery well, in the mind of the Legislature, is that well in the field that discovered the common source of supply which is the subject of the unification. To hold otherwise would not only defeat the legislative intent herein but in other situations as well because the court takes judicial knowledge of the fact major pools have been and may yet be discovered in areas where many years ago oil had been discovered in upper and shallower sands which have become practically if not completely depleted.

The order of the Commission is attacked upon the further grounds (1) the proposed "plan of unitization" is not "fair, reasonable and equitable" as required by sec. 286.5 of the Act, and (2) the "division of interest or formula for the allocation of unit production" is not fair, equitable and reasonable as required by said section.

These contentions require no extended discussions. They are directed solely to the weight of the evidence and the most that is shown in the argument is the existence of conflict in parts only of the evidence. Such does not challenge the weight of the pertinent evidence as a whole and for reasons hereinbefore stated does not disturb the presumption that attends the order of the Commission.

Plaintiff in error The Palmer Oil Corporation, a lessee, contends that the order of the Commission is particularly unfair, inequitable and unreasonable as to it as an operator.

Comprised within the unit is the S. W. ¼ of Sec. 35, Twp. 6 N., R. 10 W., upon which the Gulf Oil Corporation held an oil and gas lease from the owners. In 1938 Gulf assigned to Palmer all of its right, title and interest therein to the depth of 6000 feet, "retaining the lease as to the oil, gas and casinghead gas, together with all the rights, privileges and appurtenances thereunto belonging, below

the depth of 6,000 feet." The 6000 foot subsurface level passes through the Medrano sand by reason of which there is productivity in the sand both above and below said level. Palmer drilled a well to but not beyond said level and obtained production from said sand therein. Gulf has no well producing from the sand below said level and is not authorized under the Unitization Plan to drill and produce therefrom. The Palmer well was completed during the pendency of these proceedings before the Commission. The order of the Commission fixed the percentage of the authorized lease production that each should receive and hold same to be applicable to the production of the Palmer well. It is contended that the Commission was without authority to permit Gulf to share in such production. And further contended that the percentage division is unfair and contrary to the evidence if Gulf is entitled to so share.

The first contention is predicated solely upon the assumption that the rule of capture obtains. That it is subject to be modified by the State in the exercise of its police power we held in Wilcox Oil & Gas Company v. Bond, 173 Okla. 348, 48 Pac. (2d) 820. And that the right of capture as claimed herein does not obtain where by Act the State undertakes to protect the correlative rights of owners in a common source of supply, regulate the drilling and distribute the production thereof, we held in Patterson v. Stanolind Oil & Gas Co., 182 Okla. 155, 77 Pac. (2d) 83.

Pertinent to the second contention are the following facts. In the plan of unitization exhibited with the petition of the proponents the percentages of the lease production allotted were Palmer 5.145% and Gulf 2.538%, reflecting a lease total of 7.683%. Speaking generally, the total, or lease percentage, was predicated on the thickness of the sand underlying the lease and such thickness was deduced from the elevations of the top and bottom of the sand as ascertained by the surveys made. And the individual percentages based upon the proportions of the thickness which lay above and below the 6000 foot level. With the completion of the Palmer well it appeared as a matter of fact that the top of the sand at that point lay lower

than reflected in the earlier survey. And, such being true, without change in the depth of the bottom of the sand as established, there was reflected at that point a less thickness of sand than was considered in fixing the lease percentage of the pool production. Touching the effect of such discovery the Commission states in its report the following:

> "In addition to the proceedings and notices aforesaid, further mention is here made of the fact that during the course of said hearing, The Palmer Oil Corporation drilled and completed an additional well on a lease owned by it in the aforesaid field, necessitating a relatively slight change in the percentage of interests of the several separately owned tracts in the field shown in 'Exhibit B' attached to the recommended Plan of Unitization, and also necessitating the inclusion of such additional well in 'Exhibit D' attached to said Plan of Unitization."

As a result, the original exhibits which reflected said percentages were amended so as to reflect the lease percentage at 7.67294% (same being .01006 less than before) and the shares of Palmer and Gulf therein at 5.51614% and 2.15680%, respectively.

The question before the Commission was the extent the common thickness of the sand on the lease as previously fixed was to be diminished by reason of th diminution of thickness reflected at the point where the well was drilled. Palmer contends in substance that the thickness was 108 feet, while the Commission found same to be 96 feet. The question of the thickness turned chiefly upon the depth of the top of the sand as reflected in said well. The testimony was conflicting. The Commission determined that the weight of the evidence lay in the testimony of one Montgomery, a witness for proponents, which was concurred in by the entire Geological Committee, and not in that of one McKee, a witness for Palmer, who testified to the contrary, and so found. Under the rules hereinbefore announced we cannot say that holding of the Com-

mission is contrary to the weight of the evidence nor that the percentages prescribed thereon are arbitrary.

The Order of the Commission is affirmed.

The Writ prayed in cause No. 33,708 is denied.

vs.

CORPORATION COMMISSION OF OKLAHOMA, ET AL.;
Defendants in Error

WELCH, J., Dissenting

At the outset I would emphasize the thought that it is too difficult to undertake to determine the constitutionality of the compulsory unitization act without in any manner discussing or considering the impact on this legislation of the positive provision therein which grants the unquali-

fied veto power for sixty days to fifteen percent of the lease owners by acreage.

By that provision, considered in its necessary connection with other provisions, the act speaks for itself and thereby announces, either that it is not a necessary and proper exercise of the police power for conservation, or that it is a delegation of the police power and legislative power of the state to the will or wishes of oil operators or lessees.

In view of the positive language of this veto power provision and its direct connection as an integral part of the unitization scheme, it remains as a puzzle to me how the court can uphold the act and treat this veto power provision as some character of a separate item which may remain as a question undetermined and reserved for future determination.

It is not contended merely that this veto power provision is a separate unconstitutional part of the act. If that were all it might well be said that if compulsory unitization may be forced upon forty-nine plus percent of lessees and one hundred percent lessors against their will, any possible veto power would be to that extent a welcome escape. But that is not the crux of the matter on this point at all. It is not contended merely that this veto power provision violates private rights, if it is contended at all that it violates private rights. The complete violation of private rights is accomplished by the overall, and other, provisions of the act. As to this veto power provision, it is in fact contended that such provision is one, and an important one, of the details which demonstrate the unconstitutional attempt by this legislation to take over, for private gain, the private property rights, and private contract rights of free citizens. With this contention I agree.

In behalf of this act it is contended that the necessity to conserve oil and gas and prevent waste is the source of the state's power to compel unitization and that such necessity authorizes and requires the state to compel unitization. But by provision of the act itself the act takes this power

away from the state and lodges it in lessees, that is, first the power to initiate the proceedings, and second, the veto power for sixty days. This is a negation of the necessity of this power in the state, or an unconstitutional delegation thereof as I view it.

The compulsory unitization order herein involved affected about 3700 acres of land embracing 72 tracts under separate ownership, with numerous oil and gas lessees of separate tracts, and several hundred owners of royalty interests in the oil and gas being produced and to be produced, from what was treated as one common source of supply. At the time of the order, distributed over most of the tracts, but not all of them, there were about fifty or more wells producing oil and gas, and some additional wells in process of drilling.

The order, over the objection of some of the lessees or operators engaged in producing oil, and over the objections of numerous land owners and royalty owners, directed the operation of the entire tract as a single unit. The result would be that a committee of the lessees would select one operator who would take over all leases and all operation of the entire acreage as to the stated source of supply, and all wells now producing oil or gas would be operated by that one operator, and all future wells would be drilled by that one operator at any or all places in the tracts, without regard to the contracted leases of the tract drilled; that all oil produced from the entire tract, or from any one or several of the 72 separate tracts would be marketed by the one operator, all expenses for operating the aggregate 72 tracts deducted, and the remaining balance distributed by the operator to the various lessees and royalty owners. This distribution would be made without regard to the separate tracts from which the oil came, and without regard to any ratio of production or ratio of expense as to the various separate tracts. That is, the entire tract of 3700 acres was to be drilled and produced, and the oil marketed, as if the aggregate tract constituted a *single unit*, covered by a single lease. The distribution of net proceeds was to be made according to a pre-arranged

calculation intended to represent a computation of the present and future oil production value of each separate tract. That is, each separate tract was considered and it was assigned, or there was allocated to it, a stated percentage of the whole unit's future production.

This appeal tests the constitutionality of the legislative act authorizing such action and the power of the Corporation Commission to make such an order, and tests the validity and fairness of the order, and the sufficiency of the evidence before the Commission.

In considering this matter and making the order the Corporation Commission acted pursuant to the provisions of 52 O. S. Supp. 1945, secs. 286.1 to 286.17. That act proceeded as a conservation measure on the premise that it was desirable and necessary in various circumstances to authorize and provide for unitized management and further development of an oil and gas field or pool found to be a common source of supply, "to the end that a greater ultimate recovery of oil and gas may be had therefrom, waste prevented, and the correlative rights of the owners in a fuller more beneficial enjoyment of the oil and gas rights, protected." It authorizes the Corporation Commission to supervise and administer the act and to order and compel unitized management of whatever should be the proper area of the oil field or pool under consideration. The jurisdiction of the Corporation Commission, however, could not attach unless and until "lessees of record of 50% or more of the area * * * sought to be unitized" should file petition therefor. Then after giving notice in accordance with requirements of general oil and gas conservation statutes, and hearing all parties who desired to appear either for or against the petition, the Corporation Commission should go forward and order the unitization if it was found that such unitization was proper, and necessary in the interest of conservation, and if the unitization plan suggested by the petitioners or approved by the Corporation Commission was thought to be or was found to be for the common good and to result in general advantage to the owners of the oil and gas rights. Pro-

vision was then made that a committee of the oil and gas lessees would select a single operator who would thereafter operate the area involved as a single unit and distribute the net oil production according to the predetermined percentage to the various separate tracts of land involved, or to the lessees and royalty owners of each separate tract. It was then provided, sec. 286.6, supra, that at any time within sixty days after the entry of the order creating the unitization unit, lessees of record of fifteen percent of the unit area might file written protest against the creation of the unit and thereupon it should become the mandatory duty of the Corporation Commission to vacate the action theretofore taken and dismiss the proceedings for the creation of such unit. And lessees whether they did or did not join in the original fifty percent petition could join in this fifteen percent protest and destroy the unitization and accomplish dismissal of the proceedings, provided only that such action was taken within sixty days of the creative order of the Corporation Commission, and as stated in the majority opinion, any owner of land in the area not leased for oil and gas was to be classified as a "lessee" of his land for all purposes of the act. I deem it unnecessary to set out further detail provisions of the act except such as are stated here, and such as are generally referred to in other paragraphs of this opinion.

The petition to the Corporation Commission in this instance was signed by lessees of more than fifty percent of the area sought to be unitized, and said petitioners attached thereto a complete plan of unitization set out in great detail and at great length, with their statement of a percentage division or allocation to each separate tract of a stated interest in the future oil production from the aggregate area. And petitioners alleged they considered their stated plan and division to be fair, reasonable and equitable, all as required in section 286.4, supra.

Both lessees and royalty owners appeared and protested, but after notice and hearing the Corporation Commission made findings in favor of the petitioning lessees that unitized management of this area was proper and reasonably

necessary for the purposes set out in the act, and that such unitized management would probably result in greater ultimate oil production. And the Corporation Commission approved the detailed plan of unitization presented by petitioning lessees, and ordered unitization over the objection and protest of those operators and owners of royalty interests who appeared in opposition to unitization as aforesaid.

The unitization act makes special provision for appeal to this court from such an order, Sec. 286.7, supra, and such appeal is authorized under the general oil and gas conservation statutes. 52 O. S. 1941, Secs. 111, 112, 113 and 136, as those sections are referred to in the present act in section 286.7 thereof.

While other serious questions are presented, I think the constitutional attack is controlling. Appellants in effect and in final analysis point out a number of provisions of the act, and objections thereto as it is here applied, which they urge demonstrate several violations of constitutional provision and of individual constitutional rights. We list them as follows:

1. The act, though purporting to be necessary, and justifiable under police power, for conservation, may only be brought into operation by petitioning lessees of fifty-percent or more of the area involved.

2. That after hearing and determination by the Corporation Commission that unitized management is necessary, and will prevent waste, and will probably result in greater recovery at no increase in net costs, and that the unitization is for the common good and to the best advantage of all; and after the Corporation Commission has ordered the unitization plan into effect, and after unitized operation has commenced, the order may in effect be "vetoed," and the unitization vacated and abolished by the mere protest against it in sixty days of lessees of fifteen percent of the unit area affected.

3. That the act recognizes only lessees in the formation of the unit, in the percentage that has the veto power in sixty days, and in the committee management of the unit,

to the exclusion of any participation therein by the landowner lessors and all others who have fixed interests in the oil being produced and thereafter to be produced.

4. That the act purports to authorize abrogation of contract rights and relieve lessees of contract liabilities and that the unification does abrogate or supersede all contracts between landowner lessors and their chosen lessees, and that is accomplished upon, or by, action of the lessees alone.

5. The same objections as affecting others than original lessors, who have theretofore acquired fixed interests in the oil production.

6. That the act authorizes contingent operating expense liens against royalty interests which theretofore by express contract had been protected against any such liens and against any share or portion of operating expenses.

7. That by the fixed purpose of the act, and by the unitization, no lessee can get that for which he contracted, that is, his full portion of the oil produced from the tract on which he took his oil and gas lease.

8. That by the fixed purpose of the act, and by the unitization, no landowner lessor can count on receiving that for which he contracted, that is, his fixed share of the oil and gas produced from his land, and the result must be that oil taken or produced from one man's land is used in part to pay royalty to another who owns other and separate land in the unit area.

9. The same objection as applies to others than landowner lessors who have acquired fixed interest as royalty or shares of production.

10. That the act and unitization plan abrogates or nullifies various specific provisions of lessor, lessee contracts such as the right to receive delay rentals, rights to free gas for individual use, rights of lessor as against excessive surface use for pipe lines, or such excessive use for tank construction.

11. That as to objecting lessees the act operates to take the oil and gas leases acquired by them and assign or set over such leases to the unit for unitized operation for

the benefit of all, thus in direct effect taking private property for private use and private gain without consent of the owner.

12. That as to land in the so-called unit area not leased for oil and gas operation, the act operates to compel the owner to submit his land to drilling operations whether he wishes to do so or not, and that for direct benefit to other private persons or corporations, and that as concerns the owner of any such land the act operates in effect to coerce and compel him to engage with others in the oil production business whether he wishes to do so or not.

To state the above numbered objections would seem to demonstrate that the legislative act and the unitization plan do transgress constitutional provision and do violate constitutional rights.

As to objection number one, the proponents of unitization contend that the act is justified under the police power and as a conservation measure. But that justification and purpose loses much force by the fifty percent provision above noted. If the State may compel unitization under its police power and for conservation, then why should not such power be exercised without depending upon the will and wishes of fifty-percent of the lessees of the area affected? It would seem that if there is such justification it would exist as well where a majority objected to commencement of the proceedings as in the case where fifty percent were willing to move forward as petitioners. On this point the proponents cite cases upholding "proration" and "spacing." But when the State, acting through the Corporation Commission, exercises those powers, there is no dependence in the first instance upon the assent of fifty-percent.

What we have just said applies with even more force to objection number two. It is a most unusual kind of exercise of police power and exercise of the power of conservation to provide that after the Corporation Commission has investigated and made solemn findings as to necessity, feasibility, applicability to prevent waste, general benefits and common good, and has put into operation the

exercise of the police power for conservation, that the whole thing may be nullified by the mere written protest of holders of fifteen percent of the lease rights affected. I am not impressed with the argument that a regulation is so necessary for conservation and of such urgent character as to justify such drastic action under the police power of the state, and yet be under such control of the persons most affected as to be subject to veto by fifteen percent after it has been implemented by all of the hearings, findings and orders employed to put it into effect.

On this point the proponents of unitization cite cases upholding the Barbers' Act and the Dry Cleaners' Act where prices are fixed by percentage of those most affected. But in those cases the prices fixed are not maximum but are minimum prices and the individual operator is left to operate his own business. In those instances there is no taking over of the individual business and the operation of all such businesses as a unit by one operator, for the so-called general good of all interested parties.

It seems to me that in objections one and two there is demonstrated entirely too much delegation of the legislative power, or perhaps it is better stated, too much delegation of the police power of the State to persons financially interested in the regulation itself, and that on account of such delegation the act and the unitization plan cannot find constitutional sanction.

As to the third objection, while the oil and gas lessees may be said to be the persons most interested in the application of unitization, the landowner lessors and other royalty owners have a fixed interest in the oil being produced and to be produced, and it is pointed out that the act and the plan are so framed as to allow such generous consideration of the lessees with no consideration or participation whatever by lessors or royalty owners. The oil field or source of supply may only be brought into the jurisdiction of the Corporation Commission for application of the State's police power and conservation power by action of fifty-percent of the lessees. When the Unitization plan is put into effect it is operated and managed by

a committee composed exclusively of the lessees. The advance calculation of the various interests to govern distribution of production was set up by the petitioning lessees. And during the first sixty days of operation of the unit it is to the stated percentage of lessees that the veto power is given. The interests of the lessors and lessees differ only in degree, that is, in percentage of ownership of the production. Equal protection of the law would seem to dictate that such exclusive control could no more be given to the lessees to the exclusion of the lessors than could such exclusive control be given to the lessors and royalty owners to the exclusion of the lessees. Therefore the constitutional right to equal protection of the law is violated.

As to objection number four, of course the act authorizes and the plan effectuates almost complete abrogation of the lease contracts between lessors and lessees. About the only provision of the lease contract which is preserved is the provision as to the ratio of sharing between lessor and lessee, and that provision is not fully preserved if the lease provided for a royalty of more than one-eighth of the oil produced. That provision is not fully sustained for the further reason that in unitization the lessor does not continue to receive the contracted share of the oil produced from his land, but, instead, he receives the contracted share of the percentage of the over-all production which is allocated to his land. This may of course be more or it may be very much less than the oil produced from his land. Although the over-all purpose of the act and of the plan is to increase ultimate production, we cannot say with certainty that every lessor will receive as much compensation or compensation of equal value to him under unitization, as he would under separate drilling and production of his land as he contracted for with his selected lessee.

What I have said also applies to objection number five. And as to both objections four and five it appears that even the royalty share which the owner was entitled by contract to receive may be reduced by operation of the

unitization plan, or at least there may be or may come into existence a lien on some part of the royalty share for operating expenses. Such a lien or the probability of such a lien is specifically provided by section 9 of the act, which is section 286.9 supra and is carried forward by express provision of the unitization plan submitted by the petitioners, and approved by the Corporation Commission.

I observe of course that functioning of the well spacing law or of the proration law operates in some measure to affect the contracts between lessor and lessee. But such effect is only upon what might be the desire of the lessee to drill more wells or the desire of both lessor and lessee to produce oil more rapidly. As to those operations there is nothing like the taking over of contract rights which is here evident. We observe the authorities justifying the abrogation of the contract rights in the interest of or in subservience to the police power of the State. But we do not observe authority for such an abrogation of contract rights as is here evident by action of the lessees for their own individual interest. And we are convinced that this act and the unitization plan impair and abrogate contracts ~~and contract rights~~ far beyond any constitutional authorization.

What we have said above disposes somewhat of objection number six, but we should emphasize it with this further suggestion. Though royalty owners, by express contract with the original lessee operator, might be specifically entitled to receive the agreed share of production as royalty, without any part of the operating expense, yet, if the aggregate royalty share exceeds 12½% or ⅛th, the excess would be subject to being burdened with liens for operating expenses if they were not paid by the lessee operator who agreed to pay them. It is pointed out that in case any such royalty owner should be compelled to pay any portion of operating expenses that by subrogation he would have a claim therefor against his contract party who agreed to pay them, but in that I see no fair substitution for the contract right to receive the royalty free of any charges for operating expense.

As to objection number seven, it is clear from the act and the unitization plan that no lessee is to receive the agreed portion of the oil which he may produce from his leased premises. Any plans he may have made for his drilling campaign and production and marketing procedure are necessarily cast aside. In lieu thereof the operator, chosen by a majority of the committee, will develop the lessees' premises as much or as little as they determine. The lessee will be paid not his share of his production or the production from his leased premises, but his share of the pre-determined percentage which the calculated productivity of his lease tract bears to the aggregate pre-determined productivity of the entire area.

In this action I observe, of course, that if such lessee controls sufficient area he may veto the act and the plan if he does so within sixty days. And in considering purely the economies of the act and plan it might seem that if more than eighty-five percent find the plan wholesome and profitable and desirable, the remaining less than fifteen percent should not be heard to complain. But it has ever been true that constitutional rights have not been sustained or withheld depending upon the service or advantage thereof to majorities. Most often constitutional prohibitions or constitutional rights have been enforced in favor of and for the protection of minorities, no matter how small the percentage so occupied by the minority in question.

What I have said as to objection number seven applies with equal force to objection number eight and nine considered in behalf of landowner lessors and other royalty owners. It is inevitable that in many instances the royalty received must be substantially less than the fixed royalty share of the production from the individual tract of land. It necessarily follows that oil produced from one man's land would be taken in part to pay royalty to another who owned a separate tract of land in the unit area. While this might be justified under some proper type of exercise of the State's police power for conservation, I think clearly it cannot find constitutional sanction in the

manner undertaken by this act and this plan as aforesaid.

As to stated objection numbered ten, the rights specially mentioned are rights of value. In Wise v. Tabor, 201 Okl. 428, 206 P. 2d 970, this court recently considered the rights of a surface owner or lessee as against excessive surface use by the oil operator in the construction of storage tanks, and that right was held to be of substantial value, so that a threatened invasion of such right could be prevented by injunction.

As to stated objections numbered eleven and twelve it must be conceded of course that this taking of private property is accomplished without consent of the owner and results in private use and private gain. But the proponents of this unitization would say that the taking resulted in or was for the joint use and gain of the owner and the others interested in the unit, and that the taking resulted in no loss to the owner, but, on the other hand, resulted in gain to him. That is nothing more or less than to argue that the taking was not without adequate compensation. But the Constitution, in Art. 2, Sec. 23, prohibits such a taking *with or without compensation.* Thus a violation of this provision cannot be measured by, or condoned on account of, compensation, no matter if the compensation is wholly adequate or even exceeds the value of the property taken. The constitutional inhibition is against such a taking without consent. I submit that a taking in violation of this constitutional provision for the private gain of others jointly with the owner, or such a taking which inures to the benefit of others along with the owner, but against his consent, is just as much a violation as it would be if the taking produced gain solely to others than the owner.

We observe the extensive argument of the over-all benefits of the unitized operation of an oil field or a common source of supply. It may be that in the aggregate the production expense would be reduced and the ultimate recovery of oil be increased. It might be that ultimately each lessee would receive as much money or profit as any one of them could receive by regular private operation.

It might be that ultimately each contract would return as much in royalty payment as any one contract would return under private operation. We do not understand that it is contended to be certain that every lessee and every lessor will receive as much or more under unitization than he might receive under ordinary separate tract or individual management. If it were so contended it would be based somewhat on theory or speculation. In any event, while those items are interesting they are not controlling on the constitutional question. The most we can say here is that a large percentage of the lessees believe this plan to be wholesome and good, and profitable and desirable; that the percentage of lessees who find and believe the plan unprofitable as to them, and grievously undesirable, and think it to be discriminatory and detrimental to their property interest is a small percentage comparatively, yet it is a percentage of large financial investment and of large potential oil value. Likewise, the royalty owners who find the plan objectionable and believe it to be unfair, and find the original calculation of percentage of interest to be discriminatory against them and to be inequitable, represent rights and interests which in the aggregate run into a large sum. Indeed, the royalty interests of some of the landowners may mean more to them than the oil company investment in this area would mean to any one of the companies who as lessees initiated this proceeding, calculated percentages of ownership, and who operate the unit.

This is a large oil field. It appears that the interests owned even by small royalty interest owners may be of substantial value. Certainly the interest of every protesting lessee and of every protesting lessor or royalty owner merits full protection. That full protection under our constitution seems to me to require that each landowner and his lessee be permitted to manage their own premises in drilling for and producing oil therefrom, subject only to reasonable and necessary regulation by the State under its police power. At least that must be our conclusion as con-

cerns any application of this effort to take over this area under the unitization act and plan here considered.

In this jurisdiction we have always gone forward in the conservation of oil and gas and in the protection of correlative rights. The State, through the Corporation Commission, has extensive power in the prevention of waste. I consider it right that the State should have great power to exercise necessary controls in the production and withdrawal of this natural resource. But surely individual enterprise should be encouraged, and individual property rights and contract rights should be upheld. The State should have much power to regulate, and insofar as necessary to restrict and control the production of oil and gas. But it should not be necessary that the State take over production theretofore carried on by landowner and lessee. Much less should it be necessary for the State to authorize a majority group of lessees to take over the operations of other lessees, to the objection and detriment of minority lessees, and over the objection of all royalty owners. We do not mean to say that in this case all of the royalty owners object to this act, or to this plan of unitization, but as we read the act it would make no difference if every royalty owner did object and complain.

On this point it is somewhat significant that some lessees and some royalty owners desire this unitization while other lessors and other lessees object and protest. It would seem inevitable that in final analysis some lessees will obtain a greater return by unitization than they would without it, and that inevitably some lessees will receive less return with unitization than they would without it. The same applies exactly to landowner lessors.

In Carter v. Carter Coal Company, 298 U. S. 238, 80 L. ed. 1160 the Court considered the Federal "Bituminous Coal Conservation Act of 1935" and held the act unconstitutional for some of the objectionable features which find parallel in the State Act here considered. In the opinion (L. ed. 1189) the Court said:

> "The power conferred upon the majority is, in effect the power to regulate the affairs of an unwilling

minority. This is legislative delegation in its most obnoxious form; for it is not even delegation to an official or an official body, presumptively disinterested, but to private persons whose interests may be and often are adverse to the interests of others in the same business. * * *"

This language applies with force to the provisions of this Act which confer power upon the majority in the first instance to say whether the Corporation Commission shall ever acquire jurisdiction. If that is legislative delegation in a very obnoxious form, then how would we characterize the more obnoxious delegation to fifteen-per-cent of the operators to nullify the whole proceedings by a mere protest in sixty days? This protest they may make without showing any reason therefor, or for any reason or for no reason.

In Washington ex rel. v. Roberge, 278 U. S. 115, 73 L. ed. 210, the Supreme Court considered an ordinance in reference to the location of a philanthropic home for children or old people when two-thirds of the owners of property within 400 feet should consent. The Superintendent who passed upon applications for building permits denied the application to build such a home solely because of the applicants' failure to furnish such consents, and in reference to the ordinance the court said on page 214 L. ed as follows:

"The superintendent is bound by the decision or inaction of such owners. There is no provision for review under the ordinance; their failure to give consent is final. They are not bound by any official duty, but are free to withhold consent for selfish reasons or arbitrarily, and may subject the trustee to their will or caprice. Yick Wo v. Hopkins, 118 U. S. 356, 366, 368, 30 L. ed. 220, 225, 226, 6 Sup. Ct. Rep. 1064. The delegation of power so attempted is repugnant to the due process clause of the 14th Amendment. Eubank v. Richmond, 226 U. S. 137, 143, 57 L. ed. 156, 158, 42 L. R. A. (N. S.) 1123, 33 Sup. Ct. Rep. 76,

Ann. Cas. 1914B, 192; Browning v. Hooper, 269 U. S. 396, 70 L. ed. 330, 46 Sup. Ct. Rep. 141."

Applying that rule to the act before us the Corporation Commission is bound in the first instance by the decision or inaction of 50 to 51 percent of the oil operators or lessees. The State, acting through the Corporation Commission, may not take an initial step toward this exercise of the police power for conservation of oil until and unless fifty-percent of the operators will it to be so. Thus, 51 percent or 50 percent plus, may in every instance prevent even the inception of a proceeding looking toward conservation of oil and gas by unitized operation.

And as to continuing jurisdiction of the Corporation Commission and as to continuation of the operation under unitization, the Corporation Commission is bound for sixty days by the decision or inaction of lessees of fifteen-percent of the area. The lessees or operators above mentioned, in exercising their preference or their will in the instances above stated, are not bound by any official duty, but are free to act or withhold action for private or selfish reasons or arbitrarily, and to the extent just noted they may in fact subject the unitization proceedings to their will or caprice.

It seems clear to me that this court should conclude this delegation of power so attempted to be repugnant to the due process clause of the Constitution.

In Eubank v. Richman, 226 U. S. 137, 57 L. ed. 156, the Supreme Court considered a city ordinance enacted under a statute of Virginia which ordinance provided, in substance, that when the owners of two-thirds of property abutting on any street should request it, a committee on streets should establish a building line not less than 5 nor more than 30 feet from the street line, with provision for penalty for violation of such property line establishment. The State Court upheld the legislation, but the United States Supreme Court held that it violated the 14th Amendment to the Federal Constitution in that such enact-

ment amounted to a deprivation of property without due process of law, and denied equal protection of the law.

Applying that rule here I must conclude that this act is equally invalid. It deprives operators and landowners of property without due process of law, and it likewise deprives some operators and all of the landowners or owners of royalty interests of equal protection of the law.

While the original 50% petition requirement standing alone would not or might not invalidate the act, it must be considered along with the other provisions as to the 15% veto power, and as to complete exclusion of all others than lessees. When so considered the 50% petition provision is some indication or demonstration of the over-all length to which the act goes. And when all provisions of the act are considered we must hold that the length to which it goes transcends legal and constitutional authority.

As touching upon these points our attention is directed to various provisions included in our statutes under the title on "WATERS AND WATER RIGHTS." (Title 82 O. S. 1941). Those provisions deal with the making of various property improvements such as irrigation, drainage, flood prevention, stream channel control, land reclamation, and the like, and the construction of public water works. Since the cost of such improvements must be borne by the property owners or persons interested they are given voice as to whether the project shall exist or not. Those provisions bear no strict analogy to the act here involved. Those provisions are more nearly analogous to principles or provisions of general government where the will or wishes of the people govern as in the creation of some of our municipal subdivisions or the voting of bonds for improvements or utilities.

For the reasons stated, we conclude that the act violates Art. 2, Sec. 7 of the Constitution in that said act operates to deprive persons of property without due process of law, and said act violates Art. 2, Sec. 15 of the Constitution in that it operates to impair the obligation of contracts, and said act violates Art. 2, Sec. 23 of the Constitution in that it operates to take or damage private property for

private use, and specifically authorizes the taking and using of private property for private gain without consent of the owner, and said act violates Art. 2, Sec. 24 of the Constitution in that its operation purports to take private property for public use without just compensation, and said act violates Art. 4, Sec. 1, and Art. 5, Sec. 1 of the Constitution in that it purports to accomplish an unauthorized delegation of the legislative power and of the police power of the State.

It is suggested the conclusion that this compulsory unitization act is unconstitutional might destroy or deny or in some manner impinge upon the power of the Legislature generally to regulate the coequal rights of owners or operators to take oil and gas from a common source of supply. However, such result would in no sense be accomplished or indicated or intended. The Legislature does have such power, including the power to make private contracts conform to or submit to the necessary police power of the state, and has well exercised that power in providing for "well spacing" and "proration," and in making the various other provisions under which the taking of oil and gas by any and all persons entitled to take it is regulated. This case concerns only the authority of the Legislature to deal with such conservation and such rights *in the manner in which this act deals with such subjects.* In that consideration the test is whether the act is violative of constitutional provisions. This court must not substitute court views for legislative views as to methods of conservation or protection of coequal rights, but this court must discharge its duty to measure this act by the constitutional requirements as to the protection of all rights.

No decision is cited which has upheld such an act or anything like it.

I am authorized to say that Vice Chief Justice Luttrell, and Mr. Justice Davison and Mr. Justice O'Neal concur in this dissent.

v.

CORPORATION COMMISSION OF OKLAHOMA, ET AL.,
Defendants.

DAVISON, J., Dissenting:

I concur in the dissent written by Mr. Justice Welch.

I believe the majority opinion goes much farther than any opinion ever written on the subject of conservation under the police power of the state. If the Act in question and the order of the Corporation Commission thereunder can stand at all it is only because of the proper exercise of police power for the conservation of oil and gas and the prevention of waste thereof. Many decisions hold, however, that such power must be reasonably exercised, and that private rights should not be interfered with to a greater extent than is reasonably required by a proper exercise of the power, taking into consideration the legitimate object to be accomplished. Orison Oil Corp., et al. v. Corporation Commission, 186 Okl. 548, 99 P. 2nd 134. Under the record involved herein, I am of the opinion that

the power exercised by the Corporation Commission is unreasonable, unjust and unfair.

O. S. A. Title 52, section 286.6 of the Act in question provides, as follows:

> "If at any time after the filing of a petition for the creation of a unit and within sixty (60) days after the entry of an order by the Commission approving the creation of the same, lessees of record of fifteen percent (15%) or more of the proposed unit area, if prior to the entry of the order by the Commission, or lessees of record of fifteen percent (15%) or more of the unit area as defined by the approved plan of unitization and order of the Commission, if after the entry of such order, shall file written protest with the Commission against the creation of the unit, the Commission shall vacate all action of any kind theretofore taken and dismiss the proceedings for the creation of such unit."

This provision of the Act denies lessors equal protection of the law. The Act gives a percentage of the lessees alone the opportunity to instigate proceedings for a proposed unit area, and at the same time affords fifteen percent of the lessees the right to nullify the proceedings. It therefore gives the lessees the vehicle to promulgate a unit area, and in the same clause gives the lessees another vehicle with which to backpedal therefrom and annul all proceedings thereunder. By this provision it appears the Act creates an improper delegation of the police power and legislative power of the State to the will and opportunities of oil operators or lessees. The Act is therefore legislation which benefits the individual lessees and operators rather than being a conservation measure.

The cases relied on in the majority opinion involve the pooling or spacing of small or irregular shaped tracts while the unit involved herein covers approximately 3700 acres of land consisting of 72 separately owned tracts with several hundred royalty owners.

I am of the opinion that the legislature, by the passage

of the referred to act has created a Frankenstein, under the guise of conservation.

Petitioners,

vs.

CORPORATION COMMISSION OF OKLAHOMA, ET AL.,
Defendants.

O'NEAL, J., Dissenting:

I agree with the views expressed by Mr. Justice Welch in his dissenting opinion.

It is my judgment this unitization act under the guise of preventing waste in the production of oil and gas from the earth transcends, to an unwarranted and unreasonable degree, regulation of the production of natural resources, and enters the forbidden zone of taking property out of the hands of the owners and placing it in the hands of third persons as individuals and not as a state instrumentality for the purpose of operation, without the consent of and in violation of their rights.

As I view this Act, it is an improper, unjustified and illegal delegation of police power by the state to private individuals, or corporations acting in a private capacity,

as distinguished from acting in the capacity of a duly constituted state instrumentality, answerable to the state. It may be that the state may create a state instrumentality and vest it with the police power for such purpose, making it answerable to the state for its activities and results, but certainly the state has no power under its constitution, or the constitution of the United States to delegate the police power to private individuals or private corporations for such a purpose, or for that matter, any purpose.

APPENDIX "B"

PETITION FOR REHEARING

IN THE SUPREME COURT OF THE STATE OF OKLAHOMA

No. 33336

THE PALMER OIL CORPORATION, A CORPORATION, ET AL,
Plaintiffs in Error,

vs.

PHILLIPS PETROLEUM COMPANY, A CORPORATION, ET AL.,
Defendants in Error.

and

No. 33708

PAUL STERBA AND PAUL STERBA, JR., A MINOR, BY AND THROUGH HIS FATHER AND NEXT FRIEND, PAUL STERBA, AND THE PALMER OIL CORPORATION, A CORPORATION,
Petitioners,

vs.

CORPORATION COMMISSION OF OKLAHOMA, ET AL.,
Defendants.

PETITION FOR REHEARING

COMES NOW The Palmer Oil Corporation and Paul Sterba and Paul Sterba, Jr., a minor, by and through his father and next friend, Paul Sterba, and petition the Court

in this consolidated cause to grant them a rehearing from the decree in judgment rendered by this court on March 20, 1951, affirming in Case No. 33336 the order of the State Corporation Commission made in Cause No. 20289, and denying in Case No. 33708 petitioners' original petition for a writ of prohibition, and, as grounds for this petition for rehearing, state and show to the Court:

We desire to briefly refer to and comment upon certain material facts and contentions appearing in the record and presented in brief and oral argument, which the majority of the Court, as reflected by its opinion, overlooked, or to which it gave improper consideration. The more important of these facts and contentions, insofar as they relate to the constitutional questions involved, are as follows:

I.

The majority of the Court apparently failed to consider the pertinent facts, reflecting the destruction of the rights of The Palmer Oil Corporation by this compulsory unitization.

The first producing oil and gas well in the West Cement Field in Caddo County, Oklahoma, was completed on October 17, 1917. On February 18, 1936, Paul Sterba, and others, being the then owners of the Southwest Quarter of Section 35, Township 6 North, Range 10 West, Caddo County, Oklahoma, executed an oil and gas lease running to Gulf Oil Corporation. Gulf Oil Corporation thereafter, and in September, 1938, sold and assigned its rights under the oil and gas lease, to a depth of 6,000 feet, to The Palmer Oil Corporation, Gulf also retaining an overriding royalty. Neither said lease nor any instrument relating thereto provided for unitization or pooling of the premises with any other leases. Palmer immediately drilled several oil and gas wells on the premises, producing from zones above the Medrano Sand.

The first production of gas from the Medrano Sand Bodies of the West Cement Field occurred in October, 1936, from the Southwest Quarter of Section 36, Township 6 North, Range 10 West, and production of oil from Me-

drano Sand Bodies was first discovered in March, 1943, in the Southeast Quarter of Section 35, Township 6 North, Range 10 West.

The rights of Palmer and Sterba were vested and fixed long before the Unitization Act was passed in the year 1945, and Palmer had, in fact, by October 22, 1946, drilled six oil and gas test wells on the Sterba lease, two producing from the Medrano Sand Bodies when the Unitization Act, and its ill-begotten child, the written Plan of Unitization, sired by Phillips Petroleum Company, and other major operators, was presented for christening to the Oklahoma Corporation Commission, which, having no power but to kill or let live, gave its blessing and christened the baby "The West Cement Medrano Unit" on September 5, 1947. During the pendency of the proceedings before the Oklahoma Corporation Commission on the petition to establish the written Plan of Unitization, Palmer drilled and completed a third oil well producing from the Medrano Sand Bodies and this third well is made reference to in the opinion of the majority Court.

The written Plan of Unitization covered the several separate uncommunicable Medrano Sand Bodies under an area containing approximately 3700 contiguous surface acres, extending from the southeast to the northwest, in excess of five miles, with greatest width from north to south of approximately three and one-half miles. The Sterba-Palmer lease is near the center and in the most productive portion of the unit area.

Although Palmer's surface ownership was only approximately 4% of the unit surface area (not being a sufficient per cent to protect itself and any of the provisions of either the Unitization Act or the Plan of Unitization), yet the division of interest formula used in connection with the written Plan of Unitization shows that Palmer owned a very valued property right in excess of 5,000,000 barrels of oil in place under its lease, and was under the Plan originally allowed 5.145% of the production from the unit area, which, after the drilling and completion of the third well above mentioned, was increased to 5.51614% interest,

the increase representing in excess of 175,000 barrels of oil in place.

It is Palmer's developed valuable rights in the Sterba lease and the oil and gas thereunder and the business of producing and selling the same that was completely taken away from it by the Plan of its competitors approved by Commission's Order of September 5, 1947, and placed in the hands of private parties, Palmer's competitors, which have been operating the same since December 7, 1947.

II.

The majority opinion states:

> "Involved on the appeal are two major questions. One, the constitutionality of said sections of the statute which, as a whole, constitute what is known as the Unitization Act (H. B. 339 of the 1945 Oklahoma Legislature). The other, the legality of the order of the Commission if authorized under the Act to effect unitization. These questions will be considered in the order stated. . . .
>
> "On behalf of the lessees it is contended that the Act is violative of Art. II, Sections 7, 15, 23 and 24 of the Constitution of the State of Oklahoma, and of Art. I, sec. 10, of the Fourteenth Amendment to the Constitution of the United States. For the purpose of the presentation, there is no segregation of the contentions as to each of said constitutional provisions for the expressed reason the grounds relied on have common application to all. Two grounds are relied on. One, the Act as a whole is unreasonable. The other, the Act constitutes an unauthorized delegation of legislative power."

From the above quoted portions of the majority opinion, it appears that the majority of the Court:

(a) misconceived the nature of the constitutional issues presented and argued by plaintiffs in error, and

(b) limited its consideration to the abstract provisions of the Unitization Act and did not consider the manner of

its application to the facts and circumstances of this case.

In order to eliminate any doubt in these respects, plaintiffs in error contend:

That House Bill No. 339 of the 1945 Legislature (Title 52 O. S. Supp. 1947, Secs. 286.1 to 286.17, both inclusive), known as the Unitization Act, and the Order of the Corporation Commission of Oklahoma approving the written Plan of compulsory unitization of the several Medrano Sand Bodies in the West Cement Fields, Caddo County, Oklahoma, as interpreted and applied to the operations of Palmer and other plaintiffs in error, under the undisputed and indisputable evidence in the record, *is an improper and unreasonable exercise of the police power* and thereby (1) constitutes an unlawful delegation of legislative power to private persons or groups in violation of Section 1, Article 4, and Section 1, Article 5, of the Oklahoma Constitution; (2) deprives plaintiffs in error of their property without due process of law, and denies plaintiffs in error the equal protection of the law in violation of Section 7, Article 2 of the Oklahoma Constitution and the Fourteenth Amendment of the Constitution of the United States; (3) impairs the obligations of preexisting contracts and takes the private property of plaintiffs in error without their consent, without compensation and for private use in violation of Sections 15 and 23, Article 2 of the Oklahoma Constitution and Article 1, Section 10 of the Constitution of the United States.

The over-all constitutional question involves not only a consideration of the abstract provisions of the Unitization Act, but the manner of its application, which includes each and all of the following considerations, none of which can be separately treated or unrelated to the whole:

(a) The abstract provisions of the Unitization Act.

(b) The Written Plan of Unitization formulated by Phillips Petroleum Company, and others, and which, when approved by the Commission also became law.

(c) The Findings of Fact and Order of the Commission.

(d) All of the facts and circumstances of the case.

III.

The majority of the Court further states:

> "The substance of lessees' ground one is that the Act is unreasonable because it does not require as a condition to the establishment of the unit a finding by the Commission, that for the purpose of conservation, the application of the Act will be more effective than that of the existing laws."
>
> "There is no contention that the standards prescribed are insufficient in any respect other than in not including the suggested findings. Therefore, it necessarily follows that the contention challenges the authority of the Legislature in dealing with matters of policy, which is a realm without the scope of judicial inquiry."

The majority of the Court, as shown by the quoted portion of its opinion, evidently concluded that the constitutional issues were limited to one ground, i. e. that the Corporation Commission could, under the provisions of the Unitization Act, apply the same and the Written Plan of Unitization, without a finding that such Unitization and Plan would accomplish greater conservation than that permitted under existing laws. It is reiterated that the issues presented and argued *were not limited to any one ground but were based on many grounds.*

The majority of the Court, as shown by the quoted portion of its opinion, stated that plaintiffs in error did not question the validity of the so-called "standards" set forth in Section 286.4 of the Unitization Act. Such statement, we respectfully present, is in error. Plaintiffs in error have at all times argued that the so-called standards were not standards at all and that the Unitization Act, as applied in this case, *was an unreasonable exercise of the police power*, because:

(a) It had a retrospective operation and seriously disrupted existing and vested rights. (Our brief 317 and 318).

(b) It would serve no purpose in respect to the Medrano

Sand Bodies since more than 2/3rds of the gas energy had already been exhausted. (Our brief 317-318).

(c) It could not be any more effective for conservation purposes than the general conservation laws. (Our brief 318-321).

(d) The so-called "standards" set forth in Section 286.4 are too broad, vague, and unspecific to constitute any guide to the Commission. (Our brief 318-321).

(e) It did not become effective unless proceedings were initiated by at least 50% of lessees of surface area who not only had the exclusive power to initiate the proceedings, but also formulated and presented the Written Plan of Unitization. (Our brief 320).

(f) The Unitization Act and the Written Plan approved could be nullified within sixty days by 15% of the lessees of the surface area. (Our brief, 320).

(g) The Unitization Act and the Written Plan of Unitization in this case was designed in the interest of the major operators who could always control the formulation, application and operation of the law. (Our brief, 320-321).

(h) The Unitization Act provides not for mere rules and regulations, but is the definite taking over of the management and control of large oil fields at the will of certain percentages and without the consent of unwilling minorities, which constitutes an annihilation of the rights of small operators. (Our brief 326, 330).

In fact, the constitutional issues are not limited to the above contentions.

For instance, Mr. Justice Welch, in his well reasoned and able dissenting opinion, sets forth and discusses many constitutional objections which are apparent from the record, and by reference we wish to incorporate the contents of his opinion and the dissenting opinions of Mr. Justice Davison and Mr. Justice O'Neal herein.

IV.

In order that there may be no further misunderstanding in respect to the constitutional issues raised, plaintiffs in error desire to amplify some of the more important constitutional issues which are apparent from the record, and were presented by brief and oral argument.

(A) The majority of the Court stated in its opinion:

> "No rights have been exercised under the 15% provision of Section 286.6 though its validity is questioned here. It is unnecessary to determine the constitutionality of this provision at this time. The same is true of the 10% provision of Section 286.11 providing for reconsideration by the Commission of the Plan and operation and fixed correlative rights thereunder. These undetermined questions are reserved."

To say that it is unnecessary to determine the constitutionality of this provision at this time with reference to the fifteen percent provision of Section 286.6 constitutes an evasion of the construction of the statute, because it is the Unitization Act as a whole, as applied in this instance in conjunction with the Plan of Unitization conceived by private parties, that destroys and violates the constitutional rights of plaintiffs in error. While the pronounced purpose of the Act (Sec. 286.1) may be laudable, the subsequent portions of the Act and of the Plan of Unitization—its ill-begotten child—are disastrously destructive of the constitutional rights of plaintiffs in error. Such a statute and such a Plan, when so considered, are not unlike an egg. It cannot be part good and part bad. In this instance, it is all bad.

It was never contended by any party to these proceedings that Section 286.6 or Section 286.11, or any other section, could be separated from the Unitization Act as a whole, despite the provision of Section 286.16. All parties understood the Unitization Act as being a special and exceptionally drastic type of legislation, which would have a separate and different application, depending upon the

form of Written Plan of Unitization, to each different oil field in the State of Oklahoma, if applied. Since this exceptionally drastic type of legislation, where applied, would necessarily have a continuous and day to day application, it should not be considered piecemeal, but as a whole.

The question of separability having appeared in this for the first time in the opinion of the majority of the Court, petitioners in error urge that it is only right and proper that they should have a full opportunity to present and argue the question of separability.

The majority of the Court, having disregarded Section 286.6 (15% provision) and Section 286.11 (10% provision), assuming erroneously said provisions are not in issue and separable, it must be assumed that the majority of the Court would likewise disregard Section 286.12 (15% provision on enlarging unit) on the same ground. Not anticipating such lack of the construction of the express provisions of the statute, plaintiffs in error seriously [illegible]e a rehearing so that the majority of the Court can carefully consider similar issues involving control by private parties on a percentage basis under the express terms and provisions of the written Plan of Unitization, as follows:

(1) The Order of the Commission and the written Plan of Unitization could have been nullified merely by the failure of the Unit Committee by a vote of 66⅔ percent to take over operations under the unit within three months from the date of the Order. (See Section 9 of the written Plan). In fact the Unit Committee, in taking over the unit operations on December 7, 1947, barely escaped this nullification by two days. Will the majority of the Court say that this provision of the Plan is not in issue and separable?

(2) The day to day operations under the unit are not supervised or controlled by the Corporation Commission, but are handled by the Unit Operator, subject to vote of 66⅔ percent of the Unit Committee, except on the question of removing the Unit Operator, in which event a 75 percent vote is required. Here again, a percentage in

interest controls. Is this express provision of the Plan to be held not in issue and separable?

(3) Sections VIII, XIV and XV of the Plan of Unitization permit the Unit Operator, subject to 66⅔rds percent vote of the Unit Committee, to produce all of the oil from the unit from any one lease and to abandon such depleted lease. Is this provision not in issue and separable?

(4) The Unit Operator may produce oil disproportionately from the Palmer-Sterba lease for the benefit of the other leasehold owners within the area and then, subject to vote of 66⅔rds percent of the Unit Committee, abandon from the unit such other leases as have not been depleted by production, the owners of such abandoned leases gaining participation in the production from the Palmer-Sterba wells and the return of their own undepleted leases. Actually, the Unit Operator has produced oil disproportionately from the Palmer-Sterba lease, producing up to 11 percent of the total unit production (see Application for Writ of Prohibition) from this one lease, whereas Palmer's unit assigned interest in the total unit production is approximately 5.5 percent. Is this control by percentage not in issue and separable?

(5) Under Sections XV and VIII of the Plan of Unitization the Unit Operator, upon vote of 66⅔rds percent of the Unit Committee, can incur any expense its pleases in the further development or operation of the unit, drill, plug or abandon any well or wells it desires, may abandon or change all method or methods of operation in whole or in part at any time, may completely abandon the unit, dissolve and wind up its affairs at any time. Are these express provisions of the Plan of Unitization not in issue and separable?

Although the majority of the Court has disregarded the arbitrary percentage provisions of the Unitization Act referred to above, certainly the majority of the Court, upon further consideration, cannot disregard the arbitrary and unreasonable percentage provisions as set forth in the written Plan of Unitization. The written Plan of Unitization is an unreasonable exercise of the police power, by

reason of the fact that a certain percentage of the Unit Committee, as private individuals, have the power to exercise arbitrary and unreasonable power without limitation. In other words, the compulsory unitization is not a unit born of or controlled by provisions of the law, but rather a unitization depending upon the will of private individuals who control percents as stated of the vote of the Unit Committee.

(B) The Unitization Act applies only upon a petition being filed by 50 percent (meaning 50 percent of the surface area) of the lessees who also formulate and present with the petition, the written Plan of Unitization. The Corporation Commission cannot breathe the breath of life into the Unitization Act, or any Plan of Unitization thereunder; this can only be done by 50 percent of the lessees in the area of the assumed common source of supply. In other words, certain percentages of private parties not only initiate the proceedings, but actually formulate the law which is to control a particular oil and gas field. This is not only discrimination, it is an unauthorized delegation of authority (legislative and the exercise of police power), to private individuals. The majority of the Court, in its opinion with reference to this question, states:

> "In the first place the power so granted can neither establish or disestablish the unitization when established because the power of establishment rests with the Corporation Commission. In such situation there is not a trace of legislative power exercised."

We submit that the quoted portion of the opinion is an incorrect interpretation of the statute. The Corporation Commission has no power to initiate the proceedings, nor to formulate the Plan of Unitization. If the Corporation Commission rejects the Plan, nothing is accomplished. Therefore, the only real authority of the Corporation Commission is to apply the Unitization Act in accordance with the Plan petitioned for and submitted by 50 percent of the lessees by area. This is far different than the matter of determining whether certain legislation should become

effective upon certain conditions. Since this case was argued before the Supreme Court, an annotation on the delegation of authority to private individuals has been published in 3 ALR (2d) 188. This annotation clearly shows that where a percentage of private individuals not only initiate but formulate the legislation, the same is invalid and constitutes the most vicious type of unauthorized delegation of power to private individuals.

(C) The basic fact or major premise permitting conservation legislation which involves the adjustment and protection of correlative rights, is the existence of a *single common source of supply.* Therefore, if the Unitization Act did not have the provision (Sec. 286.2) limiting its operation to a common source of supply, the Act, without more, would be definitely violative of the Constitution of the State of Oklahoma, as well as the Constitution of the United States. See *H. F. Wilcox Oil & Gas Co.* v. *State,* 162 Okla. 89, 19 P. (2d) 347; *Mars* v. *Oxford,* 32 F. 2d 134, cert. denied 280 U. S. 563, 50 S. Ct. 24, 70 L. ed. 617, and *Ohio* v. *Indiana,* 177 U. S. 190, 20 S. Ct. 576, 44 L. ed. 729.

There is no provision in the Act any where which expressly grants the right to the Corporation Commission to determine such basic fact or major premise, namely, the existence of a single common source of supply. Nevertheless, that issue was raised by plaintiffs in error and was the most serious factual issue in the entire case.

The majority of the Court is correct in holding that the only evidence supporting the finding of the Corporation Commission that there was a single common source of supply was pure opinion evidence. In other words, the basic and fundamental fact—the existence of a single common source of supply, is, in the very nature of things, only an uncertain conclusion because it concerns a situation which may or may not exist 6,000 feet underneath the surface.

It is contended that any police power statute or regulation, the life and validity of which depends upon the determination of a fact or condition which is not susceptible of positive determination, should not be enforced upon

non-consenting parties and their private rights where there is any reasonable dispute. In this case the existence of the basic and fundamental fact is seriously in dispute and cannot be definitely proved, but merely concluded on the basis of opinion evidence. It is arbitrary and unreasonable to impose the statute and the Plan of Unitization upon the expert opinion of one witness as against the expert opinion of other witnesses equally well qualified.

(D) The division of interest formula had many unfair and unreasonable features which were argued at length. (See our brief 278-297). This division of interest formula must be considered as much a part of the Unitization Act in this case as any other express provision. The facts and circumstances concerning the application of this formula were undisputed and showed that the formula in many instances had no reasonable or scientific support in any respect. On the constitutional issues the majority of the Court gave no consideration whatever to the objections presented to this division of interest formula.

(E) Plaintiff in error contended in brief and on oral argument that all the facts and circumstances of the case had to be considered in connection with the constitutional issues. The majority of the Court again interpreted such contentions as being restricted to the sufficiency of the evidence. *This was not our intention.* There was no conflict in the known facts. The only questions were the interpretation or conclusions to be drawn from the known facts. Therefore, when the undisputed facts disclose that the Plan of Unitization was unreasonable in any respect, the whole Plan and the Unitization Act likewise became unreasonable. In other words, when it was argued in plaintiffs in error brief that there was not a single common source of supply (Brief 231-252), or that the proposed unit area had not been reasonably defined (Brief 258-269), or that the proposed Plan of Unitization was not suited to the needs and requirements of the proposed unit and unit area (Brief 269-270), or that the proposed Plan of Unitization was not fair, reasonable and equitable (Brief 277-278), or that the formula for the division of interest

was not generally fair, equitable or reasonable (Brief 278-297), or that the evidence showed that the Plan of Unitization was particularly unfair, inequitable and unreasonable as to the rights of The Palmer Oil Corporation (Brief 297-307), it was intended that these contentions would apply with equal force to the broad and general contention that the Unitization Act, as applied, (which includes the Unitization Act, the written Plan of Unitization, the Order of the Commission approving the Plan, and all other facts and circumstances), was an *unreasonable and unwarranted exercise of the police power.*

V.

The majority of the Court endeavors to distinguish the present case from the controlling decision in the case of *Carter* v. *Carter Coal Company,* 298 U. S. 238, 80 L. ed. 1160, and *State of Washington, ex rel.* v. *Roberge,* 278 U. S. 116, 73 L. ed. 210, in the following language:

> "In the Carter case the donees of the power were given authority to make decisions determinable of the rights of others and in the Washington case the donees were given an arbitrary power to veto the exercise by others of their unquestioned rights. neither situation obtains herein."

We submit that the quoted portion of the majority opinion emphasizes the analogy between the present case and the Carter case and the Washington case, and shows no distinction whatsoever.

The majority opinion then quotes at length from *Currin* v. *Wallace,* 306 U. S. 1, 83 L. ed. 441, in an effort to show that legislative enactments may be made conditional upon the will of certain percentages in interest. The Currin case is far from being in point. In the first place, the Currin case involved legislation enacted by Congress under the commerce power, in which case equality is not required. The Supreme Court in that case, in its own opinion, stated:

> "There is no requirement of uniformity in connection with the commerce power . . . undoubtedly the exercise of the commerce power is subject to the Fifth amendment . . .; but that amendment unlike the Fourteenth, has no equal protection clause."

In the second place, the legislation in the Currin case was complete inspection legislation which, if made effective in a particular market, was entirely subject to and under the supervision of the Government.

In the case of the Unitization Act, the Plan of Unitization is formulated by a percentage of private interests, is presented by a percentage of private interests, is made effective, operated and concluded by a percentage of private interests. The only part that any Governmental Agency plays in connection with the Unitization Act is to either reject or approve the Plan submitted without any definite or certain guides or standards.

Conclusion

However laudable may be the pronounced purpose of the passage of the Unitization Act, and however the public good might possibly be served by compulsory unitization of an oil field, no public or governmental agency is empowered by the Unitization Act to create or maintain in being such a unit. Under the Unitization Act these rights are delegated solely to private parties with the exercise thereof within the voluntary discretion of the percents of interests of such private parties as expressed in the Act and in the private parties' own creation—the Plan of Unitization. This House of Babylon must crumble and fall by its own weight.

It is respectfully submitted that this Petition for Rehearing should be granted.

APPENDIX "C"

APPLICATION FOR LEAVE TO FILE SECOND PETITION FOR REHEARING AND BRIEF IN SUPPORT THEREOF

IN THE SUPREME COURT OF THE STATE OF OKLAHOMA

No. 33336

THE PALMER OIL CORPORATION, a corporation, et al.,
Plaintiffs in Error,

v.

PHILLIPS PETROLEUM COMPANY, a corporation, et al.,
Defendants in Error.

and

No. 33708

PAUL STERBA and PAUL STERBA, JR., a minor, by and through his father and next friend, PAUL STERBA, and THE PALMER OIL CORPORATION, a corporation,
Petitioners,

v.

CORPORATION COMMISSION OF OKLAHOMA, et al.,
Defendants.

APPLICATION FOR LEAVE TO FILE SECOND PETITION FOR REHEARING

Come now The Palmer Oil Corporation, Paul Sterba and Paul Sterba, Jr., a minor, by and through his father and next friend, Paul Sterba, and respectfully pray leave of Court to file second petition for rehearing in these consolidated cases, and as grounds therefor show the Court as follows:

1.

The majority opinion of the Court in holding that under this record there has been no unconstitutional delegation of legislative power has failed to differentiate between legislative enactments which fix and determine a policy of the state and simply delegate to others the enforcement of such predetermined policy in the administration of the Act and the situation here, where the propriety or advisability of determining policy with respect to a given area is dependent upon the will and caprice of a majority of affected owners.

2.

The majority opinion ignores the fact that under the terms of the Act Royalty owners are deprived of their property without due process of law. This result flows from the fact that the Act completely ignores their rights and permits the Corporation Commission, by approving a plan of unitization, to deprive them of valuable rights in a proceeding to which they are not parties, and of which no notice to them is required.

Respectfully submitted,

CLAUDE MONNET,
COLEMAN H. HAYES,

BRIEF IN SUPPORT OF APPLICATION FOR LEAVE TO FILE SECOND PETITION FOR REHEARING

Point I

The Unitization Act Constitutes An Unwarranted and Unconstitutional Delegation of Legislative Power

In the majority opinion, the contention that the Act is unconstitutional because it constitutes an unauthorized delegation of legislative power is disposed of on the authority of cases which, in effect, hold that a legislative body, having once adopted a policy, may (1) delegate to an executive or agency the power and duty to enforce the policy, or (2) make the enforcement of the policy dependent upon the consent of a portion of the affected individuals.

The Act in question does neither. Although it contains recitations calculated to support it as an exercise of the police power, it does not fix the policy of the state. Rather, it says that the Corporation Commission may fix and determine the policy after a hearing, but jurisdiction of the Commission itself to either determine or carry out the policy is dependent upon the initiation of a request therefor by fifty per cent of the affected parties. It is perfectly clear that the Legislature has in effect said, "It may be advisable, depending upon circumstances, to subject certain producing areas to unit operation. The Legislature is not equipped with facilities to obtain the information necessary to determine the propriety of so doing. Consequently, we will vest in the Corporation Commission the power to make such determination."

Had the Legislature stopped at this point, the validity of the Act might have been sustained under the authorities cited in the majority opinion. However, the Legislature went further and made the question of determination dependent upon the will of lessees of record of fifty per cent or more of the area sought to be unitized. No case has been cited by counsel, and in our judgment none can be cited, in which a determination of legislative policy de-

pends upon the will, whim or caprice of any percentage of the affected parties.

Although put in slightly different language, Federal District Judge Akerman, in Chester C. Fosgate Co., et al. v. Kirkland, et al., 19 Fed. Supp. 152, struck down a marketing agreement entered into pursuant to the Federal Agricultural Adjustment Act, 7 U. S. C. A., Sections 601 to 610, inclusive. That Act authorized the Secretary of Agriculture to promulgate a handling order which should be binding upon all handlers of agricultural products upon the execution of an agreement signed by fifty per cent of the handlers. Although the Act provided an alternative method by which an order might be made without the agreement of the statutory fifty per cent, the Court concluded, in view of all of the provisions of the Act, such an agreement was a necessary requirement, and, in holding it to constitute an unwarranted delegation of legislative power, said:

> "Since the marketing agreement must be signed by 50 per cent. of handlers, and also by the Secretary, each occupies the position of a separate branch of the legislative body. Such delegation of authority to a part of those engaged in a particular industry has lately been condemned by several decisions of the Supreme Court of the United States, and by several decisions of the State Supreme Courts."

Numerous cases are cited in support of the conclusion, after a discussion of which the writer of the opinion concludes:

> "To permit the handlers of 50 per cent of the volume of any commodity to have such power in the making of a marketing agreement, which when approved by an order of some executive official shall have the force of law, is to my mind exactly what the Supreme Court said it is, namely, 'Legislative delegation in its most obnoxious form,' and in consequence, constitutes a violation of the Fifth Amendment to the Federal Constitution."

Just as it was necessary in the cited case to have, First, the concurrence, consent or agreement of fifty per cent of the parties involved, and in addition an order by the Secretary of Agriculture, under the Act here involved it is necessary to have, first, a petition filed by 50 per cent of the affected lessees, and second, an order of the Corporation Commission approving it.

Other cases to the same effect are collected in 3 A. L. R. (2d) 188. Concerning such cases the annotator says:

> "Statutes which lodge the power to initiate administrative legislation on prices, wages, or hours exclusively in private groups and limit the power of the appropriate administrative agency to approval or disapproval of such legislation, in some instances without authorizing them to modify or revise it, have been held invalid as an improper delegation of legislative power in a number of cases."

Of other cases, which include those from this Court relating to price legislation, the annotator says:

> "On the other hand, where a statute authorizes the appropriate administrative agency to enact, upon its own initiative, legislation on prices, wages, and hours under adequate standards fixed by the statute, it is not, merely because it authorizes also private groups to initiate such legislation, subject to the objection that it improperly delegates legislative power to private groups."

Another group of cases, in which Currin v. Wallace, 306 U. S. 1, heavily relied upon by the majority, falls, is discussed by the annotator, who recognizes the clear distinction between such cases and those like the case at bar. The distinction is plain and simple. As pointed out in the Currin case, a legislative body may place restrictions upon the operation of its own regulations by including as a condition the approval of a group of affected parties. However, as we have pointed out, the Legislature has not in this case imposed any restrictions upon the operation of

an ascertained policy, but has in effect authorized the Corporation Commission to impose restrictions contingent upon a petition therefor by a percentage of private parties. We unhesitatingly reassert that there is no case which approves such a delegation of legislative authority.

We also feel that no court should ever hold that a legislative body may delegate to another legislative body the power to adopt a policy provided that fifty per cent of the affected class desire the adoption of a policy relating to a given subject. Frankly, we think that this Court, in approving the legislation, overlooked the fact that thereunder the adoption of a policy, and not the enforcement thereof, is wholly dependent upon the wishes of fifty per cent of the affected parties, who may invest the Corporation Commission with the power so to do, or deprive it of such power, with or without reason, cause or justification.

We therefore respectfully submit that the authorities relied upon do not support the conclusion of the Court, that there are no authorities which do, and that the present majority opinion is in conflict with all well considered cases which have dealt with similar questions.

Point II

The Act Is Violative of the Due Process Clauses of the State and Federal Constitutions

In the majority opinion, the position of royalty owners is considered only from the standpoint that they are not afforded the same right of protest as are their lessees. It is stated, however, after pointing out that they may be inaccessible and could afford little, if any, helpful information if available, "But they are granted the right of an appeal from the action of the Commission, and this case is an example of its exercise."

This treatment and disposition of the interests of the royalty owners completely overlooks the fact that whether they are accessible or inaccessible, whether they might provide helpful information, once a proceeding is initiated

by fifty per cent of their lessees, or not, they do have extremely valuable rights which are affected by any unit plan of operation. To hold that they may be deprived of their rights and have their property taken away in a proceeding to which they are not even parties is unthinkable. No one would deny that under the unit plan here approved, many of the royalty owners have been deprived of substantial property rights. It is true that some of them, in an effort to protect their rights, by leave of the Corporation Commission, appeared and asserted them. They were able to do so only by the grace of the Commission. Under no provision of the Unitization Act are they necessary parties to the proceeding, nor is there any provision in the Act for notification of the pendency of any such proceeding. The present opinion, which so lightly brushes aside the total failure of the Act to take their rights into account, is contra to the basic concept that no person shall be deprived of his property without due process of law.

One of the latest cases in which the sanctity of property and property rights is again emphasized, is Mullane v. Central Hanover Bank & Trust Co., 339 U. S. 306. There was involved in that case a statute of the State of New York which authorized the trustee of a collective trust to procure a judicial settlement of its accounts with beneficiaries in a proceeding brought for that purpose. The only provision for notice to the beneficiaries was that publication be made in a local newspaper. The validity of the Act was challenged by a benficiary on the ground that it was insufficient to afford due process. All of the New York Courts upheld the validity of the Act. The Supreme Court of the United States, on April 24, 1950, reversed, saying:

> "We hold the notice of judicial settlement of accounts required by the New York Banking Law, Section 100-c (12) is incompatible with the requirements of the Fourteenth Amendment as a basis for adjudication depriving known persons, whose whereabouts are also known, of substantial property rights."

In support of such holding, the Court called attention to the fact that:

> "In two ways this proceeding does or may deprive beneficiaries of property. It may cut off their rights to have the trustee answer for negligent or illegal impairments of their interests. Also, their interests are presumably subject to diminution in the proceeding by allowance of fees and expenses to one who, in their names but without their knowledge, may conduct a fruitless or uncompensatory contest. Certainly the proceeding is one in which they may be deprived of property rights and hence notice and hearing must measure up to the standards of due process."

As we have heretofore suggested, we think no one would even suggest that royalty owners' rights may not be or were not jeopardized and affected by the order creating the unit. As a matter of fact, we know of no more drastic legislation than that here involved. Of course, we recognize that individual interests must in many instances give way to the public good. However, private property and contractual rights should not be destroyed without the affected parties at least having an opportunity to protect them. Such an opportunity is, under our form of government, ordinarily provided by giving to the affected party "his day in court". The Supreme Court in the Mullane cases recognized, as do we, that oftentimes the interest of the state and that of individuals comes into conflict, and that a construction of the due process clause which would create impossible or impractical obstacles cannot be justified. However, the Court said:

> "Against this interest of the State we must balance the individual interest sought to be protected by the Fourteenth Amendment. This is defined by our holding that 'The fundamental requisite of due process of law is the opportunity to be heard.' Grannis v. Ordean, 234 U. S. 385, 394, 34 S. Ct. 779, 783, 58 L. Ed. 1363. This right to be heard has little reality or

> worth unless one is informed that the matter is pending and can choose for himself whether to appear or default, acquiesce or contest."

Concerning the nature of the notice required under the due process clause, the Supreme Court, in accordance with its prior holdings, reiterated that,

> "An elementary and fundamental requirement of due process in any proceeding which is to be accorded finality is notice reasonably calculated, under all the circumstances, to apprise interested parties of the pendency of the action, and afford them an opportunity to present their objections."

In holding that notice by publication was inadequate, the Court called attention to the fact that the trustee in most instances was aware of the names and addresses of the beneficiaries, and as to them the Court said:

> "As to known present beneficiaries of known place of residence, however, notice by publication stands on a different footing. Exceptions in the name of necessity do not sweep away the rule that within the limits of practicability notice must be such as is reasonably calculated to reach interested parties. Where the names and post office addresses of those affected by a proceeding are at hand, the reasons disappear for resort to means less likely than the mails to apprise them of its pendency."

Similarly, in the instant case, the names and addresses of royalty owners are within the knowledge of the lessees who, under the Act, so completely dominate the proceedings. It is common knowledge that in producing areas lessees who are authorized by lessors to dispose of the production know the names and whereabouts of those who are entitled to participate in the royalty. Consequently, the reasoning of the Supreme Court is clearly applicable here, and the failure of the Act to provide for such notice

deprives it of validity because violative of the due process requirement.

In this connection, for the purpose of emphasis, we call the Court's attention to the fact that the legislation involved completely ignores the rights and interests of the royalty owners. Nowhere in the Act are they accorded any consideration. As a matter of fact, they are only mentioned because under the Act their rights may be decreased. The majority opinion tacitly approves this complete disregard, because it is pointed out, "but they are granted the right of an appeal." We are aware of no case which holds or intimates that the granting of a right of appeal meets the requirement of due process. As a matter of fact, the rule is generally stated that the right of appeal is no part of due process. The reasons for giving a person his day in court certainly dispel any idea that the right to appeal may be substituted therefor. For this reason alone, then, we respectfully submit that the Act involved is fatally defective in that it authorizes the destruction and impairment of property and proper rights without due process of law.

Conclusion

This case has received unusual consideration at the hands of this Court. It has been pending for more than two years. The division of the Justices is sharp and clear. For that reason we have refrained from a detail discussion of the provisions of the Act or its effect upon the parties involved. We recognize that the majority opinion and those registering dissent have been carefully prepared and reflect the considered views of the authors. We do feel, however, that the majority opinion is in conflict with fundamental constitutional concepts, and particularly those relating to the delegation of legislative power and due process. We have attempted to point out such conflict, and respectfully submit that the majority opinion should be withdrawn and one establishing the invalidity of the legislation involved promulgated by this Court.

We therefore respectfully ask the Court for leave to file Second Petition for Rehearing, and believing that the

nature of the litigation is such that its effect is of widespread public interest, we further pray for the opportunity to further orally argue the case before this Court.

Respectfully submitted,

APPENDIX "D"

HOUSE BILL NO. 339 OF THE 1945 OKLAHOMA LEGISLATURE

UNITIZED MANAGEMENT OF COMMON SOURCES OF SUPPLY (NEW)

Par. 286.1. LEGISLATIVE DECLARATION.--The Legislature finds and determines that it is desirable and necessary, under the circumstances and for the purposes hereinafter set out, to authorize and provide for unitized management, operation and further development of the oil and gas properties to which this Act [1] is applicable, to the end that a greater ultimate recovery of oil and gas may be had therefrom, waste prevented, and the correlative rights of the owners in a fuller and more beneficial enjoyment of the oil and gas rights, protected. Laws 1945, p. 162, Par. 1.

---

[1] Sections 286.1-286.17 of this title. Approved April 19, 1945. Effective 90 days after April 26, 1945 date of adjournment.

Par. 286.2. Common Sources of Supply to Which Act Is Applicable.—This Act[1] shall apply only to common sources of supply of oil, oil and gas, or gas distillate in this State.

The provisions of this Act shall not apply to any common source of supply of oil, oil and gas, or gas distillate or any part or parts thereof which at the effective date of this Act are being operated by or under pressure maintenance, repressuring, or secondary recovery methods or operations, provided, that nothing contained in this Act shall prevent the voluntary inclusion and extension of areas in which are located such existing pressure maintenance, repressuring, or secondary recovery methods or operations as unit areas under the provisions of this Act. Provided this Act shall not apply to any field where the discovery well has been drilled twenty (20) years prior to the effective date of this Act. Laws 1945, p. 162, Par. 2.

Par. 286.3. Jurisdiction of Corporation Commission.—Subject to the limitations of this Act[1] the Corporation Commission of the State of Oklahoma, hereinafter referred to as the "Commission", is hereby vested with jurisdiction, power and authority, and it shall be its duty, to supervise the administration of this Act. Laws 1945, p. 163, Par. 3.

Par. 286.4. The Petition for and Order Creating Unit.—If upon the filing of a petition therefor and after notice and hearing, all in the form and manner and in accordance with the procedure and requirements hereinafter provided the Commission shall find (a) that the unitized management, operation and further development of a common source of supply of oil and gas or portion thereof is reasonably necessary in order to effectively carry on pressure maintenance or repressuring operations, cycling operations, water flooding operations, or any combination thereof, or any other form of joint effort calculated to substan-

---

[1] Sections 286.1-286.17 of this title.

tially increase the ultimate recovery of oil and gas from the common source of supply; and (b) that one or more of said unitized methods of operation as applied to such common source of supply or portion thereof are feasible, will prevent waste and will with reasonable probability result in the increased recovery of substantially more oil and gas from the common source of supply than would otherwise be recovered; and (c) that the estimated additional cost, if any, of conducting such operations will not exceed the value of the additional oil and gas so recovered; and (d) that such unitization and adoption of one or more of such unitized methods of operation is for the common good and will result in the general advantage of the owners of the oil and gas rights within the common source of supply or portion thereof directly affected, it shall make a finding to that effect and enter an order approving the creation of a unit composed of the lessees and other persons who under the plan of unitization approved by the Commission are chargeable with the responsibility and cost of conducting such unitized methods of operation, development of the common source of supply or portion thereof described in the order, all upon such terms and conditions, as may be shown by the evidence to be fair, reasonable, equitable and which are necessary or proper to protect, safeguard, and adjust the respective rights and obligations of the several persons affected, including royalty owners, owners of overriding royalties, oil and gas payments, carried interests, mortgagees, lien claimants and others, as well as the lessees. To give the Commission jurisdiction hereunder, the petition shall be filed by, or with the authority of, lessees of record of fifty percent (50%) or more of the area of the common source of supply or portion thereof sought to be unitized. The petition shall set forth a description of the proposed unit area with a map or plat thereof attached, must allege the existence of the facts required to be found by the Commission as hereinabove provided and shall have attached thereto a recommended plan of unitization applicable to

such proposed unit area and which the petitioners consider to be fair, reasonable and equitable. Laws 1945, p. 163, Par. 4.

Par. 286.5. UNIT AREA AND PLAN OF UNITIZATION.—The order of the Commission shall define the area of the common source of supply or portion thereof to be included within the unit area and prescribe with reasonable detail the plan of unitization applicable thereto.

Each unit and unit area shall be limited to all or a portion of a single common source of supply. Only so much of a common source of supply as has reasonably been defined by actual drilling operations may be so included within the unit area.

A unit may be created to embrace less than the whole of a common source of supply only where it is shown by the evidence that the area to be so included within the unit area is of such size and shape as may be reasonably required for the successful and efficient conduct of the unitized method or methods of operation for which the unit is created, and that the conduct thereof will have no material adverse effect upon the remainder of such common source of supply.

The plan of unitization for each such unit and unit area shall be one suited to the needs and requirements of the particular unit dependent upon the facts and conditions found to exist with respect thereto. In addition to such other terms, provisions, conditions and requirements found by the Commission to be reasonably necessary or proper to effectuate or accomplish the purpose of this Act, and subject to the further requirements hereof, each such plan of unitization as the parties thereto may agree upon shall be fair, reasonable and equitable, and among other proper and equitable provisions, shall provide:

(a) For the efficient unitized management or control of the further development and operation of the unit area for the recovery of oil and gas from the common source of supply affected. Under such a plan the actual operations within the unit area may be carried on in whole or in part by the several lessees of leases within the unit area, sub-

ject to the supervision and direction of the unit, or may be conducted in whole or in part by the unit or some particular operator or operators of a lease or leases in the approved unit area dependent upon what is most beneficial or expedient. The designation of the operator shall be by vote of the lessees in the unit in a manner provided in the plan of unitization and not by the Commission.

(b) The division of interest or formula for the apportionment and allocation of the unit production, among and to the several separately-owned tracts within the unit area such as will reasonably permit persons otherwise entitled to share in or benefit by the production from such separately-owned tracts to produce or receive, in lieu thereof, their fair, equitable and reasonable share of the unit production or other benefits thereof. A separately-owned tract's fair, equitable, and reasonable share of the unit production shall be measured by the value of each such tract for oil and gas purposes and its contributing value to the unit in relation to like values of other tracts in the unit, taking into account acreage, the quantity of oil and gas recoverable therefrom, location on structure, its probable productivity of oil and gas in the absence of unit operations, the burden of operation to which the tract will or is likely to be subjected, or so many of said factors, or such other pertinent engineering, geological, or operating factors, as may be reasonably susceptible of determination. Unit production as that term is used in this Act shall mean and include all oil and gas produced from a unit area from and after the effective date of the order of the Commission approving the creation of the unit regardless of the well or tract within the unit area from which the same is produced;

(c) The manner in which the unit and the further development and operation of the unit area shall or may be financed and the basis, terms and conditions on which the cost and expense thereof shall be apportioned among and assessed against the tracts and interests made chargeable therewith, including a detailed accounting procedure governing all charges and credits incident to such operations.

Upon and subject to such terms and conditions as to time and rate of interest as may be fair to all concerned, reasonable provisions shall be made in the plan of unitization for carrying or otherwise financing lessees who are unable to meet their financial obligations in connection with the unit.

(d) The procedure and basis upon which wells, equipment and other properties of the several lessees within the unit area are to be taken over and used for unit operations, including the method of arriving at the compensation therefor, or of otherwise proportionately equalizing or adjusting the investment of the several lessees in that project as of the effective date of unit operations.

(e) For the creation of an operating committee to have general over-all management and control of the unit and the conduct of its business and affairs and the operations carried on by it, together with the creation or designation of such other subcommittees, boards or officers to function under authority of the operating committee as may be necessary, proper or convenient in the efficient management of the unit, defining the powers and duties of all such committees, boards or officers and prescribing their tenure and time and method for their selection. Each lessee within the unit area shall be entitled to representation on the operating committee and shall have a vote equal to the proportionate interest of such lessee in the unit, provided, where the voting interest of a lessee is such as to control the action taken by the committee, the vote of such lessee shall not serve to carry or defeat action by the committee unless such vote is supported by the vote of a majority of the remaining lessees.

(f) The time when the plan of unitization shall become and be effective;

(g) The time when and conditions under which and the method by which the unit shall or may be dissolved and its affairs wound up. Laws 1945, p. 164, Par. 5.

Par. 286.6. OBJECTION TO CREATION OF UNIT.—If at any time after the filing of a petition for the creation of a unit and within sixty (60) days after the entry of an order by

the Commission approving the creation of the same, lessees of record of fifteen percent (15%) or more of the proposed unit area, if prior to the entry of the order by the Commission, or lessees of record of fifteen percent (15%) or more of the unit area as defined by the approved plan of unitization and order of the Commission, if after the entry of such order, shall file written protest with the Commission against the creation of the unit, the Commission shall vacate all action of any kind theretofore taken and dismiss the proceedings for the creation of such unit. The fact that a lessee joined in the petition seeking authority to create the unit or otherwise participated in any of the steps thereafter taken with the view of creating the same, shall not preclude such lessee from filing a protest pursuant to the provisions of this Section. Laws 1945, p. 165, Par. 6.

Par. 286.7. PROCEDURE AND APPEAL.—Except as otherwise herein expressly provided, all proceedings had under this Act [1] including the filing of petitions, the giving of notices, the conduct of hearings and other action taken by the Commission shall be in the form and manner and in accordance with the procedure and procedural requirements provided in Sections 84 to 135, inclusive, Title 52, Oklahoma Statutes, 1941, or any amendment thereof with reference to proceedings thereunder. Such additional notice shall be given as may be required by the Commission. The Conservation Officer, his assistant and deputies and the Conservation Attorney shall act without additional compensation as technical advisors to the Commission to the extent that the Commission may require. Any person aggrieved by any order of the Commission made pursuant to this Act may appeal therefrom to the Supreme Court of the State of Oklahoma upon the same conditions, within the same time and in the same manner as is provided in said Sections 84 to 135, inclusive, Title 52, Oklahoma Statutes, 1941, for the taking of appeals from the orders of the Commission made thereunder, except in any such ap-

[1] Sections 286.1-286.17 of this title.

peal the Commission shall be impartial, inactive and shall not be represented directly or indirectly by the Conservation Attorney, the Attorney General or any other public official or person. The Supreme Court on appeal shall have jurisdiction and authority and it shall be its duty to review the record of proceedings and transcript of evidence and to consider the validity of the order of the Commission appealed therefrom. On appeal the order of the Commission appealed from shall be regarded as prima facie valid, fair, reasonable and equitable, but if the order is found to be contrary to the clear weight of the evidence, in any one of such respects, the same shall be vacated and set aside and the cause referred to the Commission for further proceedings not inconsistent with the judgment of the court; otherwise the said order shall be affirmed.

In addition to any other remedy provided in this Act any interested person, firm or corporation within a unit area feeling himself aggrieved by any order of the Commission or the action of a unit thereunder, may at any time institute a suit in the District Court of the County in which the greater part of the unit area is located, as in other civil suits in equity, against the other lessees within the unit and in such suit have his rights and equities determined. Any person aggrieved by the judgment entered in such an action may appeal therefrom to the Supreme Court of the State of Oklahoma in the time and manner as appeals are taken in other civil actions. To the extent possible under existing laws the Supreme Court shall give precedence to all such appeals in the hearing and disposition thereof. Laws 1945, p. 165, Par. 7.

Par. 286.8. OPERATIONS IN VIOLATION OF PLAN OF UNITIZATION UNLAWFUL.—From and after the effective date of an order of the Commission approving the creation of a unit and approving the plan of unitization applicable thereto the drilling of any well into or the operation of any well producing from the common source of supply or portion thereof within the unit area defined in the order by persons other than the unit or persons acting under its authority or except in the manner and to the extent provided in such

plan of unitization shall be unlawful and is hereby prohibited. Laws 1945, p. 166, Par. 8.

Par. 286.9. THE NATURE, PURPOSES AND FUNCTIONS OF UNITS, AND LIABILITY OF OWNERS OF OIL AND GAS RIGHTS THEREIN FOR UNIT EXPENSE.—Each unit created under the provisions of this Act [1] shall be a body politic and corporate, capable of suing, being sued and contracting as such in its own name. Each such unit shall be authorized on behalf and for the account of all the owners of the oil and gas rights within the unit area, without profit to the unit, to supervise, manage and conduct the further development and operations for the production of oil and gas from the unit area, pursuant to the powers conferred, and subject to the limitations imposed by the provisions of this Act and by the plan of unitization.

The obligation or liability of the lessee or other owners of the oil and gas rights in the several separately-owned tracts for the payment of unit expense shall at all times be several and not joint or collective and in no event shall a lessee or other owner of the oil and gas rights in the separately-owned tract be chargeable with, obligated or liable, directly or indirectly, for more than the amount apportioned, assessed or otherwise charged to his interest in such separately-owned tract pursuant to the plan of unitization and then only to the extent of the lien provided for in this Act.

Subject to such reasonable limitations as may be set out in the plan of unitization, the unit shall have a first and prior lien upon the lease-hold interest only in the unitized common source of supply (exclusive of a one-eighth (⅛) royalty interest) in and to each separately-owned tract, the interest of the owners thereof in and to the unit production and all equipment in the possession of the unit, to secure the payment of the amount of the unit expense charged to and assessed against such separately-owned tract. The interest of the lessee or other persons who by lease, contract or otherwise are obligated or responsi-

[1] Sections 286.1-286.17 of this title.

ble for the cost and expense of developing and operating a separately-owned tract for oil and gas in the absence of unitization shall, however, be primarily responsible for and charged with any assessment for unit expense made against such tract and resort may be had to overriding royalties, oil and gas payments, royalty interests in excess of a one-eighth (⅛) of the production, or other interests which otherwise are not chargeable with such cost, only in the event the owner of the interest primarily responsible fails to pay such assessment or the production to the credit thereof is insufficient for that purpose. In the event the owner of any royalty interest, over-riding royalty, oil and gas payment or other interest which under the plan of unitization is not primarily responsible therefor pays in whole or in part the amount of an assessment for unit expense for the purpose of protecting such interest, or the amount of the assessment in whole or in part is deducted from the unit production to the credit of such interest, the owner thereof shall to the extent of such payment or deduction be subrogated to all of the rights of the unit with respect to the interest or interests primarily responsible for such assessment. A one-eighth (⅛) part of the unit production allocated to each separately-owned tract shall in all events be regarded as royalty to be distributed to and among, or the proceeds thereof paid to, the royalty owners free and clear of all unit expense and free of any lien therefor. Laws 1945, p. 166, Par. 9.

Par. 286.10. PROPERTY AND CONTRACT RIGHTS.—Property rights, leases and other contracts, and all rights and obligations shall meet the provisions and requirements of this Act [1] and to any valid and applicable plan of unitization or order of the Commission made and adopted pursuant hereto, but otherwise to remain in full force and effect.

Nothing contained in this Act shall be construed to require a transfer to or vesting in the unit of title to the separately-owned tracts or leases thereon within the unit

[1] Sections 286.1-286.17 of this title.

area, other than the right to use and operate the same to the extent set out in the plan of unitization; nor shall the unit be regarded as owning the unit production. The unit production and the proceeds from the sale thereof shall be owned by the several persons to whom the same is allocated under the plan of unitization. All property, whether real or personal, which the unit may in any way acquire, hold or possess shall not be acquired, held or possessed by the unit for its own account but shall be so acquired, held and possessed by the unit for the account and as agent of the several lessees and shall be the property of such lessees as their interests may appear under the plan of unitization, subject, however, to the right of the unit to the possession, management, use or disposal of the same in the proper conduct of its affairs, and subject to any lien the unit may have thereon to secure the payment of unit expense.

The amount of the unit production allocated to each separately-owned tract within the unit, and only that amount, regardless of the well or wells in the unit area from which it may be produced, and regardless of whether it be more or less than the amount of the production from the well or wells, if any, on any such separately-owned tract, shall for all intents, uses, and purposes be regarded and considered as production from such separately-owned tract, and, except as may be otherwise authorized in this Act, or in the plan of unitization approved by the Commission, shall be distributed among or the proceeds thereof paid to the several persons entitled to share in the production for[2] such separately-owned tract in the same manner, in the same poroportions, and upon the same conditions that they would have participated and shared in the production or proceeds thereof from such separately-owned tract had not said unit been organized, and with the same legal force and effect. If adequate provisions are made for the receipt thereof, the share of the unit production allocated to each separately-owned tract shall be delivered in

[2] Probably should read "from".

kind to the persons entitled thereto by virtue of ownership of oil and gas rights therein or by purchase from such owners subject to the right of the unit to withhold and sell the same in payment of unit expense pursuant to the plan of unitization, and subject further to the call of the unit on such portions of the gas for operating purposes as may be provided in the plan of unitization.

Operations carried on under and in accordance with the plan of unitization shall be regarded and considered as a fulfillment of and compliance with all of the provisions, covenants, and conditions, express or implied, of the several oil and gas mining leases upon lands included within the unit area, or other contracts pertaining to the development thereof, insofar as said leases or other contracts may relate to the common source of supply or portion thereof included in the unit area. Wells drilled or operated on any part of the unit area no matter where located shall for all purposes be regarded as wells drilled on each separately-owned tract within such unit area. Laws 1945, p. 167, Par. 10.

Par. 286.11. AMENDMENTS TO PLAN OF UNITIZATION.—In any proceeding hereunder in which an order is entered creating a unit, the Commission shall retain jurisdiction thereof and of all parties in interest for the purpose of amending the plan of unitization from time to time whenever by reason of changed conditions or otherwise for good cause shown it is made to appear that such amendment is necessary or proper. Such an amendment may be made only upon the petition of lessees of record of ten percent (10%) or more of the unit area. Any amendment to a plan of unitization made pursuant hereto shall be effective prospectively only from and after the date on which the order providing for such amendment shall become final. The procedure for any such amendment including the filing of a petition, the giving of notice and conduct of the hearing shall be the same as that required for the creation of a unit and the adoption of a plan of unitization in the first instance, insofar as applicable. Laws 1945, p. 168, Par. 11.

Par. 286.12. ENLARGEMENT OF UNITS.—The unit area of

a unit may be unitized with adjoining and contiguous portions of the same common source of supply including the unit area of another or other units, and a unit created for the unitized management, operation and further development of such enlarged unit area upon the filing of a petition therefor and after notice and hearing, in the same manner, on the same conditions, but subject to the right of lessees of record of fifteen percent (15%) or more of an existing unit area to protest, and veto such enlargement or merger, all as herein provided with respect to the creation of a unit in the first instance. Upon the creation of a larger unit embracing the unit area of one or more smaller units, the larger unit so created shall thereupon supersede such smaller unit or units. Laws 1945, p. 169, Par. 12.

Par. 286.13. PUBLIC LANDS.—The Commissioners of the Land Office, or other proper board or officer of the State having the control and management of State land, and the proper board or officer of any political, municipal, or other subdivision or agency of the State, are hereby authorized and shall have the power on behalf of the State or of such political, municipal, or other subdivision or agency thereof, with respect to land or oil and gas rights subject to the control and management of such respective body, board, or officer, to consent to or participate in any plan or program of unitization adopted pursuant to this Act.[1] Laws 1945, p. 169, Par. 13.

Par. 286.14. NO INCOME OR PROFIT SUBJECT TO TAXATION.—Neither the unit production or proceeds from the sale thereof, nor other receipts shall be treated, regarded, or taxed as income or profits of the unit; but instead, all such receipts shall be the income of the several persons to whom or to whose credit the same are payable under the plan of unitization. To the extent the unit may receive or disburse said receipts it shall only do so as a common administrative agent of the persons to whom the same are payable. Laws 1945, p. 169, Par. 14.

---

[1] Sections 286.1-286.17 of this title.

Par. 286.15. DEFINITIONS.—For the purposes of this Act,[1] unless the context otherwise requires:

(a) The term "lessee" refers not only to lessees under oil and gas leases but also to the owners of unleased lands or mineral rights having the right to develop the same for oil and gas.

(b) Any reference to a separately-owned tract, although in general terms broad enough to include the surface and all underlying common sources of supply of oil and gas shall have reference thereto only in relation to the common source of supply or portion thereof embraced within the unit area of a particular unit.

(c) The phrase "oil and gas" shall refer not only to oil and gas as such in combination one with the other, but shall have general reference to oil, gas, casinghead gas, casinghead gasoline, gas-distillate, or other hydrocarbons, or any combination or combinations thereof, which may be found in or produced from a common source of supply of oil, oil and gas or gas-distillate.

(d) The term "person" shall mean and include any individual, corporation, partnership, common law or statutory trust, association of any kind, the State of Oklahoma or any subdivision or agency thereof acting in a proprietary capacity, guardian, executor, administrator, fiduciary of any kind, or any other entity or being capable of owning an interest in and to a common source of supply of oil and gas.

(*d*) The term "unit expense" shall include and mean any and all cost, expense, or indebtedness incurred by the unit in the establishment of its organization, or incurred in the conduct and management of its affairs or the operations carried on by it, authorized by the approved plan of unitization. Laws 1945, p. 169, Par. 15.

---

[1] Sections 286.1-286.17 of this title.

Par. 286.16. CONSTRUCTION OF ACT.—The provisions of this Act [1] are declared to be severable, and, if any section, sentence, clause or part thereof be held invalid or unconstitutional for any reason, such invalidity or unconstitutionality shall not be construed to affect the validity of the remaining provisions of this Act. Laws 1945, p. 170, Par. 16.

Par. 286.17. UNITIZATION AGREEMENTS NOT VIOLATIVE OF ANTI-TRUST LAWS OR IN RESTRAINT OF TRADE.—No agreement between or among lessees or other owners of oil and gas rights in oil and gas properties, entered into pursuant hereto or with a view or for the purpose of bringing about the unitized development or operation of such properties, shall be held to violate any of the statutes of this State prohibiting monopolies or acts, arrangements, agreements, contracts, combinations or conspiracies in restraint of trade or commerce. Laws 1945, p. 170, Par. 17.

APPENDIX "E"

ORDER NO. 20289 OF THE CORPORATION COMMISSION OF THE STATE OF OKLAHOMA, INCLUDING ITS FINDINGS OF FACT AND THE WRITTEN PLAN OF UNITIZATION BY SUCH ORDER APPROVED

REPORT AND ORDER PLAN OF UNITIZATION OF WEST CEMENT MEDRANO UNIT

BEFORE THE CORPORATION COMMISSION OF THE STATE OF OKLAHOMA

Cause CD No. 1308 Order No. 20289

IN THE MATTER OF THE PETITION FOR THE CREATION OF THE WEST CEMENT MEDRANO UNIT HAVING FOR ITS PURPOSE THE UNITIZED MANAGEMENT, OPERATION AND FURTHER DEVELOPMENT OF THE WEST CEMENT MEDRANO COMMON SOURCE OF SUPPLY OF OIL AND GAS IN CADDO COUNTY, OKLAHOMA, THE DEFINING OF THE UNIT AREA THEREOF AND THE PRESCRIBING OF THE PLAN OF UNITIZATION APPLICABLE TO SUCH UNIT AND UNIT AREA

REPORT AND ORDER OF THE COMMISSION

The above styled and numbered cause is a proceeding brought by the lessees of a substantial majority of the acreage in the West Cement Medrano oil and gas pool or field located in Caddo County, Oklahoma, seeking to unitize the management, operation and further development of said field for the purpose of preventing the waste of oil and gas and of substantially increasing the ultimate recovery of oil therefrom, all as authorized and provided for in H. B. 339 of the 1945 Oklahoma Legislature. The bringing of this proceeding followed months of cooperative study

of the field and of the benefits of unitization engaged in by substantially all of the operating lessees in the pool and in which all were invited to participate. The original petition herein, attached to which was a recommended Plan of Unitization applicable to said field, was filed October 23, 1946.

Pursuant to order of the Commission, said petition was first set for hearing November 7, 1946, at 10:00 o'clock, A. M. in the Commission Courtroom in the State Capitol Office Building at Oklahoma City, Oklahoma, and notice thereof published once a week for two consecutive weeks in a newspaper of general circulation in Caddo County, in which West Cement Medrano field is located, and for the same time in a newspaper of general circulation in Oklahoma County, Oklahoma.

At the time and place so fixed for said hearing, a large number of persons were present, not only lessees but also land owners, royalty owners and other persons having varying interests in the West Cement Medrano Field. A group of lessors and royalty owners, represented by their attorney, Reford Bond, Jr., advised the Commission that they had not had sufficient time within which to study the proposed Plan of Unitization and requested a continuance of the hearing. The granting of the continuance was agreed to by the petitioners who, through their attorneys, publicly announced that during the period of the continuance they stood ready and willing, upon request, to furnish any party in interest any factual data pertaining to the West Cement Medrano field and the proposed Plan of Unitization available to petitioners. At the same time Magnolia Petroleum Company, an operating lessee in the field, asked leave to sign the petition as one of the petitioners thereto. Whereupon, the Commission continued said hearing to December 9, 1946, at 10:00 o'clock A. M. at the same place, permitted the Magnolia Petroleum Company to sign the petition as one of the petitioners, directed that the petition be refiled and ordered that notice of the refiling of the petition and of the date to which said hearing was continued be published in the same manner and for the same

time as was the first notice of hearing, all of which was done.

In advance of said original hearing date, as is its usual custom in oil and gas matters, the Commission mailed mimeographed copies of the petition, together with information as to the time of hearing, to all persons on its established mailing list, which includes all operating lessees within the West Cement Medrano field as well as number of royalty and other interest owners.

The hearing of said cause was commenced at the time and place so fixed, namely, December 9, 1946, at 10:00 o'clock A. M., in the Commission Courtroom in the Capitol Office Building in Oklahoma City, Oklahoma, and continued at the same place throughout all the following days, to wit: December 9 and 23, 1946; January 6 and 7; February 25, 26, 27 and 28; May 13, 14, 15, 16, 20, 21, 22 and 23; July 15, 16, 17, 18, 22, 23, 24 and 25; all in 1947, except for said first mentioned dates in 1946. The continuance of said hearing from time to time was by proper orders of continuance. At said hearing the petitioners and subscribers to the proposed Plan of Unitization were represented by the following named attorneys: W. H. Brown, Russell G. Lowe, Booth Kellough, W. R. Wallace and R. M. Williams. The protestant, the Palmer Oil Corporation appeared by its attorneys, Mark H. Adams and Charles Jones, of Wichita, Kansas. Protestants Tom Potter, Clyde Kahle, Maud Kahle, Bob White Oil and Gas Company and a group of approximately 65 lessors and royalty owners appeared by their attorney, Roford Bond, Jr. The protestants B. E. Johnson, Virginia McIntyre and M. L. McIntyre appeared by their attorney, Jack Page. A number of royalty and other interest owners wrote letters to the Commission urging the granting of the petition, all of which appear in the record. Other royalty owners and various parties in interest were present at the hearing from time to time but took no part.

At the hearing everyone who desired to do so, regardless of the interest of such person, was given full opportunity to offer any and all competent evidence that any

such person chose to offer, either for or against the recommended Plan of Unitization or by way of amendment thereto, and to otherwise be heard in regard thereto. The evidence so introduced consisted of extensive geological, engineering and other proof concerning the history, discovery, development, operation and present condition of the West Cement Medrano field and the probable results obtainable both under present competitive methods of operation and through the unitization thereof; proof both pro and con as to the fairness, reasonableness and equitableness of the recommended Plan of Unitization; and proof by protestants with respect to certain amendments which they claim should be made in said Plan.

In addition to the knowledge gained from the evidence introduced at said hearing, the Commission has had, over a period of time, a general knowledge of the West Cement Medrano field and of conditions existing therein gained through the exercise by it of its jurisdiction over such field under the Conservation Laws of the State of Oklahoma, dating from the discovery thereof. As a result of the evidence, statements and arguments introduced and made in the hearing here under consideration, and by reason of its general knowledge of said West Cement Medrano field, as aforesaid, the Commission is of the opinion that it has sufficient knowledge and information upon which to base a proper order in this cause.

In addition to the proceedings and notices aforesaid, further mention is here made of the fact that during the course of said hearing, The Palmer Oil Corporation drilled and completed an additional well on a lease owned by it in the aforesaid field, necessitating a relatively slight change in the percentage of interests of the several separately owned tracts in the field shown in "Exhibit B" attached to the recommended Plan of Unitization, and also necessitating the inclusion of such additional well in "Exhibit D" attached to said Plan of Unitization. Also as a result of the time consumed by the hearing, it was considered desirable by the petitioners and subscribers to the recommended Plan of Unitization to strike from Section

XXVII of said Plan the time limitation therein contained. To accomplish the aforesaid objectives, the petitioners during the course of the hearing asked and without objection were granted leave to amend the petition accordingly. In order to permit persons not present at the hearing an additional opportunity to be heard with respect to said amendment, the Commission set the petition as amended for further hearing on July 29, 1947, at 10:00 o'clock A. M., in the Commission Courtroom in the State Capitol Office Building at Oklahoma City, Oklahoma, and caused notice of the amendment to said petition and of the hearing thereon to be published, ten (10) days prior to said hearing date, in a newspaper of general circulation in Oklahoma County, Oklahoma. At the time and place so named, the further hearing was had in said cause upon the petition as amended, no one appearing, however, in opposition thereto.

Now, on this 5th day of September, 1947, the Commission having previously taken said cause under advisement and having considered the matter in conference and each of the Commissioners being well and fully advised, the Commission makes the following findings of fact, conclusions of law, and enters the following order authorizing and approving the creation of the West Cement Medrano Unit, defining of the Unit Area thereof and prescribing of the Plan of Unitization applicable to such Unit and Unit Area.

Findings of Fact and Conclusions of Law

The Commission finds:

1. That notice of the filing of the original petition, the refiling thereof after being signed by the Magnolia Petroleum Company, the filing of the amendment thereto and the time, place and purpose of the hearings on the petition, both as originally filed and as amended, was given in all respects as by law required, and that the Commission has jurisdiction of the subject matter of said petition and amended petition and of all persons interested therein, and has jurisdiction to make and promulgate the hereinafter prescribed order.

2. That the lands (hereinafter designated and referred to as the "Unit Area") located in Caddo County, Oklahoma and outlined by the hatched line on the map marked "Exhibit A" and attached to the Plan of Unitization attached to and made a part of this order, are underlaid with an oil and gas-bearing formation known as the Medrano sandstone found at a depth ranging from approximately 4500 feet along the North and Northeast side of the Unit Area and an approximate depth of 6241 feet along the South and Southwest side of the Unit Area; that a gas cap exists along the high part of the producing formation from which the primary production is gas, whereas, the primary production from wells drilled lower on the structure is oil; that the average sand or formation thickness in the gas cap area or zone is approximately 65 feet; that the average sand or formation thickness in the oil area or zone is approximately 95 feet; that the said Medrano sandstone underlying said above described lands as aforesaid constitute a single common source of supply of oil and gas, all parts of which are permeably connected so as to permit the migration of oil or gas or both from one portion of said common source of supply to another wherever and whenever pressure differentials are created as a result of the production or operations for the production of oil or gas from said producing formation; that although faults are known to exist in parts of said common source of supply said faults do not prevent substantial migration of oil and gas and of pressures from one part of said common source of supply to another; that said common source of supply of oil and gas has heretofore been designated by the Commission and is generally known as the West Cement Medrano pool.

3. That said common source of supply of oil and gas was first discovered in October, 1936 by the drilling and completion of the Magnolia Petroleum Company's Medrano No. 6 gas well in the SE/4 of the NE/4 of the SW/4 of Section 36, Township 6 North, Range 10 West, Caddo County, Oklahoma; that the presence of oil in said common source of supply of oil and gas was first discovered in March, 1943 by the drilling and completion of the Stephens

Petroleum Company's Pierson No. 1 oil well in the SE/4 of the SW/4 of the SE/4 of Section 35, Township 6 North, Range 9 West, Caddo County, Oklahoma; that at the present time there are 37 oil wells and 19 gas wells producing from said common source of supply of oil and gas.

4. That the outer boundaries of said common source of supply of oil and gas underlying and by this Order included within the aforesaid Unit Area have been reasonably defined by actual drilling operations, both by the drilling of wells within and the drilling of wells outside said Unit Area; that said Unit Area consists of approximately 3700 acres of land.

5. That the lands embraced within the aforesaid Unit Area are divided into a large number of individual tracts of varying size and shape, and owned in severalty by a large number of different individuals, firms and corporations owning varying interests therein, including oil and gas leasehold interests, royalty interests and various and sundry other rights and interests; that the several oil and gas leases covering said lands are owned by not less than 25 different lessees; that the royalty interests under said land are divided among and owned by several hundred royalty owners; that the petitioners in this cause are lessees of record of 73.32% of the area of the common source of supply sought to be unitized; that the subscribers to the recommended Plan of Unitization and other lessees favoring its adoption are lessees of record of approximately 94% of the area of said common source of supply; that the lessees appearing at the hearing and protesting the granting of the petition herein are lessees of approximately 4% of the proposed Unit Area; that the lessees of the remaining percentage of the Unit Area have not appeared for or against the granting of the petition herein.

6. That without the unitization of said West Cement Medrano common source of supply of oil and gas the only method whereby said pool can be feasibly and effectively operated and produced for the recovery of oil and gas therefrom is by and under individual competitive pressure depletion methods of operation, the methods now being used in the pool, that is to say, by treating each separately

owned tract or lease as a separate unit for operating and production purposes and depending on the natural energy in the producing formation to move what oil and gas can be moved thereby out of the formation to the well bore where it can be produced; that the principal natural energy mechanism in said pool is gas in solution with the oil coupled with a gas cap expansion; that under present competitive methods of operation, treating each tract or lease as a separate operating unit, there has been and still continues to be a disproportionate, inequitable and wasteful utilization and dissipation of the gas energy in the pool by certain tracts to the detriment and disadvantage of other tracts and to the injury of the pool as a whole; that by and under the best known competitive pressure depletion methods of operation not more than 25% or approximately 24 million barrels of the 97 million barrels of oil originally in place in the reservoir can be economically recovered, leaving the remaining 75%, or approximately 73 million barrels of oil in the ground unrecovered and unrecoverable except through and by means of unitization of the pool and the adoption of unitized methods of operation therein; that to permit the owners of gas wells and high gas-oil ratio wells to continue to produce such wells will result in robbing the oil wells of gas energy required to produce the oil; that to shut in the gas wells and the high gas-oil ratio wells without permitting the owners thereof to share in the oil and gas production from the oil wells, would deprive the owners of the gas wells of their fair share of the production from the pool; that the value of the recoverable oil exceeds many times the market value of the gas; that the return to the reservoir of the gas produced from the oil to supplement the remaining natural gas energy and retard the decline in reservoir pressure and perhaps the injection at some later date of water low on structure is desirable and necessary to obtain the greatest ultimate recovery of oil from the pool, but which cannot be done in the absence of unitization because of the migratory nature of the injected gas or water and the effect that the injection thereof into the reservoir would have upon properties in the pool other than the

property on which the gas or water is injected and upon the pool as a whole.

7. That by and through the unitization of the proposed Unit Area and the unitized management and operation and further development thereof as a unit, all as set out and provided for in the Plan of Unitization hereto attached, full use can be made of the gas energy in the reservoir to the mutual advantage of all the owners of the said common source of supply of oil and gas, that waste of large volumes of oil and gas can be prevented, gas can and will be returned to the reservoir to supplement the natural reservoir energy, water encroachment, either natural or artificial, on the lower side of the pool can be properly controlled and utilized, substantially more oil, amounting to many millions of barrels, can be recovered from the common source of supply than can otherwise be recovered, a more equitable distribution of the recoverable oil and gas can be had as between the several owners of the pool and the correlative rights of the several owners can be more fully protected.

8. The unitization and unitized management and operation and further development of said common source of supply as a unit is reasonably necessary to effectively carry on the unitized methods of operation described in the proposed Plan of Unitization.

9. That any one or all of the unitized methods of operation described in the attached Plan of Unitization as applied to the common source of supply underlying and included within the Unit Area are feasible, will prevent waste, and will, with reasonable probability, result in the increased recovery of substantially more oil and gas from the common source of supply than would otherwise be recovered; that the estimated additional cost of conducting such operations will not exceed the value of the additional oil and gas so recovered; that such unitization and the adoption of any one or more of such unitized methods of operation is for the common good and will result in the general advantage to the owners of the oil and gas rights in and to the common source of supply thereby affected.

10. That neither said West Cement Medrano common source of supply of oil and gas nor any part or parts thereof were being operated by or under pressure maintenance, repressuring or secondary recovery methods of operation as of the effective date of H. B. 339 of the 1945 Oklahoma Legislature.

11. That the Plan of Unitization attached to this order and which is made a part hereof, is one suited to the needs and requirements of the West Cement Medrano Unit, the creation of which is hereby authorized and approved, taking into account all the facts and conditions found by the Commission to exist in respect thereto; that said Plan of Unitization is fair, reasonable and equitable and contains all the terms, provisions, conditions and requirements reasonably necessary and proper to protect, safeguard and adjust the respective rights and obligations of the several persons affected, including royalty owners, owners of overriding royalty interests, oil and gas payments, carried interests, mortgagees, lien claimants, and others, as well as the lessees and such as will effectuate and accomplish the purposes of H. B. 339 of the 1945 Oklahoma Legislature; that said Plan of Unitization provides for the efficient unitized management and control of the further development and operation of the Unit Area for the recovery of oil and gas from the common source of supply affected; that the division of interests set forth in "Exhibit B" attached to said Plan of Unitization pursuant to which the unit production is to be apportioned and allocated among and to the several separately owned tracts within the Unit Area is fair and equitable and is such as will reasonably permit persons otherwise entitled to share in or benefit by the production from such separately owned tracts to receive, in lieu thereof, their fair, equitable and reasonable share of the unit production or other benefits thereof; that the division of interest assigned to the several separately owned tracts in the Unit Area as set out in said "Exhibit B" to said Plan of Unitization is fair and reasonably representative of the value of said several tracts for oil and gas purposes and the contributing value thereof to the unit in relation to like values of other

tracts in the unit; that the basis used to arrive at said division of interest takes into account the acreage of the several separately owned tracts, the quantity of oil and gas recoverable therefrom, the location thereof on structure, the probable productivity of oil and gas from such tracts in the absence of unitization, the burden of operation to which such tracts will or are likely to be subjected, together with all other pertinent engineering, geological and operating factors as are reasonably susceptible of determination; that the manner in which and the basis, terms and conditions on which the cost and expense of the further development and operation of the Unit Area shall be financed and apportioned among and assessed against the tracts and interests chargeable therewith are fair, reasonable and equitable; that the provisions of the said Plan with respect to taking over and using the wells, equipment and other properties of the several lessees within the Unit Area, including the method of arriving at the compensation therefor and otherwise proportionately equalizing and adjusting the investment of the several lessees in the project as of the effective date of the unit operations are fair, reasonable and equitable; that the provisions of said Plan with respect to the creation of an operating committee and the powers and duties of such committee are fair, reasonable and equitable.

12. That the Plan of Unitization hereto attached in all respects conforms to and complies with the requirements of H. B. 339 of the 1945 Oklahoma Legislature.

13. That the West Cement Medrano pool is a field within the meaning of that term as used in the second paragraph of Section 2 of H. B. 339 of the 1945 Oklahoma Legislature; that the term "field" in ordinary usage has no fixed or definite meaning but is sometimes used to refer to the general area where a number of oil or gas producing formations are found and at other times used to refer to a particular common source of supply or pool; that as used by the Legislature aforesaid, the term was intended to relate to the particular common source of supply or pool sought to be unitized under the Act and not to any general area

which in a broader sense could be termed a field; that in effect said Act throughout relates to and deals only with single common sources of supply of oil and gas.

Order

It is therefore ordered by the Corporation Commission of the State of Oklahoma as follows:

1. That the petition filed herein be and the same is hereby granted.

2. That the creation of the West Cement Medrano Unit as prayed in said petition be and the same is hereby authorized and approved.

3. That the Unit Area of said unit shall extend to and include all of the West Cement Medrano common source of supply of oil and gas outlined by the hatched lines on the map marked "Exhibit A" attached to the Plan of Unitization attached to this order.

4. That the Plan of Unitization hereto attached and which by reference is made a part of this order is hereby approved and shall constitute the Plan of Unitization of and for said West Cement Medrano Unit and the Unit Area of said Unit, all to the same extent and with the same force and effect as if copied herein in its entirety.

5. Nothing herein contained shall be construed as a waiver by the Commission of any of its powers or authority over the West Cement Medrano Unit or the persons comprising said unit, or the development and operation of the Unit Area thereof under the general oil and gas conservation laws of the State of Oklahoma, it being expressly recited that the Commission has and retains continuing jurisdiction over the operations carried on by the unit to the same extent that it would have jurisdiction over any other lessee or person producing oil and gas from the West Cement Medrano pool or field in the absence of unitization.

6. The Unit shall from time to time make such reports to the Commission concerning the operation by it of the Unit Area as may be requested by the Commission.

Done and performed by the Corporation Commission at its office in the Capitol Office Building, Oklahoma City, Oklahoma, this 5th day of September, 1947.

PLAN OF UNITIZATION OF WEST CEMENT MEDRANO UNIT

Know all men by these presents:

The following shall constitute the Plan of Unitization applicable to the West Cement Medrano Unit created pursuant to authority of House Bill 339 of the 1945 Legislature of the State of Oklahoma and having for its purpose the unitized management, operation and further development of the Medrano Sand common source of supply of Oil and Gas underlying the lands outlined by the hatched line on the map hereto attached and marked "Exhibit A", all to the end that a greater ultimate recovery of Oil and Gas may be had therefrom, waste prevented and the correlative rights of the respective owners protected.

I

Definitions

As used in this Plan of Unitization, the following terms and expressions are defined as follows:

(a) "Unit" shall mean the West Cement Medrano Unit.

(b) "Commission" shall mean the Corporation Commission of the State of Oklahoma.

(c) "Person" shall mean any individual, corporation, partnership, common law or statutory trust, association of any kind, the State of Oklahoma or any subdivision or agency thereof acting in a proprietary capacity, guardian, executor, administrator, fiduciary of any kind or any other entity capable of holding an interest in and to the Unit Area.

(d) The pronoun "it" is used to refer to any person regardless of gender.

(e) "Unit Production" shall mean and include all Oil and Gas produced from the Unit Area from and after the Effective Date hereof regardless of the well or tract within the Unit Area from which the same is produced.

(f) "Lessee" shall mean any owner, in whole or in part, of an Oil and Gas Lease or any unleased mineral interest,

who alone or in association with another person or persons has the right, except for this Plan of Unitization, to explore, develop and operate a Separately Owned Tract for Oil and Gas and in so doing would be personally chargeable with a proportionate part of the cost and expense of the operation thereof. An owner of an overriding royalty interest, oil payment, carried interest, net profit contract, or other oil and gas rights of a similar nature, who is not personally chargeable with the cost and expense of operations, shall not be regarded as a Lessee.

(g) "Unit Operator" shall mean and refer to the Lessee designated to carry on and conduct the Unitized Operations within the Unit Area as provided in Section X hereof.

(h) "Oil and Gas" shall not only refer to oil and gas as such in combination one with the other, but shall have reference to oil, gas, casinghead gas, casinghead gasoline or other hydrocarbons, or any combination or combinations thereof, or any one thereof, which may be found in or produced from the Unit Area.

(i) "Oil and Gas Rights" shall mean and include the right to explore, develop and operate lands within the Unit Area for the production of Oil and Gas, to reduce the same to possession or to share in the production so obtained or the proceeds thereof.

(j) "Effective Date" shall mean the date on which the Unit assumes and takes over the operation of the Unit Area as is provided in Section IX hereof.

(k) "Unit Expense" shall include any and all cost, expense or indebtedness incurred by the Unit or Unit Operator as authorized by this Plan of Unitization or the order of the Commission creating the Unit.

(l) "Unqualified Subscribers" shall mean and refer to those Lessees who sign this Plan of Unitization as Unqualified Subscribers as is provided for in Section XXVII hereof.

(m) "Qualified Subscribers" shall mean and refer to those Lessees who sign this Plan of Unitization as Quali-

fied Subscribers as is provided for in Section XXVII hereof.

II

Name

The name of the Unit created hereby shall be West Cement Medrano Unit.

III

Unit Area

The Unit Area of the Unit shall extend to and include all of the Medrano Sand formation underlying the lands outlined by the hatched line on the map hereto attached, marked "Exhibit A" and made a part hereof, the same being a single common source of supply of Oil and Gas, located in Caddo County, Oklahoma.

IV

Separately Owned Tracts

Each tract of land within the Unit Area, which by virtue of the ownership thereof in fee, or by common ownership of the Oil and Gas Rights therein or by lease or other agreement among the owners thereof, is presently regarded as a single tract or leasehold estate for the purpose of Oil and Gas development and operation shall be defined, regarded and treated as a Separately Owned Tract within the purview and meaning of this Plan of Unitization. The Separately Owned Tracts as so defined and established are shown on the map hereto attached and marked "Exhibit A" and are for convenient identification numbered thereon and may be referred to by number.

V

General Powers of Unit

The Unit is authorized and empowered on behalf and for the account of all the Lessees within the Unit Area, without profit to the Unit, to supervise, manage and conduct the further development and operation of the Unit

Area for the production of Oil and Gas, pursuant to the powers conferred and subject to the limitations imposed by the provisions of House Bill 339 of the 1945 Session of the Oklahoma Legislature and by this Plan of Unitization.

VI

Effect of Unitization

The adoption of this Plan of Unitization and the creation of the Unit as herein provided shall have the effect from and after the Effective Date hereof of unitizing all further development and operations for the production of Oil and Gas from the Unit Area and of pooling and unitizing the production so obtained, all to the same extent as if the Unit Area had been included in a single lease and all rights thereunder owned by the Lessees in undivided interests. Property rights, leases, contracts and all other rights and obligations in respect of the Oil and Gas Rights in and to the several Separately Owned Tracts within the Unit Area are hereby amended and modified to the extent necessary to make the same conform to the provisions and requirements of this Plan of Unitization, but otherwise to remain in full force and effect.

The relationship between the Lessees within the Unit Area, resulting from the creation of the Unit shall not be that of a trust, partnership or association but shall be in the nature of the tenancy in common.

Nothing herein contained shall be construed to require or result in a transfer to or the vesting in the Unit of title to the Separately Owned Tracts within the Unit Area or to the leases thereon, other than the right to use and operate the same to the extent set out in this Plan of Unitization; nor shall the Unit be regarded as owning any of the Unit Production. The Unit Production and the proceeds from the sale thereof shall be owned by the several persons to whom the same is allocated under this Plan of Unitization. All property, real or personal, acquired, held or possessed for use in the operation of the Unit Area shall be the property of the Lessees as their interests may ap-

pear under this Plan of Unitization, subject, however, to the rights and powers herein granted the Unit and the Unit Operator.

The amount of the Unit Production allocated to each Separately Owned Tract and only that amount, regardless of the well or wells in the Unit Area from which it may be produced, and regardless of whether it be more or less than the amount of the production from the well or wells, if any, on any such Separately Owned Tract shall, for all intents, uses and purposes, be regarded and considered as production from such Separately Owned Tract.

Operations carried on, under and in accordance with this Plan of Unitization shall be regarded and considered as a fulfillment of and compliance with all the provisions, covenants and conditions, express or implied, of the several oil and gas mining leases upon lands included within the Unit Area, or other contracts pertaining to the development thereof, to the same extent that the development and operation of and the production of Oil and Gas from each of the several Separately Owned Tracts within the Unit Area would have constituted a fulfillment of and compliance with such leases and contracts. Wells drilled or operated on any part of the Unit Area, no matter where located, shall for all purposes be regarded as wells drilled on each Separately Owned Tract within the Unit Area.

VII

Allocation of Unit Production

All Unit Production, except so much thereof as is used in the development and operation of the Unit Area, including repressuring, pressure maintenance and other operations carried on in accordance with this Plan of Unitization, or is unavoidably lost, shall be apportioned among and allocated to the several Separately Owned Tracts within the Unit Area in accordance with the percentage and division of interest set forth and shown in Part I of "Exhibit B" hereto attached, subject, however, to the further provisions of Part II of said Exhibit.

Except as may be otherwise authorized or provided in this Plan of Unitization, the Unit Production allocated to each Separately Owned Tract shall be distributed among or the proceeds thereof paid to the several persons entitled to share in the production from such Separately Owned Tract in the same manner, in the same proportions, and upon the same conditions that they would have participated and shared in the production from such Separately Owned Tract, or the proceeds thereof, had not the Unit been organized, and with the same legal force and effect.

Except as may be otherwise authorized or provided in this Plan of Unitization, and provided adequate provisions are made for the receipt thereof, the share of the Unit Production allocated to each Separately Owned Tract shall be delivered in kind to the persons entitled thereto by virtue of ownership of Oil and Gas Rights therein or by purchase from such owners, subject, however, to the right of the Unit Operator to withhold and sell the same in payment of Unit Expense pursuant to this Plan of Unitization, and subject further to the right of the Unit Operator to take and use such portion of the Unit Production (including residue gas) as may be required for operating purposes, including repressuring, pressure maintenance and any other operation carried on, pursuant to this Plan of Unitization. Persons so entitled to take and receive in kind any portion of the Unit Production shall have the right to construct, maintain and operate within the Unit Area all necessary facilities for that purpose, provided the same are so constructed, maintained and operated as not to interfere with the operations carried on pursuant hereto.

To the extent that any person entitled to take and receive in kind any portion of the Unit Production shall fail to take and receive the same currently as and when produced, the Unit Operator, as agent and for the account and at the expense of such person, is authorized to market and sell or itself purchase, at not less than the market price prevailing at the time of such sale or purchase, the portion of Unit Production not so taken in kind by the person entitled to take and receive the same. Proceeds of the Unit Pro-

duction so sold, or purchased by the Unit Operator, shall be paid by the Unit Operator to the person or persons for whose account the same is so marketed.

The person or persons receiving in kind the Unit Production allocated to any Separately Owned Tract or receiving the proceeds of such Unit Production, if the same is marketed and sold, or purchased by the Unit Operator, shall be responsible for the payment of, and shall indemnify the Unit, the other Lessees and the Unit Operator against any liability for, any and all royalties, overriding royalties, production payments, gross production taxes and any and all other payments and taxes chargeable against or payable out of the Unit Production which is received in kind by, or the proceeds of which are paid to, such person or persons, and neither the Unit nor the Unit Operator shall have any responsibility or liability for payment of such royalties, overriding royalties, production payments, gross production taxes or the other payments or taxes.

If at any time the title or right of any person claiming the right to receive in kind all or any portion of the Unit Production allocated to a Separately Owned Tract is in dispute or is disapproved by the Operating Committee, the Unit Operator shall at the direction of the Operating Committee either (a) withhold and market, or itself purchase the portion of the Unit Production, title to which is in dispute or is disapproved, and impound the proceeds thereof until such time as the title or right thereto is established, by final judgment of a court of competent jurisdiction or otherwise to the satisfaction of the Unit Operator, whereupon, the proceeds so impounded shall be paid, without interest, to the person or persons rightfully entitled thereto, or (b) may require that the person or persons to whom such Unit Production is delivered, or to whom the proceeds thereof are paid, furnish security for the proper accounting therefor to the rightful owner or owners in the event the title or right of such person or persons shall fail, in whole or in part.

The Unit Operator shall have the right to take and utilize so much of the Unit Production as may be neces-

sary or desirable in the development and operation of the Unit Area, including but without being limited to, the use of gas (including residue gas) for repressuring, pressure maintenance or other operations carried on in accordance with this Plan of Unitization. No royalties, overriding royalties, production payments or other payments shall be payable upon or with respect to that portion of the Unit Production so taken and utilized by the Unit Operator or which may be lost in handling or otherwise without want of due diligence on the part of the Unit Operator.

VIII

Operating Committee

An Operating Committee is hereby created to consist of one representative to be designated by each Lessee within the Unit Area, provided that an individual Lessee may himself be a member of the Committee. Such designation shall be in writing and with respect to the representative to participate at the organization meeting of the Committee shall be presented at such meeting, or if thereafter made, shall be filed with the Secretary of the Operating Committee. Any such Lessee may in like manner (a) designate an alternate representative on the Operating Committee, who, in the absence of the Lessee or its regular representative, shall have the same full right and power to represent the interest of such Lessee, or (b) may from time to time discharge any such regular or alternate representative and designate a new representative to act for such Lessee on the Operating Committee.

The Operating Committee shall have the general overall management and control of the Unit and the conduct of its business and affairs and the operations carried on by it, and is authorized and empowered, subject to the terms and provisions hereof, to do all things necessary, proper and convenient for carrying out the terms and spirit of this Plan of Unitization and to that end, not excluding or limiting any other power or powers that may be necessary or

proper for that purpose, shall have the following specific powers and duties:

(a) To adopt rules and regulations for the proper functioning of the Operating Committee, including such matters as the time and places of holding meetings, the calling thereof or the manner of taking the vote on any question all in a manner not inconsistent with the express requirements of this Plan of Unitization.

(b) To remove any Unit Operator.

(c) To select a successor to any Unit Operator.

(d) To determine the extent of drilling operations and development to be carried on by the Unit Operator, including the approval or disapproval of the contemplated drilling, deepening, plugging back, reconditioning, abandonment or the use to be made of any well or wells.

(e) To pass upon and approve or disapprove all costs and estimates of costs and any proposed expenditure by the Unit Operator; provided, that the Committee may permit without prior approval by it the incurring of normal operating expense and any proposed expenditure by the Unit Operator of not more than Five Thousand ($5,000.00) Dollars; and provided further that the approval by the Operating Committee of the drilling of any well or wells or carrying out any specific project of development or operation shall mean and include the approval of all necessary expenditures in drilling, completing and equipping such well or wells or carrying out such project.

(f) To determine from time to time the rate at which and the wells from which the Unit Production shall be produced in conformity with good engineering practices and any applicable conservation laws or regulations.

(g) To pass upon, approve or disapprove the purchase, sale or other disposal of materials and equipment by the Unit Operator otherwise than in the normal course of approved operations.

(h) To approve and authorize the purchase, construction, location, abandonment, sale or other disposal of any

compressor plant, gasoline plant, tank batteries, salt water disposal system or other facilities serving the Unit Area.

(i) To determine the manner in which, the location at which and the extent to which gas can best and should be injected into the reservoir to accomplish the Plan of Operation set forth in Section XV hereof.

(j) To provide for the proper auditing of the accounts of the Unit Operator with respect to the operation and development of the Unit Area.

(k) To appoint such sub-committees as it may deem proper and requisite, as for example, an advisory committee, legal committee, engineering committee, plant committee, geological committee and tax committee to act under the authority and subject to the control of the Operating Committee consonant with the terms of this Plan of Unitization.

(l) To approve or disapprove any proposed plan of development or operation or amendment thereof required to be submitted to any regulatory body having jurisdiction of the subject matter thereof.

(m) To approve or disapprove any proposed expenditures for expert technical advice, including any extra services rendered by the Unit Operator's technical staff, not contemplated by the provisions of the accounting procedure hereto attached, marked "Exhibit C" and not covered by the overhead charges therein authorized, which overhead charges in said accounting procedure are intended to cover only normal lease development and lease operations.

(n) To direct and consult with the Unit Operator in all matters pertaining to the duties and functions of the Unit Operator.

(o) To provide for the finances in the manner herein provided for the carrying on of the Unit Operations hereunder.

Each Lessee within the Unit Area who is represented on the Operating Committee shall have a vote equal to the proportionate interest of said Lessee in the Unit determined as follows:

(a) In respect of each Separately Owned Tract, the Lessee or Lessees thereof shall have a vote equal to the percentage indicated opposite such Separately Owned Tract in Part I of "Exhibit B" hereto attached.

(b) Should there be more than one Lessee of a Separately Owned Tract, the vote in respect thereof shall be divided between such Lessees in proportion as such Lessees share in the Unit Expense chargeable to such tract.

(c) The vote of a Lessee having an interest in more than one Separately Owned Tract shall be the sum total of the votes of such Lessee in respect of all such tracts.

In all matters except the removal of a Unit Operator the vote on behalf of Lessees having at least 66⅔% of the total voting interest in the Unit shall control.

A Unit Operator may be removed only by the vote of at least 75% in interest of the Lessees other than such Unit Operator.

If at any time the voting interest of a Lessee should be such as to control the action taken by the Committee, the vote of such Lessee shall not serve to carry or defeat action taken by the Committee unless such vote is supported by the vote of a majority in interest of the remaining Lessees.

Minutes shall be made of all meetings of the Operating Committee and kept as a part of the permanent records of the Unit. Such minutes need not be a verbatim record of all the proceedings, but shall show and reflect (a) the names of all members present at the meeting; (b) all motions and resolutions offered or acted upon, together with the result of such action; and (c) such other formal action as may be taken by the Committee. A copy of the minutes of each such meeting shall be mailed to each member of the Committee within a reasonable time after the meeting.

Notices or other communications addressed and sent to the Unit or to the Operating Committee by United States mail or telegraph in care of the Unit Operator shall be deemed to have been properly given to or served upon the Operating Committee. The Unit Operator shall

promptly deliver all such notices or communications to the Chairman or Secretary of the Operating Committee.

IX

Organization of Unit and Effective Date of Plan

Subject to call by Lessees of record owning 50% or more in interest in and to the Unit as shown in Part I of "Exhibit B" hereto attached the representatives designated by the several Lessees to serve on the Operating Committee shall meet at some convenient place to perfect the organization of the Operating Committee. Such meeting may be held at any time after twenty (20) days from the date of the order of the Commission approving this Plan of Unitization. Notice of the time and place of said meeting shall be mailed at least ten (10) days prior thereto to all Lessees within the Unit Area whose names and addresses are known to the Lessees calling said meeting, as well as those Lessees who shall have within ten (10) days from the date of said order notified the Secretary of the Commission in writing of their desire to be so notified of the meeting. Any Lessee within the Unit Area desiring notice of such meeting may file a statement of such desire with the Secretary of the Commission, giving its name and the address to which it desires the notice to be sent.

The Operating Committee shall organize by selecting a Chairman, a Vice-Chairman, a Secretary and such other officers as to the Committee may seem proper. The Chairman and Vice-Chairman shall be selected from among the members of the Operating Committee. The Secretary and other officers may or may not be members of the Committee. The Chairman shall preside at all meetings of the Operating Committee when he is present and shall be the Chief Executive Officer of the Unit. The Vice-Chairman shall perform all duties of the Chairman in the absence of the Chairman. The Secretary shall keep and maintain all the records of the Committee and shall also be Secretary of the Unit. Such officers shall serve at the will of the Operating Committee and perform such other

duties as are delegated to them by the Operating Committee.

Upon completion of its organization, the Operating Committee shall proceed to make plans and preparations and take such steps as are necessary for the taking over of the unitized operations and further development of the Unit Area by the Unit, and shall in advance thereof fix the time when the Unit will take over such operation and development, and give the Lessees within the Unit Area reasonable notice thereof. *The time so fixed shall not be less than sixty-one (61) days after the entry of the order of the Commission approving this Plan of Unitization nor more than three months after the time when said order shall have become final.*

The time when the Unit takes over the operation and further development of the Unit Area shall be the Effective Date of this Plan of Unitization.

In the event the Unit shall fail to assume and take over the operation of the Unit Area on or before three (3) months after the time when the order of the Commission approving this Plan of Unitization shall have become final, then and in that event the Unit shall, without further action on the part of the Operating Committee or the Commission, be dissolved and all rights and obligations under this Plan of Unitization shall be at an end, except that any and all cost and expense incurred by the Unit incident to its organization or preparatory to the taking over of the operation of the Unit Area shall be borne and paid for by the Lessees whose representatives on the Operating Committee by their vote authorized the incurring of such expense, in proportion as the interest of each such Lessee in and to the Unit as set out in Part I of "Exhibit B" bears to the total interest of all such Lessees in and to the Unit as shown on said Part I of "Exhibit B." In the event the Unit assumes and takes over the operation of the Unit Area within the time so named, this Plan of Unitization shall thereafter remain in force and effect until such time as the Unit is dissolved and abandoned as provided in Section XXV hereof.

The order of the Commission approving this Plan of Unitization shall be regarded as having become final at the end of the time allowed by law for any appeal therefrom, if no appeal is taken, or, if an appeal is taken, then upon the final determination of any such appeal.

The Unit on or before five (5) days after the Effective Date hereof shall submit to the County Clerk of Caddo County, Oklahoma, for filing, a written declaration signed by the Chairman and Secretary of the Operating Committee, setting forth

(a) The hour, day and year on which the Unit took over the operation of the Unit Area;

(b) A description or plat of the lands included within the Unit Area; and

(c) The cause number and date of the Commission order approving this Plan of Unitization, with an appropriate reference to such order and the files of the Commission for further information concerning this Plan of Unitization.

X

Unit Operator

Subject to the further provisions of this Plan of Unitization, operations in connection with the development and the operation of the Unit Area for Oil and Gas shall be carried on and conducted by a Unit Operator in accordance with the instructions of the Operating Committee.

The Unit Operator shall:

(a) Conduct all such operations in a good and workmanlike manner.

(b) Keep full, true and correct books, accounts and records of its operations hereunder which shall be made available for inspection at all reasonable times by any of the Lessees within the Unit Area.

(c) Mail to each Lessee on or before the 10th day of each calendar month a full, true and correct statement of all Unit Production during the preceding calendar month.

(d) Comply, to the extent of its operations within the Unit Area, with the Workmen's Compensation Laws of

the State of Oklahoma and with all other valid and applicable federal and state laws and regulations.

(e) Carry such insurance as may be required by the Operating Committee.

(f) Keep the land and leases within the Unit Area free from liens and encumbrances occasioned by the operations of the Unit Operator save only the lien granted the Unit and the Unit Operator under this Plan of Unitization.

The Operating Committee may by the vote hereinbefore provided remove a Unit Operator at any time. A Unit Operator may resign only after giving the Operating Committee six months' written notice of its intention to resign, or sooner if a successor is selected and has assumed the duties of Unit Operator prior to the end of such time. Upon the removal or resignation of a Unit Operator the Operating Committee shall designate a successor Unit Operator from among the Lessees within the Unit Area.

Phillips Petroleum Company is hereby designated as Unit Operator.

XI

Unit Expense

The Unit Operator in the first instance shall pay and discharge all cost and expense incurred in the development and operation of the Unit Area and in the conduct of the activities and affairs of the Unit. All such cost and expense incurred in the development and operation of the Unit Area shall be in accordance with the Accounting Procedure hereto attached, marked "Exhiibt C" and made a part hereof. All other costs and expense shall be only such sums as are approved by the Operating Committee.

All such Unit Expense as it accrues shall be charged to the several Separately Owned Tracts in the Unit Area in proportion to the percentage of interest of such tracts in and to the Unit as set forth and shown in Part I of "Exhibit B" hereto attached.

Except as may be otherwise hereinafter specifically provided, a Lessee or Lessees obligated or responsible for the

cost and expenses of operating a Separately Owned Tract for Oil and Gas in the absence of unitization shall, in the same proportion and to the same extent, be chargeable with and responsible for the payment of the Unit Expense charged against such Separately Owned Tract.

The Unit Operator shall on or before the last day of each calendar month render to each Lessee within the Unit Area an itemized statement of all charges and credits during the preceding month and of the amount due from or to each such Lessee with respect to each Separately Owned Tract. If the Unit Operator so elects, such statement of account may also include a charge by way of an advance of the proportionate part of the estimated Unit Expense for the ensuing month chargeable to the Lessee against whom such statement is rendered, using as a basis therefor the budget hereinafter provided for. Except as may be otherwise provided herein, each Lessee chargeable with the payment thereof shall, within fifteen (15) days from the receipt of such statement, pay to the Unit Operator the amount thereof. If not paid when due, the unpaid balance shall bear interest at the rate of 6% per annum until paid. Payment of any such statement shall not prejudice the right of any Lessee to protest or question the correctness thereof; provided, the Unit Operator shall not be required to adjust any item of charge or credit unless a claim therefor has been presented in writing within six (6) months after the approval by the Operating Committee of the annual audit for the period in which the charge or credit was made.

Before or as soon as practical after the Effective Date hereof, the Operating Committee, acting in conjunction with the Unit Operator, shall prepare a budget of estimated Unit Expense for the remainder of the calendar year and on or before the first day of each December thereafter shall prepare a budget of estimated Unit Expense for the ensuing calendar year, which budgets shall set forth the estimated Unit Expense by quarterly periods. Unless otherwise specified in the budget, it shall be presumed for the purpose of advance billings as aforesaid, that the

estimated Unit Expense for each month of a quarterly period shall be one-third (⅓) of the estimate for the quarterly period. Budgets so prepared shall be estimates only and shall be subject to adjustment and correction by the Operating Committee and Unit Operator from time to time whenever it shall appear that an adjustment or correction is proper. A copy of each such budget and adjusted budget shall be promptly furnished each Lessee within the Unit Area.

Any Lessee, other than an Unqualified Subscriber, who does not elect to pay its proportionate share of the Unit Expense, shall not be personally obligated for the payment thereof, but the amount thereof or such portion thereof as such Lessee shall elect not to pay, together with interest thereon at the rate of 6% per annum, shall be carried and shall be payable, so far as such Lessee is concerned, as follows:

(a) So much of said charge as is made up of current operating costs, as distinguished from items of investment, together with interest thereon, shall be payable out of proceeds from all Unit Production to the credit of the interest or interests chargeable therewith.

(b) So much of said charge as is made up of items of investment, together with interest thereon, shall be payable out of 50% of the net proceeds of the Unit Production to the credit of the interest or interests chargeable therewith after deducting the charge for Operating costs under subparagraph (a) last above.

(c) All credits to any such Lessee on account of the sale or other disposal of surplus material or equipment or otherwise shall be applied against any such unpaid Unit Expense charged against such Lessee.

Amounts so carried as aforesaid, shall be billed to and paid by the Lessees who sign this Plan of Unitization as Unqualified Subscribers, in the proportion that the interest of each in the Unit bears to the total interests in the Unit of all of the Unqualified Subscribers to this Plan of Unitization; Lessees so paying the same shall be reimbursed therefor, together with interest thereon, as and

when the amounts so carried and the interest thereon are collected from the Lessees or interests primarily chargeable therewith.

The Unit shall have a first and prior lien upon the leasehold interest (exclusive of a 1/8 royalty interest) in and to each Separately Owned Tract, the interest of the owners thereof in and to the Unit Production and all equipment in possession of the Unit, to secure the payment of the Unit Expense and other items of cost charged to and against such Separately Owned Tract, provided such lien may be enforced as against overriding royalty, oil and gas payments, royalty interests in excess of a 1/8 of the production, or other interests which otherwise are not chargeable with such costs, only in the event the owner of the interest or interests primarily responsible fails to pay such Unit Expense when due, and the production to the credit thereof is insufficient for that purpose. In the event the owner of any royalty interest, overriding royalty, oil and gas payment or other interest which under the Plan of Unitization is not primarily responsible therefor pays any part of such Unit Expense for the purpose of protecting such interest or the amount of such Unit Expense in whole or in part is deducted from the Unit Production to the credit of such interest, the owner thereof shall, to the extent of such payment or deduction, be subrogated to all of the rights of the Unit and of the Unit Operator with respect to the interest or interests primarily chargeable with such Unit Expense. A one-eighth (1/8) part of the Unit Production allocated to each Separately Owned Tract shall in all events be regarded as royalty to be distributed to and among or the proceeds thereof paid to the royalty owners free and clear of all Unit Expense and free of any lien therefor. The lien hereinabove provided for shall be for the use, benefit and protection of Unit Operator or other Lessees or persons entitled to receive or share in the monies, the payment of which is secured thereby, and in the event of failure of the Unit to enforce such lien, the Unit Operator or other person entitled to the benefit there-

of, shall be subrogated to the lien rights of the Unit, including the right of foreclosure.

In the event of a failure of any Lessee to pay its share of the Unit Expense when due, and also in the case of a Lessee who elects to be carried as aforesaid, the Unit Operator shall be entitled to take and market, or itself purchase the Unit Production to the credit of such Lessee or to the credit of the interest or interests chargeable with such Unit Expense, or to otherwise collect and receive the proceeds from the sale thereof, and shall apply all such sums so collected against the delinquent or unpaid Unit Expense due from such Lessee or interest, the balance of such proceeds, if any, to be paid to the Lessee or other person entitled thereto. The Unit Operator may likewise take any other credit due any such Lessee or interest and apply the same against sums due from such Lessee or interest for Unit Expense.

Any and all income and credits received by Unit Operator on account of Unit Operations hereunder, from whatever source received, shall currently be accounted for and credited to the Lessees or interests entitled to credit therefor.

XII

Initial Adjustment of Investment

Upon the Effective Date hereof the Unit shall assume control and management of the further development and operation of the Unit Area and, except as may be otherwise herein provided, each Lessee within the Unit Area shall deliver possession to the Unit Operator of (a) all wells within the Unit Area, (b) all lease and other operating equipment used in the operation of such wells, and (c) all production and well records and other pertinent data pertaining thereto.

(1) Completed Wells

All wells which as of the Effective Date are completed as producing wells in the Medrano Sand shall be taken over by the Unit, except that in the case of wells deter-

mined by the Operating Committee to be unnecessary to Unit operations, the owners thereof may upon request retain possession thereof for the purpose of completing the same in some other formation not a part of the Unit Area, provided, the owners thereof shall immediately cause the Medrano Sand to be sealed off in a manner satisfactory to the Operating Committee.

(2) Wells Being Drilled or Reconditioned

Any well being drilled, repaired, deepened or plugged back to the Medrano Sand as of the Effective Date hereof may be completed by the separate owner or owners thereof and if so completed as a producing well in the Medrano Sand, shall be taken over by the Unit except that in the case of wells determined by the Operating Committee to be unnecessary to Unit Operation, the possession thereof may be retained by the owners thereof under the circumstances and upon the conditions named in (1) last above.

(3) Casing, Tubing and Wellhead Connections

All casing, one string of tubing and wellhead connections in or on wells taken over by the Unit shall be treated and regarded as a part of such wells.

(4) Lease and Operating Equipment

As of the Effective Date hereof the Operating Committee shall determine what part of the lease and other operating equipment (exclusive of warehouses, lease houses, camps and office buildings) used in the operation of wells taken over by the Unit it considers necessary or desirable to take over and use in connection with the unitized development and operation of the Unit Area including, by way of example, but not thereby excluding, other equipment of a like or different kind, derricks, tank batteries, separators, rods, pumps, tubing in excess of one string, flow lines, water lines, gas lines, etc., which said lease and operating equipment (exclusive of warehouses, lease houses, camps and office buildings) shall be delivered to and taken over by the Unit. All lease and operating

equipment not so taken over shall remain the separate property of the several owners thereof and may be used by said separate owners in the operation of wells producing from formations other than the Medrano Sand or reclaimed as such separate owners may desire. The acquisition of existing warehouses, lease houses, camps, or office buildings considered desirable to the operation and development of the Unit Area shall be by negotiation and separate contract of purchase with the owner or owners of such warehouses, lease houses, camps and office buildings.

(5) Adjustment of Well Investment

(a) Each Separately Owned Tract on which is one or more wells taken over by the Unit shall be given credit for the value assigned to such well or wells as follows: wells listed in "Exhibit D" hereto attached shall have the assigned value therein shown; wells not listed in "Exhibit D" shall be assigned a value determined in the same manner as was used in determining the values assigned to the wells listed in "Exhibit D".

(b) Each Separately Owned Tract within the Unit Area shall thereupon be charged with the total value of all such wells in proportion to such tract's percentage of interest in and to the Unit as shown in Part I of "Exhibit B" hereto attached, less the amount of the credit due such tract under (a) last above, resulting in either a net debit or a net credit with respect to each Separately Owned Tract.

(c) The amount of any net debit chargeable against a Separately Owned Tract under (b) above shall be payable by the Lessee or Lessees of such tract out of 10% of 7/8 of the Unit Production of oil allocated to such tract if such tract has a credit under (a) above, or 25% of 7/8 of said oil if said tract has no credit under (a) above. The oil applicable to the oil payment with respect to each Separately Owned Tract having a net debit shall be sold by the Unit Operator, at not less than the prevailing market price, for the account of the Lessees of Separately Owned Tracts having net credits under (b) above until such time

as the accumulated proceeds thereof equal the amount of such net debit. The Lessee or Lessees of each Separately Owned Tract having a net debit shall have the right to designate the purchaser to whom said oil shall be sold, provided the purchaser so designated will take and purchase said oil at the prevailing market price. Amounts collected by the Unit Operator under the provisions of this paragraph shall be paid by said Unit Operator to the Lessees of Separately Owned Tracts having net credits under (b) above in proportion to the percentages which the net credit due each bears to the net credit due all such Lessees. The amounts of the debits and credits under (a) and (b) above in respect to Separately Owned Tracts held by the same Lessee may, at the option of such Lessee, be grouped for the purpose of arriving at a combined net debit for all such tracts payable out of such fraction of 7/8 of the Unit Production of oil allocated to all such tracts as will result in the application of the same amount of oil each month to the payment of said combined net debit as would have been applied to the payment of the separate net debits against said several tracts in the absence of such grouping.

(6) Accounting for Lease and Operating Equipment

An accounting for the lease and operating equipment so transferred to and taken over by the Unit shall be had as between the owners thereof, and all Lessees within the Unit Area on the basis of the value thereof determined in accordance with Section IV of the accounting procedure hereto attached marked "Exhibit C", plus a reasonable allowance for the cost of installation, if installed, to be determined by the Operating Committee, and proper charges and credits entered against the several Separately Owned Tracts, all to the end that on and after the Effective Date hereof each of the several Lessees within the Unit Area instead of separately owning the equipment delivered to the Unit by such Lessees, will have exchanged the same for an undivided interest in and to all the equipment so taken over and acquired by the Unit and will have paid

or have been paid, as the case may be, for any difference in value. The amount of any net charge made against a Separately Owned Tract under this paragraph shall be treated and regarded in all respects the same as any other charge for Unit Expense chargeable to such tract.

XIII

Oil in Lease Tankage as of Effective Date

A proper and timely gauge shall be made of all lease or other tanks taken over by the Unit to ascertain the amount of oil in such tanks at the time the Unit assumes and takes over the development and operation of the Unit Area. So much of such oil as is legally produced shall remain and be the property of the parties entitled thereto had not the Unit been created, and upon request, shall be delivered in kind to persons entitled thereto, or in the absence of such request, shall be sold by the Unit Operator for the credit of such persons at not less than the prevailing market price and the proceeds thereof paid to such persons.

XIV

Settlement With Respect to Gas Produced and Underproduction of Gas Prior to Effective Date

A settlement with respect to gas produced and underproduction of gas prior to the Effective Date shall be made as follows:

(a) Each Separately Owned Tract having underproduction to its credit as of the Effective Date shall be given credit for such underproduction, less so much thereof as may have accumulated between November 1, 1946, and the Effective Date, on the basis of 95% of what the Lessee or Lessees of each such tract would have received and been paid therefor, less seller's cost of dehydration, had said gas been produced and sold currently during the period or periods in which such underproduction accumulated.

(b) Each Separately Owned Tract shall be charged with the sales of gas from such tract during the four months'

period from November 1, 1945, to March 1, 1946, plus any overproduction charged against such tract as of the Effective Date other than overproduction as may have accumulated during said four months' period, on the basis of 7/8 of 95% of the average price, less seller's cost of dehydration, received for gas sold from such tract during said four months' period from November 1, 1945 to March 1, 1946.

(c) Unit Operator shall pay to the Lessee or Lessees of each Separately Owned Tract having a net credit after deducting the amount of the charge under (b) from the credit under (a) the amount of such net credit.

(d) The Lessee or Lessees of each Separately Owned Tract against which there is a net charge after deducting the amount of the credit under (a) from the amount of the charge under (b) shall be charged with and shall pay to the Unit Operator the amount of said net charge in the same manner and on the same terms and conditions as if said net charge was a charge for Unit Expense against such Separately Owned Tract.

(e) If the amounts collected under (d) are less than the amounts paid under (c) the difference shall be charged against the several Separately Owned Tracts within the Unit Area in proportion to their respective percentages of interest as set out in Part I of Exhibit B hereof as an item of Unit Expense. If the amounts collected under (d) are more than the amount paid out under (c), the difference shall be credited to the several Separately Owned Tracts and paid to the Lessees thereof in proportion to the percentages of interest of such tracts as set out in Part I of Exhibit B hereof.

(f) The amounts credited to each Separately Owned Tract and paid to the Lessee or Lessees thereof under (c) and (e) shall be distributed and paid by such Lessee or Lessees to the owners of the Oil and Gas Rights in and to such tract, including the Royalty Owners, in the same proportion and to the same extent that they share in the Unit Production allocated to such tract as of the Effective Date hereof.

(g) The underproduction and overproduction of gas and

the amount of sales of gas from any Separately Owned Tract at any time or during any period shall be determined from the books and records of the Commission.

XV

Plan of Operation

To the end that the quantity of Oil and Gas ultimately recoverable from the Unit Area may be substantially increased and waste prevented, the further development and operation of the Unit Area, from and after the Effective Date hereof, shall be conducted by the application to the Unit Area of the following unitized method of operation:

(a) As soon as practical after the Effective Date hereof, the Unit shall make the necessary preparations therefor and with diligence and in accordance with good engineering and production practices engage in pressure maintenance or repressuring operations through the return of gas to the reservoir to the extent and in the manner best calculated to efficiently and without waste result in the greatest ultimate recovery of Oil and Gas from the Unit Area. In so doing, the Unit is authorized to construct, purchase or otherwise acquire and operate such gasoline plants, processing plants or compressor plants and other facilities as may in the best judgment of the Operating Committee be desirable for that purpose, or is authorized, should it so elect, to contract with the owners of an individually owned plant or plants and facilities to render in whole or in part the desired services in connection therewith.

(b) The oil produced from the Unit Area shall be produced from those wells in the Unit Area from which the same can be obtained with the smallest loss or dissipation of reservoir energy reasonably possible under practical operating conditions as they may exist from time to time.

(c) Gas wells and wells which produce oil with gas-oil ratios found to be excessive in relation to the gas-oil ratios of other wells producing oil from the Unit Area shall be shut in or the production therefrom restricted in such manner as to make the most effective utilization of the gas

energy of the reservoir reasonably possible under practical operating conditions as they may exist from time to time.

(d) Production of Oil and Gas from different parts of the Unit Area shall be regulated in such manner as to retard, control or effectively utilize water encroachment, in such manner and to such extent as may be found reasonably possible and economically advisable from time to time.

(e) Gas (other than gas produced in connection with the production of oil) shall be produced from the Unit Area only at such time or times and in such manner as in the judgment of the Operating Committee such gas may be produced without materially decreasing the quantity of oil economically recoverable from the Unit Area.

(f) Such other unitized method or methods of operation as may from time to time be determined by the Operating Committee to be feasible, necessary or desirable to efficiently and substantially increase the ultimate recovery of Oil and Gas from the Unit Area, provided the estimated additional cost thereof does not exceed the value of the additional Oil and Gas to be so recovered.

Nothing herein contained shall prevent the Unit from abandoning or changing in whole or in part any particular method or methods of operation, including the pressure maintenance or repressuring operations required under (a) above, if and in the event, at such time, and to the extent that any such method of operation as applied to the Unit Area is, in the best judgment of the Operating Committee, no longer in accord with good engineering or production practices.

XVI

Right to Information Regarding Unit Operations

Each and all Lessees within the Unit Area shall have access to the entire Unit Area at all reasonable times to inspect and observe operations of every kind and character on the property, and shall have access at all reasonable times to any and all information pertaining to wells drilled, production secured, marketing of Unit Production and to the books, records and vouchers relating to the operation

of the Unit Area. Unit Operator shall, upon request, furnish to any such lessee tank tables, daily gauge and run tickets and reports of stock on hand at the first of each month and any other pertinent information pertaining to the Unit Area or development and operation thereof. All of the rights herein granted shall apply with equal force to the construction and operation by the Unit of any repressuring or pressure maintenance plant or other facilities in connection therewith.

XVII

Liability

No member of the Operating Committee or any other committee shall be personally liable or individually responsible for any act, error, default or omission as a member of such committee or committees.

Neither the Unit nor the Unit Operator shall be liable or responsible under any of the provisions of this Plan of Unitization for any acts or omissions resulting from causes beyond the control of the Unit or such Unit Operator, or other causes which by the exercise of due diligence could not have been prevented or overcome.

Unit Operator shall not be liable or responsible for any damage to the Unit Area or the property, equipment or facilities used in the development and operation thereof, or for the loss of any production arising out of its operation of the Unit Area, except only for bad faith or gross negligence in connection therewith.

If and in the event, notwithstanding the foregoing provisions of this section, the Unit, the Unit Operator or any member of the Operating Committee is held liable by a court of competent jurisdiction for any matter or thing for which it is herein provided the Unit or person so named shall not be liable, the amount of such liability as finally determined shall thereupon be treated, regarded and paid as an item of Unit Expense.

XVIII

Change of Interest

All transfers, assignments and conveyances of any interest in, or with respect to, any of the Separately Owned Tracts within the Unit Area shall be subject to the terms, provisions and conditions of this Plan of Unitization, but shall not be binding on the Unit or the Unit Operator unless and until a photostatic or certified copy of the recorded instrument evidencing such change of ownership has been delivered to the Unit Operator. Each such transfer, assignment or conveyance, whether so stating or not, shall operate to impose upon the person or persons acquiring such interest the obligation of the assignor or grantor with respect to the interest so transferred and shall likewise operate to give and grant to the person or persons acquiring such interest all benefit attributable hereunder to such interest.

XIX

Audits

The Operating Committee shall cause an audit to be made of the books, accounts and records of the Unit Operator in respect to matters pertaining to the Unit and the operation of the Unit Area at least once each year and shall furnish a copy thereof to each of the Lessees within the Unit Area. Each such audit shall cover the period intervening since the last audit. The audit may be made by an auditor or auditing committee from the accounting staff of one or more of the Lessees within the Unit Area, or by an independent auditor or auditors employed by the Unit to make such audit.

XX

Rights of Way

The Unit shall have a servitude and right of way on, over and across all of the lands in the Unit Area for the purpose of laying, constructing, building, using and main-

taining, operating, changing, repairing and removing pipe lines, tanks, telegraph and telephone lines, water lines, and other facilities for the development and operation of the Unit Area for Oil and Gas and for the gathering, handling and disposal of the Unit Production; provided, the Unit shall pay all damages to growing crops, timber, fences, improvements and structures on the land resulting from the exercise of the rights and privileges granted to it in this section.

XXI

Claims, Suits and Judgments Against Individual Owners of Unit Area

In the event claim is made against any of the owners of the Unit Area or any of such owners are sued on account of any matter or thing growing out of the development and operation of the Unit Area by the Unit and over which such owner or owners have no control because of the rights, powers and duties herein granted the Unit, said owner or owners shall immediately notify the Operating Committee in writing of such claim or suit. The Operating Committee shall assume and take over the further handling of such claim or suit and in pursuance thereof may select an attorney or attorneys for that purpose, who, subject to the directions of the Operating Committee, shall have the exclusive right to direct and control the settlement or defense thereof. Should such claim be settled, final judgment be entered against any such defendant or defendants upon said cause of action and any such defendant is required to pay or satisfy such judgment or expense of litigation in whole or in part, the amount of such settlement or judgment shall be treated, regarded and paid as any other item of Unit Expense. Nothing herein contained shall apply to or relieve any such owner or owners of liability which may have accrued prior to the effective date of this Plan of Unitization.

XXII

Title Information

Upon request of either the Operating Committee or the Unit Operator, the Lessees of the several Separately Owned Tracts shall furnish and make available to the Unit or the Unit Operator, as the case may be, an abstract brought to the date of the request, together with all other title information in the possession and files of such Lessees, title opinions, original or true copies of all leases, assignments, contracts, curative matter and all other data and information pertaining to or otherwise affecting titles to the Oil and Gas Rights in and to the Unit Area.

XXIII

Other Formations

It is understood that the common source of supply described herein as the Unit Area, namely, the Medrano Sand of the West Cement Field, underlies and may overlie other reservoirs or common sources of supply of Oil and Gas not a part of the aforesaid Medrano Sand or a part of the Unit Area of the Unit created hereby. Except as specifically provided in this Plan of Unitization, all rights of any and all persons in and to such other reservoirs or common sources of supply of Oil and Gas and the production therefrom, together with the right of ingress and egress and the use of the surface of the Unit Area for the exploration, development and operation of such other reservoirs or common sources of supply of Oil and Gas, are expressly reserved unto the separate owners thereof and shall remain unaffected by the creation of the Unit and the adoption of this Plan of Unitization, all to the same extent as if this Plan of Unitization had not been adopted except that in the exercise of such rights the owners thereof shall have due regard for the rights granted the Unit with respect to its operations hereunder. Likewise, any reference in this Plan of Unitization to a Separately Owned Tract or to the Unit Area, although in gen-

eral terms broad enough to include the surface and all underlying common sources of supply of Oil and Gas, shall have reference to the lands embraced within such Separately Owned Tract and within the Unit Area only in relation to the Medrano Sand of the West Cement Field.

XXIV

Abandonment of Wells

If the Operating Committee at any time desires to abandon any well completed in the Medrano Sand and salvage the casing and other equipment that is a part of the well, the Lessee or Lessees of the Separately Owned Tract on which such well is located shall be notified in writing of such decision and shall have and be granted thirty (30) days from receipt of such notice within which to elect to take over such well for the purpose of completing the same in some other formation not a part of the Unit Area. Any such Lessee electing to take over such a well shall pay the salvage value of the casing and other equipment in and on the well, determined in accordance with Section IV of the accounting procedure hereto attached marked "Exhibit C", and shall agree to assume full responsibility for the proper plugging and abandonment thereof at such time as the well is ultimately abandoned. No such well shall be operated or used for the production of Oil and Gas from the Unit Area and to that end the Lessee taking over such a well shall immediately cause the Medrano Sand in such well to be sealed off in a manner satisfactory to the Operating Committee. In the event the Lessee or Lessees of such a Separately Owned Tract do not elect to take over such well, the Unit Operator shall proceed to properly plug and abandon the same and salvage the casing and other equipment therefrom.

XXV

Abandonment of Operations and Dissolution of Unit

At such time as it is determined by the Operating Committee that Unit Production can no longer be produced

from the Unit Area in paying quantities the further development and operation of the Unit Area by the Unit shall be abandoned, the Unit dissolved and its affairs wound up.

Upon abandonment of Unit Operations,

(a) All rights in and to the several Separately Owned Tracts shall revert to the separate owners and Lessees thereof;

(b) The owner or Lessee of a Separately Owned Tract desiring to take over and continue to operate a well located on such Separately Owned Tract may do so by paying the salvage value of the casing and other equipment in and on the well determined in accordance with Section IV of the accounting procedure hereto attached marked "Exhibit C" and by agreeing to properly plug and abandon the well at such time as it is ultimately abandoned;

(c) With respect to all wells not taken over by the owner or Lessees of the Separately Owned Tracts as aforesaid, the Unit Operator shall salvage so much of the casing and other equipment therein as can economically and reasonably be salvaged and shall cause such well to be properly plugged and abandoned;

(d) The salvaging, liquidation or other distribution of assets and properties used in the operation of the Unit Area shall be in a manner determined by the Operating Committee; provided, any Lessee desiring to take its share of the physical assets or any portion thereof in kind may do so. All such assets and property shall belong to the several Lessees in proportion to their respective interests in the Unit.

At such time as the Unit Operations are abandoned and the affairs of the Unit wound up, the Unit shall submit for filing a declaration to that effect with the Secretary of the Corporation Commission and with the County Clerk of Caddo County, Oklahoma, whereupon the rights, powers and duties of the Unit shall be at an end.

XXVI

Amendment to Plan of Unitization and Enlargement of Unit

Any amendment of this Plan of Unitization or any enlargement of the Unit or Unit Area shall be in accordance with the provisions of Sections 11 and 12 of House Bill 339 of the 1945 Legislature of the State of Oklahoma or any amendment thereto.

XXVII

Subscribers

Provision is made below for the signing of this Plan of Unitization by Lessees within the Unit Area who wish to expressly signify their agreement to the terms, provisions and conditions hereof. Such Lessees may sign either as Unqualified or Qualified Subscribers. Those signing as Unqualified Subscribers agree to all the terms, provisions and conditions hereof, including the agreement to participate in carrying the Lessees who elect to be carried under the provisions of Section XI. Those signing as Qualified Subscribers agree to all the terms, provisions and conditions hereof, except that they reserve the right to be carried in respect to the payment of Unit Expense as is provided in Section XI and do not agree to participate in carrying the other Lessees who elect to be carried under the terms of said Section. This Plan of Unitization may be so signed by the subscribers hereto at any time, the original of which shall at all times from and after the approval hereof by the Commission remain on file in the office of the Secretary of the Commission. In lieu of signing the original of this Plan of Unitization, any Lessee desiring to subscribe hereto, either as an Unqualified or Qualified Subscriber, may do so by separate instrument filed with the Secretary of the Commission, all with the same effect as if such Lessees signed the original.

The signing hereof by any Lessee shall be binding upon the heirs, personal representatives, successors and assigns of such Lessees.

The signing hereof by each of the subscribers hereto is

conditioned upon the approval of this Plan of Unitization by the Corporation Commission.

The signing hereof by the Unqualified Subscribers is further conditioned upon the signing hereof by Unqualified Subscribers who, under this Plan of Unitization based on present lease ownership, will own sixty-five per cent (65%) or more in interest in the Unit.

EXHIBIT "B"

Part II

Fo the purpose of this exhibit:

(a) The following amounts of the Unit Production of Oil shall be regarded as *"Normal Production"* for the years shown opposite the amounts so named:

Year Following Effective Date	Daily Average in Barrels
1st year	5,225 Barrels
2nd year	5,075 "
3rd year	4,925 "
4th year	4,775 "
5th year	4,775 "
6th year	4,203 "
7th year	3,872 "
8th year	3,788 "

(b) All Unit Production of Oil in excess of said Normal Production shall be regarded as *"Excess Production"*.

(c) *"Time of Acceleration"* shall mean and include the time from the Effective Date to the end of five consecutive periods, each consisting of 12 calendar months, with the exception that any month shall not be counted as a month fixing the term of each such period if the Unit Production of Oil during such month is less than the Normal Production as a sole and direct consequence of a statewide proration order of the Corporation Commission. The five periods aforesaid shall be designated consecutively as Periods 1, 2, 3, 4 and 5.

(d) *"Time of Deceleration"* shall mean and include the time from the end of the Time of Acceleration and continuing until such time as the total number of additional barrels of Oil allocated to Separately Owned Tracts numbered 56, 57, 58, 64 and 65 during the Time of Acceleration as hereinafter provided, is offset by a like number of barrels of Oil allocated to the other Separately Owned Tracts during such Time of Deceleration, as hereinafter provided.

During the Time of Acceleration the Normal Production of Oil as hereinabove defined shall be allocated to all the several Separately Owned Tracts within the Unit Area in proportion to their respective percentages of interest shown in Part I of this Exhibit.

The Excess Production, if any, in any month during the Time of Acceleration and if sufficient for that purpose, shall be allocated to Separately Owned Tracts numbered 56, 57, 58, 64 and 65 in such amounts as to allocate to each such Separately Owned Tract the following amounts of Oil in excess of the number of barrels of Normal Production allocated to such Separately Owned Tracts.

Number of Period	Percent in Excess of Normal
1	100%
2	75%
3	50%
4	25%
5	10%

If the Excess Production in any month during the Time of Acceleration exceeds the amount required to satisfy the aforesaid increased allocations to the 5 Separately Owned Tracts last hereinabove named, the excess shall be allocated to all of the several Separately Owned Tracts within the Unit Area in proportion to their respective percentages of interest as shown in Part I of this Exhibit.

If the Excess Production, if any, in any month during the Time of Acceleration is not sufficient to satisfy in full the aforesaid increased allocations to the 5 Separately Owned Tracts hereinabove named, then and in that event the amount of such Excess Production shall be allocated to said 5 Separately Owned Tracts in the proportion that the percentage of interest of each such tract bears to the sum of the percentages of interest of all of said 5 Tracts, as shown in Part I of this Exhibit.

During the Time of Deceleration the amount of the Unit Production of Oil allocated each month to the 5 Separately Owned Tracts hereinabove specifically named, shall be 50% of their respective percentages of interest as shown in Part I of this Exhibit, until such time as the total accumulated number of barrels of Oil so withheld from such tracts by reason of said 50% reduction in percentage shall exactly equal the total accumulated number of additional barrels of Oil allocated to said tracts by reason of the special increase in allocation granted such tracts during the Time of Acceleration as hereinabove provided. The Unit Production of Oil so withheld from said 5 Separately Owned Tracts hereinabove specifically named by reason of said 50% reduction in the percentage allocation to such tracts shall be allocated to the other Separately Owned Tracts in the Unit Area, exclusive of the 5 tracts hereinabove specifically named, in the proportion that the percentages of interest of each bears to the sum of the percentages of interest of all such other tracts, exclusive of the 5 specifically named tracts, as shown in Part I of this Exhibit.

After the End of the Time of Deceleration all Unit Production shall be allocated to all the several Separately

Owned Tracts within the Unit Area in proportion to their respective percentages of interest as shown in Part I of this Exhibit.

EXHIBIT "C"

Accounting Procedure

The term "joint property" as herein used shall be construed to mean the Unit Area covered by the Plan of Unitization to which this "Accounting Procedure" is attached, together with any processing or other plants and facilities used in the development and operation of such Unit Area.

The term "Operator" as herein used shall be construed to mean the Unit Operator designated to conduct the development and operation of the joint property for the joint account.

I—Development and Operating Charges

Subject to limitations hereinafter prescribed, Operator shall charge the joint account with the following items:

(1) Delay or other rentals, when such rentals are paid by Operator for the joint account.

(2) Labor, teaming and other services necessary for the development, maintenance and operation of the joint property.

(3) Materials, equipment and supplies purchased or furnished by Operator from its warehouse stocks or from its other leases for use on the joint property. Insofar as is practical and consistent with efficient and economical operation, only such materials shall be purchased for or transferred to the joint property as are required for immediate use, and the accumulation of warehouse or lease stock on the joint property shall be avoided.

(4) Moving materials to the joint property from vendor's or from Operator's warehouse in the district or from other properties of Operator, but in either of the last events no charge shall be made to the joint account for a

distance greater than the distance from the nearest reliable supply store or railway receiving point.

(5) Moving surplus materials from the joint property to outside vendees, if sold f. o. b. destination, or minor returns to Operator's warehouse or other storage point. No charge shall be made to the joint account for moving major surplus materials to Operator's warehouse or other storage point for a distance greater than the distance to the nearest reliable supply store or railway receiving point, except by authority of the Operating Committee; and no charge shall be made to the joint account for moving materials to other properties belonging to Operator, except by authority of the Operating Committee.

(6) Use of and service by Operator's exclusively owned equipment and utilities as provided in Paragraph (6) of Section II: "Basis of Charges to Joint Account."

(7) Damages or losses incurred by fire, flood, storm or from any other cause not controllable by Operator through the exercise of reasonable diligence. Operator shall furnish the Operating Committee written notice of damages or losses incurred by fire, storm, flood or other natural or accidental causes as soon as practicable after report of the same has been received by Operator.

(8) Expenses of litigation, liens, judgments and liquidated claims involving the joint property or incident to its development and operation. Actual expenses incurred by Operator in securing evidence pertaining to the joint property shall be a proper charge against the joint account.

(a) When any case, by prior agreement, is handled by Operator's legal staff, thereby eliminating the retaining of outside counsel, a charge commensurate with the cost of services rendered may be made to the joint account. Charges of this nature shall not be rendered until the Operating Committee has approved the amount thereof.

(b) Fees and expenses of outside attorneys shall not be charged to the joint account except where the employment of such outside attorneys is authorized by the Operating Committee.

(9) All taxes paid for the benefit of the parties in in-

terest including ad valorem, property, gross production, occupation and any other taxes assessed against the jointly-owned properties, the production therefrom or the operations thereon.

(10) Insurance:

(a) Premiums paid for insurance carried for the benefit of the joint account together with all expenditures incurred and paid in settlement of any and all losses, claims, damages, judgments and other expenses, including legal services, not recovered from insurance carrier.

(b) If no insurance is required to be carried, all actual expenditures incurred and paid by Operator in settlement of any and all losses, claims, damages, judgments and any other expenses, including legal services, shall be charged to the joint account.

(11) Overhead:

In lieu of any charge for the salaries and expense of officers and employees of Operator other than employees directly assigned to the operation of the joint property and employees performing special work pursuant to authority of the Operating Committee, and, in lieu of any charge for office and camp expense other than the expense of a field office or camp, if any, required for the operation of the joint property, the Operator shall have the right to charge the joint account with the following overhead charges:

(a) $150.00 per month for each drilling well, beginning on the date the well is spudded and terminating when it is on production or is plugged, as the case may be, except that no charge shall be made during suspension of drilling operations for fifteen (15) or more consecutive days.

(b) $50.00 per well per month for the first ten (10) producing wells.

(c) $40.00 per well per month for the second ten (10) producing wells.

(d) $25.00 per well per month for all producing wells over twenty (20).

(e) $20.00 per well per month for injection wells.

(f) An allowance to be agreed upon between the Operator and Operating Committee with respect to the construction and operation of any gas injection plant and facilities if and when the construction and operation thereof is authorized.

In connection with overhead charges, the status of wells shall be as follows:

(1) Producing gas wells shall be included in overhead schedule the same as producing oil wells.

(2) Wells permanently shut down but on which plugging operations are deferred, shall be dropped from overhead schedule at the time the shutdown is effected. When such wells are plugged, overhead shall be charged at the producing well rate during the time required for plugging operation.

(3) Wells being plugged back or drilled deeper shall be included in overhead schedule the same as drilling wells.

(4) If and when a well is temporarily shut down (other than for proration) and not produced or worked upon for a period of a full calendar month, it shall not be included on the overhead schedule for such month.

(5) Salt water disposal wells shall not be included in overhead schedule.

The above specific overhead rates are subject to adjustment and shall be amended from time to time by agreement between Operator and the Operating Committee if, in practice, they are found to be insufficient or excessive.

(12) Warehouse Handling Charges: None.

(13) Any other expenditures incurred by Operator for the necessary and proper development, maintenance, and operation of the joint property, except that Operator shall not charge the joint account with any expenditure or contribution made by Operator towards employes' stock purchase plan, group life insurance, pension, retirement, or bonus, other than such expenditures or contributions imposed or assessed by governmental authority.

II—Basis of Charges to Joint Account

(1) Outside Purchases: All materials and equipment purchased and all service procured from outside sources shall be charged at their actual cost to Operator, after deducting any and all trade or cash discounts actually allowed off invoices, or received by Operator.

(2) New materials furnished by Operator (Condition "A"):

New materials transferred to the joint property from Operator's warehouse or other properties shall be priced f. o. b. the nearest supply store or railway receiving point at replacement cost of the same kind of materials. This will include large equipment such as tanks, rigs, pumps, boilers and engines. All tubular goods (2" or over) shall be charged on the basis of mill shipment or carload price. Other materials, where the replacement cost cannot be readily ascertained, may, for the purposes of consistency and convenience, be charged on the basis of a reputable supply company's preferential list price f. o. b. nearest supply store or railway receiving point to the joint property prevailing on the date of transfer of the materials to the joint property.

In determining the value of any transferred materials, all special and preferential discounts shall be allowed but the regular cash discount shall not be considered.

(3) Secondhand materials furnished by Operator (Conditions "B" and "C"):

(a) Tubular goods (2" and over), fittings, machinery and other equipment which is in sound and serviceable condition at date of transfer, will be classed as condition "B" and charged at 75% of the price of new materials, in accordance with the provisions of Paragraph (2) above.

(b) Tanks, derricks, and buildings or other equipment involving erection costs shall be charged on a basis not to exceed 75% of knocked-down new price for similar materials.

(c) Other secondhand materials, such as units of machinery or other equipment that is serviceable, but substantially not good enough to be considered first-class secondhand material when transferred to the joint property, shall be classed as condition "C" and charged at 50% of the new price.

(d) There may also be cases where some items of equipment, due to their unusual condition, should be fairly and equitably priced by Operator.

(4) Warranty of Materials Furnished by Operator: Operator does not warrant the materials furnished from its warehouse or other properties beyond or back of the dealers' or manufacturer's guaranty, and in case of defective materials, credits shall not be passed until adjustment has been received by Operator from the manufacturers or their agents.

(5) If materials required are not available in Operator's surplus stocks, Operator shall whenever in its judgment it is practical to do so, give to other lessees within the Unit Area opportunity of furnishing the materials required in proportion to their interest, provided that the same can be furnished at the time such materials are required, and further provided that any such materials so furnished shall be in condition acceptable to Operator and shall be charged to the joint account on the same terms and conditions as are provided herein to cover the furnishing of materials by Operator.

(6) Operator's Exclusively-owned Facilities: The following rates shall apply to service rendered to the joint property by facilities owned exclusively by Operator:

(a) Water service, gas, teaming, power, and compressor service: All at rates currently prevailing in the field where the joint property is located.

(b) Automotive Equipment: Rates commensurate with cost of ownership and operation and in line with schedule of rates adopted by the Petroleum Motor Transport Association as recommended uniform standardized charges against the joint account. Automotive charges will be based on use in actual service on or in connection with

the joint property. Truck, tractor and pulling unit rates shall include wages and expenses of driver.

(c) A fair rate shall be charged for the use of drilling and cleaning-out tools and any others items of Operator's fully-owned machinery or equipment which shall be ample to cover maintenance, repairs, depreciation and the service furnished the joint property. Provided, however, that such charges shall not exceed those currently prevailing in the field where the joint property is located.

(d) Whenever requested, Operator shall inform the other lessees within the Unit Area in advance of the rates it proposes to charge.

(e) Rates shall be revised and adjusted from time to time when found to be either excessive or insufficient.

III—Disposal of Lease Equipment and Materials

(1) Materials purchased by Operator shall be credited to the joint account and included in the monthly statement of operations for the month in which the materials are removed from the joint property.

(2) Materials purchased by other lessees within the Unit Area shall be invoiced by Operator and paid for by such lessees to Operator immediately following receipt of invoice and delivery of materials. Operator shall thereupon immediately pass credit to the joint account and include the same in the monthly statement of operations for the month in which the materials were paid for by such lessees.

(3) Division of materials in kind, if made between Operator and other lessees within the Unit Area shall be in proportion to their respective interests in the joint property. Each party will thereupon be charged individually with the value of the materials received or receivable and corresponding credits will be made to the joint account by the Operator, and, both credits shall appear in the same monthly operating statement.

(4) Sales to outsiders of major materials shall be made only with the approval of the Operating Committee as to both terms and price and where made the proceeds shall

be credited by Operator to the joint account at the full amount collected from vendee. Any claims by vendee for defective materials or otherwise shall be charged back to the joint account, if and when paid by Operator.

IV—Basis of Pricing Materials Transferred from Joint Account

Materials and equipment purchased by either Operator or the lessees in the Unit Area, or divided in kind between them, unless otherwise approved by the Operating Committee, shall be valued on the following basis of condition and price: (New price as used in the following paragraphs shall have the same meaning and application as that used above in Section II: "Basis of Charges to Joint Account").

(1) New Materials: (Condition "A") being new equipment or supplies purchased or procured from the joint property but never used thereon; at 100% of current new prices.

(2) Good Secondhand Materials: (Condition "B") being good serviceable materials which are further usable without repair, at:

(a) 75% of current new prices, if materials were new when originally charged to the joint property.

(b) 75% of current new prices less depreciation consistent with their usage on and service to the joint property, if materials were originally charged to the joint property as secondhand at 75% of new prices.

(3) Other Used Materials: (Condition "C") being materials further usable for their original function only after repair and reconditioning; at 50% of current new prices.

(4) Bad Order Materials: (Condition "D") being materials not further usable for their original function but for possible other service; at 25% of current new prices.

(5) Junk: (Condition "E") being obsolete and unserviceable materials; at prevailing junk prices in the district. Where practicable, junk should be disposed of at the joint property.

(6) Temporarily Used Materials: When the use of cer-

tain items of equipment on the joint property has been only temporary, and the time of actual use thereon does not justify the deduction of depreciation as listed in (a) and (b) of Paragraph (2) hereof, such materials will be priced on a basis that will leave a net charge against the joint account consistent with the service rendered and adequate for the time the materials were in use.

V—Inventories

Periodic inventories of the materials and equipment of the joint property, which shall include such materials and equipment as are ordinarily considered controllable by Operators of oil and gas properties, shall be taken by Operator at such times and under such conditions as may be prescribed by the Operating Committee.

APPENDIX "F"

OIL AND GAS LEASE OWNED BY THE PALMER OIL CORPORATION, WITH ROYALTY RIGHTS OWNED BY PAUL STERBA AND PAUL STERBA, JR.

Filed for record Feb. 26, 1936 at 11:00 A. M. R. L. Goodfellow County Clerk (Seal)

Oil & Gas Lease

Agreement, made and entered into the 12th day of February, 1936, by and between Paul Sterba and wife, Gertrude K. Sterba, and Helen Catherine Jackson, nee Sterba, and husband Clifford Jackson, of Kay County & Canadian County, Oklahoma, hereinafter called lessor (whether one or more) and Chris Pearson, hereinafter called lessee:

Witnesseth: That the said lessor, for and in consideration of One & No/Dollars, cash in hand paid, the receipt of which is hereby acknowledged, and of the covenants and agreements hereinafter contained on part of lessee to be paid, kept and performed, has granted, demised, leased and let and by these presents does grant, demise, lease and let unto the said lessee for the sole and only purpose of mining and operating for oil and gas and of laying of pipe lines, and of building tanks, powers, stations and structures thereon to produce save and take care of said products, all that certain tract of land situate in the county of Caddo, State of Oklahoma, described as follows, to-wit:

The Southwest Quarter, of Section 35, Township 6 N, Range 10 W, and containing 160 acres, more or less.

It is agreed that this lease shall remain in force for a term of five years from this date, and as long thereafter as oil or gas or either of them is produced from said land by lessee.

In consideration of the premises the said lessee covenants and agrees:

1st. To deliver to the credit of lessor, free of cost, in the pipe line to which lessee may connect wells on said

land, the equal one-eighth part of all oil produced and saved from the leased premises.

2nd. To pay lessor one-eighth (1/8) of the gross proceeds each year, payable quarterly for the gas from each well where gas only is found, while the same is being used off the premises and if used in the manufacture of gasoline a royalty of one-eighth (1/8) payable monthly at the prevailing market rate for gas; and lessor to have gas free of cost from any such well for all stoves and all inside lights in the principal dwelling on said land during the same time, by making lessor's own connections with the well at lessor's own risk and expense.

3rd. To pay lessor for gas produced from any oil well and used off the premises or in the manufacture of gasoline or any other product a royalty of one-eighth (1/8) of the proceeds, at the mouth of the well, payable monthly at the prevailing market rate.

If no well be commenced on said land on or before the 12th day of February, 1937, this lease shall terminate as to both parties, unless the lessee shall on or before that date pay or tender to the lessor or to the lessors credit in the The Security Bank at Ponca City, Okla., or its successors, which shall continue as the depository regardless of changes in the ownership of said land, the sum of One hundred sixty & No/100 Dollars which shall operate as a rental and cover the privilege of deferring the commencement of a well for twelve months from said date. The payment herein referred to may be made in currency, draft or check at the option of the lessee; and the depositing of such currency, draft or check in any post office, with sufficient postage and properly addressed to the lessor, or said bank, on or before said last mentioned date, shall be deemed payment as herein provided. In like manner and upon like payments or tenders, the commencement of a well may be further deferred for like periods of the same number of months successively.

And it is understood and agreed that the consideration first recited herein, the down payment, covers, not only the privilege granted to the date when said first rental is

payable as aforesaid, but also the lessee's option of extending that period as aforesaid, and any and all other rights conferred.

Should the first well drilled on the above described land be a dry hole, then and in that event, if a second well is not commenced on said land within twelve months from the expiration of the last rental period for which rental has been paid, this lease shall terminate as to both parties, unless the lessee on or before the expiration of said twelve months shall resume the payment of rentals, in the same amount and in the same manner as hereinbefore provided. And it is agreed that upon the resumption of the payment of rentals as above provided, that the last preceding paragraph hereof governing the payment of rentals and the effect thereof, shall continue in force just as though there had been no interruption in the rental payments, and if the lessee shall commence to drill a well within the terms of this lease ~~or~~ any extension thereof, the lessee shall have the right to drill such well to completion with reasonable diligence and dispatch, and if oil or gas, or either of them, be found in paying quantities, this lease shall continue and be in force with like effect as if such well had been completed within the term of years first mentioned.

If said lessor owns a less interest in the above described land than the entire and undivided fee simple estate therein, then the royalties and rentals herein provided for shall be paid the said lessor only in the proportion which lessor's interest bears to the whole and undivided fee.

Lessee shall have the right to use, free of cost, gas, oil and water produced on said land for lessee's operations thereon, except water from the wells of lessor.

When requested by lessor, lessee shall bury lessee's pipe lines below plow depth.

No well shall be drilled nearer than 200 feet to the house or barn now on said premises without written consent of lessor.

Lessee shall pay for damages caused by lessee's operations to growing crops on said land.

Lessee shall have the right at any time to remove all

machinery and fixtures placed on said premises, including the right to draw and remove casing.

If the estate of either party hereto is assigned and the privilege of assigning in whole or in part is expressly allowed, the covenants hereof shall extend to their heirs, executors, administrators, successors or assigns, but no change in the ownership of the land or assignments of rental or royalties shall be binding on the lessee until after the lessee has been furnished with a written transfer or assignment or a true copy thereof and it is hereby agreed that in the event this lease shall be assigned as to a part or as to parts of the above described lands and the assignee or assignees of such part or parts shall fail or make default in the payment of the proportionate part of the rents due from him or them, such default shall not operate to defeat or affect this lease in so far as it covers a part or parts of said lands, upon which the said lessee or any assignee thereof shall make due payment of said rental, and this lease shall never be forfeited for non-payment of any rental due until after at least ten days written notice by registered mail or in person shall have been given the lessee.

Lessor hereby warrants and agrees to defend the title to the lands herein described and agrees that the lessee shall have the right at any time to redeem for lessor, by payment, any mortgages, taxes or other liens on the above described lands, in the event of default of payment by lessor, and be subrogated to the rights of the holder thereof, and the undersigned, lessors, for themselves and their heirs, successors, and assigns, hereby surrender and release all right of dower and homestead in the premises described herein, insofar as said right of dower and homestead may in any way affect the purposes for which this lease is made as recited herein.

In Testimony Whereof We Sign, this the 12th day of February, 1936.

HELEN CATHERINE JACKSON (s)
CLIFFORD JACKSON (s)
PAUL STERBA (s)
GERTRUDE K. STERBA (s)

STATE OF OKLAHOMA,
County of Canadian, SS:

Be it remembered, That on this 12th day of February A. D. 1936, before me, a Notary Public in and for said County and State, personally appeared Helen Catherine Jackson, nee Sterba, and Clifford Jackson, her husband, to me known to be the identical persons described in and who executed the within and foregoing instrument and acknowledged to me that they executed the same as their free and voluntary act and deed for the uses and purposes therein set forth.

In witness whereof, I have hereunto set my official signature and affixed my notarial seal, the day and year first above written.

(SEAL) H. C. KIMNER, *Notary Public.*

My commission expires January 2nd, 1938.

STATE OF OKLAHOMA,
County of Kay, SS:

Before me, the undersigned, a Notary Public within and for said County and State on this 13 day of February, 1936, personally appeared Paul Sterba and wife, Gertrude K. Sterba, to me known to be the identical persons who executed the within and foregoing instrument and acknowledged to me that they executed the same as their free and voluntary act and deed for the uses and purposes therein set forth.

In testimony whereof I have hereunto set my hand and official seal the day and year last above written.

(SEAL) J. R. MEET, *Notary Public.*

My commission expires Feb. 14, 1936.

APPENDICES "G" and "H"

APPLICATION TO ASSUME ORIGINAL JURISDICTION

and

PETITION FOR WRIT OF PROHIBITION OR OTHER PROPER RELIEF

IN THE SUPREME COURT OF THE STATE OF OKLAHOMA

No. ———

PAUL STERBA AND PAUL STERBA JR., A MINOR, BY AND THROUGH HIS FATHER AND NEXT FRIEND, PAUL STERBA, AND THE PALMER OIL CORPORATION, A CORPORATON,

Petitioners,

vs.

CORPORATION COMMISSION OF OKLAHOMA, CONSISTING OF REFORD BOND, RAY O. WEEMS AND RAY C. JONES; PHILLIPS PETROLEUM COMPANY, A CORPORATION; AMERADA PETROLEUM CORPORATION, A CORPORATION; ANDERSON-PRICHARD OIL CORPORATION, A CORPORATION; RAY STEPHENS, INC., A CORPORATION; STEPHENS PETROLEUM COMPANY, A CORPORATION; GULF OIL CORPORATION, A CORPORATION; MAGNOLIA PETROLEUM COMPANY, A CORPORATION; CITIES SERVICE OIL COMPANY, A CORPORATION; FOSTER PETROLEUM CORPORATION, A CORPORATION; AND SUNRAY OIL CORPORATION, A CORPORATION,

Defendants.

APPLICATON TO ASSUME ORIGINAL JURISDICTION

Come now, Paul Sterba and Paul Sterba, Jr., a minor, by and through his father and next friend, Paul Sterba, and The Palmer Oil Corporation, and respectfully pray

this Court to assume jurisdiction in an original proceeding under the petition for a Writ of Prohibition and other proper relief, copy of which petition is attached hereto, for the following reasons:

First: That the relief sought is against the Corporation Commission of the State of Oklahoma, and other defendants above named, who are acting as a "Unit Committee" under the jurisdiction of said Commission, to prevent and prohibit the enforcement of the Commission's Order No. 20289, which purported to create the "West Cement Medrano Unit" of the West Cement Field of Caddo County, Oklahoma, pursuant to House Bill No. 339 of the 1945 Oklahoma Legislature (O. S. Supp. 1947, Title 52, Sec. 286.1 to 286.17).

Second: That the action of the "Commission" and the "Unit Committee" is without authority of law and has been and will continue to be acts of judicial nature which are excessive, arbitrary and unreasonable, and that the applicants herein have suffered and will continue to suffer irreparable injury and damages.

Third: That the questions involved in said petition are of great public interest and that applicants have no speedy or adequate remedy in the State Court, Federal Court, or before the Commission to prevent their irreparable injury and damage.

Brief in support of this application and the petition referred to are filed herewith.

CLAUDE MONNET,
COLEMAN H. HAYES,

PAUL STERBA AND PAUL STERBA, JR., A MINOR, BY AND THROUGH HIS FATHER AND NEXT FRIEND, PAUL STERBA, AND THE PALMER OIL CORPORATION, A CORPORATON,

Petitioners,

vs.

CORPORATION COMMISSION OF OKLAHOMA, CONSISTING OF REFORD BOND, RAY O. WEEMS AND RAY C. JONES; PHILLIPS PETROLEUM COMPANY, A CORPORATION; AMERADA PETROLEUM CORPORATION, A CORPORATION; ANDERSON-PRICHARD OIL CORPORATION, A CORPORATION; RAY STEPHENS, INC., A CORPORATION; STEPHENS PETROLEUM COMPANY, A CORPORATION; GULF OIL CORPORATION, A CORPORATION; MAGNOLIA PETROLEUM COMPANY, A CORPORATION; CITIES SERVICE OIL COMPANY, A CORPORATION; FOSTER PETROLEUM CORPORATION, A CORPORATION; AND SUNRAY OIL CORPORATION, A CORPORATION,

Defendants.

PETITION FOR WRIT OF PROHIBITION OR OTHER PROPER RELIEF

Come now Paul Sterba, Paul Sterba, Jr., a minor by and through his father and next friend, Paul Sterba, and The Palmer Oil Corporation, petitioners herein, and respectfully represent and show to this Honorable Court as follows:

First: That your petitioners, Paul Sterba and Paul Sterba, Jr., a minor, are residents of Ponca City, Kay County, Oklahoma, and will hereinafter be referred to as "Sterbas"; that petitioner, The Palmer Oil Corporation, is a corporation duly organized and existing under the laws of the State of Kansas and licensed to transact busi-

ness within the State of Oklahoma and will be hereinafter referred to as "Palmer".

That the defendants, Reford Bond, Ray O. Weems and Ray C. Jones are the duly elected, qualified and acting Commissioners of the Corporation Commission of Oklahoma and as such constitute and will be hereinafter referred to as the "Commission". That the defendants, Phillips Petroleum Company, Amerada Petroleum Corporation, Ray Stephens, Inc., Stephens Petroleum Company, Cities Service Oil Company, Sunray Oil Corporation and Foster Petroleum Corporation are each corporations duly organized and existing under and by virtue of the laws of the State of Delaware and are each duly licensed to transact business within the State of Oklahoma; that the defendant, Anderson-Prichard Oil Corporation is duly organized and existing under and by virtue of the laws of the State of Delaware and the State of Oklahoma and is licensed to transact business within the State of Oklahoma; that the defendant, Gulf Oil Corporation, is duly organized and existing under and by virtue of the laws of the State of Pennsylvania and is duly licensed to transact business within the State of Oklahoma; that the defendant, Magnolia Petroleum Company, is duly organized and existing under and by virtue of the laws of the State of Texas and is duly licensed to transact business within the State of Oklahoma; that the name and address of the resident agents of said defendant corporations are as follows:

Phillips Petroleum Company, Bruce McClelland, Jr., Hightower Building, Oklahoma City, Oklahoma.

Amerada Petroleum Corporation, George M. Green, 735 First National Bldg., Oklahoma City, Oklahoma.

Anderson-Prichard Oil Corporation, T. H. Marshall, 1000 Apco Tower, Oklahoma City, Oklahoma.

Ray Stephens, Inc., H. G. Stephens, 2600 Apco Tower, Oklahoma City, Oklahoma.

Stephens Petroleum Company, Waldo E. Stephens, 2600 Apco Tower, Oklahoma City, Oklahoma.

Gulf Oil Corporation, Katherine Manton, 1517 N. W. 20th, Oklahoma City, Oklahoma.

Magnolia Petroleum Company, W. R. Wallace, 7th and Broadway, Oklahoma City, Oklahoma.

Cities Service Oil Company, B. A. Ames, First National Building, Oklahoma City, Oklahoma.

Foster Petroleum Corporation, Katherine Manton, 1517 N. W. 20th, Oklahoma City, Oklahoma.

Sunray Oil Corporation, Edward Howell, 2420 First National Bldg., Oklahoma City, Oklahoma.

That said defendant corporations above named comprise the purported operating committee of the so-called West Cement Medrano Unit as purportedly created and established by the Commission under and by virtue of its order No. 20289 entered September 5, 1947, and that said corporations so comprising said committee will be hereinafter referred to as "Committee".

Second: That "Sterbas," petitioners herein, are the owners as tenants in common, Paul Sterba owning an undivided ¾ths interest and Paul Sterba, Jr., a minor, owning an undivided ¼th interest, of the following described real estate in Caddo County, Oklahoma:

> The Southwest Quarter (SW¼) of Section Thirty-five (35), Township Six (6) North, Range Ten (10) West.

That heretofore and on or about February 12, 1936, the then owners of the above described real estate, Paul Sterba and his wife, Gertrude K. Sterba, and his sister, Helen Sterba Jackson, and her husband, Clifford Jackson, made, executed and delivered, as lessors, to Chris Pearson, as lessee, an oil and gas lease covering said real estate, said lease being recorded in Book 75, page 316, in the Office of the County Clerk of said County and State, which by reference thereto is made a part hereof; that among other terms and provisions of said oil and gas lease, the lessee therein or his assigns therein covenanted to deliver to the credit of the lessors, free of cost, in the pipe line to which the lessee may connect wells on said land, the equal one-eighth part of all oil produced and saved from said leased premises. Said lessee and his assigns further covenanted

to pay to lessors one-eighth of the gross proceeds of gas produced at the prevailing market rate for gas.

That thereafter, and on or about the 15th day of February, 1936, said Chris Pearson transferred all of his interest in and to said oil and gas lease to defendant, Gulf Oil Corporation, which assignment is recorded in Book 75 Misc., page 319, in the Office of the County Clerk in said County and State, which by reference thereto is made a part hereof.

Third: That on or about the 6th day of September, 1938, the Gulf Oil Corporation entered into written contract with "Palmer" under the terms of which Gulf Oil Corporation agreed to assign to "Palmer" all of its interest in and to said oil and gas lease to a depth of 6000 feet provided "Palmer" would within thirty (30) days commence drilling operations for a test well in the Northeast Quarter (NE¼) of the Northeast Quarter (NE¼) of said Southwest Quarter(SW¼) of said Section Thirty-five (35), and with diligence and dispatch drill said well to a total depth of 6000 feet, unless oil, gas or either of them or igneous rock or other impenetrable substance was encountered at a lesser depth; that said contract is recorded in the Office of the County Clerk in said County and State in Book 83, page 379, and by reference made a part hereof.

Fourth: That "Palmer" duly performed all terms and conditions of said contract by drilling and completing an oil and gas test well as a commercial producer on or about October 13, 1938 at the location above designated, said well being known as the Palmer-Sterba No. 1 well and being completed in what is commonly known as the Niles Sand at a total depth of 3545 feet.

That on December 6, 1938 Gulf Oil Corporation assigned and set over unto "Palmer" the aforedescribed oil and gas lease to a depth of 6000 feet, all as provided in said contract of assignment, said assignment being filed in the Office of the County Clerk and recorded in Book 84, page 214, Caddo County, Oklahoma, and by reference thereto is made a part hereof.

Fifth: That thereafter and on the 5th day of May, 1939,

"Palmer" drilled and completed a Palmer-Sterba Well-No. 2 at a location in the Northeast Quarter of the Northwest Quarter of the Northwest Quarter of the Southwest Quarter of said Section Thirty-five, which well is producing from the Rowe Sand at a total depth of 3401 feet; that thereafter and on the 31st day of October, 1940, "Palmer" drilled and completed as a producer of gas in commercial quantities Palmer-Sterba No. 3 well at a location in the Northwest Quarter of the Northwest Quarter of the Southwest Quarter of said Section Thirty-five, from what is commonly known as the Medrano Sand at a total depth of 5260 feet; that thereafter and on or about the 5th day of June, 1943, "Palmer" drilled and completed as a producer of oil in commercial quantities Palmer-Sterba Well No. 4, at a location in the Southeast Quarter of the Southeast Quarter of the Southwest Quarter of said Section Thirty-five, from what is commonly known as the Medrano Sand at a total depth of 5995 feet; that thereafter and on or about the 14th day of August, 1943, "Palmer" drilled and completed, as Palmer-Sterba No. 5, a well at a location in the Southeast Quarter of the Northeast Quarter of the Southwest Quarter of said Section Thirty-five, which well was drilled to a depth of 6000 feet, sufficient to test what is commonly known as the Medrano Sand, but by reason of a fault there existing such sand was found absent, but that said well was completed as a commercial producer in what is commonly known as the Marchand Sand; that thereafter and on or about the 17th day of November, 1943, "Palmer" drilled and completed as a dry hole Palmer-Sterba No. 6 well at a location in the Northeast Quarter of the Southwest Quarter of said Southwest Quarter of Section Thirty-five which well, in cooperation with Gulf Oil Corporation, was drilled to a depth of 6425 feet, sufficient to test what is commonly known as the Medrano Sand, but by reason of a fault there existing such sand was found absent; that thereafter and on or about the 21st day of March, 1947, "Palmer" drilled and completed as a commercial producer of oil Palmer-Sterba No. 7 well at a location in the Northeast Quarter

of the Southwest Quarter of the Southwest Quarter of said Section Thirty-five, which well is producing from what is commonly known as the Medrano Sand at a total depth of 5992 feet; that the drilling and development operations of "Palmer" were performed in a good and workmanlike manner and under the rules and regulations of the "Commission" in compliance with the implied covenants of said oil and gas lease and at all times "Palmer" paid to "Sterbas" their 1/8th of the proceeds of oil or gas produced, as provided under the terms and provisions of said lease.

Sixth: That on or about the 19th day of April, 1945, the Legislature of the State of Oklahoma enacted a statute providing for the unitized management of common sources of supply of oil and gas, which law was designated as House Bill No. 339 of the 1945 Legislature of the State of Oklahoma and became effective as a law July 25, 1945, and is set forth in O. S. Supp. 1947, Title 52, Sec. 286.1 to 286.17, both inclusive; that the terms and provisions of said statute purported to establish a radical departure from the rules of property and property rights that had heretofore existed in the State of Oklahoma in respect to the drilling and development of common sources of supply of oil or gas; that said statute by its own terms provided: (Sec. 286.2)

> "Provided this Act shall not apply to any field where the discovery well has been drilled (20) years prior to the effective date of this Act."

Seventh: That on or about October 27, 1946, the defendants, Phillips Petroleum Company, Amerada Petroleum Corporation, Anderson-Prichard Oil Corporation, Ray Stephens, Inc., Stephens Petroleum Company and Magnolia Petroleum Company, as petitioners, filed their petition with the Corporation Commission of the State of Oklahoma for an order creating the "West Cement Medrano Unit" having for its purpose the unitized management, operation and further development of the entire Medrano Sand of the West Cement Field of Caddo County,

Oklahoma, including the premises owned by "Sterbas" as above described and the leaseholds thereon held by "Palmer" and Gulf Oil Corporation; that Gulf Oil Corporation has completed no producing well upon the premises and that "Sterbas" relied upon "Palmer" as their lessee and operator of all the producing wells upon their premises to fully protect their interests in said proceedings before the "Commission".

Eighth: That the proceedings before the "Commission" to establish such West Cement Medrano Unit were designated as Cause C.D.1308 and that various hearings were had therein beginning on or about the 9th day of December, 1946, and terminating on or about July 29, 1947; that under the plan of unitization originally proposed by the petitioners therein there was allocated to "Sterbas'" property as their interest in the total unit the percentage of 7.683, which percentage was divided between the leaseholds thereon as follows:

Palmer (above 6000')	5.145
Gulf Oil Corporation (below 6000')	2.538

and that the proposed plan of unitization and the unit area designated thereby was agreed upon in writing by all of the members of the "Committee", defendants herein, including Gulf Oil Corporation.

Ninth: That "Palmer" as lessee of "Sterbas'" premises duly filed its answer and protest to the petition filed in said proceedings C.D.1308 before the "Commission" and claimed in the hearings before said "Commission" that said statute under which petitioners sought to establish said unit was unconstitutional, constituting a deprivation of property without due process of law, impairment of the obligation of contract, unlawful delegation of power and a taking of property without compensation—all in violation of the Constitution of the United States and the Constitution of the State of Oklahoma; that the proposed plan of unitization did not allocate to "Sterbas'" property and particularly to "Palmer's" leasehold thereon, a fair percent of the unit production; that the plan was otherwise inequitable and unjust; that the Medrano Sand

of the West Cement Field did not constitute a single common source of supply; that the plan made no provision for adjustment of equities or property rights as might be reflected by subsequent development; that the discovery well in the West Cement Field was drilled more than twenty (20) years prior to the effective date of the statute; and that the facts were otherwise insufficient to justify the establishment of unitized management and operation.

Tenth: That petitioners amended the proposed plan of unitization by allocating to "Sterbas'" premises a total unit percent of 7.67202, which was divided between the leaseholds thereon as follows:

Palmer (above 6000')	5.51614
Gulf Oil Corporation (below 6000')	2.15688;

that the percent above mentioned was allowed to Gulf Oil Corporation irrespective of the fact that no producing well was drilled on said "Sterbas'" premises to a depth greater than 6000 feet and that in the allocation of said percentage "Palmer" was given no consideration by the "Commission" on its contention of certain ownership and drainage rights below 6000 feet.

That on the 5th day of September, 1947, the "Commission" entered its order No. 20289 in Cause No. C.D.1308, establishing the West Cement Medrano Unit exactly in accordance with the amended plan of unitization proposed by said petitioners, a copy of said order being attached hereto, marked Exhibit "A", and by reference made a part hereof; that said order included within the West Cement Medrano Unit the property owned by "Sterbas" and various other properties all as shown by the hatched lines on the plat attached to Exhibit "A".

Eleventh: That said order No. 20289 entered by the "Commission" was illegal, invalid and void on its face because

First: The order shows on its face that the discovery well in the West Cement Field was drilled more than 20 years prior to the effective date of the statute and therefore the law could not be applied.

Second: The law and order on its face shows that it is unconstitutional under both the Constitution of the State of Oklahoma and the Constitution of the United States.

Twelfth: That the discovery oil and gas well in the West Cement Field of Caddo County, Oklahoma, was the Fortuna Company well drilled and completed at a location in the Southwest Quarter of Section Thirty-one, Township Six North, Range Nine West, on or about October 17, 1917; that despite such undisputed fact the "Commission" undertook to exercise arbitrary and excessive judicial power by applying the unitization statute above referred to to the West Cement Field of Caddo County, Oklahoma; that the "Commission" without legal authority sought to avoid the effect of the provision contained in Sec. 286.2 of said statute above referred to by making the following finding:

> "That the West Cement Medrano Pool is a field within the meaning of that term as used in the second paragraph of Section 2 of H. B. 339 of the 1945 Oklahoma Legislature; that the term 'field' in ordinary usage has no fixed or definite meaning but is sometimes used to refer to the general area where a number of oil or gas formations are found and at other times used to refer to a particular common source of supply or pool; that as used by the Legislature aforesaid, the term was intended to relate to the particular common source of supply or pool sought to be unitized under the act and not to any general area which in a broader sense could be termed a field; that in effect said act relates to and deals only with single common sources of supply of oil and gas."

That the "Commission" failed to consider or comment upon the constitutional questions raised and presented to it with respect to the validity of the statute under which it ordered the establishment of the West Cement Medrano Unit.

That all of the evidence introduced in Cause No. C.D.1308 showed that the Medrano Sand bodies of the West Cement Field constituted two or more distinct common sources of

supply as a result of geological faults of sufficient magnitude and extent to completely separate the sand bodies of the said Medrano Sand lying on either side of such faults. That despite such facts the "Commission" in violation of the statute itself, which is applicable only to single common sources of supply, applied such statute and ordered a unitization of the several separate bodies of Medrano Sand of the West Cement Field.

Thirteenth: That "Palmer" duly appealed to the Supreme Court of the State of Oklahoma from "Commission's" order numbered 20289 and filed with the "Commission" an application for the fixing of supersedeas bond for the purpose of staying said order of the "Commission" pending final determination thereof by the Supreme Court of the State of Oklahoma; that the "Commission" on the 3rd day of October, 1947, fixed the amount of supersedeas bond in the sum of $250,000.00, which was unreasonable, arbitrary and excessive and "Palmer" failed to make bond in said amount, but perfected said appeal on or about October 18, 1947, without bond, and the same is now pending before the Supreme Court of the State of Oklahoma as Case No. 33336; and that "Palmer" has duly filed in said appeal its brief and is awaiting the filing of briefs by the "Committee" or its members, and the final hearing thereof by the Court; that all matters presented in said appeal are by reference made a part hereof.

Fourteenth: That on December 1, 1947, the "Sterbas" and "Palmer" involuntarily relinquished to defendant Phillips Petroleum Company, as Unit Operator under the supervision of the "Committee" and under the authority and approval of the "Commission", possession, control and operation of the Medrano Sand in and under "Sterbas'" premises and "Palmer's" leasehold, all as above described; that at all times since December 1, 1947, said "Committee" and the "Commission" have withheld said property from "Sterbas" and "Palmer" and have exercised and have threatened to continue to exercise unreasonable, excessive and arbitrary judicial power in the operation and development of said property; that at all times

since December 1, 1947, the "Committee" and the "Commission" have operated and developed said property as several common sources of supply and threaten to continue to do so.

Fifteenth: That "Sterbas" and "Palmer" as the result of the operations of the "Committee" as authorized by the "Commission" and the threatened continued operations have suffered and will suffer irreparable and permanent damages and that "Sterbas" and "Palmer" will be faced with a multiplicity of suits of a prolonged and extensive nature if the "Committee" and the "Commission" are not restrained and prohibited from further operating their property.

Sixteenth: That during the period of December, 1947, January and February, 1948, the "Committee" with the authority and approval of the "Commission" produced from "Sterbas'" and "Palmer's" property the total of 51,817 barrels of oil, which amount constituted for said period 11.3% of the total oil produced by the "Committee" under the authority of the "Commission" from the entire unit, the total unit production being 453,245 barrels of oil; that under the terms of the oil and gas lease existing between "Sterbas" and "Palmer"—assuming a price of $2.50 per barrel for oil—"Sterbas" would have been entitled to a royalty of approximately $16,000.00 for said three months' period and "Palmer" would have been entitled to an amount in excess of $100,000.00 on the oil and gas produced and sold; that under the percent allocated to "Sterbas'" property of the total unit production—assuming a price of $2.50 per barrel for oil—"Sterbas" would be entitled to a royalty for said three months' period of approximately $11,000.00 and "Palmer" would be entitled to a sum of approximately $60,000.00; that the deficiency in the amount payable to "Sterbas" under the terms of the oil and gas lease in the approximate sum of $5,000.00 has been or will be paid by the "Committee" with the authority and approval of the "Commission" to various of the "Committee" members and other parties within the unit and that "Sterbas" will be unable to re-

cover the same without prolonged and expensive litigation involving many parties and many suits; that the deficiency in the amount payable to "Palmer" under the terms of its oil and gas lease during said period of a sum in excess of $40,000.00 has been or will be paid by the "Committee" with the authority and approval of the "Commission" to various of the "Committee" members and other parties within the unit and cannot be recovered by "Palmer" without prolonged and expensive litigation involving many parties and many suits; that petitioners are informed and believe that the "Committee" with the approval and authority of the "Commission" is continuing the same manner of operation of petitioners' property as those described during the period as aforesaid and will continue such operations indefinitely unless prohibited or restrained by this Court.

Seventeenth: That Petitioners have no speedy or adequate remedy except by an original action in this Court; the petitioners have no way of knowing the length of time required before the appeal in Case No. 33336 will be heard or whether the legal questions raised in said appeal can be properly determined in such appeal; that no actions or proceedings which petitioners could bring either in a State or Federal District Court or before the "Commission" could adequately provide a remedy to petitioners or prevent the continuing injury and damage which they are suffering each day; that the statute involved in this matter establishes a new property law in this state which has been applied by the "Commission" retroactively to the vested rights of petitioners; that the question of the validity of said statute is of great public interest, and, if valid, the interpretation and effect of such statute is likewise of great public interest; that this Court has broad powers in its original jurisdiction to issue writs of prohibition and to exercise superintending control over inferior tribunals.

Wherefore, petitioners pray that this Court take original jurisdiction and issue its alternative writ of prohibition directed to the members of the "Commission" and the

members of the "Committee" prohibiting them from enforcement of the "Commission's" order No. 20289 pending the final disposition hereof, and to set a day certain on which said writ shall be returnable on which the "Commission" and the "Committee" and the various members thereof shall be required to appear and show cause why such writ should not be made permanent, and for such other and further relief as to the Court may seem proper in the premises.

Respectfully submitted,

CLAUDE MONNET,
COLEMAN H. HAYES,

BEFORE THE CORPORATION COMMMISSION OF THE STATE OF OKLAHOMA

Cause CD No. 1308

Order No. 20289

IN THE MATTER OF THE PETITION FOR THE CREATION OF THE WEST CEMENT MEDRANO UNIT HAVING FOR ITS PURPOSE THE UNITIZED MANAGEMENT, OPERATION AND FURTHER DEVELOPMENT OF THE WEST CEMENT MEDRANO COMMON SOURCE OF SUPPLY OF OIL AND GAS IN CADDO COUNTY, OKLAHOMA, THE DEFINING OF THE UNIT AREA THEREOF AND THE PRESCRIBING OF THE PLAN OF UNITIZATION APPLICABLE TO SUCH UNIT AND UNIT AREA

REPORT AND ORDER OF THE COMMISSION

The above styled and numbered cause is a proceeding brought by the lessees of a substantial majority of the acreage in the West Cement Medrano oil and gas pool or field located in Caddo County, Oklahoma, seeking to unitize the management, operation and further development of said field for the purpose of preventing the waste of oil and gas and of substantially increasing the ultimate recovery of oil therefrom, all as authorized and provided for in H. R. 339 of the 1945 Oklahoma Legislature. The bringing of this proceeding followed months of cooperative study of the field and of the benefits of unitization engaged in by substantially all of the operating lessees in the pool and in which all were invited to participate. The original petition herein, attached to which was a recommended Plan of Unitization applicable to said field, was filed October 23, 1946.

Pursuant to order of the Commission, said petition was first set for hearing November 7, 1946, at 10:00 o'clock, A. M. in the Commission Courtroom in the State Capitol Office Building at Oklahoma City, Oklahoma, and notice thereof published once a week for two consecutive weeks in a newspaper of general circulation in Caddo County,

in which West Cement Medrano field is located, and for the same time in a newspaper of general circulation in Oklahoma County, Oklahoma.

At the time and place so fixed for said hearing, a large number of persons were present, not only lessees but also land owners, royalty owners and other persons having varying interests in the West Cement Medrano Field. A group of lessors and royalty owners, represented by their attorney, Reford Bond, Jr., advised the Commission that they had not had sufficient time within which to study the proposed Plan of Unitization and requested a continuance of the hearing. The granting of the continuance was agreed to by the petitioners who, through their attorneys, publicly announced that during the period of the continuance they stood ready and willing, upon request, to furnish any party in interest any factual data pertaining to the West Cement Medrano field and the proposed Plan of Unitization available to petitioners. At the same time Magnolia Petroleum Company, an operating lessee in the field, asked leave to sign the petition as one of the petitioners thereto. Whereupon, the Commission continued said hearing to December 9, 1946, at 10:00 o'clock A. M. at the same place, permitted the Magnolia Petroleum Company to sign the petition as one of the petitioners, directed that the petition be refiled and ordered that notice of the refiling of the petition and of the date to which said hearing was continued be published in the same manner and for the same time as was the first notice of hearing, all of which was done.

In advance of said original hearing date, as is its usual custom in oil and gas matters, the Commission mailed mimeographed copies of the petition, together with information as to the time of hearing, to all persons on its established mailing list, which includes all operating lessees within the West Cement Medrano field as well as a number of royalty and other interest owners.

The hearing of said cause was commenced at the time and place so fixed, namely, December 9, 1946, at 10:00 o'clock A. M., in the Commission Courtroom in the Capi-

tol Office Building in Oklahoma City, Oklahoma, and continued at the same place throughout all of the following days, to wit: December 9 and 23, 1946; January 6 and 7; February 25, 26, 27 and 28; May 13, 14, 15, 16, 20, 21, 22 and 23; July 15, 16, 17, 18, 22, 23, 24 and 25; all in 1947, except for said first mentioned dates in 1946. The continuance of said hearing from time to time was by proper orders of continuance. At said hearing the petitioners and subscribers to the proposed Plan of Unitization were represented by the following named attorneys: W. H. Brown, Russell G. Lowe, Booth Kellough, W. R. Wallace and R. M. Williams. The protestant, the Palmer Oil Corporation appeared by its attorneys, Mark H. Adams and Charles Jones, of Wichita, Kansas. Protestants Tom Potter, Clyde Kahle, Maud Kahle, Bob White Oil and Gas Company and a group of approximately 65 lessors and royalty owners appeared by their attorney, Reford Bond, Jr. The protestants B. E. Johnson, Virginia McIntyre and M. L. McIntyre appeared by their attorney, Jack Page. A number of royalty and other interest owners wrote letters to the Commission urging the granting of the petition, all of which appear in the record. Other royalty owners and various parties in interest were present at the hearing from time to time but took no part.

At the hearing everyone who desired to do so, regardless of the interest of such person, was given full opportunity to offer any and all competent evidence that any such person chose to offer, either for or against the recommended Plan of Unitization or by way of amendment thereto, and to otherwise be heard in regard thereto. The evidence so introduced consisted of exfensive geological, engineering and other proof concerning the history, discovery, development, operation and present condition of the West Cement Medrano field and the probable results obtainable both under present competitive methods of operation and through the unitization thereof; proof both pro and con as to the fairness, reasonableness and equitableness of the recommended Plan of Unitization; and

proof by protestants with respect to certain amendments which they claim should be made in said Plan.

In addition to the knowledge gained from the evidence introduced at said hearing, the Commission has had, over a period of time, a general knowledge of the West Cement Medrano field and of conditions existing therein gained through the exercise by it of its jurisdiction over such field under the Conservation Laws of the State of Oklahoma, dating from the discovery thereof. As a result of the evidence, statements and arguments introduced and made in the hearing here under consideration, and by reason of its general knowledge of said West Cement Medrano field, as aforesaid, the Commission is of the opinion that it has sufficient knowledge and information upon which to base a proper order in this cause.

In addition to the proceedings and notices aforesaid, further mention is here made of the fact that during the course of said hearing, The Palmer Oil Corporation drilled and completed an additional well on a lease owned by it in the aforesaid field, necessitating a relatively slight change in the percentage of interests of the several separately owned tracts in the field shown in "Exhibit B" attached to the recommended Plan of Unitization, and also necessitating the inclusion of such additional well in "Exhibit D" attached to said Plan of Unitization. Also as a result of the time consumed by the hearing, it was considered desirable by the petitioners and subscribers to the recommended Plan of Unitization to strike from Section XXVII of said Plan the time limitation therein contained. To accomplish the aforesaid objectives, the petitioners during the course of the hearing asked and without objection were granted leave to amend the petition accordingly. In order to permit persons not present at the hearing an additional opportunity to be heard with respect to said amendment, the Commission set the petition as amended for further hearing on July 29, 1947, at 10:00 o'clock A. M., in the Commission Courtroom in the State Capitol Office Building at Oklahoma City, Oklahoma, and caused notice of the amendment to said petition and of

the hearing thereon to be published, ten (10) days prior to said hearing date, in a newspaper of general circulation in Oklahoma County, Oklahoma. At the time and place so named, the further hearing was had in said cause upon the petition as amended, no one appearing, however, in opposition thereto.

Now, on this 5th day of September, 1947, the Commission having previously taken said cause under advisement and having considered the matter in conference and each of the Commissioners being well and fully advised, the Commission makes the following findings of fact, conclusions of law, and enters the following order authorizing and approving the creation of the West Cement Medrano Unit, defining of the Unit area thereof and prescribing of the Plan of Unitization applicable to such Unit and Unit Area.

Findings of Fact and Conclusions of Law

The Commission finds:

1. That notice of the filing of the original petition, the refiling thereof after being signed by the Magnolia Petroleum Company, the filing of the amendment thereto and the time, place and purpose of the hearings on the petition, both as originally filed and as amended, was given in all respects as by law required, and that the Commission has jurisdiction of the subject matter of said petition and amended petition and of all persons interested therein, and has jurisdiction to make and promulgate the hereinafter prescribed order.

2. That the lands (hereinafter designated and referred to as the "Unit Area") located in Caddo County, Oklahoma and outlined by the hatched line on the map marked "Exhibit A" and attached to the Plan of Unitization attached to and made a part of this order, are underlaid with an oil and gas-bearing formation known as the Medrano sandstone found at a depth ranging from approximately 4500 feet along the North and Northeast side of the Unit Area and an approximate depth of 6241 feet along the South and Southwest side of the Unit Area; that a

gas cap exists along the high part of the producing formation from which the primary production is gas, whereas, the primary production from wells drilled lower on the structure is oil; that the average sand or formation thickness in the gas cap area or zone is approximately 65 feet; that the average sand or formation thickness in the oil area or zone is approximately 95 feet; that the said Medrano sandstone underlying said above described lands as aforesaid constitutes a single common source of supply of oil and gas, all parts of which are permeably connected so as to permit the migration of oil or gas or both from one portion of said common source of supply to anther wherever and whenever pressure differentials are created as a result of the production or operations for the production of oil or gas from said producing formation; that although faults are known to exist in parts of said common source of supply said faults do not prevent substantial migration of oil and gas and of pressures from one part of said common source of supply to another; that said common source of supply of oil and gas has heretofore been designated by the Commission and is generally known as the West Cement Medrano pool.

3. That said common source of supply of oil and gas was first discovered in October, 1936 by the drilling and completion of the Magnolia Petroleum Company's Medrano No. 6 gas well in the SE/4 of the NE/4 of the SW/4 of Section 36, Township 6 North, Range 10 West, Caddo County, Oklahoma; that the presence of oil in said common source of supply of oil and gas was first discovered in March, 1943 by the drilling and completion of the Stephens Petroleum Company's Pierson No. 1 oil well in the SE/4 of the SW/4 of the SE/4 of Section 35, Township 6 North, Range 9 West, Caddo County, Oklahoma; that at the present time there are 37 oil wells and 19 gas wells producing from said common source of supply of oil and gas.

4. That the outer boundaries of said common source of supply of oil and gas underlying and by this Order included within the aforesaid Unit Area have been reason-

ably defined by actual drilling operations, both by the drilling of wells within and the drilling of wells outside said Unit Area; that said Unit Area consists of approximately 3700 acres of land.

5. That the lands embraced within the aforesaid Unit Area are divided into a large number of individual tracts of varying size and shape, and owned in severalty by a large number of different individuals, firms and corporations owning varying interests therein, including oil and gas leasehold interests, royalty interests and various and sundry other rights and interests; that the several oil and gas leases covering said lands are owned by not less than 25 different lessees; that the royalty interests under said land are divided among and owned by several hundred royalty owners; that the petitioners in this cause are lessees of record of 73.32% of the area of the common source of supply sought to be unitized; that the subscribers to the recommended Plan of Unitization and other lessees favoring its adoption are lessees of record of approximately 94% of the area of said common source of supply; that the lessees appearing at the hearing and protesting the granting of the petition herein are lessees of approximately 4% of the proposed Unit Area; that the lessees of the remaining percentage of the Unit Area have not appeared for or against the granting of the petition herein.

6. That without the unitization of said West Cement Medrano common source of supply of oil and gas the only method whereby said pool can be feasibly and effectively operated and produced for the recovery of oil and gas therefrom is by and under individual competitive pressure depletion methods of operation, the methods now being used in the pool, that is to say, by treating each separately owned tract or lease as a separate unit for operating and production purposes and depending on the natural energy in the producing formation to move what oil and gas can be moved thereby out of the formation to the well bore where it can be produced; that the principal natural energy mechanism in said pool is gas in solution with the oil coupled with a gas cap expansion; that under present

competitive methods of operation, treating each tract or lease as a separate operating unit, there has been and still continues to be a disproportionate, inequitable and wasteful utilization and dissipation of the gas energy in the pool by certain tracts to the detriment and disadvantage of other tracts and to the injury of the pool as a whole; that by and under the best known competitive pressure depletion methods of operation not more than 25% or approximately 24 million barrels of the 97 million barrels of oil originally in place in the reservoir can be economically recovered, leaving the remaining 75%, or approximately 73 million barrels of oil in the ground unrecovered and unrecoverable except through and by means of unitization of the pool and the adoption of unitized methods of operation therein; that to permit the owners of gas wells and high gas-oil ratio wells to continue to produce such wells will result in robbing the oil wells of gas energy required to produce the oil; that to shut in the gas wells and the high gas-oil ratio wells without permitting the owners thereof to share in the oil and gas production from the oil wells, would deprive the owners of the gas wells of their fair share of the production from the pool; that the value of the recoverable oil exceeds many times the market value of the gas; that the return to the reservoir of the gas produced from the oil to supplement the remaining natural gas energy and retard the decline in reservoir pressure and perhaps the injection at some later date of water low on structure is desirable and necessary to obtain the greatest ultimate recovery of oil from the pool, but which cannot be done in the absence of unitization because of the migratory nature of the injected gas or water and the effect that the injection thereof into the reservoir would have upon properties in the pool other than the property on which the gas or water is injected and upon the pool as a whole.

7. That by and through the unitization of the proposed Unit Area and the Unitized management and operation and further development thereof as a unit, all as set out and provided for in the Plan of Unitization hereto attached,

full use can be made of the gas energy in the reservoir to the mutual advantage of all the owners of the said common source of supply of oil and gas, that waste of large volumes of oil and gas can be prevented, gas can and will be returned to the reservoir to supplement the natural reservoir energy, water encroachment, either natural or artificial, on the lower side of the pool can be properly controlled and utilized, substantially more oil, amounting to many millions of barrels, can be recovered from the common source of supply than can otherwise be recovered, a more equitable distribution of the recoverable oil and gas can be had as between the several owners of the pool and the correlative rights of the several owners can be more fully protected.

8. The unitization and unitized management and operation and further development of said common source of supply as a unit is reasonably necessary to effectively carry on the unitized methods of operation described in the proposed Plan of Unitization.

9. That any one or all of the unitized methods of operation described in the attached Plan of Unitization as applied to the common source of supply underlying and included within the Unit Area are feasible, will prevent waste, and will, with reasonable probability, result in the increased recovery of substantially more oil and gas from the common source of supply than would otherwise be recovered; that the estimated additional cost of conducting such operations will not exceed the value of the additional oil and gas so recovered; that such unitization and the adoption of any one or more of such unitized methods of operation is for the common good and will result in the general advantage to the owners of the oil and gas rights in and to the common source of supply thereby affected.

10. That neither said West Cement Medrano common source of supply of oil and gas nor any part or parts thereof were being operated by or under pressure maintenance, repressuring or secondary recovery methods of operation as of the effective date of H. B. 339 of the 1945 Oklahoma Legislature.

11. That the Plan of Unitization attached to this order and which is made a part hereof, is one suited to the needs and requirements of the West Cement Medrano Unit, the creation of which is hereby authorized and approved, taking into account all the facts and conditions found by the Commission to exist in respect thereto; that said Plan of Unitization is fair, reasonable and equitable and contains all the terms, provisions, conditions and requirements reasonably necessary and proper to protect, safeguard and adjust the respective rights and obligations of the several persons affected, including royalty owners, owners of overriding royalty interests, oil and gas payments, carried interests, mortgagees, lien claimants, and others, as well as the lessees and such as will effectuate and accomplish the purposes of H. B. 339 of the 1945 Oklahoma Legislature; that said Plan of Unitization provides for the efficient unitized management and control of the further development and operation of the Unit Area for the recovery of oil and gas from the common source of supply affected; that the division of interests set forth in "Exhibit B" attached to said Plan of Unitization pursuant to which the unit production is to be apportioned and allocated among and to the several separately owned tracts within the Unit Area is fair and equitable and is such as will reasonably permit persons otherwise entitled to share in or benefit by the production from such separately owned tracts to receive, in lieu thereof, their fair, equitable and reasonable share of the unit production or other benefits thereof; that the division of interest assigned to the several separately owned tracts in the Unit Area as set out in said "Exhibit B" to said Plan of Unitization is fair and reasonably representative of the value of said several tracts for oil and gas purposes and the contributing value thereof to the unit in relation to like values of other tracts in the unit; that the basis used to arrive at said division of interest takes into account the acreage of the several separately owned tracts, the quantity of oil and gas recoverable therefrom the location thereof on structure, the probable productivity of oil and gas from

such tracts in the absence of unitization, the burden of operation to which such tracts will or are likely to be subjected, together with all other pertinent engineering, geological and operating factors as are reasonably susceptible of determination; that the manner in which and the basis, terms and conditions on which the cost and expense of the further development and operation of the Unit Area shall be financed and apportioned among and assessed against the tracts and interests chargeable therewith are fair, reasonable and equitable; that the provisions of the said Plan with respect to taking over and using the wells, equipment and other properties of the several lessees within the Unit Area, including the method of arriving at the compensation therefor and otherwise proportionately equalizing and adjusting the investment of the several lessees in the project as of the effective date of the unit operations are fair, reasonable and equitable; that the provisions of said Plan with respect to the creation of an operating committee and the powers and duties of such committee are fair, reasonable and equitable.

12. That the Plan of Unitization hereto attached in all respects conforms to and complies with the requirements of H. B. 339 of the 1945 Oklahoma Legislature.

13. That the West Cement Medrano pool is a field within the meaning of that term as used in the second paragraph of Section 2 of H. B. 339 of the 1945 Oklahoma Legislature; that the term "field" in ordinary usage has no fixed or definite meaning but is sometimes used to refer to the general area where a number of oil or gas producing formations are found and at other times used to refer to a particular common source of supply or pool; that as used by the Legislature aforesaid, the term was intended to relate to the particular common source of supply or pool sought to be unitized under the Act and not to any general area which in a broader sense could be termed a field; that in effect said Act throughout relates

to and deals only with single common sources of supply of oil and gas.

Order

It is therefore ordered by the Corporation Commission of the State of Oklahoma as follows:

1. That the petition filed herein be and the same is hereby granted.

2. That the creation of the West Cement Medrano Unit as prayed in said petition be and the same is hereby authorized and approved.

3. That the Unit Area of said unit shall extend to and include all of the West Cement Medrano common source of supply of oil and gas outlined by the hatched lines on the map marked "Exhibit A" attached to the Plan of Unitization attached to this order.

4. That the Plan of Unitization hereto attached and which by reference is made a part of this order is hereby approved and shall constitute the Plan of Unitization of and for said West Cement Medrano Unit and the Unit Area of said Unit, all to the same extent and with the same force and effect as if copied herein in its entirety:

5. Nothing herein contained shall be construed as a waiver by the Commission of any of its powers or authority over the West Cement Medrano Unit or the persons comprising said unit, or the development and operation of the Unit Area thereof under the general oil and gas conservation laws of the State of Oklahoma, it being expressly recited that the Commission has and retains continuing jurisdiction over the operations carried on by the unit to the same extent that it would have jurisdiction over any other lessee or person producing oil and gas from the West Cement Medrano pool or field in the absence of unitization.

6. The Unit shall from time to time make such reports to the Commission concerning the operation by it of the Unit Area as may be requested by the Commission.

Done and Performed by the Corporation Commission at its office in the Capitol Office Building, Oklahoma City, Oklahoma, this 5th day of September, 1947.

IN THE SUPREME COURT OF THE STATE OF OKLAHOMA

No. —

PAUL STERBA and PAUL STERBA, JR., a minor, by and through his father and next friend, PAUL STERBA, and THE PALMER OIL CORPORATION, a corporation,

Petitioners,

vs.

CORPORATION COMMISSION OF OKLAHOMA, consisting of REFORD BOND, RAY O. WEEMS and RAY C. JONES; PHILLIPS PETROLEUM COMPANY, a corporation; AMERADA PETROLEUM CORPORATION, a corporation; ANDERSON-PRICHARD OIL CORPORATION, a corporation; RAY STEPHENS, INC., a corporation; STEPHENS PETROLEUM COMPANY, a corporation; GULF OIL CORPORATION, a corporation; MAGNOLIA PETROLEUM COMPANY, a corporation; CITIES SERVICE OIL COMPANY, a corporation; FOSTER PETROLEUM CORPORATION, a corporation; and SUNRAY OIL CORPORATION, a corporation,

Defendants.

NOTICE

To Each of the Above Named Defendants:

Take Notice that on the above and foregoing application, petition and exhibits attached thereto, Paul Sterba and Paul Sterba, Jr., a minor, by and through his father and next friend, Paul Sterba, and The Palmer Oil Corporation, as petitioners, will move the Supreme Court in the City of Oklahoma City, Oklahoma, on the ——— day of ————————, 1948, at the opening of Court on that day, or as soon thereafter as counsel can be heard, for an Order assuming original jurisdiction and directing that an al-

ternative writ of prohibition issue out of said Court directed to said defendants, commanding them to desist and refrain from any further proceedings in the enforcement of Order No. 20289, made by the Corporation Commission of the State of Oklahoma on September 5, 1947, and for such other relief as may be just and proper.

O. S. 1949 supp., Title 52, Secs. 84 to 127.2

OKLAHOMA STATUTES 1941

Title 52, Sections 81 to 279, Inclusive

General Provisions

"Par. 81. Oklahoma Oil and Gas Conservation Act—Change of title of officers and fund.—From and after the effective date of this Act, Chapter 131, Oklahoma Session Laws 1933,[1] shall be designated and shall be the 'Oklahoma Oil and Gas Conservation Act,' and in all places therein where the words 'proration umpire' are used the same shall be construed to mean 'conservation officer,' where the words 'assistant proration umpire' are used the same shall be construed to mean 'assistant conservation officer', where the words 'proration attorney' are used the same shall be construed to mean 'conservation attorney', where the words 'deputy proration umpire' are used the same shall be construed to mean 'deputy conservation officers' and where the words 'proration fund' are used the same shall be construed to mean "conservation fund", and said officers and said fund shall hereinafter be designated, and shall be, as above set forth. Laws 1935, p. 239, Par. 1.

"Par. 82. Consolidation of offices and positions—Certain positions abolished—Supervision and control—Additional duties of officers.—The duties of the office and the position of the Chief Oil and Gas Conservation Agent, created and now existing under and by virtue of law; is hereby transferred to and consolidated with the office and position of the Conservation Officer, as herein named in Section 1,[1a] and all of the duties exercised by said Chief Oil

[1] Sections 84-135 of this title.

[1a] Section 81 of this title.

and Gas Conservation Agent will, after the passage of this Act, be exercised by the Conservation Officer as herein named in Section 1.

"The positions, respectively, of Chief Oil and Gas Conservation Agent, and six (6) of the eleven Conservation Officers, created and now existing by virtue of law under the 'Bureau for the Conservation of Oil and Gas,' are hereby abolished, and, from and after the effective date of this Act, the other officers and employees created and now existing by virtue of law under the 'Bureau for the Conservation of Oil and Gas' shall be under the supervision and control of the Conservation Officer as herein named in Section 1, and in addition to their present duties shall hereafter perform all duties imposed by said Chapter 131, Session Laws, 1933,[1b] and the statutory salaries thereof shall be paid from the said Conservation Fund; and the duties now imposed on the officers and positions by said Chapter 131, Session Laws, 1933, shall also include the enforcement of all the laws, and the rules and regulations of the Corporation Commission pertaining to oil and gas. Laws 1935, p. 239, Par. 2.

"Par. 83. Well log division—Supervision and control—Disposition of fees—Stenographer or clerk.—The Well Log Division of the Corporation Commission as now existing shall, from and after the effective date of this Act, be under the supervision and control of said Conservation Officer, and all fees collected by said division shall be paid into the Conservation Fund. One or more of the stenographers or clerks mentioned in Section 4 hereof[1c] shall be assigned to perform the duties of the Well Log Division. Laws 1935, p. 239, Par. 3; Laws 1941, p. 217, par. 6.

"Par. 84. Definitions.—For the purposes of this Act:[1]

"(a) The term 'Commission' shall mean the Corporation Commission.

"(b) The word 'Person' shall include any individual, copartnership, corporation, common law or statutory trust, or association of whatever character.

[1b] Sections 84-135 of this title.

[1c] Section 127 of this title.

"(c) The term 'Common Source of Supply' shall comprise and include that area which is underlaid, or which from geological or other scientific data, or from drilling operations or other evidence appears to be underlaid by a common accumulation of oil or gas, provided that if any such area is underlaid, or appears from geological or other scientific data, or from drilling operations, or other evidence to be underlaid by more than one common accumulation of oil or gas separated from each other by strata of earth and not connected with each other, then such area shall as to each said common accumulation of oil or gas be deemed a separate common source of supply.

"(d) The word 'Oil' shall mean crude oil or petroleum.

"(e) The term 'Producer of Oil' shall mean any person who alone or in association with another person or persons shall have the right to drill into and produce oil from or who has any interest in oil produced from any common source of supply of oil in this State.

"(f) The term 'Operator' shall mean any producer of oil who has drilled a well or wells into a common source of supply and is engaged in operating such well or wells for the purpose of producing oil or gas therefrom.

"(g) The term 'Taker' shall include any person, who, acting alone, or jointly with any other person or persons, shall directly or indirectly purchase or transport by any means whatsoever or otherwise remove oil or gas from any common source of supply in this State. Laws 1933, ch. 131, p. 278, Par. 1.

"Validity.—Grison Oil Corporation v. Corporation Commission, 186 Okl. 548, 99 P. 2d 134; Patterson 1. Stanolind Oil & Gas Co., 59 S. Ct. 259, 305 U. S. 376, 83 L. Ed. 231, dismissing appeal 77 P. 2d 83, 182 Okl. 155; Indian Territory Illuminating Oil Co. v. Larkins, 168 Okl. 69, 31 P. 2d 608; Sterling Refining Co. v. Walker, 165 Okl. 45, 25 P. 2d 312; Rich v. Doneghey, 71 Okla. 204, 177 P. 86, 3 A. L. R. 352.

"Construction and application.—Gilmer Oil Co. v. Corporation Commission of Oklahoma, 177 Okl. 505, 61 P. 2d 22; State ex rel. Oklahoma Tax Commission v. Barnsdall Refineries, 56 S. Ct. 340, 296 U. S. 521, 80 L. Ed. 366, affirm-

ing Barnsdall Refineries v. Oklahoma Tax Commission, 171 Okla. 145, 41 P. 2d 918, certiorari granted State of Oklahoma ex rel. Oklahoma Tax Commission v. Barnsdall Refineries, 56 S. Ct. 97, 296 U. S. 556, 80 L. Ed. 392."

Par. 85. Waste of oil—Definition and prohibition—Rules, regulations and orders.—The term 'waste' as used in this Act,[1] as applied to the production of oil, in addition to its ordinary meaning and in addition to the meaning given thereto by any other provision of this Act, shall include economic waste, under-ground waste, including water encroachment in the oil and/or gas bearing strata. The use of reservoir energy for oil producing purposes by means or methods that unreasonably interfere with obtaining from the common source of supply the largest ultimate recovery of oil, surface waste, and waste incident to the production of oil in excess of transportation or marketing facilities, or reasonable market demands. The production of oil or gas in the State of Oklahoma in such manner and under such conditions as to constitute waste as in this Act defined is hereby prohibited and the Commission shall have authority and is charged with the duty to make rules, regulations, and orders for the prevention of such waste, and for the protection of all fresh water strata and oil and/or gas bearing strata encountered in any well drilled for oil or gas. Laws 1933, ch. 131, p. 279, Par. 2; Laws 1935, p. 232, Par. 1.

Validity. Sterling Refining Co. v. Walker, 165 Okl. 45, 25 P. 2d 312.

Administration of law. British American Oil Producing Co. v. Corporation Commission of Oklahoma, 180 Okl. 468, 69 P. 2d 669.

Jurisdiction and power of Commission. Grison Oil Corporation v. Corporation Commission, 186 Okl. 548, 99 P. 2d 134; Croxton v. State, 186 Okl. 249, 97 P. 2d 11; Gilmer Oil Co. v. Corporation Commission, 183 Okl. 95, 80 P. 312; Gilmer Oil Co. v. Corporation Commission of Oklahoma, 177 Okl. 505, 61 P. 2d 22.

Par 86. Waste of gas—What included—Power of com-

[1] Sections 84-135 of this title.

mission to limit production.—The term "waste" as applied to gas contained in or produced from a common source of supply of oil shall, in addition to its ordinary meaning, include the unreasonable production and/or the inefficient or wasteful utilization of gas in the operation of oil wells drilled therein. In Such Quantities Or In Such Manner As Unreasonably To Reduce Reservoir Pressures, Or Unreasonably To Diminish The Quantity Of Oil That Ultimately Might Be Recovered From The Common Source of Supply, the escape, directly or indirectly, of gas from oil wells drilled therein into the open air in excess of the amount necessary in the efficient drilling, completion or operation thereof; the escape, blowing or releasing, directly or indirectly, into the open air of gas produced from wells productive of gas, only, or of gas and gasoline, only, drilled into any such common source of supply, save only such as is necessary in the efficient drilling and completion thereof; and the unnecessary depletion or inefficient utilization of the gas energy contained in such common source of supply. In order to prevent the waste or to reduce the dissipation of the gas energy contained in any such common source of supply, the Commission, in addition to its other powers in respect thereof, shall have authority to limit the production of gas from wells producing gas only or gas and gasoline only, to a percentage of the daily open flow capacity of such wells that is less than the percentage of oil production allowed to oil wells drilled therein. Laws 1933, ch. 131, p. 279, Par. 3; Laws 1935, p. 232, Par. 2.

"Par. 87. Common Source of supply of oil—Restriction to proportion of nonwasteful production—Powers of Commission.—Whenever the full production of any common source of supply of oil in this State can only be obtained under conditions constituting waste, then any person having the right to drill into and produce oil from any such common source of supply may, except as otherwise authorized and/or in this Act,[1] provided, take therefrom only such proportion of all oil that may be produced therefrom without waste as the production of the well or wells of

[1] Sections 84-135 of this title.

any such person bears to the total production of such common source of supply. The Commission is authorized to regulate the taking of oil from any or all such common sources of supply within the State of Oklahoma so as to prevent the inequitable or unfair taking from any common source of supply, and to prevent unreasonable discrimination in favor of any such common source of supply against another."

"Well spacing and drilling units. (a) To prevent, and to assist in preventing, the various types of waste prohibited in said Chapter 131, as amended by this Act,[1] or any of said wastes said Corporation Commission by orders, rules and regulations made in conformity with the procedural requirements of Chapter 131, Session Laws of Oklahoma, 1933,[2] shall have the power to establish well-spacing and drilling units of uniform and specified size and shape for any common source of supply discovered in this State after this Act shall become effective, or for any common source of supply producing in said State when this Act shall become effective where the well-spacing and drilling unit established for said producing common source of supply shall not unreasonably prejudice, affect, or impair the correlative rights and obligations of the producers of oil and royalty owners interested in said common source of supply. The drilling unit shall not exceed ten (10) acres in size, unless eighty per cent (80%) or more of the lessees of record as of the date of bringing in the first well and owning at least eighty per cent (80%) of all the acreage embraced within the probable producing area of the common source of supply agree to a larger unit, but in no event shall such a drilling unit exceed forty (40) acres. Provided, that sub-section (a) shall not apply to oil fields producing from a common source of supply and already developed or substantially drilled and developed at the time of the passage of this Act, unless unanimously agreed to by all operators therein.

"Determination of size and shape of drilling units—Location of Wells. (b) in establishing a well-spacing or

[1] Sections 85-87 of this title.

[2] Sections 84-135 of this title.

drilling unit for a common source of supply hereunder, the acreage to be embraced within the unit and the shape thereof shall be determined by the Commission from the evidence introduced at the hearing, and the following facts, among other things, shall be material; (1) The lands embraced in the common source of supply as then defined; (2) The plan of well-spacing then being employed in said source of supply; (3) The depth of such producing wells as may already have been completed therein; (4) The thickness, porosity and permeability of the producing sand in said source of supply; (5) The nature and character of the reservoir energy found therein; (6) The formations encountered in any wells then drilling in said source of supply; (7) Cores taken from said source of supply; (8) The history and producing characteristics of wells in other sources of supply producing from the same or similar formations; and (9) Any other available geological or scientific data pertaining to said source of supply which may be of probative value to said Commission in determining the proper spacing and well drilling unit therefor, with due and reasonable allowance for the correlative rights and obligations of the producers of oil and royalty owners interested therein; Provided, That In Making An Order Under This Sub-Section A Plat Showing The Surface Area Included Therein And The Size, Form, And Shape Of The Spacing Or Drilling Unit Established Shall Be Attached Thereto And Subject To The Other Provisions Of This Act, said order shall direct that where a unit is held or owned as an entirety the well permitted that unit shall be located as near the center thereof as may be. Provided, however, if such a unit is located on the edge of a common source of supply and adjacent to a producing unit, then upon application, notice and hearing before the Commission, in conformity with the procedural requirements of Chapter 131, Session Laws of Oklahoma, 1933,[1] by order of the Commission, the well on such a unit may be drilled at other than the approximate center.

"Separately owned tracts within single unit. (c) If

[1] Sections 84-135 of this title.

two or more separately owned tracts are embraced within an established spacing or drilling unit, any oil lessee or other person having the right to drill one of said separately owned tracts may do so; Provided, the allowable production from said separately owned tract shall be such proportion of its daily capacity as herein determined as the acreage of said separately owned tract bears to the entire acreage of the spacing or drilling unit upon which it is drilled. If, under the conditions first recited in this subsection, an oil lessee or other person owning a majority or more of the acreage included in the spacing unit, and/or having the right to drill the same for oil, shall elect to drill a well on his acreage, he shall give the other oil lessees or persons owning acreage in the unit, and/or having the right to drill the same for oil, 15 days written notice of his intention to drill, and such notice shall show the estimated reasonable cost of drilling, equipping and completing the well. And any of said oil lessees or persons within said 15 day period, by contributing to the lessee or person intending to drill said well such proportion of the estimated reasonable cost of drilling, equipping and completing the same, as the acreage of the contributor bears to the total acreage owned, or controlled for oil producing purposes by oil lessees or persons, who are participating in the cost of the well, shall thereupon be entitled to a corresponding share of seven-eighth (7/8ths) of all production from said well, said payment to be made to the person drilling the well before he shall set his surface casing therein; each contributor, in virtue of his contribution, thereupon to become the owner of his proportionate share in the material and equipment used in drilling or operating said well. Any lessee or person so contributing to the cost of said well on said majority acreage shall thereupon be bound and obligated under the provisions of this subsection not to drill a well on the separate acreage held by him in said unit. Where another or other lessees or persons owning separate tracts in the unit contribute to the cost of the well drilled on the majority acreage, as above provided, the allowable production from said well

shall be such proportion of its daily capacity as herein determined, as the majority acreage plus the separately owned tract or tracts of the contributor or contributors bears to the entire acreage of the unit. Provided, if any person intending to contribute, as above set forth, shall not be satisfied with the estimate of the cost of drilling, or with the financial ability of the majority owner to drill the well, and if, thereupon, either or both of these questions cannot be settled by agreement among all persons intending to contribute to the cost of the well and the majority owner, the dissatisfied person, upon written application filed with the Commission and under the procedural requirements of Section 131, Session Laws of 1933,[1] including notice, shall have a hearing on his application before the Corporation Commission to determine either one or both of said questions as submitted in his said application. If the evidence before the Commission warrants a reduction in the estimated cost of said well, as herein provided, the Commission shall so order, and obedience to an order so made shall comply with the provisions of this subsection; Provided, further, that if on the final completion of the well, it shall be found that the original estimate of the person drilling the same, or the reduction thereof by the Commission, as herein provided, does not represent the actual reasonable cost of drilling, equipping and completing said well, nothing herein contained shall prevent the parties sustaining such cost, by agreement, or appropriate legal proceedings, from adjusting said actual cost among themselves, in the proportions hereinbefore set forth. If the evidence at said hearing warrants, the Commission by its order, shall require the person who gave notice of his intention to drill the majority acreage to deposit with the Commission, or in a bank designated by it, or in one agreed upon by the parties, a sufficient sum in cash to cover the estimated cost of drilling, equipping and completing said well, as made by said person, or as readjusted by said Commission, said sum to be returned to the depositor upon evidence furnished the Commission

[1] Sections 84-85 of this title.

that the cost of said well has been fully paid; or, in lieu thereof, the Commission may require the person intending to drill said well to file with said Commission his bond in the penal sum equalling said estimated cost, payable to the parties who shall have agreed to contribute to the cost of said well, as herein provided, duly signed by the principal and a responsible surety company qualified to do business in the State of Oklahoma. The Commission, in its said order, shall fix the time for the depositing of said money, or the filing of said bond, and in said order the terms and conditions of said bond shall be set forth. The person operating the well on said majority acreage, shall at all times have a lien on all the production of the persons contributing to the cost of the well to secure the payment of their respective proportions of the reasonable operating costs of said well; provided, further, however, that not more than Twenty-five ($25.00) Dollars shall be charged per month, per well, by the person operating the well for gross over-head and administration costs.

"Nothing in this sub-section contained shall prevent an oil lessee or other person, having the right to drill on a separate tract in a unit and who has not contributed to the cost of the well drilled on the majority acreage, as above provided, from drilling one well on his separate tract. In the event a producing well, or wells, is completed upon a unit where there are two or more separately owned tracts, any royalty owner, or group of royalty owners, holding the royalty interest under a separately owned tract, shall share in one-eighth (1/8) of all the production from the well or wells drilled within the unit in the proportion that the acreage of their separately owned tract bears to the entire acreage of the unit; Provided, where the lease of a person who has sustained his share of the cost of drilling the well on the majority acreage, as herein provided, stipulates a royalty in excess of one-eighth (1/8) of the production, or said lease shall be subject to an over-riding royalty, to an oil payment, or other obligation, than the lessee of said lease, out of his share of the seven-eighths (7/8th) of the production from the well drilled on said majority acreage,

as hereinbefore provided, shall sustain and pay said excess royalty, over-riding royalty, or oil payment, and therefrom meet said other obligation due in respect of the separate tract held by him. The Corporation Commission, by its rules and regulations, is hereby vested with power to carry all the provisions of this sub-section into effect in order to preserve uniform well spacing throughout a common source of supply, where spacing units have been established; and, further, more effectively to prevent waste, as prohibited by Chapter 131, of the Session Laws of 1933, as amended by this Act, and to protect and adjust the correlative rights and obligations of all persons interested in a particular established unit, or in the source of supply wherein spacing units have been established under this Act.

"Enlargement of boundaries of common source of supply. (d) The Commission under proper application and proof, and in conformity with the procedural requirements of said Chapter 131, of the Session Laws of 1933,[1] shall have the power to enlarge and extend the boundaries of a common source of supply when oil development, or the trend of such development, shall indicate that an additional area should be included therein and, thereupon, the Commission, by proper order, shall require the same spacing and drilling units to the additional portion of the common source of supply. Laws 1933, ch. 131, p. 280, Par. 4; Laws 1935, p. 233, Par. 3.

"Par. 88. Rules and regulations—Considerations—Unreasonable discrimination—The Commission in making such rules and regulations as it shall deem necessary to carry out, effect the purposes, and enforce the provisions of Sections 1, 2, 3, and 4 of this Act,[2] shall give consideration to the prevention of waste caused by encroachment of water in the oil or gas bearing strata and the water conditions in any well or wells located in a common source of supply and/or to the smallness of production of any well or wells, by reason of which such well or wells cannot be

[1] Sections 84-135 of this title.

[2] Sections 84-87 of this title.

operated and oil produced therefrom in the proportion provided by Section 4[1] except at a loss to the owner of such well or wells and/or except so as to result in waste as defined in this Act and/or except to the injury and damage to other well or wells located in the same common source of supply; and, in order to prevent such loss, waste, injury, or damage, shall by rules and regulations permit any operator of such well or wells to produce a greater proportion of oil therefrom than provided by Section 4 hereof, provided that in so doing the Commission shall not permit unreasonable discrimination in favor of such operators against other operators in the same common source of supply. Laws 1933, ch. 131, p. 280, Par. 5.

"Par. 89. Determination of capacity of wells—Treating wells as entirety—Limitation on reduction.—For the purpose of determining the total production from any common source of supply, and the amount of oil which the operators of the wells therein are entitled to take therefrom, the capacity of each well to produce oil shall be from time to time ascertained and determined by the Commission under rules and regulations prescribed by it. All or any two or more of the wells on any lease or holding in any prorated common source of supply in this State may, when so provided by rule or regulation issued by the Commission, be regarded and treated by the Commission as an entirety instead of prorating each well thereon separately when and to the extent that such can be done without waste and without injury or injustice to the operators of other leases or holdings in the same common source of supply, and when an over-production of oil occurs from any prorated well producing in any common source of supply, the over-production of oil from such well may be by the Commission charged to the lease on which such well is located, as an entirety, when the Commission finds that the same may be done without injury or injustice to the operators and owners of offset wells; provided further that the capacity of each well in any prorated common source of supply to produce oil, hereinafter called potential, shall be ascer-

[1] Section 87 of this title.

tained and determined at regular intervals, provided that not more than six (6) months shall elapse between the determining of one potential before another potential shall be determined, and provided further that regardless of anything in this Act [1] to the contrary contained or authorized the Commission shall not by rule, regulation, order or otherwise reduce the allowable production from any oil well in this State below twenty-five (25) barrels of oil per day or its full production if it is incapable of producing twenty-five (25) barrels per day. Laws 1933, ch. 131, p. 281, Par. 6.

"Par. 90. Orders, rules and regulations—Each common source of supply.—The Commission is hereby empowered to make all such orders, rules and regulations applicable to each common source of supply as it may find to be necessary or proper and/or to make general orders, rules and regulations applicable alike to all common sources of supply in the State, in order to carry out the provisions of Sections 1 to 6, inclusive of this Act.[2] Laws 1933, ch. 131, p. 281, Par. 7.

"Par. 91. Meters on pipe lines—Commission to designate type—Inspection—Cost of operation.—The Commission is hereby empowered and authorized by its orders, rules, and regulations, to require that meters be installed (a) upon any pipe line used in purchasing and/or transporting oil in or out of any prorated common source of supply and/or from storage adjacent thereto and (b) upon any pipe line used in gathering and/or transporting oil from leases or storage in such common source of supply, to refineries, loading racks, and field or other storage, and/or to deliver such oil to other transportation lines in or near such fields. All meters installed pursuant to any order, rule or regulation of the Commission made or issued by it under the provisions of this Section shall be of a type or types approved by it and the Proation Umpire [3] shall be in mechanical construction and accuracy in operation, sufficient to register the oil transported through the pipe

[1] Sections 84-135 of this title.
[2] Sections 84 to 89 of this title.
[3] Changed to Conservation Officer. See section 81 of this title.

line or pipe lines upon which such meters are installed with a degree of accuracy of not more than two (2) per cent from accurate. Said meters shall be installed and maintained at the cost and expense of the owner and/or operators of the pipe lines on which the same are required to be installed. No owner or operator of any such pipe line upon which a meter or meters shall have been installed and/or is being maintained pursuant to orders, rules and regulations of the Commission made hereunder, shall operate such pipe line or pipe lines at any time when the meter or meters thereon are not properly registering the flow of oil to the knowledge of such owner or operator or when by the exercise of reasonable diligence he or it should have known thereof, except or unless permission to do so by order of the Commission shall have been granted. Said meters shall at all times be subject to inspection and reading by the Proration Umpire,[1] his deputies, or any person authorized and ordered by the Commission to inspect or read the same. The provisions of this Section shall be applied and enforced by the Commission only when it finds and holds that the installation of such meter or meters is necessary to the enforcement of this Act,[2] and the installation of meters shall not be required generally, and for other purposes as a means of measuring oil. Laws 1933, ch. 131, p. 281, Par. 8.

"Par. 92. Reports—Oil purchased or transported—Forms—Verification.—The Commission is hereby authorized and empowered by orders, rules or regulations issued by it to require all takers of oil in or out of any prorated common source of supply to make and file periodically with the Commission, at such time or times, as often as the Commission shall in such orders, rules and regulations provide, reports of all oil purchased and/or transported by such takers within or from such prorated fields, and that duplicate copies thereof shall be filed with the Proration Umpire.[3] Said reports shall be upon forms prescribed by the Commission and shall describe the leases and prop-

[1] Changed to Conservation Officer. See section 81 of this title.
[2] Sections 84-135 of this title.
[3] Changed to Conservation Officer. See section 81 of this title.

erties, and, if ordered by the Commission, the wells from which crude oil has been taken by any such taker, and the amount thereof, and shall contain such other information as will enable or assist the Commission in enforcing the provisions of this Act,[1] which may be required by the orders, rules and regulations of the Commission; and shall be verified by the maker thereof upon oath. Laws 1933, ch. 131, p. 282, Par. 9.

"Par. 93. Operators—Books—Oil produced and sold.—Every operator in any prorated common source of supply shall, when required by any rule, order, or regulation of the Commission, keep books showing accurately (a) the amount of oil produced daily from each lease or property operated by him or it and, if the Commission shall order, from each well owned or operated by him or it on each such lease or property, and (b) the amount of oil sold or otherwise disposed of each day from each of his or its said properties, and, when so required by the order of the Commission, from each of his or its wells thereon and to whom the same is sold and delivered. Said books and all documents and records made by any such operator relating to the operation of his or its properties or wells in any such prorated common source of supply shall at all times be open for the inspection of the Commission or any officer, agent or employee authorized and directed by the Commission by its order to inspect or examine the same; and shall, upon the order of the Commission or the request of any such authorized officer, agent or employee be made immediately available for such inspection. Laws 1933, ch. 131, p. 282, Par. 10.

"Par. 94. Maps and drawings—Location of pipe lines and connections—Verification.—The Commission may require any and all operators in any prorated common source of supply to file with it maps or drawings which shall show the location of all pipe lines, connections, pumps and tanks, the size and capacities thereof used for producing or transporting oil from each well owned by such operator in such common source of supply, and may likewise require the

[1] Sections 84-135 of this title.

takers of oil from such common source of supply to file with the Commission maps and drawings showing the pipe lines, connections, tanks, size and capacity thereof used by such takers in taking or transporting oil from such common source of supply and from each and all wells therein. The correctness of such maps and drawings shall be verified upon oath as shall be provided by the orders, rules or regulations of the Commission. Laws 1933, ch. 131, p. 283, Par. 11.

"Par. 95. Reports—Quantity of oil produced and moved—Penalty.—The Commission shall by order require every operator in each prorated common source of supply to file periodically with it when and as often as required, and upon forms approved by it, reports which shall show (a) the quantity of oil produced, and the quantity of oil removed by each operator from his or its each lease or property in said common source of supply, and, unless otherwise provided by rule or regulation of the Commission, from his or its each well in said common source of supply, and (b) the amount of oil run to storage, delivered to common carrier, or to a purchaser or transporter through the operator's own pipe line, and, in the latter case to what destination, and the name or names of the person or persons purchasing or taking such oil, and which shall contain such further information as may be required by the Commission.

"If any operator shall fail or refuse to file any report or reports required by this Section or by any order, rule or regulation of the Commission made in pursuance of this section, in addition to the other penalties provided for in this Act [1] for such violation, the Commission may by its order require that said operator shall discontinue to produce any oil from any leasehold, property or well with respect to which such operator has failed or refused to make and file such report, until he or it shall have filed same; provided when any such operator shall have filed with the Commission any such report or reports as required by this section, or any order, rule or regulation of

[1] Sections 84-135 of this title.

the Commission, the Commission shall permit such operator to produce his or its well or wells, theretofore shut down by such order of the Commission, so as to recover and make up the oil that such operator would have been lawfully entitled to produce during the period such well or wells were shut down, if the order of the Commission requiring him or it to discontinue or reduce production of oil therefrom until such report or reports were filed had not been made. Laws 1933, ch. 131, p. 283, par. 12.

"Par. 96. Verification of reports, statements, maps and drawings.—When by an order, rule or regulation of the Commission made in pursuance of this Act,[1] any report, statement, map or drawing duly verified, is required to be filed with the Commission or any other officer, by any firm, trust, association or corporation, such report, statement, map or drawing shall be verified by (a) such member, agent or employee of such firm, trust or association, and (b) such officer or officers, agent or employee of such corporation as shall be provided or required by order, rule or regulation of the Commission. Laws 1933, ch. 131, p. 284, par. 13.

"Par. 97. Commission—Jurisdiction to make orders, rules and regulations—Hearings.—The Commission upon its own motion, or upon the petition of the Attorney General, or of the Proration Attorney,[1a] or of the Proration Umpire,[2] on behalf of the State, or of any operator, producer, or taker of oil from any common source of supply, to be affected by any such order, rule or regulation, filed with the Commission, shall have jurisdiction to make any and all orders, rules and regulations authorized and/or provided for in Sections 1 to 13 of this Act, inclusive,[3] provided that said orders, rules, and regulations shall be made only after a hearing before the Commission, of which the Commission shall have given at least ten (10) days' notice, by one publication of such notice in some newspaper of general circulation printed in Oklahoma City, Oklahoma,

[1] Sections 84-135 of this title.

[1a] Changed to Conservation Attorney. See section 81 of this title.

[2] Changed to Conservation Officer. See section 81 of this title.

[3] Sections 84-96 of this title.

at which hearing the Attorney General, or the Proration Attorney[1] or the Proration Umpire[2] upon behalf of the State, any operator or taker or producer of oil from any common source of supply, or any other person interested in such common source or sources of supply to be affected by the order, rule or regulation sought, shall have an opportunity to offer evidence and to be heard in support of or in opposition to such motion or petition for such order, rule, or regulation. Such notice of hearing shall be signed by at least a majority of the members of the Commission and shall specify (a) the time and place of hearing, (b) briefly the general nature of the order or orders, rule or rules, regulation or regulations sought in the proceeding before the Commission, and (c) the name or names or general description of the common source or sources of supply that may be affected by any such rule, order, or regulation, unless by such motion or petition filed the order or orders, rule or rules, regulation or regulations sought are intended to apply and affect the entire State.

"With respect to any motion or petition filed under the provisions of this Act,[3] the service of notice thereof and any hearing thereon, and any order, rule or regulation, made thereon, the Commission shall have the power of a Court of record, and shall have the further powers and authority with respect thereto enumerated and provided in Section 15 of this Act;[4] provided, that the Commission upon the date set or fixed in the notice of hearing in any proceeding commenced under the provisions of this Section, or at the time of such hearing therein, or of making any order or orders, rule or rules, regulation or regulations therein, may by its order provide that said proceeding shall be continued upon the docket of the Commission for further hearing or hearings therein, and for the issuance and/or promulgation of further order or orders, rule or rules, or regulation or regulations by the Commission

[1] Changed to Conservation Attorney. See section 81 of this title.
[2] Changed to Conservation Officer. See section 81 of this title.
[3] Sections 84-135 of this title.
[4] Section 98 of this title.

therein, modifying, supplementing, revoking or vacating any previous order, rule or regulation of the Commission therein as it shall determine; and if the Commission shall, in any such order rule or regulation continuing any such case upon its docket for further hearings and orders therein, fix the time and place of such hearing or hearings, no further notice thereof shall be required; but if the Commission shall not, in its orders continuing upon its docket any such proceeding for further hearings and orders therein, fix the time and place of such hearing or hearings, then no further hearing therein shall be had until notice thereof shall have been given for the same length of time and in the same manner provided in this Act for notice of the initial hearing in said proceeding. Laws 1933, ch. 131, p. 284, par. 14.

"Par. 98. Powers of Commission—Marshal of Commission.—In all matters pertaining to the making, issuing and enforcement of its orders, rules and regulations made under the provisions of this Act,[1] the Commission shall have and exercise all of the following powers and authority; to-wit (1) Of visitation and of a Court of Record; (2) To administer oaths; (3) To compel attendance of witnesses; (4) To compel the production of books and records; (5) To punish for contempt any person guilty of any disrespectful or disorderly conduct in the presence of the Commission while in session; (6) To punish as for contempt any disobedience or violation of the provisions of this Act and of any of its orders, rules, regulations, and judgments made or rendered by it under and in pursuance of the provisions of this Act; (7) To enforce the provisions of this Act, and compliance with any of its orders, rules, regulations or judgments by appropriate process, and by shut down orders, ordering and directing the shutting down or discontinuance of production of oil from any well or well of or operated by the offender with respect to which complaint has been made; and by orders or writs remedial or otherwise necessary or proper, to carry into effect its orders, rules, and regulations; (8) To appoint or desig-

[1] Sections 84-135 of this title.

nate one of its agents or employees or one of the deputies to the Proration Umpire[a] to act as Marshal of the Commission, who shall serve as such Marshal during its pleasure without additional compensation for such services, and who shall attend the sessions of the Commission, and when directed by it shall serve and execute orders, subpoenas, commitments and other process issuing from it. Laws 1933, ch. 131, p. 285, par. 15.

"Par. 99. Filing of papers and documents—Use as evidence.—When under any provision of this Act[1] or of any order, rule or regulation made in pursuance of this Act, any petition, motion, return, pleading, report, statement, map or drawing is required to be filed with the Commission, the same shall be deemed to be filed when filed with the Secretary of the Commission. Duplicate copies of all reports, statements, maps or drawings shall also be filed with the Proration Umpire.[2] The original or any copy of any such reports, maps, drawings, statements or other documents duly certified by the Secretary of the Commission, when the contents thereof are material to the issues involved, shall be competent and admissible in evidence in any proceedings and hearings therein brought or had under the provisions of Section One (1) to Thirteen (13), inclusive, of this Act;[3] and any such original or certified copy thereof shall, in any proceeding upon complaint or prosecution as for contempt against any person for violation of this Act or of any order, rule or regulation of the Commission, be competent and admissible in evidence to establish admissions against interest made by any defendant or defendants to such complaint or prosecution who filed or caused to be filed such report, map, drawing, statement or other document. Laws 1933, ch. 131, p. 286, par. 16.

"Par. 100. Witnesses—Depositions.—The Commission may cause depositions of witnesses residing within or without the State to be taken in any proceeding pending before it in any manner provided by law for taking depositions

[a] Changed to Conservation Officer. See section 81 of this title.
[1] Sections 84-135 of this title.
[2] Changed to Conservation Officer. See section 81 of this title.
[3] Sections 84-96 of this title.

in civil actions in courts of record; and any deposition so taken shall be sealed up and endorsed with the title of the cause and the name of the officer taking the same, and by him addressed and transmitted to the Secretary of the Commission, where it shall remain under seal until opened by the Secretary on order of the Commission, or at the request of a party to the proceeding, or an attorney for such party. Laws 1933, ch. 131, p. 286, par. 17.

"Par. 101. Procedure—Rules of—Enforcement of orders and rules.—The Commission shall have power with or without any notice of hearing to make and promulgate rules of procedure not inconsistent with the provisions of this Act [1] to govern the filing, prosecution, hearing, and determination of proceedings authorized to be brought before the Commission and for the enforcement of its orders, rules and regulations made under the provisions of this Act; provided, that no order, rule or regulation of the Commission and no order made in the enforcement thereof shall be held void or be reversed merely because the Commission may not have promulgated procedural rules. Laws 1933, ch. 131, p. 286, par. 18.

"Par. 102. Contempt — Punishment — Enforcement of fines—Disposition of fines and penalties.—Punishment for contempt by the Commission of any person, guilty of any disrespectful or disorderly conduct in the presence of the Commission while in session, or for disobedience of its subpoena, summons or other process, may be by fine not exceeding $1,000, or by confinement in the county jail of Oklahoma County not exceeding one (1) year, or by both. Any person who shall disobey or violate any of the provisions of this Act [2] or any of the orders, rules, regulations or judgments of the Commission issued, promulgated or rendered by it, shall be punished as for contempt. Punishment by the commission in proceedings as for contempt for disobedience or violation of any provision of this Act or any of its orders, rules, regulations or judgments, issued, promulgated or rendered under the provisions of this Act,

[1] Sections 84-135 of this title.
[2] Sections 84-135 of this title.

shall be by fine not exceeding in amount $5,000, and each day such disobedience or violation shall continue shall constitute a separate and additional contempt, and shall be punished by separate and additional fines each in amount not in excess of aforesaid amount. Any fine or penalty assessed under the provisions of this Act shall constitute and be a lien upon all the property of the offender within the State, except the homestead of such offender, provided that, before any such fine or penalty shall become a lien upon any property of the offender as against third persons, a copy of the order or judgment of the Commission assessing such fine or penalty, certified by the Secretary of the Commission, shall be filed in the office of the Court Clerk of the County wherein any such property of the offender is located, and entered on the judgment docket of said court. If any such fine shall not be paid to the Commission within thirty (30) days after the order or judgment of the Commission imposing the same, the Commission shall issue an execution directed to the proration Umpire[1] commanding him to seize sufficient property of the offender to satisfy said fine; and it shall be the duty of the Proration Umpire to levy upon any property of the offender found within the State, and to sell and dispose of the same in like manner as now provided and required of sheriffs in this State in the levy upon and sale of property under an execution upon a judgment of a District Court of the State, and all costs incurred in the issuance, execution and sale under such levy shall be taxed against the defendant and collected in the same manner provided herein for the collection of such fine. All moneys collected as fines or penalties under the provisions of this Act, shall, when paid into or received by the Commission, be by it paid to the State Treasurer of the State for the credit of the Proration Fund.[2] Laws 1933, ch. 131, p. 287, par. 19.

"Par. 103. Contempt—Proceedings—How commenced—Complaint—Citation.—Proceedings as for contempt for disobedience or violation of the provisions of this Act[3] or

[1] Changed to Conservation Officer. See section 81 of this title.
[2] Changed to Conservation Fund. See section 81 of this title.
[3] Sections 84-135 of this title.

of the orders, rules, regulations and judgments of the Commission made, issued and/or rendered under the provisions of this Act, may be commenced by the filing with the Commission by (a) the Attorney General, or (b) the Proration Attorney,[2] or (c) the Proration Umpire,[3] or (d) Assistant Proration Umpire,[4] or (e) by any producer of oil or taker in the State, of a complaint which shall, when filed by any producer of oil or taker, be verified upon information and belief. Said complaint by whomsoever filed shall state, (a) the name of the person, firm, trust, corporation, or association against whom the complaint is made; (b) the order or orders, rule or rules, regulation or regulations and judgment or judgments of the Commission, violation of which is charged; (c) and briefly in general terms the acts or omissions of the defendant constituting the violation of which complaint is made. Any such complaint may charge against any defendant one or more violations of the provisions of this Act and/or of any rule, order or regulation of the Commission made hereunder; provided, that the acts or omissions of the defendant constituting each violation charged shall be briefly stated in general terms in separately numbered paragraphs or counts of such complaint. Upon the filing of any such complaint, the Secretary of the Commission shall issue in the name of the State by him as Secretary of the Commission, addressed to the defendant or defendants, a citation to the defendant or defendants in said complaint, to which shall be attached a copy of said complaint. Said citation shall state (a) the date on which and by whom said complaint was filed and the name of the complainant, (b) a brief general description of the nature of the complaint, (c) a reference to copy of the complaint which shall be attached to said notice, (d) the date on which said complaint is set for hearing, which shall not be earlier than ten days from the date of such citation, and (e) a statement that unless the defendant shall on or before said date for hearing file his or its pleadings to such complaints, allegations and

[2] Changed to Conservation Attorney. See section 81 of this title.
[3] Changed to Conservation Officer. See Section 81 of this title.
[4] Changed to Asistant Conservation Officer. See section 81 of this title.

charges therein contained, the same shall be taken as confessed. Service of said citation in such proceedings for contempt shall be had and return thereof made as hereinafter provided. Laws 1933, ch. 131, p. 287, par. 20.

"Par. 104. Right of entry and inspection by conservation officer, his assistants and deputies.—The Proration Umpire,[1] his assistant and deputies shall have the right at all times to go upon and inspect oil and gas properties from which oil or gas is being produced, pipe lines, tank farms, and pump stations, for the purpose of ascertaining whether the provisions of this Act[2] and the orders, rules, regulations and judgments of the Commission made in pursuance of the provisions of this Act are being complied with, and shall report to the Commission any violation thereof. Laws 1933, ch. 131, p. 288, par. 21.

"Par. 105. Power to close wells—Orders regulating flow and production—Motion or petition for order—Temporary orders.—The Commission shall have the power to order closed, and by the Proration Umpire,[1] his assistant, and deputies, to close any well or wells which have been over-produced in violation of this Act[2] and/or of the orders, rules and regulations of the Commission and/or to order that the production of oil from such well or wells shall be reduced, until such condition of over-production of any such well or wells has been equalized so that the operator of such well or wells shall not be permitted to take therefrom a greater amount of oil than is permitted under the provisions of this Act and/or the orders, rules and regulations of the Commission, made in pursuance of the provisions of this Act; and may issue and enforce other orders to regulate the flow and production of oil and gas in such common source of supply for the purpose of preventing or stopping violations of its orders, rules or regulations, prescribing proration of production or ratable taking of oil in any common source of supply. Said orders of enforcement may be issued by the Commission upon its own motion, or upon written petition filed by (a) the Attorney

[1] Changed to Conservation Officer. See section 81 of this title.
[2] Sections 84-135 of this title.

General, or (b) the Proration Attorney,[1] or (c) the Proration Umpire, in the name of the State; or by any person interested in the proration or ratable taking of oil from any common source of supply where any such violation of the orders, rules or regulations of the Commission is alleged to have occurred. Said motion or petition for such orders of enforcement shall be filed with the Secretary of the Commission and shall state the name of the violator or violators and the provision of the statute, or the order, rule or regulation which it is charged are being violated, and briefly in general language the act or acts, omission or omissions, done or being done by the alleged violator or violators which constitute the violation of statute or of the order, rule or regulation of the Commission complained of. Any such petition, other than motions by the Commission for such enforcement orders, shall be verified by the officer or person filing the same, but such verification may be made upon affiant's best information and belief. Whenever any such motion or petition for an order of enforcement shall charge that the violation or violations by the defendant therein of the provisions of this Act or of orders, rules and regulations of the Commission complained of, is that defendant has produced or is producing oil from any well or wells in any common source of supply at a rate in excess of that allowed by the orders, rules and regulations of the Commission applicable thereto, the Commission, in its discretion, may, at the time of the filing of any such motion or petition, or at any time thereafter prior to its final hearing thereon and issuance of final or permanent order in such proceeding, make or issue a temporary order or orders, ordering and directing the defendant or defendants in any such proceeding to shut down and discontinue immediately, or to curtail the production of oil from any well or wells alleged to be involved in the violations complained of so as to comply with the orders, rules and regulations of the Commission; and said temporary order may further provide and require that if the defend-

[1] Changed to Conservation Attorney. See section 81 of this title.

ant or defendants shall fail to shut down or curtail the production from any such well or wells so ordered in the manner required by such order of the Commission within twenty-four (24) hours from the time of service of said order, the Proration Umpire, his assistant or deputies shall thereupon go upon the premises upon which said well or wells are located, and shut down the production of oil from said well or wells until the hearing provided in said temporary order of the Commission shall have been held, and/or until the Commission shall otherwise order. The defendant or defendants against whom any such temporary order has been issued shall have the right to appear before the Commission at any time prior to the date for hearing in said proceeding and move that such temporary order be dissolved or modified, and show cause to the Commission why same should be done. The Commission upon hearing any such motion, which shall be promptly heard, and may be had with or without notice thereof to the petitioner, may in its discretion dissolve or modify such temporary order or continue the same until final hearing in said cause shall have been held. Provided, however, that if upon final hearing before the Commission in such proceeding, or upon appeal to the Supreme Court, if an appeal from the decision of the Commission in such proceeding shall be taken, it shall be determined that any such temporary order was wrongfully issued by the Commission, the defendant or defendants shall be permitted to produce their well or wells, shut down, or the production from which was reduced by such temporary order of the Commission, so as to recover or make up the oil such defendant or defendants could have lawfully produced from such well or wells during the period such well or wells were shut down or the production thereof was reduced, if such temporary order of the Commission requiring such well or wells to be shut down, or the production therefrom to be reduced had not been made by the Commission. Laws 1933, ch. 131, p. 288, par. 22.

"Par. 106. Notice on filing of motion or petition.—Upon the filing of any motion or petition for order or orders of

nary meaning, shall include economic waste, underground waste, surface waste, and waste incident to the production of crude oil or petroleum in excess of transportation or marketing facilities or reasonable market demands. The Corporation Commission shall have authority to make rules and regulations for the prevention of such wastes, and for the protection of all fresh water strata, and oil and gas bearing strata, encountered in any well drilled for oil. Laws 1915, ch. 25, par. 3.

"Par. 274. Common source of supply—Restrictions on production when full production would cause waste—Powers of Corporation Commission—Discrimination prohibited.—Whenever the full production from any common source of supply of crude oil or petroleum in this State can only be obtained under conditions constituting waste, as herein defined, then any person, firm or corporation, having the right to drill, into and produce oil from any such common source of supply, may take therefrom only, such proportion of all crude oil and petroleum that may be produced therefrom, without waste, as the production of the well or wells of any such person, firm or corporation, bears to the total production of such common source of supply. The Corporation Commission is authorized to so regulate the taking of crude oil or petroleum from any or all such common sources of supply, within the State of Oklahoma, as to prevent the inequitable or unfair taking, from a common source of supply, of such crude oil or petroleum, by any person, firm, or corporation, and to prevent unreasonable discrimination in favor of any one such common source of supply as against another. Laws 1915, ch. 25, par. 4.

"Par. 275. Wells gauged—Regulation by Corporation Commission—Agents.—For the purpose of determining such production, a gauge of each well shall be taken under rules and regulations to be prescribed by the Corporation Commission, and said Commission is authorized and directed to make and promulgate, by proper order, such other rules and regulations, and to employ or appoint such

agents with the consent of the Governor, as may be necessary to enforce this act.[1] Laws 1915, ch. 25, par. 5.

"Par. 276. Enforcement of act—Hearings before corporation commission.—Any person, firm, or corporation, or the Attorney General on behalf of the State, may institute proceedings before the Corporation Commission, or apply for a hearing before said Commission, upon any question relating to the enforcement of this act,[1] and jurisdiction is hereby conferred upon said Commission to hear and determine the same. Said Commission shall set a time and place, when and where such hearing shall be had and give reasonable notice thereof to all persons or classes interested therein, by publication in some newspaper or newspapers, having general circulation in the State, and in addition thereto, shall cause reasonable notice in writing to be served personally on any person, firm or corporation complained against. In the exercise and enforcement of such jurisdiction, said Commission is authorized to determine any question or fact, arising hereunder, and to summon witnesses, make ancillary orders, and use mesne and final process, including inspection and punishment as for contempt, analogous to proceedings under its control over public service corporations, as now provided by law. Laws 1915, ch. 25, par. 6.

"Par. 277. Appeals to Supreme Court—Effect on orders.—Appellate jurisdiction is hereby conferred upon the Supreme Court in this State to review the action of said Commission in making any order, or orders, under this act.[1] Such appeal may be taken by any person, firm or corporation, shown by the record to be interested therein, in the same manner and time as appeals are allowed by law from other orders of the Corporation Commission. Said orders so appealed from shall not be superseded by the mere fact of such appeal being taken, but shall be and remain in full force and effect until legally suspended or set aside by the Supreme Court. Laws 1915, ch. 25, par. 7.

"Par. 278. Violation—Penalties.—In addition to any penalty that may be imposed by the Corporation Commis-

[1] Sections 271-279 of this title.

sion for contempt, any person, firm, or corporation, or any officer, agent or employee thereof, directly or indirectly violating the provisions of this act,[1] shall be guilty of a misdemeanor, and upon conviction thereof, in a court of competent jurisdiction, shall be punished by a fine in any sum not to exceed five thousand dollars ($5,000.00), or by imprisonment in the county jail not to exceed thirty (30) days, or by both fine and imprisonment. Laws 1915, ch. 25, par. 8.

"Par. 279. Partial invalidity.—The invalidity of any section, sub-division, clause or sentence of this act[1] shall not in any manner affect the validity of the remaining portion thereof. Laws 1915, ch. 25, par. 10.

OKLAHOMA STATUTES CUMULATIVE SUPPLEMENT 1949

Title 52, Sections 84 to 127.2

General Provisions

"Pars. 84-86. *Repealed. Laws 1947, p. 327, Par. 6.*—Amendment prior to repeal: Laws 1945, pp. 155, 156, Pars. 1-3.

"Par. 86.1. *Definitions.*—For the purposes of this Act,[2]

(a) The term "Commission" shall mean the Corporation Commission;

(b) The word "Person" shall include any individual, copartnership, corporation, common law or statutory trust or association of whatever character;

(c) The term "Common Source of Supply" shall compromise and include that area which is underlaid or which, from geological or other scientific data, or from drilling operations, or other evidence, appears to be underlaid, by a common accumulation of oil or gas or both; provided, that, if any such area is underlaid, or appears from geological or other scientific data, or from drilling operations, or other evidence, to be underlaid by more than one common accumulation of oil or gas or both, separated from

[1] Sections 271-279 of this title.

[2] Sections 86.1-86.5 of this title.

each other by a strata of earth and not connected with each other, then such area, as to each said common accumulation of oil or gas or both, shall be deemed a separate common source of supply;

(d) The term "Owner" shall mean a person who has the right to drill into and to produce from any common source of supply and to appropriate the production, either for himself or for himself and others;

(e) The word "Oil" shall mean crude petroleum oil, and any other hydrocarbons, regardless of gravity, which are produced at the well in liquid form by ordinary production methods;

(f) The word "Gas" shall mean all natural gas, including casinghead gas, and all other hydrocarbons not defined as oil in the sub-section above;

(g) The term "Producer" shall mean any person who, along or in association with another person or persons, shall have the right to drill into and produce from, or who has any interest in production from, any common source of supply in this State;

(h) The term "Operator" shall mean any producer of oil or gas who has drilled a well or wells into a common source of supply and is engaged in operating such well or wells for the purpose of producing oil or gas therefrom;

(i) The term "Taker" shall include any person, who, acting alone, or jointly with any person or persons, is directly or indirectly purchasing or transporting by any means whatsoever or otherwise removing oil or gas from any common source of supply in this State. Laws 1947, p. 326, Par. 1.

"Par. 86.2. *Waste of oil—Defined—Prohibited—Prevention—Protection of fresh water strata and oil or gas bearing strata.*—The term 'waste', as applied to the production of oil, in addition to its ordinary meaning, shall include economic waste, under-ground waste, including water encroachment in the oil or gas bearing strata; the use of reservoir energy for oil producing purposes by means or methods that unreasonably interfere with obtaining from the common source of supply the largest ultimate recovery

of oil; surface waste and waste incident to the production of oil in excess of transportation or marketing facilities or reasonable market demands. The production of oil in the State of Oklahoma in such manner and under such conditions as to constitute waste as in this Act.[1] defined is hereby prohibited, and the Commission shall have authority, and is charged with the duty, to make rules, regulations, and orders for the prevention of such waste, and for the protection of all fresh water strata and oil or gas bearing strata encountered in any well drilled for oil or gas. Laws 1947, p. 326, Par. 2.

"Par. 86.3. *Waste of gas—Meaning—Prevention—Prohibition—Protection of fresh water and oil or gas bearing strata.*—The term 'waste', as applied to gas, in addition to its ordinary meaning, shall include the inefficient or wasteful utilization of gas in the operation of oil wells drilled to and producing from a common source of supply; the inefficient or wasteful utilization of gas from gas wells drilled to and producing from a common source of supply; the production of gas in such quantities or in such manner as unreasonably to reduce reservoir pressure or unreasonably to diminish the quantity of oil or gas that might be recovered from a common source of supply; the escape, directly or indirectly, of gas from oil wells producing from a common source of supply into the open air in excess of the amount necessary in the efficient drilling, completion or operation thereof; waste incident to the production of natural gas in excess of transportation and marketing facilities or reasonable market demand; the escape, blowing or releasing, directly or indirectly, into the open air, of gas from wells productive of gas only, drilled into any common source of supply, save only such as is necessary in the efficient drilling and completion thereof; and the unnecessary depletion or inefficient utilization of gas energy contained in a common source of supply. In order to prevent the waste or to reduce the dissipation of gas energy contained in a common source of supply, in addition to its other powers in respect thereof, the Commission shall have the

[1] Sections 86.1-86.5 of this title.

authority to limit the production of gas from wells producing gas only to a percentage of the capacity of such wells to produce. The production of gas in the State of Oklahoma in such manner and under such conditions as to constitute waste as in this Act[1] defined is hereby prohibited, and the Commission shall have authority and is charged with the duty to make rules, regulations, and orders for the prevention of such waste and for the protection of all fresh water strata and oil or gas bearing strata encountered in any well drilled for gas. Laws 1947, p. 327, Par. 3.

"Par. 86.4. *Common source of supply—Orders, rules and regulations.*—The Commission is hereby empowered after notice of hearing to make all such orders, rules and regulations applicable to each common source of supply as it may find to be necessary or proper and to make general orders, rules and regulations applicable alike to all common sources of supply in the State. It shall not be necessary to publish such order, rule or regulation, after its adoption or promulgation by the Commission, before it shall go into effect, nor shall it be necessary to publish any such order, rule or regulation in each subsequent annual report of the Commission. Provided, that the Corporation Commission shall not under the provisions of this Act[1] make any order establishing a well spacing or drilling unit. Laws 1947, p. 327, Par. 4.

"Par. 86.5. *Procedural requirements.*—This Act[1] shall be subject to all of the procedural requirements contained in Sections 84 to 135, inclusive, Title 52, Oklahoma Statutes, 1941, including the right of appeal to the Supreme Court of the State on the part of any person aggrieved by any action of the Commission under and pursuant to this Act. Laws 1947, p. 327, Par. 5.

"Par. 87. *Repealed. Laws 1947, p. 331, Par. 2.* Amendment prior to repeal: Laws 1945, p. 157, Par. 4.

"Par. 87.1. *Common Source of supply of oil—Well spacing and drilling units.*—Whenever the production from any common source of supply of oil or natural gas in this State

[1] Sections 86.1-86.5 of this title.

can be obtained only under conditions constituting waste or drainage not compensated by counter-drainage, then any person having the right to drill into and produce from such common source of supply may, except as otherwise authorized or in this Act provided, take therefrom only such proportion of the oil or natural gas that may be produced therefrom without waste or without such drainage as the productive capacity of the well or wells of any such person considered with the acreage properly assignable to each such well bears to the total productive capacities of the wells in such common source of supply considered with the acreage properly assignable to each well therein.

Establishment of units. (a) To prevent or to assist in preventing the various types of waste of oil or gas prohibited by statute, or any of said wastes, or to protect or assist in protecting the correlative rights of interested parties, the Commission, upon a proper application and notice given as hereinafter provided, and after a hearing as provided in said notice, shall have the power to establish well spacing and drilling units of specified and approximately uniform size and shape covering any common source of supply, or prospective common source of supply, or oil or gas within the State of Oklahoma. Such order establishing well spacing or drilling units for a common source of supply may be entered after a hearing upon the petition of any person owning an interest in the minerals in lands embraced within such common source of supply, or the right to drill a well for oil or gas on the lands embraced within such common source of supply, or on the petition of the Conservation Officer of the State of Oklahoma. When such a petition is filed with the Commission, the Commission shall give at least fifteen (15) days' notice of the hearing to be held upon such petition by one publication at least fifteen (15) days prior to said hearing, in some newspaper of general circulation printed in Oklahoma City, Oklahoma, and by one publication, at least fifteen (15) days prior to the date of said hearing, in some newspaper printed in the county, or in each county, if there be more than than one, in which the lands embraced within the applica-

tion are situated. Except as to the notice of hearing on such a petition, the procedural requirements of Sections 84 to 135, inclusive, of Title 52, Oklahoma Statutes of 1941, shall govern all proceedings and hearing provided for by this section.

Acreage of unit—Order establishing. (b) In establishing a well spacing or drilling unit for a common source of supply thereunder, the acreage to be embraced within each unit and the shape thereof shall be determined by the Commission from the evidence introduced at the hearing, and the following facts, among other things, shall be material; (1) The lands embraced in the actual or prospective common source of supply (2) the plan of well spacing then being employed or contemplated in said source of supply; (3) the depth at which production from said common source of supply has been or is expected to be found; (4) the nature and character of the producing or prospective producing formation or formations; (5) any other available geological or scientific data pertaining to said actual or prospective source of supply which may be probative value to said Commission in determining the proper spacing and well drilling unit therefor, with due and relative allowance for the correlative rights and obligations of the producers and royalty owners interested therein.

The order establishing such spacing or drilling units shall set forth: (1) the outside boundaries of the surface area included in such order; (2) the size, form, and shape of the spacing or drilling units so established; (3) the drilling pattern for the area, which shall be uniform; and (4) the location of the permitted well on each such spacing or drilling unit. To such order shall be attached a plat upon which shall be indicated the foregoing information. Subject to other provisions of this Act, the order establishing such spacing or drilling units shall direct that no more than one (1) well shall thereafter be produced from the common source of supply on any unit so established, and that the well permitted on that unit shall be drilled at the location thereon as prescribed by the Commission, with such exception as may be reasonably necessary

where it is shown, upon application, notice and hearing in conformity with the procedural requirements of Sections 84 to 135, inclusive, Title 52, Oklahoma Statutes, 1941, and the Commission finds that any such spacing unit is located on the edge of a pool and adjacent to a producing unit, or for some other reason that to require the drilling of a well at the prescribed location on such spacing unit would be inequitable or unreasonable. Whenever such an exception is granted, the Commission shall adjust the allowable production for said spacing unit and take such other action as may be necessary to protect the rights of interested parties.

Decrease of size of units—Additional wells—Enlargement of area—Size of units when oil within 9990 feet of surface. (c) The Commission shall have jurisdiction upon the filing a proper application therefor, and upon notice given as provided in sub-section (a) above, to decrease the size of the well spacing units or to permit additional wells to be drilled within the established units, upon proper proof at such hearing that such modification or extension of the order establishing drilling or spacing units will prevent or assist in preventing the various types of wastes prohibited by statute, or any of said wastes, or will protect or assist in protecting the correlative rights of persons interested in said common source of supply, or to enlarge the area covered by the spacing order, if such proof discloses that the development or the trend of development indicates that such common source of supply underlies an area not covered by the spacing order. The Commission shall not establish well spacing units of more than forty (40) acres in size covering common sources of supply of oil the top of which lies less than 9990 feet below the surface as determined by the original or discovery well in said common source of supply.

Violations or order—Separately owned tracts or undivided interests—Pooling Costs. (d) The drilling of any well or wells into any common source of supply for the purpose of producing oil or gas therefrom, after a spacing order has been entered by the Commission covering such

common source of supply, at a location other than that fixed by said order is hereby prohibited. The drilling of any well or wells into a common source of supply, covered by a pending spacing application, at a location other than that approved by a special order of the Commission authorizing the drilling of such well, is hereby prohibited. The operation of any well drilled in violation of any spacing so entered is also hereby prohibited. When two (2) or more separately owned tracts of land are embraced within an established spacing unit, or where there are undivided interests separately owned, or both such separately owned tracts and undivided interests embraced within such established spacing unit, the owners thereof may validly pool their interests and develop their lands as a unit. Where, however, such owners have not agreed to pool their interests, and where one such separate owner has drilled or proposes to drill a well on said unit to the common source of supply, the Commission, to avoid the drilling of unnecessary wells, or to protect correlative rights, shall, upon a proper application therefor and a hearing thereon, require such owners to pool and develop their lands in the spacing unit as a unit. All orders requiring such pooling shall be made after notice and hearing, and shall be upon such terms and conditions as are just and reasonable and will afford to the owner of such tract in the unit the opportunity to recover or receive without unnecessary expense his just and fair share of the oil and gas. The portion of the production allocated to the owner of each tract or interests included in a well spacing unit formed by a pooling order shall, when produced, be considered as if produced by such owner from the separately owned tract or interest by a well drilled thereon. Such pooling order of the Commission shall make definite provisions for the payment of cost of the development and operation, which shall be limited to the actual expenditure required for such purpose not in excess of what are reasonable, including a reasonable charge for supervision. In the event of any dispute relative to such costs, the Commission shall determine the proper costs after due notice to interested

parties and a hearing thereon. The operator of such unit, in addition to any other right provided by the pooling order or orders of the Commission, shall have a lien on the mineral leasehold estate or rights owned by the other owners herein and upon their shares of the production from such unit to the extent that costs incurred in the development and operation upon said unit are a charge against such interest by order of the Commission or by operation of law. Such liens shall be separable as to each separate owner within such unit, and shall remain liens until the owner or owners drilling or operating the well have been paid the amount due under the terms of the pooling order. The Commission is specifically authorized to provide that the owner or owners drilling, or paying for the drilling, or for the operation of a well for the benefit of all shall be entitled to production from such well which would be received by the owner, or owners, for whose benefit the well was drilled or operated, after payment of royalty, until the owner or owners drilling or operating the well have been paid the amount due under the terms of the pooling order or order settling such dispute. No part of the production or proceeds accruing to any owner of a separate interest in such unit shall be applied toward payment of any cost properly chargeable to any other interest in said unit.

For the purpose of this Act[1] the owner, or owners, of oil and gas rights in and under an unleased tract of land shall be regarded as a lessee to the extent of a seven-eighths (7/8) interest in and to said rights and a lessor to the extent of the remaining one-eighth interest therein. Should the owners of separate tracts or interests embraced within a spacing unit fail to agree upon a pooling of their interests and the drilling of a well on the unit, and should it be established by final, unappealable judgment of a court of competent jurisdiction that the Commission is without authority to require pooling as provided for herein, then subject to all other applicable provisions of this Act, the owner of each tract or interest embraced within

[1] This section.

a spacing unit may drill on his separately owned tract, and the allowable production therefrom shall be that portion of the allowable for the full spacing unit as the area of such separately owned tract bears to the full spacing unit.

In the event a producing well, or wells, are completed upon a unit where there are, or may thereafter be, two (2) or more separately owned tracts, any royalty owner or group of royalty owners holding the royalty interest under a separately owned tract included in such spacing unit shall share in the one-eighth (⅛) of all production from the well or wells drilled within the unit or in the gas well rental provided for in the lease covering such separately owned tract or interest in lieu of the customary fixed royalty, in the proportion that the acreage of their separately owned tract or interest bears to the entire acreage of the unit; provided, where a lease covering any such separately owned tract or interest included within a spacing unit stipulates a royalty in excess of one-eighth (⅛) of the production, or said lease shall be subject to an overriding royalty, to production payment or other obligation, then the lessee of said lease out of his share of the working interests from the well drilled on said unit, shall sustain and pay said excess royalty, overriding royalty, or production payment, and therefrom meet any other obligation due in respect to the separately owned tract or interest held by him. Laws 1947, p. 328, Par. 1.

"Pars. 88, 89. *Repealed. Laws 1947, p. 331, Par. 1.*

"Par. 90. *Repealed. Laws 1947, p. 327, Par. 6.* Amendment prior to repeal: Laws 1945, p. 160, Par. 5. Orders, rules and regulations concerning common source of supply, see section 86.4 of this title.

"Par. 113. *Appeals—Power of Supreme Court—Supersedeas—Bond.* Proceedings for review.—Application of Moran, Okl., 200 P. 2d 758.

"Par. 121. *Director of Conservation—Oath and bond—Tenure—Salary—Duties.*—There is hereby created the office of Director of Conservation, which shall be filled as hereinafter provided. Said Director shall, before he enters

upon the duties of his office, take and subscribe to the Constitutional Oath of Office prescribed for State Officials, and shall give a bond to the State of Oklahoma in the sum of Ten Thousand Dollars ($10,000.00) with surety to be approved by the Commission conditioned that he will honestly and faithfully perform his duties, and that he will pay to the State, in the manner prescribed by law, all money which comes into his hand by virtue of such office. The tenure of his office shall be at the pleasure of the Commission. The Director shall receive a salary to be fixed by the Commission not to exceed the sum of Six Thousand Six Hundred Dollars ($6,600.00) per annum, payable monthly, and shall possess such powers and authority, and be charged with such duties as provided in this Act,[1] and in addition thereto he shall investigate all charges and complaints of violations of this Act, and any orders, rules and regulations of the Commission, and report all such violations to the Commission and to the Conservation Attorney, and he shall file charges and complaints with the Commission, or other proper tribunal or court, of all such violations. He shall obey and enforce all orders of the Commission. As amended Laws 1947, p. 332, Par. 4.

"Par. 124. *Conservation Attorney—Tenure—Salary—Duties.*—There is hereby created the Office of Conservation Attorney, which office shall be filled as hereinafter provided. The Conservation Attorney shall receive a salary to be fixed by the Commission not exceeding the sum of Six Thousand Six Hundred Dollars ($6,600.00) per annum, payable monthly. Said attorney shall, before he enters upon the duties of his office, take and subscribe to the Constitutional Oath of office prescribed for the State Officials. The tenure of his office shall be at the pleasure of the Commission. The Conservation Attorney shall be the legal advisor to the Commission, Director of Conservation and Field Supervisors in all matters arising under this Act.[1] He shall appear for the State, the Director and Field Supervisors in all proceedings under this Act before the Commission, shall file and prosecute charges and com-

1 Sections 84-135 of this title.

plaints of violations of this Act, and of any orders, rules and regulations of the Commission made hereunder, shall file and prosecute contempt proceedings, and proceedings as for contempt arising hereunder, and shall appear for the State, the Director and Field Supervisors, and prosecute or defend in their behalf all actions and proceedings in the courts of the United States in all courts of this State arising out of the enforcement of this Act, or any orders, rules or regulations of the Commission made hereunder; provided, however, that as to any proceeding authorized by this Act which shall be commenced and prosecuted by any producer or taker of oil, or other person, the Conservation Attorney shall be permitted to assist in such proceeding, but shall conduct the same only upon the request of the person instituting the same; and provided further, that as to any criminal action, in the district or county courts of this State, arising out of the enforcement of this Act or any orders, rules, or regulations of the Commission, the Conservation Attorney shall not supersede but shall assist the County Attorney in the prosecution thereof; and provided further, that any producer or taker of oil, or other interested person, shall be permitted to assist, through counsel, in any action or proceeding arising out of the enforcement of this Act, or any orders, rules or regulations made by the Commission hereunder.

In addition to his other duties, the Conservation Attorney shall be the legal advisor to the State Fuel Inspector, and shall appear for the State and said State Fuel Inspector in all proceedings before the Commission, and when requested, by the State Fuel Inspector, or the Commission, so to do, shall appear in any court in this State, and shall prosecute and defend all actions and proceedings in connection with the enforcement of the laws of the State of Oklahoma and the rules of the Commission relating to the inspection of petroleum products as set forth in Article 6, of Chapter 59, Oklahoma Statutes 1931, and the Acts amendatory thereof.[2] As amended Laws 1947, p. 332, Par. 5.

---

[2] Section 321 et seq. of this title.

"Par. 124.1. *Assistant Conservation Attorney.*—There is hereby created the office of Assistant Conservation Attorney, which office shall be filled as hereinafter provided. The Assistant Conservation Attorney shall receive a salary to be fixed by the Commission not exceeding the sum of Three Thousand Six Hundred Dollars ($3,600.00) per annum, payable monthly. The tenure of his office shall be at the pleasure of the Commission, and he shall assist the Conservation Attorney in performing all of the duties imposed upon the Conservation Attorney by Section 5 hereof.[1] The Assistant Conservation Attorney shall have his salary and necessary expenses paid from the Conservation Fund. Laws 1947, p. 333, Par. 6.

"Par. 125. *Appointments—Made by Commission—Tenure.*—The Conservation Officer and Conservation Attorney shall be appointed by the Corporation Commission and shall hold office at its pleasure. As amended Laws 1943, p. 126, Par. 1.

Effective on approval April 3, 1943.

"Par. 126. *Field supervisors.*—The Corporation Commission may, at any time which it finds that the public interest will be subserved thereby, appoint not more than Fifteen (15) deputies, to be known as Field Supervisors, who shall have and exercise all the powers granted to them in this Act,[2] and who shall be charged with the performance of all the duties assigned to them by the Director of Conservation, and shall, when so ordered by the Commission, enforce any order, rule, or regulation, or serve any writ or process issued by the Commission; and the number shall be increased or decreased as the Commission shall order; provided, however, that not more than Fifteen (15) Field Supervisors shall at any time be appointed and act as such. When so appointed the salaries of said Field Supervisors shall be fixed by the Commission at not to exceed Three Thousand Six Hundred Dollars ($3,600.00) each, per annum, payable monthly; provided that, said Field Supervisors shall have had at least five (5) years

[1] Section 124 of this title.

[2] Sections 84-135 of this title.

practical experience in the production of oil or gas, or be qualified engineers or geologists or have had five (5) years' experience as a deputy conservation officer. As amended Laws 1943, P. 126, Par. 2; Laws 1945, p. 161, Par. 1; Laws 1947, p. 333, Par. 7.

"Par. 127. *Engineers or geologists—Assistant director—Statisticians—Reporters—Stenographers and clerks.*—The Corporation Commission may employ four (4) oil and gas engineers or petroleum geologists who shall be either a graduate or registered engineer or geologist, one of whom shall be designated senior engineer or geologist, and be paid a salary of not to exceed Four Thousand Five Hundred Dollars ($4,500.00) per annum and the other three of whom shall be paid a salary of Four Thousand Two Hundred Dollars ($4,200.00), each per annum; one (1) assistant director of conservation and office manager who shall be paid a salary of not to exceed Four Thousand Two Hundred Dollars ($4,200.00), per annum, and who shall have had at least five (5) years' experience in the oil and/or gas business, or five years' experience as an employee of the conservation department. One (1) assistant director of conservation and field supervisor, who shall receive a salary of not to exceed Four Thousand Two Hundred Dollars ($4,200.00) per annum, and who shall have had five (5) years' experience in the oil and/ gas business or five (5) years' experience as an employee of the Conservation department; three (3) statisticians who shall be paid a salary of not to exceed three thousand Dollars ($3,000.00) each per annum; two (2) court reporters, who shall be paid a salary of not to exceed Two Thousand Four Hundred Dollars ($2,400.00) per annum; two (2) stenographers (who shall serve as secretary to the Director of Conservation and to the Conservation Attorney) who shall receive a salary of not to exceed Two Thousand Two Hundred and Twenty Dollars ($2,220.00) each per annum; and six (6) stenographers and/or clerks, who shall receive a salary of not to exceed Two Thousand Dollars ($2,00.00) each per annum. The salary of said employees shall be fixed by the Corporation Commission and shall be payable monthly

ing those wherein is sought the issuance and promulgation of orders, rules or regulations by the Commission under the provisions of an Act of the Legislature approved February 11, 1915, entitled "An Act defining and prohibiting the waste of crude oil or petroleum, providing for the equitable taking of the same from the ground and conferring authority on the Corporation Commission, prescribing the penalty for the violation of this Act and declaring an emergency," and of any amendments thereto,[1] but any and all such proceedings shall continue to final decision or action therein by the Commission, and all further proceedings, hearings and all orders, rules and regulations had or made therein by the Commission, and all enforcement thereof shall be under and subject to the terms and provisions of this Act. All existing orders, rules and regulations of the Commission heretofore made and issued under the provisions of aforesaid Act of the Legislature, approved February 11, 1915, and of any amendments thereto, until repealed, vacated or modified by order of the Commission, or of the Supreme Court on appeal therefrom, shall continue and remain in full force and effect and shall be enforced in the same manner and to like extent as if this Act had not been enacted, but all further proceedings and hearings in any proceedings heretofore brought and now pending before the Commission, and the institution, prosecution and hearing of any proceedings hereafter brought before the Commission in connection with any such existing orders, rules or regulations of the Commission shall be governed by the rules of procedure in this Act provided and/or that shall be issued by the Commission in pursuance of the provisions of this Act. Laws 1933, ch. 131, p. 301, par. 49.

"Par. 136. Application of procedural requirements—Right of appeal—Rules and regulations.—This Act[2] is subject to all of the procedural requirements of Chapter 131, Section Laws of Oklahoma, 1933,[3] including the right of appeal to the Supreme Court of the State on the part

[1] Sections 271-279 of this title.

[2] Sections 85-87 and 136-138 of this title.

[3] Sections 84-135 of this title.

of any person aggrieved by any action under said subsections, and the Corporation Commission is hereby vested with specific power and jurisdiction to establish rules and regulations for the carrying out and enforcement of all of the provisions of this Act. Laws 1935, p. 236, par. 4.

"Par. 137. Powers of cities and towns not limited or restricted.—Nothing in this Act[1] is intended to limit or restrict the rights of cities and towns governmental corporate powers to prevent oil or gas drilling therein nor under its police powers to provide its own rules and regulations with reference to well-spacing units or drilling or production which they may have at this time under the general laws of the State of Oklahoma. Laws 1935, p. 236, par. 5.

"Par. 138. Partial invalidity, effect of.—If any Section, paragraph, sentence or phrase of this Act[2] shall be declared unconstitutional or void for any reason, by any court of final jurisdiction, such Decision shall not in any way invalidate or affect any other Section, paragraph, sentence or phrase of this Act, but the same shall continue in full force and effect. Laws 1935, p. 236, par. 6.

Interstate Compacts

"Par. 201. Compacts with other states authorized—Objectives—Fact finding agency—Uniform conservation and tax laws.—The Governor, or such Representative as he may appoint, is authorized to meet with Representatives of the Governors of other petroleum-producing states, and of the United States, for the purpose of agreeing upon a compact among such States effecting the following objectives:

"(a). Establishment of a joint state and federal fact-finding agency to consist of one Representative appointed by the Governor of each compacting state, and one Representative of the United States as Congress or the President shall direct. Said agency shall make periodic findings, subject to the approval and modification by the Presi-

[1] Sections 85-87 and 136-138 of this title.

[2] Sections 85-87 and 136-138 of this title.

dent, of the demand for petroleum to be produced within the United States, for withdrawals from storage, and for petroleum and products thereof to be imported. It shall thereupon, subject to concurrence of Representatives of compacting states capable of together producing two-thirds of the demand for domestic production so found, and approval and modification by the President, determine the part thereof allowable as production within each petroleum-producing state.

"(b). Voluntary regulation of production by each compacting State within its own borders in accordance with said determination of the joint fact-finding agency, to the extent that and in such manner as the laws of each State may authorize.

"(c). Formulation by the joint agency of uniform conservation measures and tax laws which it shall recommend to the compacting states, and exercise by said agency of such incidental powers as may be agreed upon. Laws 1935, p. 240, par. 1.

"Par. 202. Interstate compacts—When binding.—No compact made under the authority of this Act [1] shall bind this State unless and until:

"(a). Said compact shall be ratified by the Legislatures of two of the States of Texas, California, Kansas and New Mexico, and the Legislature of this State, and Congress shall consent thereto.

"(b). Congress shall make provision for the control and limitation of importations in accordance with the findings referred to in Section 1.[2]

"(c). Congress shall provide for the control of interstate movements of petroleum produced or withdrawn from storage in violation of the laws and valid regulations of the several states, and products of such petroleum.

"(d). Congress shall provide for the control of interstate movements of petroleum produced in any State in excess of the determination, referred to in Section 1, of allowable production within said State as approved by the

[1] This section and section 201 of this title.
[2] Section 201 of this title.

President, and products of such petroleum. Laws 1935, p. 240, par. 2.

"Par. 203. Interstate compact ratified and confirmed.—The "Interstate Compact to Conserve Oil and Gas" entered into by the Governor of this State and the Representatives of certain other oil producing States at Dallas, Texas, on the 16th day of February, 1935, is hereby ratified, approved and confirmed by the State of Oklahoma. Laws, 1935, p. 242, par. 1.

"Par. 204. Terms and provisions of compact.

"An Interstate Compact to Conserve Oil and Gas.

Article I

"This agreement may become effective within any compacting State at any time as prescribed by that State, and shall become effective within those States ratifying it whenever any three of the States of Texas, Oklahoma, California, Kansas, and New Mexico have ratified and Congress has given its consent. Any oil-producing State may become a party hereto as hereinafter provided.

Article II

"The purpose of this compact is to conserve oil and gas by the prevention of physical waste thereof from any cause.

Article III

"Each State bound hereby agrees that within a reasonable time it will enact laws, or if laws have been enacted, then it agrees to continue the same in force, to accomplish within reasonable limits the prevention of:

"(a) The operation of any oil well with an inefficient gas-oil ratio.

"(b) The drowning with water of any stratum capable of producing oil or gas, or both oil and gas, in paying quantities.

"(c) The avoidable escape into the open air or the wasteful burning of gas from a natural gas well.

"(d) The creation of unnecessary fire hazards.

"(e) The drilling, equipping, locating, spacing or operating of a well or wells so as to bring about physical waste of oil or gas or loss in the ultimate recovery thereof.

"(f) The inefficient, excessive or improper use of the reservoir energy in producing any well.

"The enumeration of the foregoing subjects shall not limit the scope of the authority of any State.

Article IV

"Each State bound hereby agrees that it will, within a reasonable time, enact statutes, or if such statutes have been enacted then that it will continue the same in force, providing in effect that oil produced in violation of its valid oil and/or gas conservation statutes or any valid rule, order or regulation promulgated thereunder, shall be denied access to commerce; and providing for stringent penalties for the waste of either oil or gas.

Article V

"It is not the purpose of this compact to authorize the States joining herein to limit the production of oil or gas for the purpose of stabilizing or fixing the price thereof, or create or perpetuate monopoly, or to promote regimentation, but is limited to the purpose of conserving oil and gas and preventing the avoidable waste thereof within reasonable limitations.

Article VI

"Each State joining herein shall appoint one representative to a commission hereby constituted and designated as The Interstate Oil Compact Commission, the duty of which said commission shall be to make inquiry and ascertain from time to time such methods, practices, circumstances and conditions as may be disclosed for bringing about conservation and the prevention of physical waste of oil and gas, and at such intervals as said commission deems beneficial it shall report its findings and recommendations to the several States for adoption or rejection.

"The commission shall have power to recommend the coordination of the exercise of the police powers of the several States within their several jurisdictions to promote the maximum ultimate recovery from the petroleum reserves of said States, and to recommend measures for the maximum ultimate recovery of oil and gas. Said commission shall organize and adopt suitable rules and regulations for the conduct of its business.

"No action shall be taken by the commission except: (1) by the affirmative votes of the majority of the whole number of the compacting States, represented at any meeting, and (2) by a concurring vote of a majority in interest of the compacting States at said meeting, such interest to be determined as follows: Such vote of each State shall be in the decimal proportion fixed by the ratio of its daily average production during the preceding calendar half-year to the daily average production of the compacting States during said period.

Article VII

"No State by joining herein shall become financially obligated to any other State, nor shall the breach of the terms hereof by any State subject such State to financial responsibility to the other States joining herein.

Article VIII

"This compact shall expire September 1, 1937. But any State joining herein may, upon (60) days' notice, withdraw herefrom.

"The representatives of the signatory States have signed this agreement in a single original which shall be deposited in the archives of the Department of State of the United States, and a duly certified copy shall be forwarded to the Governor of each of the signatory States.

"This compact shall become effective when ratified and approved as provided in Article I. Any oil-producing State may become a party hereto by affixing its signature to a counterpart to be similarly deposited, certified and ratified.

"Done in the City of Dallas, Texas, this sixteenth day of February, 1935.

E. W. MARLAN, The Governor of the State of Oklahoma;
JAMES V. ALLRED, The Governor of the State of Texas;
R. L. PATTERSON, For the State of California;
FRANK VESELY, E. H. WELLS, HUGH BURCH, HIRAM M. DOW, For the State of New Mexico.

"The following representatives recommend to their respective Governors and Legislatures the ratification of the foregoing agreement::

JOHN W. OLVEY, of Arkansas;
WARWICK M. DOWNING, of Colorado;
WILLIAM BELL, of Illinois;
GORDON F. VAN EENANAAM, GERALD COTTER of Michigan;
RALPH J. PRYOR, E. B. SHAWVER, T. C. JOHNSON of Kansas.

Laws 1935, p. 242, par. 2; Laws 1939, p. 346, par. 2; Laws 1941, p. 212, par. 2.

"Par. 205. Governor as official representative of State—Powers and duties—Assistant representatives.—The Governor is hereby designated as the official representative of the State of Oklahoma on "The Interstate Oil Compact Commission" provided for in the compact herein authorized to be extended. The Governor shall exercise and perform for the State of Oklahoma all the powers and duties imposed by the aforesaid compact upon a representative to "The Interstate Oil Compact Commission;" provided, that he shall have the authority to appoint an assistant representative who shall act as the official representative of the State of Oklahoma on "The Interstate Oil Compact Commission" when the authority to so act is delegated to him by the Governor. In addition said assistant representative shall perform such other duties as the Governor may designate which are necessary to enable the State of Oklahoma to fully cooperate in accomplishing the objects of office prescribed by the Constitution which shall be filed with the Secretary of State, and he shall receive for his services the sum of Fifteen ($15.00) Dollars, for each day he is engaged in the performance of

the duties of his office. Laws 1935, p. 244, par. 3; Laws 1935, p. 241, par. 1; Laws 1939, p. 349, par. 5; Laws 1941, p. 214, par. 5.

"Par. 206. Clerical, technical and legal assistants—Expenses—Office.—The assistant representative referred to in Section 5 of this Act [1] is hereby authorized with the consent of the Governor to employ such clerical, technical and legal assistants as may be necessary for him to properly perform the duties assigned him, and to incur such other expenses as may be necessary to enable the State of Oklahoma to fully cooperate in accomplishing the objects of "The Interstate Compact to Conserve Oil and Gas." Said assistant representative and his assistants, and the Governor when acting in his capacity as official representative of the State of Oklahoma on "The Interstate Oil Compact Commission," shall receive their actual and necessary traveling expenses when away from the State Capitol in the performance of their duties, which shall be paid from the special fund hereinafter created. The State Board of Affairs shall provide and furnish an office in the State Capitol for said assistant representative. Laws 1935, p. 241, par. 2; Laws 1939, p. 349, par. 6; Laws 1941, p. 214, par. 6.

"Par. 207. Interstate oil compact fund—Purposes for which used—Disposition of unexpended balance.—There is hereby created in the office of the State Treasurer a special fund to be known as "The Interstate Oil Compact Fund of Oklahoma" and all moneys which accrue to said fund are hereby appropriated for the purpose of paying the compensation of the assistant representative referred to in Section 5 of this Act; [2] the compensation of such clerical, technical and legal assistants as he may, with the consent of the Governor, employ; the actual and necessary traveling expenses of the assistant representative and his employees and of the Governor when traveling in his capacity as official representative of the State of Oklahoma on "The Interstate Oil Compact Commission;" all items

[1] Section 205 of this title.
[2] Section 205 of this title.

of office expense including the cost of office supplies and equipment, such contributions as the Governor shall deem proper to pay to the Interstate Oil Compact Commission to defray its expenses; and such other necessary expenses as may be incurred in enabling the State of Oklahoma to fully cooperate in accomplishing the objects of "The Interstate Compact to Conserve Oil and Gas." Said fund shall be disbursed by the State Treasurer upon warrants issued by the State Auditor upon sworn itemized claims approved by said assistant representative and the Governor; provided, that if at the end of any fiscal year any part of said special fund shall remain unexpended, such balance shall be transferred by the State Treasurer to and become a part of the Conservation Fund of the State for the ensuing fiscal year. Laws 1935, p. 241, par. 3; Laws 1939, p. 350, par. 7; Laws 1941, p. 214, par. 7.

"Par. 208. Duration of Act—Withdrawal from compact—Credit of funds to conservation fund.—The provisions of this Act shall be in force and effect so long as the State of Oklahoma shall be and remain a party to "The Interstate Compact to Conserve Oil and Gas." In the event the State of Oklahoma withdraws from said compact, the provisions of this Act shall cease to operate and any unencumbered moneys in "The Interstate Oil Compact Fund of Oklahoma" shall be credited to the Conservation Fund of the State of Oklahoma and be used for the purposes for which said fund is created. Laws 1935, p. 242, par. 4; Laws 1939, p. 350, par. 8; Laws 1941, p. 215, par. 8.

"Par. 209. Notice of passage and approval of act.—Notice of the passage and approval of this Act and of the Compact herein shall be given by the Governor of Oklahoma to the Governors of Texas, California, New Mexico, Arkansas, Colorado, Kansas, Illinois and Michigan; said States being represented during the consideration of said compact, and to the Department of State of the United States: said notice to be effected by the mailing of a certified copy of this Act[1] to the above enumerated officials. Laws 1935, p. 244, par. 4.

[1] Sections 203-205 and 209-211 of this title.

"Par. 210. Governor to declare effective date of compact.—It is hereby made the duty of the Governor of Oklahoma to ascertain and to declare by public proclamation the effective date of the terms and provisions of said compact, in accordance with the provisions of Article I thereof.[1] Laws 1935, p. 244, par. 5.

"Par. 211. Further extensions—Withdrawal from compact—Determination and necessary steps.—The Governor of Oklahoma is further authorized and empowered for and in the name of the State of Oklahoma to execute agreements for the further extension of the expiration date of the said The Interstate Compact to Conserve Oil and Gas and to determine if and when it shall be for the best interest of the State of Oklahoma to withdraw from said Compact upon sixty (60) days' notice as provided by the terms of the Compact. In the event he shall determine that this State should withdraw from said Compact he shall have full power and authority to give necessary notice and to take any and all steps necessary and proper to effect the withdrawal of the State of Oklahoma from said Compact. Laws 1935, p. 244, par. 6; L. 1939, p. 349, par. 4, Laws 1941, p. 214, par. 4.

Gas

"Par. 231. Ownership of gas.—All natural gas under the surface of any land in this state is hereby declared to be and is the property of the owners, or gas lessees, of the surface under which gas is located in its original state. Laws 1913, ch. 198, p. 439, par. 1.

"Par. 232. Drilling rights—Restrictions on output.—Any owner, or oil and gas lessee, of the surface, having the right to drill for gas shall have the right to sink a well to the natural gas underneath the same and to take gas therefrom until the gas under such surface is exhausted. In case other parties, having the right to drill into the common reservoir of gas, drill a well or wells into the same, then the amount of gas each owner may take therefrom shall be proportionate to the natural flow of his well

[1] Section 204 of this title.

or wells to the natural flow of the well or wells of such other owners of the state common source of supply of gas, such natural flow to be determined by any standard measurement at the beginning of each calendar month; provided, that not more than twenty-five per cent of the natural flow of any well shall be taken, unless for good cause shown, and upon notice and hearing the Corporation Commission may, by proper order, permit the taking of a greater amount. The drilling of a gas well or wells by any owner or lessee of the surface shall be regarded as reducing to possession his share of such gas as is shown by his well. Laws 1913, ch. 198, p. 440, par. 2.

"Par. 233. Sale of gas—Prices and amounts of gas to be taken—Delivery.—Any person, firm or corporation, taking gas from a gas field, except for purposes of developing a gas or oil field, and operating oil wells, and for the purpose of his own domestic use, shall take ratably from each owner of the gas in proportion to his interest in said gas, upon such terms as may be agreed upon between said owners and the party taking such, or in case they cannot agree at such a price and upon such terms as may be fixed by the Corporation Commission after notice and hearing; provided, that each owner shall be required to deliver his gas to a common point of delivery on or adjacent to the surface overlying such gas. Laws 1913, ch. 198, p. 440, par. 3.

"Par. 234. Misappropriation of gas—Liability for damage and penalties.—Any person, firm or corporation, taking more than his or its proportionate share of such gas, in violation of the provisions of this act,[1] shall be liable to any adjoining well owner for all damages sustained thereby and subject to a penalty for each violation not to exceed five hundred dollars ($500.00) and each day such violation is continued shall be a separate offense. Laws 1913, ch. 198, p. 441, par. 4.

"Par. 235. Misappropriation of gas—Criminal responsibility.—Any person or agent of a corporation, who takes gas, or aids or abets in the taking of gas, except as herein

[1] Sections 231-235 of this title.

provided, either directly or indirectly, as an individual officer, agent, or employee of any corporation, shall be guilty of grand larceny, and, upon conviction thereof, shall be sentenced to the penitentiary not to exceed five (5) years. Laws 1913, ch. 198, p. 441, par. 5.

"Par. 236. Waste prohibited.—The production of natural gas in the State of Oklahoma, in such manner, and under such conditions as to constitute waste, shall be unlawful. Laws 1915, ch. 197, par. 1.

"Par. 237. Waste defined.—The term waste, as used herein in addition to its ordinary meaning, shall include escape of natural gas in commercial quantities into the open air, the intentional drowning with water of a gas stratum capable of producing gas in commercial quantities, underground waste, the permitting of any natural gas well to wastefully burn and the wasteful utilization of such gas. Laws 1915, ch. 197, par. 2.

"Par. 238. Conservation of gas.—Whenever natural gas in commercial quantities, or a gas bearing stratum, known to contain natural gas in such quantity, is encountered in any well drilled for oil or gas in this state, such gas shall be confined to its original stratum until such time as the same can be produced and utilized without waste, and all such strata shall be adequately protected from infiltrating waters. Any unrestricted flow of natural gas in excess of two million cubic feet per twenty-four hours shall be considered a commercial quantity thereof; provided, that if in the opinion of the Corporation Commission, gas of a lesser quantity shall be of commercial value, said Commission shall have authority to require the conservation of said gas in accordance with the provisions of this act;[1] and provided, further, the gauge of the capacity of any gas well shall not be taken until such well has been allowed an open flow for the period of three days. Laws 1915, ch. 197, par. 3.

"Par. 239. Common source of supply—Excess gas supply—Apportionment and regulation to prevent waste.—Whenever the full production from any common source of

[1] Sections 236-247 of this title.

supply of natural gas in this state is in excess of the market demands, then any person, firm or corporation, having the right to drill into and produce gas from any such common source of supply, may take therefrom only such proportion of the natural gas that may be marketed without waste, as the natural flow of the well or wells owned or controlled by any such person, firm or corporation bears to the total natural flow of such common source of supply having due regard to the acreage drained by each well, so as to prevent any such person, firm or corporation securing any unfair proportion of the gas therefrom; provided, that the Corporation Commission may by proper order, permit the taking of a greater amount whenever it shall deem such taking reasonable or equitable. The said commission is authorized and directed to prescribe rules and regulations for the determination of the natural flow of any such well or wells, and to regulate the taking of natural gas from any or all such common sources of supply within the state, so as to prevent waste, protect the interests of the public, and of all those having a right to produce therefrom, and to prevent unreasonable discrimination in favor of any one such common source of supply as against another. Laws 1915, ch. 197, par. 4.

"Par. 240. 'Common purchaser'—Discrimination in purchases prohibited—Regulation of purchases.—Every person, firm or corporation, now or hereafter engaged in the business of purchasing and selling natural gas in this state, shall be a common purchaser thereof, and shall purchase all of the natural gas which may be offered for sale, and which may reasonably be reached by its trunk lines, or gathering lines without discrimination in favor of one producer as against another, in favor of any one source of supply as against another save as authorized by the Corporation Commission after due notice and hearing; but if any such person, firm or corporation, shall be unable to purchase all the gas so offered, then it shall purchase natural gas from each producer ratably. It shall be unlawful for any such common purchaser to discriminate between like grades and pressures of natural gas, or in favor

of its own production, or of production in which it may be directly or indirectly interested, either in whole or in part, but for the purpose of prorating the natural gas to be marketed, such production shall be treated in like manner as that of any other producer or person, and shall be taken only in the ratable proportion that such production bears to the total production available for marketing. The Corporation Commission shall have authority to make regulations for the delivery, metering and equitable purchasing and taking of all such gas and shall have authority to relieve any such common purchaser, after due notice and hearing, from the duty of purchasing gas of an inferior quality or grade. Laws 1915, ch. 197, par. 5.

"Par. 241. Enforcement of Act—Hearings before Corporation Commission.—Any person, firm or corporation, or the Attorney General, on behalf of the state may institute proceedings before the Corporation Commission, or apply for a hearing before said commission, upon any question relating to the enforcement of this Act;[1] and jurisdiction is hereby conferred upon said commission to hear and determine the same, said commission shall set a time and place when such hearing shall be had and give reasonable notice thereof to all persons or classes interested therein by publication in some newspaper or newspapers having general circulation in the state, and shall in addition thereto cause notice to be served in writing upon any person, firm or corporation, complained against in the manner now provided by law for serving summons in civil actions. In the exercise and enforcement of such jurisdiction said commission is authorized to summon witnesses, make ancillary orders, and use such mesne and final process including inspection and punishment as for contempt, analogous to proceedings under its control over public service corporations as now provided by law. Laws 1915, ch. 197, par. 6.

"Par. 242. Appeals to Supreme Court.—Appellate jurisdiction is hereby conferred upon the Supreme Court of this state to review the orders of said commission made under

[1] Sections 236-247 of this title.

this act.[1] Such appeal may be taken by any person, firm or corporation, shown by the record to be interested therein, in the same manner and time as appeals are allowed by law from other orders of the Corporation Commission. Said orders so appealed from, may be superseded by the commission or by the Supreme Court upon such terms and conditions as may be just and equitable. Laws 1915, ch. 197, par. 7.

"Par. 243. Corporation Commission—Authority to make rules and regulations.—The Corporation Commission shall have authority to make regulations for the prevention of waste of natural gas, and for the protection of all natural gas, fresh water, and oil bearing strata encountered in any well drilled for oil or natural gas, and to make such other rules and regulations, and to employ or appoint such agents, with the consent of the Governor, as may be necessary to enforce this act.[1] Laws 1915, ch. 197, par 8.

"Par. 244. Pipe line companies—Acceptance of act as prerequisite to right to operate.—Before any person, firm or corporation shall have, possess, enjoy or exercise the right of eminent domain, right of way, right to locate, maintain, construct or operate pipe lines, fixtures, or equipments belonging thereto or used in connection therewith, for the carrying or transportation of natural gas, whether for hire or otherwise, or shall have the right to engage in the business of purchasing, piping, or transporting natural gas, as a public service, or otherwise, such person, firm or corporation, shall file in the office of the Corporation Commission a proper and explicit authorized acceptance of the provisions of this act.[1] Laws 1915, ch. 197, par. 9.

"Par. 245. Mine Inspector—Duties unchanged.—Nothing contained in this act[1] shall be construed to interfere with any duties now imposed by law upon the Chief Mine Inspector of the state or his deputies. Laws 1915, ch. 197, par. 10.

"Par. 246. Partial invalidity—Effect.—The invalidity of any section, subdivision, clause, or sentence of this act[1]

[1] Sections 236-247 of this title.

shall not in any manner affect the validity of the remaining portion thereof. Laws 1915, ch. 197, par. 11.

"Par. 247. Violation—Penalties.—In addition to any penalty that may be imposed by the Corporation Commission for contempt, any person, firm or corporation, or any officer, agent or employee thereof, directly or indirectly violating the provisions of this act,[1] shall be guilty of a misdemeanor, and upon conviction thereof, in a court of competent jurisdiction, shall be punished by a fine in any sum not to exceed five thousand dollars ($5,000.00) or by imprisonment in the county jail not to exceed thirty (30) days, or by both such fine and imprisonment. Laws 1915, ch. 197, par. 12.

"Par. 271. Waste prohibited.—The production of crude oil or petroleum in the State of Oklahoma, in such manner and under such conditions as to constitute waste, is hereby prohibited. Laws 1915, ch. 25, par. 1.

"Par. 272. Production and sale regulated—Corporation Commission, authority of.—The taking of crude oil or petroleum from any oil bearing sand or sands in the State of Oklahoma at a time when there is not a market demand therefor at the well at a price equivalent to the actual value of such crude oil or petroleum is hereby prohibited, and the actual value of such crude oil or petroleum at any time shall be the average value as near as may be ascertained in the United States at retail of the by products of such crude oil or petroleum when refined less the cost and a reasonable profit in the business of transporting, refining and marketing the same, and the Corporation Commission of this State is hereby invested with the authority and power to investigate and determine from time to time the actual value of such crude oil or petroleum by the standard herein provided, and when so determined said Commission shall promulgate its findings by its orders duly made and recorded, and publish the same in some newspaper of general circulation in the State. Laws, 1915, ch. 25, par. 2.

"Par. 273. Waste defined—Regulations to prevent.—The term 'waste' as used herein, in addition to its ordi-

[1] Sections 236-247 of this title.

enforcement, as provided in the preceding section of this Act,[1] the Secretary of the Commission, in the name of the Commission and by him as its Secretary, shall issue a notice to the defendant or defendants named in such motion or petition, which said notice shall be addressed to the defendant or defendants in said petition, and shall state, (a) the filing of such motion or petition; (b) the order or orders, rule or rules, regulation or regulations of the Commission, or the provisions of this Act,[2] violations of which are charged therein; (c) the common source of supply in or with respect to which such violation has occurred or is occurring; (d) the date on which said motion or petition is set for hearing, which shall be on such date as shall be provided by order, rule or regulation of the Commission, but shall not be earlier than ten (10) days from the date of the issuance of such notice; and (e) a copy of said motion or petition filed in said cause shall be attached to said notice, and if any temporary order of enforcement shall have been made by the Commission in said proceedings, reference to such order shall be contained in said notice and a copy thereof shall be attached to said notice, in order that service of the same upon the defendant or defendants may be made at the same time as the service of said notice. Laws 1933, ch. 131, p. 290, par. 23.

"Par. 107. Process—Service—How made—Return.—Except as otherwise provided or authorized in this Act,[1] service of any notice, petition or other pleading, citation, summons, subpoena, order of the Commission of which service is required, and execution, commitment or other process, in any proceeding before the Commission under the provision of this Act, may be made by the Proration Umpire,[2] his assistant[3] or any deputy[4] to the Proration Umpire, or by any other person authorized and directed by order of the Commission to make such service, and such service may be made upon any person, firm, trust, asso-

3 Changed to Assistant Conservation Officer. See section 81 of this title.
4 Changed to Deputy Conservation Officers. See Section 81 of this title.

ciation or corporation, required to be served, in the same manner as is provided for the service of summons in civil actions in the District Courts of the State, upon such persons, firms, trusts, associations, and corporations respectively. The officer or other person making any such service shall make his return thereof and file the same with the Secretary of the Commission. Said return shall show the time when the notice, pleading, citation, petition, summons, subpoena, order of the Commission, execution, commitment, or other process was received by him and the time and manner the same was served by him. Laws 1933, ch. 131, p. 291, par. 24.

"Par. 108. Oaths—Perjury—Punishment.—Every person who, having taken an oath that he will testify, declare or depose before the Commission, in any proceeding, or at any hearing before said Commission, authorized and provided for under the provisions of this Act,[1] shall wilfully and contrary to such oath state any material matter which he knows to be false, is guilty of perjury, and upon conviction shall be punished by imprisonment in the State penitentiary not more than five (5) years. Laws 1933, ch. 131, p. 291, par. 25.

"Par. 109. False verification of documents as perjury—Punishment.—Any person who shall verify under oath any report, map or drawing or other statement or document authorized or required by the provisions of this Act,[1] or by any order, rule or regulation of the Commission made under the provisions of this Act to be filed with the Commission, or with the Secretary of the Commission, or with any other officer, and who files or causes the same to be filed with the Secretary of the Commission or other officer, which states or contains any material matter which he knows to be false is guilty of perjury and upon conviction thereof shall be punished by imprisonment in the State penitentiary for not less than two (2) years, nor more than ten (10) years. Laws 1933, ch. 131, p. 291, par. 26.

"Par. 110. Market demand—Transportation and mar-

[1] Sections 84-135 of this title.

keting facilities—Evidence—Proceedings and hearings.—In any proceeding or at any hearing before the Commission wherein the Commission shall require or shall deem it advisable to ascertain and/or find the reasonable market demand and/or the transportation or marketing facilities for oil that may be produced from any common source of supply during any specific period of time thereafter, it shall be competent, subject to such limitations and conditions, as shall be prescribed and provided by general order or rule of the Commission, to receive in evidence in such proceeding or at such hearing, any statement which shall have been communicated to (a) the Commission, or (b) to the Secretary of the Commission, or (c) to the Proration Umpire,[1] by any purchaser or taker of oil by (a) telegram, or (b) letter, which shall state the amount of oil produced from said common source of supply (a) that such purchaser or taker contemplates or intends he or it will purchase during the period of time involved; or (b) the capacity of his or its transportation or marketing facilities which will be, during the period of time involved, available for transportation and/or marketing oil that may be produced from such common source of supply; and the Commission in ascertaining and determining the transportation or marketing facilities, or the reasonable market demands for oil during any such period of time that may be produced from such common source of supply may give such weight to such evidence that it shall determine the same is entitled. Laws 1933, ch. 131, p. 291, par. 27.

"Par. 111. Collateral attack on orders, rules and regulations—Appeals—Supreme Court.—No collateral attack shall be allowed upon orders, rules and regulations of the Commission made hereunder, but the sole method of reviewing such orders and inquiring into and determining their validity, justness, reasonableness or correctness shall be by appeal from such orders, rules or regulations to the Supreme Court. On appeal every such order, rule or regulation shall be regarded as prima facie, valid, reasonable and just. No court of this State except the Supreme Court,

[1] Changed to Conservation Officer. See section 81 of this title.

and it only on appeal, as herein provided, shall have jurisdiction to review, reverse, annul, modify or correct any order, rule, or regulation of the Commission within the general scope of its authority herein or to enjoin, restrain or suspend execution or operation thereof, provided that writs of mandamus and prohibition shall lie from the Supreme Court to the Commission in all cases where such writs, respectively, would under like circumstances lie to any inferior court or officer. Laws 1933, ch. 131, page 292, par. 28.

"Par. 112. Application to amend or modify orders—Hearing—Appeal.—Any person affected by any Legislative or administrative order of the Commission shall have the right at any time to apply to the Commission to repeal, amend, modify, or supplement the same. Such application shall be in writing and shall be heard as expeditiously as possible after notice of the hearing thereon shall have been given in the manner provided by Section 14 of this Act.[1] An appeal shall lie to the Supreme Court from any order made by the Commission in any such proceedings or from the refusal of the Commission to make any order petitioned for therein, in the same manner and within the same time in which other appeals are authorized to be taken by the provisions of this Act,[2] and, on any such appeal, the Supreme Court may affirm the order of the Commission, or the Commission's action in refusing to make the order petitioned for, or may itself make the order which the Commission should have made, or remand the cause to the Commission with directions to make such order as the Supreme Court may determine should have been made. Laws 1933, ch. 131, p. 292, par. 29.

"Par. 113. Appeals—Power of Supreme Court—Supersedeas-Bond.—In the manner now provided by law for taking appeals to the Supreme Court from orders, rules or regulations of the Commission affecting transportation and transmission companies, appeals may be taken to the Supreme Court from any order, rule or regulation made,

1 Section 97 of this title.
2 Section 84-135 of this title.

issued or promulgated by the Commission under the provisions of Section 1 to 13, inclusive,[1] (a) by the Attorney General, or (b) by the Proration Attorney,[2] or (c) by the Proration Umpire,[3] on behalf of the State; or by any person aggrieved by such order, rule, or regulation appealed from. On such appeal the Supreme Court shall have power to determine the validity, the reasonableness and justice of such order, rule, or regulation and should the Court find from the record that the order, rule or regulation appealed from is incorrect, unreasonable, unjust or insufficient in any particular it shall amend, modify, or supplement such order, rule or regulation so as to make the same correct, reasonable, just or sufficient, or shall substitute therefor such order, rule, or regulation as in the Court's opinion is warranted by the record, is reasonable and just, and will effect the purposes and intent of this Act.[4] On such appeals no order, rule or regulation shall be reversed and remanded to the Commission for a new trial thereon or for the taking of additional testimony unless the Court shall find that the evidence introduced before the Commission is insufficient to enable the Court to determine and make a proper order, rule, or regulation or that the party appealing did not have lawful notice of the hearing before the Commission, or that the Commission refused to receive competent evidence offered by the party appealing, which, if true, would leave the order, rule or regulation appealed from without substantial basis in fact. In like manner appeal may be taken to the Supreme Court from any order, judgment or decree issued, or final action taken by the Commission in any proceeding before it wherein it is sought to have any person adjudged (a) guilty of direct contempt, or (b) punished as for contempt for violation of any provision of this Act or of any order, rule or regulation of the Commission made hereunder, or (c) in which is sought any other order of enforcement for the purpose of enforcing the orders, rules, and regulations of the Commission made hereunder, provided any such appeal may

1 Sections 84-96 of this title.
2 Changed to Conservation Attorney. See section 81 of this title.
3 Changed to Conservation Officer. See section 81 of this title.

be taken and prosecuted only by (a) the Attorney General, or (b) the Proration Attorney, or (c) the Proration Umpire, on behalf of the State, or (d) by any person against whom any such order or decree of contempt, or as for contempt, or other order of enforcement shall have been rendered, or (e) by any other person whose interests are affected by such order, judgment, decree or final action taken by the Commission in such proceeding and who is aggrieved thereby.

"No order, rule, regulation, judgment or decree or final action of the Commission appealed from shall be superseded except by order of the Commission or the Supreme Court. No supersedeas shall be granted by either the Commission or the Supreme Court except upon condition that the appellant shall file in said appeal a bond with such surety as shall be approved by the Commission or the Supreme Court, granting such supersedeas. Said bond shall, (a) be in such amount, (b) contain such terms and conditions and (c) be payable to the State for its benefit or for the benefit of such person or persons as shall be damaged by such appeal, if the order, rule, regulation, judgment, decree or action of the Commission appealed from shall be affirmed; all as shall be provided and required by the Commission or the Supreme Court granting such supersedeas.

"All appeals under the provisions of this Act must be taken within 60 days from the date on which the order, rule, regulation, judgment, decree or final action of the Commission appealed from shall have been made, rendered or taken by the Commission; and except as otherwise provided in this Act, the hearing and determination thereof by the Supreme Court, and the enforcement of its judgment and decree therein, and against the sureties upon the supersedeas bond therein, shall be governed by the provisions of law now in force applicable to appeals in proceedings for contempt and other proceedings for the violation of orders, rules and regulations of the Commission affecting transportation companies; and to the extent possible under existing laws the Supreme Court shall give

precedence to all such appeals in the hearing and disposition thereof. Laws 1933, ch. 131, p. 293, par. 30.

"Par. 114. Obstructing or delaying performance of duties—Penalty.—Any person who knowingly and wilfully delays or obstructs any Proration Umpire,[1] any assistant[2] or deputy[3] of the Proration Umpire, or any agent or employee of the Commission, in the performance of any duty enjoined upon such Proration Umpire, assistant or deputy of such Proration Umpire, or agent, or employee of the Commission, by the provisions of this Act[4] or by any lawful order, rule or regulation of the Commission; or who knowingly and wilfully delays or obstructs any public officer of the State, or of any municipal subdivision thereof in the discharge or attempted discharge of any duty of his office, arising by virtue of or growing out of the enforcement of or an attempt to enforce the provisions of this Act, or any lawful order, rule, or regulation of the Commission made in pursuance of the provisions hereof; or who attempts by means of any threat or violence to deter or prevent any such Proration Umpire, assistant, or deputy of the Proration Umpire, or any agent or employee of the Commission from performing any duty imposed upon them when such duty arises by virtue of or grows out of the attempt to enforce the provisions of this Act or of any lawful order, rule, or regulation of the Commission made hereunder, shall be guilty of a misdemeanor and upon conviction thereof may be punished by fine not exceeding Five Hundred Dollars ($500.00), or by confinement in the County jail not exceeding six (6) months, or both. If such threat or violence, or such attempted interference or obstruction is accompanied by the use or attempted use of firearms by any such person so offending, then such person shall be guilty of a felony and upon conviction may be punished by imprisonment in the State penitentiary for a period of not less than one (1) year

nor more than five (5) years. Laws 1933, ch. 131, p. 294, par. 31.

"Par. 115. Conspiracy to violate Act—Punishment.—If two or more persons conspire to violate any provision of this Act,[1] or any lawful order, rule, or regulation of the Commission fixing the method, manner, amount and rate of production of oil or gas from any common source of supply in the State of Oklahoma or conspire to produce oil or gas from any well or wells in any common source of supply in the State of Oklahoma in excess of the allowable production permitted from such well or wells as fixed and determined by any lawful order, rule, or regulation of the Commission or conspire to avoid making or filing any report, map or drawing, or to file any false report, map or drawing with respect to the method, manner, time, place, amount, or rate of production of oil or gas from any well or wells in any common source of supply in the State of Oklahoma, or conspire to avoid the making or filing of any report, map or drawing, or to file any false report, map or drawing, with respect to the removal or transportation of oil or gas by any means whatsoever, from any common source of supply, as may be prescribed or required by this Act or by any lawful order, rule, or regulation of the Commission; or conspire to make any false statement therein with respect to any material matter contained therein, and one or more such parties shall do any act to effect the object of any such conspiracy, then each of the parties to any such conspiracy shall, upon conviction in any court having jurisdiction of the offense, be fined not more than Five Thousand Dollars ($5,000) or imprisoned in the State penitentiary for a period of not exceeding five (5) years, or both. Laws 1933, ch. 131, p. 295, par. 32.

"Par. 116. Violations of orders, rules and regulations—Injunction—Appeal—Supersedeas.—Where the Commission shall make and issue any order, rule, or regulation for the prevention or prohibition of any waste prohibited

[1] Sections 84-135 of this title.

by this Act,[1] or by any order, rule, or regulation of the Commission, authorized by this Act, and the same has been or is being violated by any person, firm, trust, association or corporation, the Attorney General of the State, or the Proration Attorney[2] may in the name of the State bring an action in the District Court of the County wherein the oil or gas properties have been or are being operated in violation of such order, rule, or regulation of the Commission or wherein any such violation of any order, rule or regulation of the Commission has been or is being committed, for a prohibitory and/or a mandatory injunction, enjoining and prohibiting the offender from further violating the provisions of this Act or any such order, rule, or regulation of the Commission and/or commanding and compelling such offender to obey such order, rule, or regulation; and such court is hereby given jurisdiction to grant such injunction or such other relief as may be proper in the premises, and shall have power to grant in any such proceedings temporary restraining orders and/or injunctions, to obtain which no bond shall be required. Neither a temporary nor permanent injunction granted under the provisions of this section shall be stayed or superseded on appeal therefrom except upon order of the Supreme Court, and then only upon application therefor, and hearing thereon after reasonable notice to plaintiff. In so far as permitted and not prohibited by existing statutes, all suits brought under the provisions of this section shall be given, in the hearing and trial thereof, by all courts in which the same are brought and prosecuted, precedence over other actions pending in said courts. Laws 1933, ch. 131, p. 295, par. 33.

"Par. 117. Bribery—Punishment.—Whoever corruptly gives, offers or promises to give to any Member of the Commission, Proration Umpire,[1] assistant[3] or Deputy[3] of a Proration Umpire, Proration Attorney,[3] or agent or Employee of the Commission, any gift or gratuity whatso-

[3] Change of names. See section 81 of this title.

ever with an intent to influence any such officer or person in his acts or conduct with respect to (a) enforcing any order, rule or regulation of the Commission made under this Act,[1] or (b) the discharge of any duty by any such officer or person imposed upon him by the provisions of this Act, or by any order, rule, or regulation of the Commission issued and promulgated under the provisions of this Act, shall be punished by imprisonment in the State penitentiary not exceeding five (5) years, and by fine not exceeding Five Thousand Dollars ($5,000). Laws 1933, ch. 131, p. 296, par. 34.

"Par. 118. Bribery—Accepting bribe—Punishment—Any Member of the Commission, Proration Umpire,[1] assistant,[2] deputy,[2] agent or employee of the Proration Umpire, Proration Attorney,[2] or any agent or employee of the Commission who asks, receives or agrees to receive any gift or gratuity upon any agreement or understanding that his acts or conduct with respect to (a) enforcing any provision of this Act[3] or of any order, rule, or regulation of the Commission made under or in pursuant of this Act, or (b) the discharge of any duty by any such officer or person imposed upon him by the provisions of this Act, or by any order, rule, or regulation of the Commission issued and promulgated under the provisions of this Act, shall be influenced thereby shall be punishable by imprisonment in the penitentiary not exceeding ten (10) years, and by fine not exceeding Ten Thousand Dollars ($10,000). Laws 1933, ch. 131, p. 296, par. 35.

"Par. 119. Bribery—State's evidence—Immunity.—In all cases involving the offering, promising, giving or receiving any gift, or gratuity, made criminal by Sections 34 and 35 of this Act,[4] and in all cases for conspiracy under Section 32 of this Act,[4] the party to such crime or crimes who shall first furnish information in relation thereto as against the other party or parties thereto, and in any prosecution therefor shall testify to the same truthfully and fully,

shall not thereafter be criminally liable therefor, but in such cases no conviction shall be had on the uncorroborated testimony of one such witness. Laws 1933, ch. 131, p. 297, par. 36.

"Par. 120. Powers—Grant of not to restrict general powers.—Any grant of specific power or powers, and any imposition of any specific duty or duties upon the Commission by the provisions of this Act[1] shall not be construed to restrict or limit the general powers granted and the general duties imposed upon the Comimssion with respect to the enforcement of the provisions of this Act. Laws 1933, ch. 131, p. 297, par. 37.

"Par. 121. Conservation Officer—Bond—Salary—Tenure—Duties.—There is hereby created the office of Conservation Officer, which shall be filled as hereinafter provided. Said Conservation Officer shall, before he enters upon the duties of his office, take and subscribe to the Constitutional Oath of office prescribed for State officials, and shall give a bond to the State of Oklahoma in the sum of ten thousand dollars ($10,000.00) with surety to be approved by the Commission conditioned that he will honestly and faithfully perform his duties, and that he will pay to the State, in the manner prescribed by law, all money which comes into his hand by virtue of such office. The tenure of his office shall be at the pleasure of the Commission. The Conservation Officer shall receive a salary to be fixed by the Commission not to exceed the sum of four thousand eight hundred dollars ($4,800.00) per annum, payable monthly, and shall possess such powers and authority, and be charged with such duties as provided in this Act, and in addition thereto he shall investigate all charges and complaints of violations of this Act, and any orders, rules and regulations of the Commission, and report all such violations to the Commission and to the Conservation Attorney, and he shall file charges and complaints with the Commission, or other proper tribunal or court, of all such violations. He shall obey and enforce

all orders of the Commission. Laws 1933, ch. 131, p. 297, par. 38; Laws 1941, p. 215, par 1.

"Par. 122. Repealed. Laws 1941, p. 217, par. 5.

"Par. 123. Conservation Officer—Assistant Conservation Officer—Qualifications.—Be it provided, however, that the Proration Umpire [1] and Assistant Proration Umpire,[2] created under this act [3] shall have had at least seven (7) years practical experience in the production of oil. Laws 1933, ch. 131, p. 298, par. 39a.

"Par. 124. Conservation Attorney—Tenure—Salary—Duties.—There is hereby created the office of Conservation Attorney, which office shall be filled as hereinafter provided. The Conservation Attorney shall receive a salary to be fixed by the Commission not exceeding the sum of four thousand eight hundred dollars ($4,800.00) per annum, payable monthly. Said attorney shall, before he enters upon the duties of his office, take and subscribe to the Constitutional Oath of office prescribed for State officials. The tenure of his office shall be at the pleasure of the Commission. The Conservation Attorney shall be the legal advisor to the Commission, Conservation Officer and deputies in all matters arising under this Act. He shall appear for the State, the Conservation Officer and deputies, in all proceedings under this Act before the Commission, shall file and prosecute charges and complaints of violations of this Act, and of any orders, rules and regulations of the Commission made hereunder, shall file and prosecute contempt proceedings, and proceedings as for contempt arising hereunder, and shall appear for the State, the Conservation Officer and deputies, and prosecute or defend in their behalf all actions and proceedings in the Courts of the United States and in all courts of this State arising out of the enforcement of this Act, or any orders, rules, or regulations of the Commission made hereunder; provided, however, that as to any proceeding authorized by this Act which shall be commenced and prosecuted by any

3 Sections 84-135 of this title.

producer or taker of oil, or other person, the Conservation Attorney shall be permitted to assist in such proceeding, but shall conduct the same only upon the request of the person instituting the same; and provided further, that as to any criminal action, in the district or county courts of this State, arising out of the enforcement of this Act or any orders, rules, or regulations of the Commission, the Conservation Attorney shall not supersede but shall assist the County Attorney in the prosecution thereof; and provided further, that any producer or taker of oil, or other interested person, shall be permitted to assist, through counsel, in any action or proceeding arising out of the enforcement of this Act, or any orders, rules or regulations made by the Commission hereunder.

"In addition to his other duties, the Conservation Attorney shall be the legal adviser to the State Fuel Inspector, and shall appear for the State and said State Fuel Inspector in all proceedings before the Commission, and when requested, by the State Fuel Inspector, or the Commission, so to do, shall appear in any court in this State, and shall prosecute and defend all actions and proceedings in connection with the enforcement of the laws of the State of Oklahoma and the rules of the Commission relating to the inspection of petroleum products as set forth in Article 6, of Chapter 59, Oklahoma Statutes 1931, and the Acts amendatory thereof.[1] Laws 1933, ch. 131, p. 298, par. 40; Laws 1941, p. 216, par. 2.

"Par. 125. Appointments—Made by Commission.—The Proration Empire,[2] Assistant Proration Umpire,[2] and Proration Attorney,[3] shall be appointed by the Commission. Laws 1933, ch. 131, page 299, par. 40-A.

"Par. 126. Deputies—Appointment—Powers—Salaries. —The Commission may, at any time when it finds that the public interests will be subserved thereby, appoint not more than twenty-one (21) deputies, to be known as deputy conservation officers, who shall have and exercise all the powers granted to them in this Act, and who shall be

[3] Changed to Assistant Conservation Officer. See section 81 of title.

charged with the performance of all the duties assigned to them by the Conservation Officer, and shall, when so ordered by the Commission, enforce any order, rule, or regulation, or serve any writ or process issued by the Commission; and the number shall be increased or decreased as the Commission shall order; provided, however, that not more than twenty-one (21) deputies shall at any time be appointed and act as such; and one of said deputies shall be a petroleum engineer, who in addition to his educational qualifications shall have had at least five years' experience in production of oil, and whose salary shall not exceed three thousand dollars ($3,000.00) per annum, payable monthly. When so appointed the salaries of not to exceed ten of said deputies shall be fixed by the Commission at not to exceed two thousand four hundred dollars ($2,400.00) per annum, payable monthly, and the salaries of the other ten deputies shall be fixed by the Commission at not to exceed one thousand eight hundred dollars ($1,800.00) per annum, payable monthly; provided that, not less than three fourths of the deputy conservation officers shall have had at lease five years' practical experience in the production of oil; and provided further, that the traveling expenses of said deputy conservation officers shall not exceed seventy-five dollars ($75.00) each in any month. Laws 1933, ch. 131, p. 299, par. 41; Laws 1941, p. 216, par. 3.

"Par. 127. Stenographic and clerical help—The Commission may employ such stenographic and clerical help as may be required, not exceeding nine (9) stenographers and clerks, one of whom may be designated "Chief Clerk" and one of whom may be a reporter. The salaries of said employees shall be fixed by the Commission, but the salary of the Chief Clerk shall not exceed two thousand seven hundred dollars ($2,700.00) per annum, payable monthly, and the salary of the reporter shall not exceed two thousand one hundred dollars ($2,100.00) per annum, payable monthly, and the salary of each other stenographer and clerk shall not exceed one thousand five hundred dollars ($1,-

500.00) per annum, payable monthly. Laws 1933, ch. 131, p. 299, par. 42; Laws 1941, p. 217, par. 4.

"Par. 128. Conservation Officer and assistants—Powers —Expenses.—The Proration Umpire,[1] his assistant[1] and deputies,[1] shall each possess all of the powers and authorities of a peace officer, with the right to bear firearms, and they and the Proration Attorney[2] shall be allowed and paid out of the Proration fund[3] their actual and necessary expenses while absent from their official headquarters on official duties, and all necessary office supplies and expense, including stationery, telephone and telegraph, postage and printing. Laws 1933, ch. 131, p. 299, par. 43.

"Par. 129 Repealed. Laws 1941, p. 217, par. 5.

"Par. 130. Vacancies—How filled.—Except as otherwise provided in this Act,[4] all vacancies in any office or in any employment, provided or authorized under the provisions of this Act, may be filled by the same officer or officers and in the same manner and for the same term as is provided for the original appointment of such officers or employment. Laws 1933, ch. 131, p. 300, par. 44a.

"Par. 131. Inspector for commission—Power and duties.—The Commission shall have the right from time to time to designate one or more of its agents or employees to act as inspector for the Commission, who shall serve as such inspector during its pleasure, without additional compensation for such services, and who shall have the right, at all times, to go upon and inspect oil and gas properties from which oil or gas is being produced, oil and gas pipe line facilities, oil and gas pump station properties and refineries, for the purpose of ascertaining whether the provisions of this Act,[5] and the orders, rules, regulations and judgments of the Commission, made in pursuance of the provisions of this Act, are being complied with, and shall report to the Commission any violations thereof. Such inspectors, when so appointed and acting, shall each possess

[5] Sections 84-135 of this title.

all of the powers and authority of a peace officer and shall have the right to bear firearms. Laws 1933, ch. 131, p. 300, par. 45.

"Par. 132. State Board of Public Affairs—Rooms and supplies.—The State Board of Affairs shall provide such rooms, furniture and supplies as shall be necessary for the use of the Proration Umpire,[1] his assistant,[1] and deputies,[1] and the Proration Attorney,[1] in carrying out their duties as prescribed by this Act.[2] Provided, that no expense incurred in carrying out the provisions of this section or any part of this Act, shall be paid out of the General Revenue Fund of the State of Oklahoma. Laws 1933, ch. 131, p. 300, par. 46.

"Par. 133. Conservation fund—Items paid therefrom.—There is hereby created in the State Treasury a fund to be known as the "Proration Fund"[3] which shall consist of all moneys that may be payable to said fund by law, and there shall be paid therefrom all salaries and expenses of the Proration Umpire,[2] his assistant,[4] deputies[4] and employees, and the Proration Attorney,[4] and the salaries of reporters, stenographers and clerks authorized by this Act[3] to be employed, and such other items as are or shall be authorized by law to be paid therefrom in connection with the enforcement of the provisions of this Act. Laws 1933, ch. 131, p. 300, par. 47.

"Par. 134. Partial invalidity—Effect.—If any section, paragraph, sentence or phrase of this Act[5] shall be declared unconstitutional, or void for any other reason by any Court of final jurisdiction, such fact shall not in any manner invalidate or affect any other section, paragraph, sentence or phrase of this Act, but the same shall continue in full force and effect. Laws 1933, ch. 131, p. 301, par. 48.

"Par. 135. Pending actions not terminated.—The enactment of this Act[5] shall not terminate any proceeding or proceedings now pending before the Commission, includ-

from the Conservation Fund. As amended Laws 1943, p. 127, Par. 3; Laws 1945, p. 161, Par. 2; Laws 1947, p. 333, Par. 8.

"Par. 127.1. *Traveling and subsistence expenses.*—Each of the fourteen (14) deputy conservation officers provided for in this Act[1] shall be entitled to receive five (5) cents per mile traveling expense when traveling in his privately owned automobile on official business of the Conservation Department, or any necessary traveling expense when not using his automobile. He shall be entitled to subsistence expense at not to exceed Five Dollars ($5.00) per day within the State of Oklahoma. Each deputy conservation officer shall keep an accurate record by meter of the miles traveled by automobile, and an accurate and complete statement of all traveling, subsistence, and other expense, which shall be itemized, sworn to by claimant, and with proper receipts attached thereto, and when approved by the Conservation Officer and Corporation Commission the same shall be payable from the Conservation Fund. The limitation on subsistence for the Conservation Officer, the Conservation Attorney, the four oil or gas engineers or petroleum geologists and the Chief Clerk shall be not to exceed Seven Dollars and Fifty Cents ($7.50) per day while traveling in the State of Oklahoma. When traveling outside the State such officers and employees shall receive and be reimbursed for their actual and necessary expenses to be evideneed by receipts for the money actually expended. All necessary traveling, subsistence, and other neeessary expenses of any employee of the Conservation Department shall be paid from the Conservation Fund, and the General Fund of this State shall not be liable for the salary or expense of any employee of the Conservation Department. Laws 1943, P. 127; Par. 4, as amended Laws 1945, p. 162, Par. 3.

"Par. 127.2. *Trial examiner.*—There is hereby created the Office of Trial Examiner, which office shall be filled by the Corporation Commission. The Trial Examiner shall receive a salary to be fixed by the Commission, not exceed-

ing the sum of Five Thousand Dollars ($5,000.00) per annum, payable monthly. The tenure of his office shall be at the pleasure of the Commission and he shall hear all causes referred to him by the Commission for hearing, and then shall file with the Commission his report of the proceedings had and his recommendation as to the disposition of the proceedings. The Corporation Commission is hereby authorized to refer any and all cases as it sees fit to said Trial Examiner, or any other person employed by the Commission, for hearing. The salary of the Trial Examiner shall be paid from the Conservation Fund. Laws 1947, p. 334, Par. 9.

APPENDIX "J"

SENATE BILL NO. 203 OF THE OKLAHOMA LEGISLATURE OF 1951

SECRETARY OF STATE, ITEM NO. 215

An Act

Enrolled Senate Bill No. 203

By: GARVIN and MAHAN Of the Senate and BULLARD and MILLER Of the House

AN ACT AUTHORIZING AND RELATING TO THE UNITIZED MANAGEMENT, OPERATION AND DEVELOPMENT, IN WHOLE OR IN PART, OF COMMON SOURCES OF SUPPLY OF OIL, OIL AND GAS, OR GAS DISTILLATE IN THIS STATE; DEFINING COMMON SOURCE TO WHICH ACT IS APPLICABLE; CONFERRING AUTHORITY UPON AND DEFINING THE DUTIES OF THE CORPORATION COMMISSION IN REGARD THERETO; AUTHORIZING THE ORGANIZATION OF UNITS AND PRESCRIBING THE PROCEDURE THEREFOR, INCLUDING THE RIGHT AND METHOD OF APPEAL FROM ORDERS OF THE CORPORATION COMMISSION, TO THE SUPREME COURT FOR EQUITABLE RELIEF; DEFINING THE PURPOSES, NATURE, FUNCTIONS AND POWERS OF SUCH UNITS; AUTHORIZING THE INCLUSION OF PUBLIC LANDS WITHIN THE UNIT AREA OF A UNIT; LIMITING THE EFFECT OF ANTI-TRUST LAWS; MAKING OPERATIONS WITHIN A UNIT AREA BY PERSONS OTHER THAN UNIT UNLAWFUL; REPEALING TIT. 52, CHAP. 3b, SECTIONS 1-17, INCLUSIVE, SESSION LAWS 1945; AND DECLARING AN EMERGENCY.

Be it Enacted by the People of the State of Oklahoma:

Section 1. The Legislature finds and determines that it is desirable and necessary, under the circumstances and for the purposes hereinafter set out, to authorize and provide for unitized management, operation and further development of the oil and gas properties to which this Act is applicable, to the end that a greater ultimate re-

covery of oil and gas may be had therefrom, waste prevented, and the correlative rights of the owners in a fuller and more beneficial enjoyment of the oil and gas rights, protected.

Section 2. Subject to the limitations of this Act the Corporation Commission of the State of Oklahoma, hereinafter referred to as the "Commission", is hereby vested with jurisdiction, power and authority, and it shall be its duty to make and enforce such orders and do such things as may be necessary or proper to carry out and effectuate the purposes of this Act.

Section 3. If upon the filing of a petition therefor and after notice and hearing, all in the form and manner and in accordance with the procedure and requirements hereinafter provided, the Commission shall find (a) that the unitized management, operation and further development of a common source of supply of oil and gas or portion thereof is reasonably necessary in order to effectively carry on pressure-maintenance or repressuring operations, cycling operations, water flooding operations, or any combination thereof, or any other form of joint effort calculated to substantially increase the ultimate recovery of oil and gas from the common source of supply; and (b) that one or more of said unitized methods of operation as applied to such common source of supply or portion thereof are feasible, will prevent waste and will with reasonable probability result in the increased recovery of substantially more oil and gas from the common source of supply than would otherwise be recovered; and (c) that the estimated additional cost, if any, of conducting such operations will not exceed the value of the additional oil and gas so recovered; and (d) that such unitization and adoption of one or more of such unitized methods of operation is for the common good and will result in the general advantage of the owners of the oil and gas rights within the common source of supply or portion thereof directly affected, it shall make a finding to that effect and make an order creating the unit and providing for the unitization and unitized operation of the common source of sup-

ply or portion thereof described in the order all upon such terms and conditions, as may be shown by the evidence to be fair, reasonable, equitable and which are necessary or proper to protect, safeguard, and adjust the respective rights and obligations of the several persons affected, including royalty owners, owners of overriding royalties, oil and gas payments, carried interests, mortgagees, lien claimants and others, as well as the lessees. The petition shall set forth a description of the proposed unit area with a map or plat thereof attached, must allege the existence of the facts required to be found by the Commission as hereinabove provided and shall have attached thereto a recommended plan of unitization applicable to such proposed unit area and which the petitioner or petitioners consider to be fair, reasonable and equitable.

Section 4. The order of the Commission shall define the area of the common source of supply or portion thereof to be included within the unit area and prescribe with reasonable detail the plan of unitization applicable thereto.

Each unit and unit area shall be limited to all or a portion of a single common source of supply. Only so much of a common source of supply as has been defined and determined to be productive of oil and gas by actual drilling operations may be so included within the unit area.

A unit may be created to embrace less than the whole of a common source of supply only where it is shown by the evidence that the area to be so included within the unit area is of such size and shape as may be reasonably required for the successful and efficient conduct of the unitized method or methods of operation for which the unit is created, and that the conduct thereof will have no material adverse effect upon the remainder of such common source of supply.

The plan of unitization for each such unit and unit area shall be one suited to the needs and requirements of the particular unit dependent upon the facts and conditions found to exist with respect thereto. In addition to such other terms, provisions, conditions and requirements found by the Commission to be reasonably necessary or proper

to effectuate or accomplish the purpose of this Act, and subject to the further requirements hereof, each such plan of unitization shall contain fair, reasonable and equitable provisions for:

(a) The efficient unitized management or control of the further development and operation of the unit area for the recovery of oil and gas from the common source of supply affected. Under such a plan the actual operations within the unit area may be carried on in whole or in part by the unit itself, or by one or more of the lessees within the unit area as unit operator subject to the supervision and direction of the unit, dependent upon what is most beneficial or expedient. The designation of the unit operator shall be by vote of the lessees in the unit in a manner provided in the plan of unitization and not by the Commission.

(b) The division of interest or formula for the apportionment and allocation of the unit production, among and to the several separately-owned tracts within the unit area such as will reasonably permit persons otherwise entitled to share in or benefit by the production from such separately-owned tracts to produce or receive, in lieu thereof, their fair, equitable and reasonable share of the unit production or other benefits thereof. A separately-owned tract's fair, equitable and reasonable share of the unit production shall be measured by the value of each such tract for oil and gas purposes and its contributing value to the unit in relation to like values of other tracts in the unit, taking into account acreage, the quantity of oil and gas recoverable therefrom, location on structure, its probable productivity of oil and gas in the absence of unit operations, the burden of operation to which the tract will or is likely to be subjected, or so many of said factors, or such other pertinent engineering, geological, or operating factors, as may be reasonably susceptible of determination. Unit production as that term is used in this Act shall mean and include all oil and gas produced from a unit area from and after the effective date of the order of the Commission creating the unit regardless of the well

or tract within the unit area from which the same is produced.

(e) The manner in which the unit and the further development and operation of the unit area shall or may be financed and the basis, terms and conditions on which the cost and expense thereof shall be apportioned among and assessed against the tracts and interests made chargeable therewith, including a detailed accounting procedure governing all charges and credits incident to such operations. Upon and subject to such terms and conditions as to time and rate of interest as may be fair to all concerned, reasonable provision shall be made in the plan of unitization for carrying or otherwise financing lessees who are unable to promptly meet their financial obligations in connection with the unit.

(d) The procedure and basis upon which wells, equipment and other properties of the several lessees within the unit area are to be taken over and used for unit operations, including the method of arriving at the compensation thereof, or of otherwise proportionately equalizing or adjusting the investment of the several lessees in the project as of the effective date of unit operation.

(e) The creation of an operating committee to have general over-all management and control of the unit and the conduct of its business and affairs and the operations carried on by it, together with the creation or designation of such other subcommittees, boards or officers to function under authority of the operating committee as may be necessary, proper or convenient in the efficient management of the unit, defining the powers and duties of all such committees, boards or officers and prescribing their tenure and time and method of their selection.

(f) The time when the plan of unitization shall become and be effective.

(g) The time when and conditions under which and the method by which the unit shall or may be dissolved and its affairs wound up.

Section 5. No order of the Commission creating a unit and prescribing the plan of unitization applicable thereto

shall become effective unless and until the plan of unitization has been signed, or in writing ratified or approved by lessees of record of not less than sixty three per cent (63%) of the unit area affected thereby and by owners of record of not less than sixty three per cent (63%) (exclusive of royalty interests owned by lessees or by subsidiaries of any lessee) of the normal one-eighth (⅛) royalty interest in and to the unit area, and the Commission has made a finding either in the order creating the unit or in a supplemental order that the plan of unitization has been so signed, ratified or approved by lessees and royalty owners owning the required percentage interest in and to the unit area. Where the plan of unitization has not been so signed, ratified or approved by lessees and royalty owners owning the required percentage interest in and to the unit area at the time the order creating the unit is made, the Commission shall, upon petition and notice, hold such additional and supplemental hearings as may be requested or required to determine if and when the plan of unitization has been so signed, ratified or approved by lessees and royalty owners owning the required percentage interest in and to the unit area and shall, in respect to such hearings, make and enter a finding of its determination in such regard. In the event lessees and royalty owners, or either, owning the required percentage interest in and to the unit area have not so signed, ratified or approved the plan of unitization within a period of six (6) months from and after the date on which the order creating the unit is made, the order creating the unit shall cease to be of further force and effect and shall be revoked by the Commission.

Section 6. Except as otherwise herein expressly provided, all proceedings had under this Act including the filing of petitions, the giving of notices, the conduct of hearings and other action taken by the Commission shall be in the form and manner and in accordance with the procedure and procedural requirements provided in Sections 84 to 135, inclusive, Title 52, Oklahoma Statutes, 1941, or any amendment thereof with reference to proceedings

thereunder. Such additional notice shall be given as may be required by the Commission. The Conservation Officer, his assistant and deputies and the Conservation Attorney shall act without additional compensation as technical advisors to the Commission to the extent that the Commission may require. Any person aggrieved by any order of the Commission made pursuant to this Act may appeal therefrom to the Supreme Court of the State of Oklahoma upon the same conditions, within the same time and in the same manner as is provided in said Sections 84 to 135, inclusive, Title 52, Oklahoma Statutes, 1941, or any amendments thereof, for the taking of appeals from the orders of the Commission made thereunder.

Section 7. From and after the effective date of an order of the Commission creating a unit and prescribing the plan of unitization applicable thereto, the operation of any well producing from the common source of supply or portion thereof within the unit area defined in the order by persons other than the unit or persons acting under its authority or except in the manner and to the extent provided in such plan of unitization shall be unlawful and is hereby prohibited.

Section 8. Each unit created under the provisions of this Act shall be a body politic and corporate, capable of suing, being sued and contracting as such in its own name. Each such unit shall be authorized on behalf and for the account of all the owners of the oil and gas rights within the unit area, without profit to the unit, to supervise, manage and conduct the further development and operations for the production of oil and gas from the unit area, pursuant to the powers conferred, and subject to the limitations imposed by the provisions of this Act and by the plan of unitization.

The obligation or liability of the lessee or other owners of the oil and gas rights in the several separately-owned tracts for the payment of unit expense shall at all times be several and not joint or collective and in no event shall a lessee or other owner of the oil and gas rights in the separately-owned tract be chargeable with, obligated or

liable, directly or indirectly, for more than the amount apportioned, assessed or otherwise charged to his interest in such separately-owned tract pursuant to the plan of unitization and then only to the extent of the lien provided for in this Act.

Subject to such reasonable limitations as may be set out in the plan of unitization, the unit shall have a first and prior lien upon the leasehold estate and other oil and gas rights (exclusive of a one-eighth (⅛) royalty interest) in and to each separately-owned tract, the interest of the owners thereof in and to the unit production and all equipment in the possession of the unit, to secure the payment of the amount of the unit expense charged to and assessed against such separately-owned tract. The interest of the lessee or other persons who by lease, contract or otherwise are obligated or responsible for the cost and expense of developing and operating a separately-owned tract for oil and gas in the absence of unitization, shall however, be primarily responsible for and charged with any assessment for unit expense made against such tract and resort may be had to overriding royalties, oil and gas payments, royalty interests in excess of one-eighth (⅛) of the production, or other interests which otherwise are not chargeable with such cost, only in the event the owner of the interest primarily responsible fails to pay such assessment or the production to the credit thereof is insufficient for that purpose. In the event the owner of any royalty interest, overriding royalty, oil and gas payment or other interest which under the plan of unitization is not primarily responsible therefor pays in whole or in part the amount of an assessment for unit expense for the purpose of protecting such interest, or the amount of the assessment in whole or in part is deducted from the unit production to the credit of such interest, the owner thereof shall to the extent of such payment or deduction be subrogated to all of the rights of the unit with respect to the interest or interests primarily responsible for such assessment. A one-eighth (⅛) part of the unit production allocated to each separately-owned tract shall in all events be regarded

as royalty to be distributed to and among, or the proceeds thereof paid to, the royalty owners free and clear of all unit expense and free of any lien therefor.

Section 9. Property rights, leases, contracts, and all other rights and obligations shall be regarded as amended and modified to the extent necessary to conform to the provisions and requirements of this Act and to any valid and applicable plan of unitization or order of the Commission made and adopted pursuant hereto, but otherwise to remain in full force and effect.

Nothing contained in this Act shall be construed to require a transfer to or vesting in the unit of title to the separately-owned tracts or leases thereon within the unit area, other than the right to use and operate the same to the extent set out in the plan of unitization; nor shall the unit be regarded as owning the unit production. The unit production and the proceeds from the sale thereof shall be owned by the several persons to whom the same is allocated under the plan of unitization. All property, whether real or personal, which the unit may in any way acquire, hold or possess shall not be acquired, held or possessed by the unit for its own account but shall be so acquired, held and possessed by the unit for the account and as agent of the several lessees and shall be the property of such lessees as their interests may appear under the plan of unitization, subject, however, to the right of the unit to the possession, management, use or disposal of the same in the proper conduct of its affairs, and subject to any lien the unit may have thereon to secure the payment of unit expense.

The amount of the unit production allocated to each separately-owned tract within the unit, and only that amount, regardless of the well or wells in the unit area from which it may be produced, and regardless of whether it be more or less than the amount of the production from the well or wells, if any, on any such separately-owned tract, shall for all intents, uses and purposes be regarded and considered as production from such separately-owned tract, and, except as may be otherwise authorized in this

Act, or in the plan of unitization approved by the Commission, shall be distributed among or the proceeds thereof paid to the several persons entitled to share in the production from such separately-owned tract in the same manner, in the same proportions, and upon the same conditions that they would have participated and shared in the production or proceeds thereof from such separately owned tract had not said unit been organized, and with the same legal force and effect. If adequate provisions are made for the receipt thereof, the share of the unit production allocated to each separately-owned tract shall be delivered in kind to the persons entitled thereto by virtue of ownership of oil and gas rights therein or by purchase from such owners, subject to the rights of the unit to withhold and sell the same in payment of unit expense pursuant to the plan of unitization, and subject further to the call of the unit on such portions of the gas for operating purposes as may be provided in the plan of unitization.

Operations carried on under and in accordance with the plan of unitization shall be regarded and considered as a fulfilment of and compliance with all of the provisions, covenants, and conditions, express or implied, of the several oil and gas mining leases upon lands included within the unit area, or other contracts pertaining to the development thereof, insofar as said leases or other contracts may relate to the common source of supply or portion thereof included in the unit area. Wells drilled or operated on any part of the unit area no matter where located shall for all purposes be regarded as wells drilled on each separately-owned tract within such unit area.

Nothing herein or in any plan of unitization shall be construed as increasing or decreasing the implied covenants of a lease in respect to a common source of supply or lands not included within the unit area of a unit.

Section 10. The unit area of a unit may be enlarged to include adjoining portions of the same common source of supply, including the unit area of another unit, and a new unit created for the unitized management, operation and further development of such enlarged unit area, or the

plan of unitization may be otherwise amended, all in the same manner, upon the same conditions and subject to the same limitations as herein provided with respect to the creation of a unit in the first instance, except, that where an amendment to plan of unitization relates only to the rights and obligations as between lessees the requirement that the same be signed ratified or approved by royalty owners of record of not less than sixty three per cent (63%) of the unit area shall have no application.

Section 11. The Commissioners of the Land Office, or other proper board or officer of the State having the control and management of State land, and the proper board or officer of any political, municipal, or other subdivision or agency of the State, are hereby authorized and shall have the power on behalf of the State or of such political, municipal, or other subdivision or agency thereof, with respect to land or oil and gas rights subject to the control and management of such respective body, board, or officer, to consent to or participate in any plan or program of unitization adopted pursuant to this Act.

Section 12. Neither the unit production or proceeds from the sale thereof, nor other receipts shall be treated, regarded, or taxed as income or profits of the unit; but instead, all such receipts shall be the income of the several persons to whom or to whose credit the same are payable under the plan of unitization. To the extent the unit may receive or disburse said receipts it shall only do so as a common administrative agent of the persons to whom the same are payable.

Section 13. For the purposes of this Act, unless the context otherwise requires:

(a) The term "lessee" refers not only to lessees under oil and gas leases but also to the owners of unleased lands or mineral rights having the right to develop the same for oil and gas.

(b) Any reference to a separately-owned tract, although in general terms broad enough to include the surface and all underlying common sources of supply of oil and gas shall have reference thereto only in relation to the common

source of supply or portion thereof embraced within the unit area of a particular unit.

(c) The phrase "oil and gas" shall refer not only to oil and gas as such in combination one with the other, but shall have general reference to oil, gas, casinghead gas, casinghead gasoline, gas-distillate, or other hydrocarbons, or any combination or combinations thereof, which may be found in or produced from a common source of supply of oil, oil and gas or gas-distillate.

(d) The term "person" shall mean and include any individual, corporation, partnership, common law or statutory trust, association of any kind, the State of Oklahoma or any subdivision or agency thereof acting in a proprietary capacity, guardian, executor, administrator, fiduciary of any kind, or any other entity or being capable of owning an interest in and to a common source of supply of oil and gas.

(e) The term "unit expense" shall include and mean any and all cost, expense, or indebtedness incurred by the unit in the establishment of its organization, or incurred in the conduct and management of its affairs or the operations carried on by it.

Section 14. The provisions of this Act are declared to be severable, and, if any section, sentence, clause or part thereof be held invalid or unconstitutional for any reason, such invalidity or unconstitutionality shall not be construed to affect the validity of the remaining provisions of this Act.

Section 15. No agreement between or among lessees or other owners of oil and gas rights in oil and gas properties, entered into pursuant hereto or with a view or for the purpose of bringing about the unitized development or operation of such properties, shall be held to violate any of the statutes of this State prohibiting monopolies or acts, arrangements, agreements, contracts, combinations or conspiracies in restraint of trade or commerce.

Section 16. Title 52, Chap. 3b §§ 1-17 inclusive, Session Laws of Oklahoma, 1945, are hereby repealed.

Section 17. It being immediately necessary for the preser-

vation of the public peace, health and safety, an emergency is hereby declared to exist, by reason whereof this Act shall take effect and be in full force from and after its passage and approval.

IN THE MATTER OF THE PETITION FOR THE CREATION OF THE WEST CEMENT MEDRANO UNIT HAVING FOR ITS PURPOSE THE UNITIZED MANAGEMENT, OPERATION AND FURTHER DEVELOPMENT OF THE WEST CEMENT MEDRANO COMMON SOURCE OF SUPPLY OF OIL AND GAS IN CADDO COUNTY, OKLAHOMA, THE DEFINING OF THE UNIT AREA THEREOF AND THE PRESCRIBING OF THE PLAN OF UNITIZATION APPLICABLE TO SUCH UNIT AND UNIT AREA.

JURISDICTIONAL STATEMENT

(a)

Basis upon Which It Is Contended That the United States Supreme Court Has Jurisdiction

A final judgment and decision has been entered by the highest court in the State of Oklahoma unreasonably and

unnecessarily taking the property and impairing the contractual rights of the petitioners under 52 OSA Secs. 286.1 to 286.17, known as the Unitization Act. That the said Act authorizes such taking of the property and impairment of the contractual rights of the petitioners in a manner which

1. Denies the petitioners the equal protection of the laws and unnecessarily and unreasonably discriminates against them;

2. And unnecessarily and unreasonably takes their property and impairs their contractual rights without due process of law or just compensation;

all in violation of Sec. 10, Art. I of or the Fifth Amendment to, or the Fourteenth Amendment to the United States Constitution.

(b)

Statutory Provisions Believed to Sustain Jurisdiction

The statutory provisions believed to sustain the appellate jurisdiction are Title 28 USCA Sec. 1257:

"State courts; appeal; certiorari

Final judgments or decrees rendered by the highest court of a State in which a decision could be had, may be reviewed by the Supreme Court as follows:

(1) By appeal, where is drawn in question the validity of a treaty or statute of the United States and the decision is against its validity.

(2) By appeal, where is drawn in question the validity of a statute of any state on the ground of its being repugnant to the Constitution, treaties or laws of the United States, and the decision is in favor of its validity.

(3) By writ of certiorari, where the validity of a treaty or statute of the United States is drawn in question or where the validity of a State statute is drawn in

question on the ground of its being repugnant to the Constitution, treaties or laws of the United States, or where any title, right, privilege or immunity is specially set up or claimed under the Constitution, treaties or statutes of, or commission held or authority exercised under, the United States. June 25, 1948, c. 646, 62 Stat. 929."

and 28 USCA 2101(c):

"Any other appeal or any writ of certiorari intended to bring any judgment or decree in a civil action, suit or proceeding before the Supreme Court for review shall be taken or applied for within ninety days after the entry of such judgment or decree. A justice of the Supreme Court, for good cause shown, may extend the time for applying for a writ of certiorari for a period not exceeding sixty days."

The following decisions also sustain the appellate jurisdiction:

Champlin Refining Co. v. *Corporation Commission*, 286 U. S. 210; 76 L. Ed. 1062;

Thompson v. *Consolidated Gas Utilities*, 300 U. S. 55, 81 L. Ed. 510;

Hunter Co. v. *McHugh*, 320 U. S. 222, 88 L. Ed. 5.

(c)

The State Statute and Order of the Corporation Commission of the State of Oklahoma Issued Thereunder, the Validity of Which Is Involved.

The statute of the State of Oklahoma, the validity of which is involved, is hereto attached as Appendix "A" and made a part hereof.

The judgment and order of the Corporation Commission of the State of Oklahoma made pursuant to said statute,

the validity of which is involved, and the "Plan" therein approved, is hereto attached and made a part hereof and marked Appendix "B".[1]

(d)

Date of Decisions and Date of Petition for Appeal Therefrom

The date of the decree sought to be reviewed herein is May 22, 1951, and the date upon which the application for appeal is presented is July 30, 1951.

(e)

Nature of the Case and Rulings of the Court Bringing the Case Within the Jurisdictional Provisions Relied upon

The proceeding was brought before the Corporation Commission of the State of Oklahoma, on October 22, 1946, under authority of the Unitization Act of Oklahoma, by the defendants-in-error, the operator lessees of about 75% of the area of 3700 acres of land which they claimed overlaid the common source of supply of oil and gas known as the West Medrano Pool, Cement Field, Caddo County, Oklahoma. The West Medrano Pool was discovered in the month of October, 1936. At the time the proceeding was brought 37 oil wells and 19 gas wells had been drilled to depths ranging from 4500' to 6241' by the various separate lessee operators and were producing oil and gas in widely varying quantities. The lands are divided into a large number of farms of different size and shape and are owned in severalty by a large number of different owners, and the farms were leased for oil and gas purposes to various

[1] (CLERK'S NOTE.—These documents are printed as appendices to this statement as to jurisdiction in *Palmer Oil Corp.* v. *Amerada Petroleum Corp.*, No. 301, October Term, 1951.)

different lessees. The purpose of the proceeding was:

1. To cancel all the oil and gas leases covering the area claimed by the applicants to constitute an entire oil and gas common source of supply, and create in lieu thereof one oil and gas lease to remain in force as long as oil or gas is produced from any part thereof and providing for the payment of ⅛ royalty and dividing the same among the royalty owners.

2. To nullify all of the implied covenants of the leases without compensation.

3. To nullify all express provisions of the leases without compensation.

4. To authorize one operator to take title and possession of all property, wells and structures and operate the same.

5. To obtain approval of the Corporation Commission of Oklahoma, (which approval the Commission was, by the terms of the Unitization Act, bound and required to give.)

a. Of the division made by applicants of the oil and gas to be produced from the pool, and

b. Of the compensation fixed by the applicants for the wells, machinery and structures so taken all according to the "Plan" of division and compensation previously prepared by the applicants and filed with their petition.

The petitioners, who were the lessors of the land involved, with the exception of Tom Potter, who was a lessee, and Clyde Kahle, who was an over-riding royalty owner, and other interested persons appeared, answered and objected.

The Corporation Commission made the order as requested in the application and approved the "Plan" as the Unitization Act required it to do. Although the constitutional questions were raised before the Commission they were not passed upon. The petitioners appealed to the Supreme Court of the State of Oklahoma asking reversal

of the Order on the grounds that the Unitization Act and the Order are in violation of Sec. 10 Art. I of, or the Fifth Amendment, or the Fourteenth Amendment to the United States Constitution for the reason that they (1) unreasonably impair the petitioners' contracts, (2) unreasonably take petitioners' property for private or public use without compensation, (3) unreasonably give the defendants-in-error the right, but deny the petitioners the right to set the Unitization Act in operation, (4) unreasonably give the defendants-in-error the right, but deny the petitioners the right to file a "Plan" with the Corporation Commission dividing the oil and gas and providing for compensation for property taken by the defendants-in-error; which is also an unreasonable delegation of legislative and judicial power. That none of the four above named constitutional guaranties need be violated in order to effectively conserve oil and gas and operate a common source of supply of oil and gas as one unit. However, the Supreme Court of Oklahoma held that the Unitization Act and the Order of the Corporation Commission taking the petitioners' property and contractual rights in such manner was not violative to the Constitution of the United States, — Okla. —; 231 Pac. (2d) 997.

(f)

Grounds upon Which It Is Contended the Questions Involved Are Substantial

The impairment of the petitioners' contractual rights and taking their property without compensation is substantial in that

1. Under the implied covenants of their oil and gas leases, the lessor petitioners could compel the lessee to protect their land against drainage of oil or gas, to fully develop the premises for oil and gas, and to produce and market the

oil and gas therefrom. The Unitization Act and Order #20289 expunge these covenants. The rights were valuable because by their use the lessors could force the lessees to drill as many wells as would fully develop the lessors' oil and gas rights, thus insuring a diligent development and operational program and timely production of the oil and gas. The implied covenants are an onerous burden to the lessees because under the covenant, if the lessee does not diligently fully develop the lessor's property, his lease is subject to cancellation and therefore, if the lease is at all worth developing, he will drill as many wells as there are spacing units on his oil and gas lease, thereby laying out considerable money and investment. With the abrogation and expungement of the implied covenants, the lessee may develop the land as slowly as he chooses and by wider well spacing than is required under the statutes and orders of the Corporation Commission produce the oil and gas as slowly as he chooses, having no regard to the interest of the lessor, as he was, under the law of implied covenants, required to do. The leases on the lands involved were all made prior to the passage of the Unitization Act. Neither the Act nor the Order nor the "Plan" provide for any compensation to the lessor for the loss of these rights.

The leases are all similar in form, a copy of one of the leases is hereto attached, marked Appendix "E," and made a part hereof.[2]

2. Under the express terms of the oil and gas leases, the lessor petitioners are entitled to the free use of gas from the wells for light and heat on the premises. This right is a considerable inducement to the execution of the leases in the first instance and has a real substantial value to the land owners, not only in convenience, but also in money.

---

[2] (CLERK'S NOTE.—This lease is printed as an appendix to the statement as to jurisdiction in the case of *Palmer Oil Corp.* v. *Amerada Petroleum Corp.*, No. 301, October Term, 1951.)

If the lease, according to its terms, is extended beyond its primary term of years by the production of oil and gas from the premises, to a term as long as oil or gas is produced, then the lessor is assured of the full use of gas on the premises. Such a contingency necessitates the drilling of a well by the lessee. On the other hand, if such well is not drilled within the primary term of years of the lease, the lease expires and the lessor may lease it again. Under the Unitization Act and Order #20289 of the Corporation Commission, the lease is extended beyond the primary term of years without drilling a well as is required by the lease thereby relieving the lessee of the onerous burden of drilling a well and depriving the lessor of the use of free gas on the premises. Neither the Act nor the Order provides for compensation for the expungement of this right and the relief of the lessee's obligation.

3. Under the express terms of the lease, unless the lessee drills a well and produces oil or gas in paying quantities within the primary term of years of the lease, the lease expires. Under the Unitization Act and Order #20289 of the Corporation Commission, the lease is extended as long as oil or gas is produced from the common source of supply. No bonus or compensation is paid lessor for the extraction of this property right, although lease bonuses in proven fields such as the one under consideration have brought substantial sums of money and even sums of great magnitude.

4. Under the express terms of the lease, the same expires when oil or gas is no longer produced from the premises. Under the Unitization Act and Order #20289, the lease is extended as long as oil or gas is produced from the common source of supply. Again appears the extraction of a valuable right without compensation whatsoever. No provision is made in the Act, Order or "Plan" for compensation of

any kind to the lessor for his loss of the contractual rights hereinabove set forth in the preceding sub-paragraphs 1, 2, 3 and 4, all of which is to the enrichment of the defendants-in-error and none of which are essential to the unit operation of the Medrano Pool.

5. Under the express terms of the lease, the lessee is entitled to 1/8 of the oil and gas produced from his land or interest in the mineral estate. This contractual right is expunged by the Act and Order and there is substituted in lieu thereof 1/8 of whatever oil and gas is assigned by the defendants-in-error in their "Plan" to the owner of the oil and gas lease covering the land. The lessor is not given the same right which the lessee is given, i.e., to file a "Plan" fixing the fractional part of oil and gas produced from the entire common source of supply to which the lessor is entitled, nor is the Corporation Commission required by the Act to either approve or reject such a "Plan".

The denial of procedural due process of law and equal protection of the laws and equal laws to the petitions is substantial in that all of the property rights and contractual rights above set forth in sub-paragraphs 1, 2, 3, 4 and 5 are unreasonably and unnecessarily taken without due process of law and without equal protection of the law to the petitioner and in addition thereto the well, machinery, installations and structures of one of the minority lessees of the value of $80,000 per well are taken without adequate compensation and at the same time discriminating against the minority lessee. The said minority lessee is allowed $18,000 for his well, machinery, installations and structures, whereas all other lessees were allowed $80,000 for similar wells. The minority lessee was not permitted by the Unitization Act to file with the Corporation Commission a "Plan" setting out the value of his well, which "Plan" the Commission must allow or reject. The majority lessees are

actually and in practice permitted to fix the compensation which is a delegation of legislative or judicial power.

(g)

Stage of Proceedings and Manner in Which Federal Questions Were Raised

The petitioners first raised the Federal Questions by filing Answers to the application of the defendants-in-error before the Corporation Commission of the State of Oklahoma on May 21, 1947, leave having been first granted to file such answers. The same Federal Questions were again raised on Motion for Judgment before the Corporation Commission and in the Motion for New Trial filed before the Corporation Commission. The questions were again raised in their Petition in Error filed in the Supreme Court of the State of Oklahoma appealing from the judgment of the Corporation Commission and in their Briefs filed in the Supreme Court of Oklahoma and in Oral Argument before the Supreme Court of Oklahoma, and again in the Petition for Rehearing filed before the Supreme Court of the State of Oklahoma after the decision of said court was first made.

(h)

Manner in Which the Questions Involved Were Passed upon by the Court

The Corporation Commission of the State of Oklahoma did not pass upon the Federal questions raised as hereinabove set forth in Paragraph (g) as appears from Order #20289.

The Supreme Court of the State of Oklahoma by opinion and decision of March 20, 1951, held that the Unitization Act and Order #20289 did not violate Sec. 10 Art. I of, or the 5th, or 14th Amendment to the United States Constitu-

tion, and by Order of May 22, 1951, denying Petition for Rehearing, and by order of the 5th day of June, 1951, denying application to file Second Amended Petition.

(i)

Excerpts from Record Bringing Cause Within Statutes Conferring Jurisdiction on Supreme Court

1 a. Excerpt from Answer of oil and gas lessors filed with Corporation Commission May 21, 1947:

> "2. For further defense, the undersigned allege that the statute of the State of Oklahoma, being Title 52, Sections 286.1 to 286.17, Oklahoma Statutes Annotated, upon which the petitioners base their application for the creation of the West Cement Medrano Unit, violates:
>
> (a) The Fourteenth Amendment to the United States Constitution, Section 1, in that it attempts to take the property of the undersigned without due process of law and denies to the undersigned the equal protection of the laws.
>
> (b) The Fifth Amendment to the Constitution of the United States in that it seeks to take the property of the undersigned without due process of law and without just compensation.
>
> (c) Article 1, Section 10 of the United States Constitution, in that said statute impairs the obligation of the contract between the undersigned lessors and the petitioning lessees.
>
> (d) The Fourteenth Amendment to the United States Constitution, Section 1, prohibiting abridgment of privileges and immunities of citizens of the United States." (C.M. 1000-1001.)

1 b. Excerpts from Answer of Clyde Kahle, overriding royalty owner, filed May 21, 1947:

(same as allegation in paragraph 1 a)

1 c. Excerpts from Answer of Tom Potter, minority lessee, filed May 21, 1947:

(same as allegation in paragraph 1 a)

Note: Corporation Commission of the State of Oklahoma did not pass upon or even mention constitutional questions.

3. Excerpt from Petition in Error filed in Supreme Court of the State of Oklahoma:

"1. The said Commission erred in rendering judgment for the defendants-in-error in that the Statutes of Oklahoma, Title 52, Sections 286.01 to 286.17 Oklahoma Statutes Annotated and upon which said Commission based its authority to render said judgment, violate the Constitution of the United States of America and particularly violate the following amendments and articles thereof, to-wit:

(a) The Fourteenth Amendment to the United States Constitution, Section 1, in that said statutes attempt to take the property of the plaintiff in error without due process of law and denies to them the equal protection of the laws.

(b) The Fifth Amendment to the Constitution of the United States in that said statutes seek to take the property of the plaintiff in error without due process of law and without just compensation.

(c) Article 1, Section 10 of the United States Constitution, in that said statutes impair the obligation of the several separate contracts between the Lessor, Plaintiff in error, and the Lessee, defendants in error.

(d) The Fourteenth Amendment to the United States Constitution, Section 1, prohibiting abridgment of privileges and immunities of citizens of the United States."

4. Excerpt from Opinion of the Supreme Court of Oklahoma denying petitioner's contention that Oklahoma's Unitization Act violates United States Constitution:

> "3. House Bill 339 of the 1945 Legislature (Tit. 52 O. S. Supp. 1947, Secs. 286.1 to 286.17), known as the Unitization Act is not violative of Secs. 7, 15, 23 or 24 of Art. II, or Sec. 1 of Art. IV or Secs. 1 or 51 of Art. V. of the Constitution of the State of Oklahoma, nor violative of Sec. 10 of Art. I, of, or of the Fifth or Fourteenth Amendments to the Constitution of the United States."

5. Excerpt from Petition for Rehearing filed in Supreme Court of the State of Oklahoma:

> "The Plaintiffs in Error call the Honorable Court's attention to the fact that said decision overlooked the questions decisive of the case and duly submitted by counsel as follows:
>
> ". . .' 2. The 14th Amendment to the Constitution of the United States, Section 1, quotes as follows:
>
> 'All persons born or naturalized in the United States and subject to the jurisdiction thereof, are citizens of the United States and of the state wherein they reside. *No state shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States, nor shall any state deprive any person of* life, liberty, or *property, without due process of law, nor deny to any person within its jurisdiction the equal protection of the laws.*'
>
> "(a) The Unitization Act provides that it can be set in operation only by lessees of 50% of the area of the common source of supply and authorizes said majority owners to expunge the contracts of the lessors and lessees depriving the lessors of valuable contractual rights and relieving the lessees from heavy contractual burdens under the leases and authorizing the said majority owners to take the lands and prop-

erty of the lessees and use the same for oil and gas purposes and to fix the compensation of the lessors for the lessors or the minority lessees the right to place the act in operation or to fix the compensation of the parties involved for the loss of their royalty or any other contractual rights or property which patently denies to the lessors and to the minority owners, all of whom are citizens of the United States, the equal protection of the laws as provided in the above provisions of the United States Constitution. . . .

"Article 1, Section 10 of the United States Constitution quotes as follows:

"*No state shall* enter into any treaty, alliance or confederation; grant letters of marque and reprisal; coin money; emit bills of credit; make anything but gold and silver coin a tender of payment of debts; *pass any* bill of attainder, ex post facto law, or *law impairing the obligation of contracts;* or grant any title of nobility."

"(The latter part of the above Section has been omitted.)

"The Unitization Act violates the Constitution of the United States in that the above quoted Section thereof prohibits any State from passing any law impairing the obligation of contract. An exception has been made to said provision of the Constitution of the United States which permits the States in the exercise of the police power to enact laws impairing contracts provided the exercise of such power is reasonable and nondiscriminatory. The purpose of the exercise of the police power by the State of Oklahoma under the Unitization Act is to insure unit operation of common sources of supply of oil and gas in proper cases. In order to accomplish such unit operation it is not necessary to deprive the lessor of his right to the termination of the lease he has given to the lessee for failure to produce oil or gas from the premises, because immediately upon the termination of the lease under its own terms, the lessor and owner of the minerals may be substituted for the former lessee in the unitization program with-

out affecting in any way the unit operation of the common source of supply. The Unitization Act deprives the lessor of his right to terminate his oil and gas lease for failure of the lessee to produce oil or gas from the premises after the expiration of the primary term. It has always been the very essence of 'unless' oil and gas leases that the lessee was obligated to spend large sums of money in the development of the premises for oil and gas in order to extend the lease beyond the primary term and that unless the lessee did drill on the lands and produced oil and gas from the premises within the primary term of the lease that the said lease would expire and the oil and gas rights revert to the lessor. The oil and gas rights are very valuable otherwise, the lessees would not be engaged in such an extensive and expensive operations and litigation. The lessor has the right to hold the lessee to the terms of the contract as they have been fixed and construed for years by the courts of this State, particularly since the enforcement of such contractual rights and obligations in no way interfere with, or impair the unit operation of, any common source of supply which may be included in part under such oil and gas lease.

"The Unitization Act expunges the implied covenants of the oil and gas leases which require the lessee to fully develop and market and to protect the lease against drainage. It is not necessary to the unit operation of a common source of supply to strike out these covenants. The lessee can still be required to fully develop the common source of supply, to market the oil and gas therefrom, and to protect the same from drainage without affecting, in any way the unit operation of said common source of supply, yet the Unitization Act specifically provides for the expungement of implied covenants of the oil and gas leases. The act further provides that the oil and gas leases, after unitization, should constitute one single oil and gas lease and there is no reason why the said one single lease should not bear all three of the said implied covenants. The act further provides that a part of a common source of supply

may be unitized which patently leaves open an avenue for the drainage of oil and gas to the area of the common source of supply not included in the unit. Drainage from the common source of supply may occur through a well bore drilled through the common source of supply to another common source of supply lying either above or below the unitized common source of supply. It is evident from the physical nature of things that the implied covenants requiring full development subject to the conservation laws of the State, protection against drainage, and marketing of the oil and gas may be retained in the single lease contract and enforced against lessees without, in any way, interfering with the unit operation of the common source of supply.

"There are also numerous special provisions in the various oil and gas leases which provided, among other things, that the lessor shall have the free use of gas in houses and structures located on the premises. This particular provision is very important to the lessor and was a moving consideration in his execution of the lease. The Unitization Act expunges this provision but such expungement in no way affects the unit operation of the common source of supply. Inasmuch as many of the gas wells will be closed in it might cause the lessee to pipe gas to the lessor's premises, however, this expense would be, as the majority lessees say 'de minimus.'"

6. Excerpt from Order of Supreme Court of the State of Oklahoma denying petitioners' Petition for Rehearing in Supreme Court of the State of Oklahoma:

"IN THE SUPREME COURT OF THE STATE OF OKLAHOMA, May 22, 1951.

THE CLERK IS HEREBY DIRECTED TO ENTER THE FOLLOWING ORDERS:

. . . 33,336 The Palmer Oil Corporation, et al. v. Phillips Petroleum Co.

All petitions for rehearing and application for oral argument in the above styled and numbered causes denied."

7. Excerpt from Application for Leave to File Second Petition for Rehearing filed in Supreme Court of the State of Oklahoma:

"That the opinion of this Court is in conflict with . . . the Constitution of the United States, and the decision of the Supreme Court of the United States in the case of Mullane vs. Central Hanover Bank & Trust Company, 339 U. S. 306, decided April 24, 1950, as more fully appears from the attached Second Petition for Re-Hearing."

8. Excerpt from Order of Supreme Court of State of Oklahoma denying Application for Leave to File Second Petition for Re-Hearing:

"IN THE SUPREME COURT OF THE STATE OF OKLAHOMA, June 5, 1951.

THE CLERK IS HEREBY DIRECTED TO ENTER THE FOLLOWING ORDERS:

. . . 33,336 The Palmer Oil Corp., et al. v. Phillips Petroleum Co. Application for Leave to File Second Amended Petition for Re-Hearing in the above styled and numbered cause denied."

Cases Believed to Sustain Jurisdiction

The appeal having been perfected within ninety days from date on which the judgment of the Oklahoma Supreme Court became final is timely. (Sec. 2101, Tit. 28, U. S. Code Revised.)

Appeal is the proper remedy for review of a decision of a state court of last resort in favor of the validity of state statutes and of administration orders issued pursuant to legislative authority claimed to be delegated by such statutes where the statutes and the orders thereunder issued are alleged to contravene the Federal Constitution (Sec. 1257, Tit. 28, U. S. Code Revised).

IN THE

SUPREME COURT OF THE UNITED STATES

OCTOBER TERM, 1951.

No. 301.

THE PALMER OIL CORPORATION, PAUL STERBA AND PAUL STERBA, JR., A MINOR BY AND THROUGH HIS FATHER AND NEXT FRIEND, PAUL STERBA,
APPELLANTS,

vs.

AMERADA PETROLEUM CORPORATION, ANDERSON-PRICHARD OIL CORPORATION, CITIES SERVICE OIL COMPANY, ET AL.,
APPELLEES.

APPEAL FROM THE
SUPREME COURT OF THE STATE OF OKLAHOMA

BRIEF OF APPELLANTS,
THE PALMER OIL CORPORATION, PAUL STERBA AND PAUL STERBA, JR., A MINOR, BY AND THROUGH HIS FATHER AND NEXT FRIEND, PAUL STERBA.

OPINION BELOW.

The opinions, majority and dissenting, of the Supreme Court of Oklahoma (R. 28-78) are reported in .... Okla. ...., 231 P. 2d 997.

JURISDICTION.

The judgment and decision of the Supreme Court of Oklahoma was entered on March 20, 1951. (R. 28) The finality of the judgment was stayed until June 5, 1951, by order of the Supreme Court of Oklahoma and the filing by appellants of petition for rehearing and application for leave to file second petition for rehearing. (R. 78, 116, 130) Appellants' Petition for Appeal to the Supreme Court of the United States was presented and allowed on July 30, 1951, within ninety days from the final judgment, decree and decision sought to be reviewed (R. 131, 136), and "Probable Jurisdiction" in this cause was noted by the Supreme Court of the United States on the 14th day of January, 1952.

The jurisdiction of the Supreme Court of the United States rests on 28 U. S. C. A. 1257(2). See also Rules 36, (1), 12 (1) (2) (3) (4) (5) (6), 9, and 10 (1) (2) (3) (4) (5).

INTRODUCTORY STATEMENT.

The Supreme Court of Oklahoma has sustained an Order of the Corporation Commission of Oklahoma approving a Written Plan compelling unitization of the Medrano sand bodies in the West Cement Field, in Caddo County, Oklahoma, underlying some 3,700 surface acres, such Plan being promulgated by a certain percentage of the oil and gas lease area owners within such proposed unit as provided by the Oklahoma Statute (House Bill No. 339, passed in 1945 and effective July 26, 1945,) complained of. The effect of such Compulsory Unitiza-

tion Plan is to completely dispossess each oil and gas lease owner in the unit area of its operation rights and take away the property and contract rights of the landowner lessors or royalty owners and oil and gas lease lessees. The rights of appellants Sterbas, as landowner and lessor in oil and gas lease made in 1936, and of The Palmer Oil Corporation, as lessee-assignee under said oil and gas lease on the Sterba land, were established and Palmer drilled and completed six oil and gas test wells on said leasehold prior to 1945.

QUESTION PRESENTED.

Whether House Bill No. 339 of the 1945 Oklahoma Legislature (O. S. Supp. 1949, Title 52, Sec. 286.1 to Sec. 286.17, inclusive), known as the Compulsory Unitization Act, and the Order of the Corporation Commission of Oklahoma, No. 20289, entered in Cause CD No. 1308, approving the Written Plan of Unitization of the Medrano sand bodies in the West Cement Field in Caddo County, Oklahoma, as interpreted and applied to the ownership and operations of The Palmer Oil Corporation and other appellants, under the undisputed and indisputable evidence, constitutes an improper and unreasonable exercise of the police power of the State of Oklahoma, in violation of the due process, equal protection and contract clauses of the Constitution of the United States.

STATUTES INVOLVED.

The Statutes and Orders involved are as follows:

1. House Bill No. 339 of the 1945 Oklahoma Legislature (O. S. Supp. 1949, Title 52, Sec. 286.1 to Sec. 286.17 inclusive) is printed in Appendix "A", pages 77 to 91.

2. The Order of the Corporation Commission of the State of Oklahoma, Number 20289 entered in Cause CD No. 1308, is printed in Appendix "B", pages 92 to 104.

3. The Written Plan of Compulsory Unitization is printed in Appendix "C", pages 105 to 157.

SPECIFICATION OF ERRORS.

The Supreme Court of the State of Oklahoma erred in deciding that Order No. 20289 of the Corporation Commission of Oklahoma, in Cause CD No. 1308, and the Plan of Compulsory Unitization approved thereby and the statutes (House Bill 339 of the 1945 Legislature, Title 52, Oklahoma Statutes Supplement 1949, Sections 286.1 to 286.17, both inclusive), upon which said Court determined said Order and Plan were authorized, as construed and applied to appellants by the decision and judgment of said Court under the undisputed and indisputable evidence in the record, did not deprive appellants of their property without due process of law or deny to them the equal protection of the laws in contravention of the provisions of Section I of the Fourteenth Amendment to the Constitution of the United States, and did not impair the obligation of appellants' leasehold contract in contravention of Section 10, Article I of the Constitution of the United States, because

(a) Said Order, Plan and Statutes are an unreasonable exercise of the police power.

(b) Said Order and the findings in support thereof are contrary to the undisputed and indisputable evidence in the record in that the record shows no waste of oil or gas, as defined or contemplated by the Oklahoma Conservation Statutes, was being committed, that correlative rights of producers, landowners and royalty owners in and to oil and gas were being protected and conserved in accordance with the general conservation statutes of the State of Oklahoma and the subsisting Orders of the Commission thereunder.

(c) Said Order, Plan and Statutes completely deprive appellants of their property and places it in the hands of private parties to control its management, further development and operation.

(d) Said Order, Plan and Statutes completely divest personal, property and contract rights vested and established long before the making of said Order and Plan and the enactment of said statutes.

(e) Said Statutes are too broad, vague and unspecific to constitute any reasonable guide to the Commission in making of any Order approving any Plan of Unitization thereunder.

(f) The undisputed evidence establishes that there was no single common source of supply of oil and gas, which is necessary to justify any type of oil and gas conservation statutes.

(g) Said Order, Plan and Statutes provide for and constitute more than mere regulations of the business of producing oil and gas, completely taking away from appellants their contractual rights under the oil and gas lease and their rights to possess and develop the property for oil and gas, substituting therefor merely a right to share in the proceeds arising from oil and gas production from the entire unit.

(h) Appellants, Paul Sterba and Paul Sterba, Jr., as owners of the land and royalty, are not, under the Statutes, Order or Plan of Unitization, given any voice in respect to any matter concerning the compulsory unitization.

(i) Said Statutes, Order and Plan of Unitization provide for the taking of private property not for a public use or public purposes, but for private purposes and private gain.

(j) Under said statutes percentages of private parties are authorized to decide whether a particular oil and gas field should be unitized and, if so, the type or plan of unitization, and their private decision, at their will, is submitted to the Commission for approval; if approved by the Commission, a certain percentage of private parties still have the right to completely nullify the Plan or amend the Plan, or enlarge the Plan, and in any event, control the future operations under the Plan and the winding up and closing thereof; the Commission has no right of its own to initiate the proceedings or formulate the Plan, amend

or change the Plan, or otherwise control the Plan, except its power under the general conservation laws.

(k) Said Statutes, Order and Plan provide for an unlawful delegation to private parties of the authority to determine legislative policy on any oil field within the State of Oklahoma, and particularly the West Cement Field.

(l) Said Statutes, Order and Plan of Unitization unlawfully delegate arbitrary legislative authority to certain percentages of private persons to determine the legislative policy in respect to any oil field within the State of Oklahoma, and particularly the West Cement Field.

(m) Said Statutes, Order and Plan unlawfully delegate to private parties the judicial power of determining the rights of royalty owners and minority lessees in respect to any oil field within the State of Oklahoma, and particularly the West Cement Field.

(n) Said Order and Plan unlawfully delegate arbitrary judicial and legislative power to private parties to determine the rights of royalty owners within any oil field of the State of Oklahoma, and particularly the West Cement Field.

(o) Said Statutes, Order and Plan provide for drastic changes in contractual and property rights which are not reasonably necessary to promote conservation of oil and gas or prevent waste thereof.

(p) Said Statutes, Order and Plan provide for arbitrary, unreasonable and capricious procedures and methods by which private parties determine rights of other private parties in and to any oil field of the State of Oklahoma, and particularly the West Cement Field.

(q) The Order and Plan are unreasonable, arbitrary and capricious and are not based upon the undisputed and indisputable evidence in the record.

(r) The undisputed and indisputable evidence showed conclusively that geological faults separated the Medrano Sand in the West Cement Field into several, separate common sources of supply.

STATEMENT.

This appeal is from the final judgment of the Supreme Court of Oklahoma in Cause No. 33336 and Cause No. 33708, consolidated in that Court. (R. 16)

Cause No. 33336 in the Supreme Court of Oklahoma was originally commenced as Cause CD No. 1308 before the Corporation Commission of the State of Oklahoma, hereinafter referred to as "Commission", by the filing of a petition (R. 173) on October 22, 1946, by Amerada Petroleum Corporation, Anderson-Prichard Oil Corporation, Phillips Petroleum Company, Ray Stephens, Inc., Stephens Petroleum Company and Magnolia Petroleum Company (hereinafter referred to as proponents or appellees) to enforce a compulsory unitization of all oil and gas leases and royalty or landowners' rights in an area alleged to contain the "Medrano Sand" of the

West Cement Field in Caddo County, Oklahoma, in accordance with a Written Plan prepared and submitted by said petitioners under the purported authority granted by the "Compulsory Unitization Act". (R. 173-183, 1250-1300)

The appellant, The Palmer Oil Corporation, hereinafter referred to as "Palmer", was the owner of an oil and gas leasehold within the area sought to be unitized, and the appellants, Paul Sterba and Paul Sterba, Jr., hereinafter referred to as "Sterbas", were the landowners owning the royalty rights under Palmer's said oil and gas leasehold. (Appendix "D", page 158, R. 1523-1526, 1477)

Palmer filed a written protest in Cause No. 33336 to the petition and proposed Plan of Unitization, alleging, among other things, that such compulsory unitization would contravene and violate the due process, equal protection and contract clauses of the Constitution of the United States as an improper exercise of the police power and that said Medrano Sand did not constitute a single common source of supply. (R. 255) Protests were also filed by other lessees and land owners. (R. 331, 821, 825)

Hearings were held before the Commission at various times, beginning December 9, 1946, and ending July 25, 1947. (R. 184, 201, 330, 333, 368, 430, 502, 896, 1092) The initial Plan of Compulsory Unitization was amended by its proponents on July 18, 1947, in order to give effect to a change of information or facts occasioned by the drilling and completion, on or about February 2,

1947, of Palmer's Sterba No. 7 well. (R. 1082-1088) On September 5, 1947, the Commission entered its report and Order No. 20289 granting the petition and approving the Plan of Compulsory Unitization, as amended. (R. 1239)

Palmer's oil and gas leasehold, covering 160 acres of land, was derived through an oil and gas lease executed by Paul Sterba, and other then owners of the property, as lessors, on February 18, 1936, to Chris Pearson, as lessee, who in turn assigned said lease to Gulf Oil Corporation. (R. 1523-1529) A copy of this lease is printed in Appendix "D", pages 58 to 162. On September 6, 1938, Gulf Oil Corporation assigned its rights under said lease to Palmer to a depth of 6,000 feet, retaining an overriding royalty, and by contract required Palmer to commence the drilling of an oil and gas test well on said lease and drill the same to a depth of 6,000 feet, unless oil and gas, or either of them, were found in commercial quantities at a lesser depth. (R. 1477) A copy of the assignment of the lease from Gulf Oil Corporation to Palmer is printed in Appendix "E", pages 163 to 166, and a copy of the contract between Gulf Oil Corporation and Palmer is printed in Appendix "F", pages 167 to 174.

Palmer completed its first well on this leasehold in October, 1938, which produced oil from the "Niles Sand" at a total depth of 3545 feet; completed its second well in May, 1939, which produced oil from the "Rowe Sand", at a total depth of 3401 feet; completed its third well in October, 1940, as a gas well, being the

first well on said leasehold producing from the "Medrano Sand", at a total depth of 5260 feet; completed its fourth well in June, 1943, which produced oil from the "Medrano Sand" at a total depth of 5995 feet; completed its fifth well in August, 1943, to a total depth of 6,000 feet, as a dry hole, being drilled into a fault; completed its sixth well on November 7, 1943, to a total depth of 6,425 feet, as a dry hole, having been drilled into the same fault; and on May 21, 1947, completed its seventh well, which produced oil from "Medrano Sand" at a total depth of 5,992 feet. (R. 6)

The first oil and gas test well drilled in the area known as the West Cement Field was completed on October 17, 1917, as an oil well in a producing horizon other than the "Medrano Sand". The first test well which resulted in production from the "Medrano Sand" in the West Cement Field was completed as a producer of gas in October, 1936, on land located in the next governmental section to Palmer's leasehold, and the first well producing oil from the "Medrano Sand" in said West Cement Field was discovered in March, 1943, on a quarter section adjacent to Palmer's leasehold. (R. 235, 1422)

The Compulsory Unitization Act was enacted by the 1945 Legislature of the State of Oklahoma and became effective on the 26th day of July, 1945. The Written Plan of Unitization approved by Order No. 20289 embraced 72 separate tracts (shown on Exhibit 24, R. 176, 210) of land covered by separate oil and gas leases comprising a total of 3700 surface acres. Palmer's

Sterba oil and gas lease, covering 160 surface acres, is in the approximate center of the unitized area and was estimated to have oil in place in the Medrano sand bodies thereunder of 7,880,000 barrels. (Exhibit 53, R. 1484 A, Tract No. 30-31) At the time of the entry of the Commission's Order No. 20289, on September 5, 1947, each of Palmer's Sterba Medrano sand oil wells were being allowed to produce 200 barrels of oil per day by the Commission under the General Oil and Gas Conservation Laws of the State of Oklahoma and were capable of producing such oil without waste. (R. 244, 610)

The Medrano sand bodies underlying the West Cement Field dip sharply from the Northeast to the Southwest, ranging from an approximate depth below the surface of 4,500 feet to 6,000 feet, the thickness of the sand bodies pinching out at the top of the structure but thickening at the bottom of the structure to an estimated thickness of 125 feet. The gas zone or zones are in the upper portion of the sand bodies, the oil zones are immediately below the gas zones and water below the oil zones. (Ex. 25, R. 1476-1477, 211)

The original Plan of Unitization specified or assigned the percentage of interest or ownership in the entire Unit held by each leasehold owner or owners, and the royalty owner under each lease was assigned a fraction of such ownership based upon the royalty provisions in the lease, usually a 1/8th interest. (R. 179-181) The method by which such percentage ownership was determined is not shown in the Plan itself

but was adduced in evidence on cross examination of appellees' witnesses. While Palmer's rights in the Sterba lease were to a depth of 6,000 feet, subject to Gulf Oil Corporation's overriding royalty, and while Gulf Oil Corporation had never drilled a well on such lease and no Medrano sand had been encountered in such lease at a depth below 6,000 feet through Palmer's several exploratory wells therefor thereon, the appellees in dividing the percentages assigned in the original Plan of Unitization between Palmer and Gulf divided the total 7.683% attributable as a whole to the Sterba lease, as follows:

Palmer (above 6000 feet) 5.145% 5,260,000 barrels of oil in place
Gulf (below 6,000 feet) 2.538% 2,620,000 barrels of oil in place
(R. 1486, 1487, Table 2, Tract No. 30-31, as to percentage;
R. 1484 A, Table 1, Tract No. 30-31, as to barrels of oil in place.)

While Cause No. CD 1308 was still pending before the Corporation Commission, Palmer drilled and completed its seventh well above mentioned, which established facts showing that the above percentages originally assigned to Palmer and Gulf were incorrect, because the information secured from the drilling of such well showed that there were more oil zone acre feet in the Medrano sand bodies under the Palmer-Sterba lease above the depth of 6,000 feet than had originally been estimated by appellees, the proponents of the Plan. Appellees then amended their Plan of Unitization in ac-

cordance with their interpretation of the information disclosed by Palmer's-Sterba Well No. 7, recalculating and reassigning the unit percentage under the Plan of Unitization by appellees assigned to the Palmer-Sterba lease as between Palmer and Gulf as follows:

Palmer (above 6,000 feet)	5.51614%
Gulf (below 6,000 feet)	2.15688%

(R. 1084-1088, 1492, Table 2, Tract No. 30; R. 1493, Table 2, Tract No. 31.)

The amended Plan, as approved, does not contemplate any subsequent change in the percentage of interest in the Unit owned by the various parties, even though subsequent drilling develops facts which would warrant such change. The evidence showed that prior to the filing of the petition to establish the unitization, an operator's committee was formed of which Mr. H. W. Kaveler, Phillips Petroleum Company, was chairman. The operator's committee caused to be formed a sub-committee of geologists and a sub-committee of engineers, which were referred to as "geologists' committee" and the "engineers' committee." (R. 232)

The only written report by the geologists' committee was a report made in October, 1945, identified and admitted into evidence as Exhibit 68. (R. 1414-1449, 389) A general description of the Medrano sand and its reservoir condition was given in this report as follows:

> "*Medrano Zone*—The attempt to define the stratigraphic age of the Medrano is not a consideration of this committee. For practical purposes, the top of the Medrano Zone is considered as the top of

the main body of conglomerate and or sand from sample determination and electrical logs. The base of the Medrano is placed at the base of the sand as determined in the same manner. The zone is composed of sand, conglomerate and shale.

"*Medrano Sand*—The Medrano sand is that portion of the Medrano zone composed of sand and conglomerate sand. The productive sand is that portion having sufficient porosity and permeability to form a reservoir and proven to be productive.

"*Areal Extent*—The north and northeast boundaries have been defined under the Corporation Commission Order No. 17736 as of April 10, 1945. Extension of this boundary was made to the southeast and to the northwest as shown on the maps presented with this report. Points where the sand is absent by faulting or pinch-out are shown as zero points or connected by zero lines. The Pool is limited on the south and west by water."

"STRUCTURAL INFLUENCE ON RESERVOIR

"*Faults*—The presence of a number of faults in the West Cement Medrano Pool have been proven by geologic evidence. Only those of sufficient importance to influence production have been considered and these divide the pool into five segments as shown on the map:

"The Sherritt Fault was cut by Gulf No. 3 Sherritt, 33-6N-10W.

"The Sterba Fault was cut by Phillips No. 2 Oaks, 34-6N-10W.

"Palmer No. 5 and No. 6 Sterba and Magnolia No. 2 Cement Henley, in Section 35-6N-10W.

"The Hartshorne Fault was cut by Phillips No. 1 Hartshorne in 2-5N-10W and Magnolia No. 11 Medrano and No. 10 Lindsey in 36-6N-10W.

"The Edwards Fault was cut by Magnolia No. 6 Edwards, 1-5N-10W.

"Five of the wells cited above missed the Medrano sand because of faults shortly above the zone.

"*Barriers*—The Edwards fault is believed to form a complete barrier between the production east of the fault and that west of the fault. There is no definite geologic evidence to prove or disprove communication between the other segments but it is agreed that pressure measurements indicate the lack of free communication between segments *** ." (R. 1415)

Mr. C. P. Dimit, Vice President of Phillips Petroleum Company, on March 21, 1944, wrote a letter to Petroleum Administrator for War, requesting authority for 20-acre spacing in the Medrano sand of the West Cement Field, stating among other things, as follows:

" *** it should be noted that the interpretation of the general geological features have not been changed greatly except for the now proven existence of cross faults, of which there is evidence of at least four. These cross-faults are known to exist both from pressure and stratigraphic data. Such faults have various displacements and the one traversing the S/2 of Section 35-6N-10W, is known to have a displacement of some 500 to 700 feet. The two wells drilled in the fault zone missed the Medrano sand entirely. The strike and displacement of the other three faults is not so well established but the interpretation here presented readily accounts for the difference in reservoir pressures.

The portion of the pool covered by this application is divided into four fault-segments, each of which has varying characteristics and varying degrees of ex-

ploitation. To facilitate presentation of data, these fault-segments have been designated as segments A, B, C, and D, and the limits of each shown on Exhibit A." (Ex. 92, R. 1466, 1468, 1047-1052)

The geologists' committee also prepared maps contoured on the top of the Medrano sand and on the bottom of the Medrano sand (Exhibits 54, 55, R. 1495, 1497, 318, 325) showing the gas oil contact, the water oil contact and the location of the various faults and other data. The geologists' committee also prepared sand thickness maps (Exhibits 56, 57, R. 1499, 1501, 327, 328) showing the estimated thickness of the Medrano sand in the oil zone, the estimated thickness of the Medrano sand in the gas zone, the several faults and other data. These several maps and all contours upon them were based upon information and data secured from 86 control points. (See Exhibit 54, R. 1495) being oil and gas test well holes drilled in the general area of the proposed unit. The information was secured from these various wells by way of electrical logs, core data and general production information, including the records in the office of the Corporation Commission. The core data was available on 15 of the test wells and no complete core from the top through to the bottom of the Medrano sand was ever taken from any well. Exhibit 54 was probably referred to in the evidence more than any other Exhibit and for convenience is reproduced as Appendix "G", page 175.

The geologists' committee estimated the top of the Medrano sand and the bottom of the Medrano sand at each of the control points within the Medrano sand and from this information prepared the maps above referred to, particularly the sand thickness maps (Ex. 56 and 57, R. 1499, 1501) of the Medrano sand containing oil or gas. In determining the sand thickness of the Medrano sand containing oil or gas, the Committee did not exclude shale breaks or any portions of sand having zero permeability or a low permeability. The geologists' committee also on said maps allocated to various tracts a sand thickness of the Medrano sand containing oil or gas, even though no wells were drilled upon any portion of 34 of such tracts containing a total of 1020 surface acres. (See Ex. 54, R. 1495) In some instances, tracts were allocated oil and gas in the Medrano sand, even where the wells drilled were dry holes or nominal producers. (Ex. 77, R. 1463, 909, Ex. 78, R. 1465, 919)

The top and bottom of the Medrano sand, as well as the sand thickness of the oil and gas zones of the Medrano sand at points other than control points is determined on the maps by the practice of contouring upon which no two people definitely agree. There may be differences of from 5 to 25 feet in contouring, depending upon who does it. Whether or not the contouring was correcty done materially affects the sand thickness under each tract and the participating unit factor assigned thereto. (R. 327)

The sand thickness maps were then furnished to the engineering sub-committee for the purpose of estimat-

ing the recoverable oil and gas in place and finally making the computation by which the percentage of interest in the unit was assigned to each of the separate leasehold owners and tracts. (R. 798)

The entire study and report (Ex. 71, R. 1419-1459, 553) made by the engineering committee is predicated on the existence of four geological faults dividing the Medrano Sand into five separate segments and their calculation and determination were made separately as to each segment. This engineers' report (Ex. 71) and the geologists' report (Ex. 68) are the basis of all testimony of appellee's expert witnesses.

The engineers' committee used the volumetric method of determining the estimated recoverable oil and gas in place. The procedure by which this was done can only be understood by a thorough study of Exhibit 71, and the actual calculations shown on Exhibit 53. (R. 1484A, 552-812) The calculations shown on Exhibit 53 were superseded by the calculations shown on Exhibit 53-R (R. 1490) as a result of change of facts occasioned by Palmer's drilling and completion of the Palmer-Sterba No. 7, which also caused Exhibits 54R, 55R, 56-R and 57-R to respectively supersede Exhibits 54, 55, 56 and 57. (R. 1495, 1497, 1499, 1501, 898, 901)

The engineers' committee undertook to estimate in each separate segment the amount of gas originally in place before gas was discovered and the amount of oil originally in place before oil was discovered. (R. 1425, 1450)

The sand thickness maps were used and, by surveying them with an instrument known as a planimeter, the engineers' committee estimated the acre feet of sand containing either oil or gas under each particular tract within each segment. (R. 622)

Each tract was assigned a porosity in the same amount as all other tracts within the same segment—irrespective of the actual porosity—such porosity being determined by a weighted average from the information available on the control points within that particular segment. When the factor of pressure or any other factors were used in making the estimated recoverable oil in place the same amount of factor was used for each particular tract as was used for other tracts within the same segment. (R. 1424, 505)

The isobaric map prepared by the engineers' committee, being Exhibit 72, (R. 1506, 903) showed that different pressures existed in the different segments as of November, 1945, when the pressure survey was made.

From the estimated acre feet of sand under each particular tract the original oil or gas in place under that tract was estimated. An arbitrary factor of 4% was then allowed to those tracts having their position on the lower portion of the structure allowing them a favorable gravity situation. This 4% was apportioned between such tracts on a percentage basis depending as to their location upon structure. For instance, a tract having the full benefit of gravity drainage was given 100% of the 4%, one having 50% benefit was given 50% of the 4% and so on. (R. 1484A)

The next step was to deduct from each tract the oil produced to March 1, 1946, in order to establish a definite date as of when the estimate would apply. Then the estimated recoverable oil as of March 1, 1946, was made based upon a recovery factor of 35½%. The estimated recoverable gas in place was computed by using a factor of 95%. (R. 295-299)

The recoverable gas as thus determined was assigned a value of 5¢ per thousand cubic feet and the estimated recoverable oil was assigned a value of $1.52 per barrel; the value of the recoverable oil and gas was reduced to money and therefrom a percentage calculated for each tract as to the entire unit. (R. 1484A, 303)

This percent was not the final percent of interest. The final percent of interest was determined by introducing another factor called "current income factor" based upon the oil runs from each tract during the months of May, June and July of 1946. These runs did not represent the actual potential or productivity of the wells on the tracts but rather the actual runs as allowed by the Corporation Commission. Based upon the runs mentioned each tract's current income percentage to the whole unit was computed. (R. 304, 571, 709-717)

The final calculation was to assign each tract the percent of ownership in the unit by giving the percent of the estimated recoverable oil a weight of 80% and the percent of the current income a weight of 20% and therefrom make the final computation. The 20% weight given to current income was an arbitrary figure. Witnesses for proponents stated that it was good engineering prac-

tice to use a current income factor but admitted that such factor could carry a weight as low as 15% and as much as 45% and still be within the realm of good engineering practice. (R. 884, 885, 1485, 301)

In the determination of the division of interests between the various tracts within the proposed unit no consideration was given to the comparative lifting costs involved in each of the respective tracts, nor the comparative efficiency of the respective operators, nor the comparative position of the respective operators concerning compliance with the implied covenants of their leases to properly develop the leases or drill offsets, nor comparative risks taken and expenses incurred in drilling and development.

Palmer drilled three wells which encountered the Medrano sand at a point above 6,000 feet and said wells are now producing from such sand. Palmer drilled two other wells at a depth which would have been great enough to encounter the Medrano sand, but, because of the Sterba fault, said wells found the Medrano sand absent. (Ex. 54, R. 1495)

Gulf Oil Corporation has drilled no well on the Sterba lease.

The engineers' committee in making a division of interest between Gulf Oil Corporation and Palmer merely ran a horizontal line through their estimated Medrano sand under the Palmer Sterba lease at a depth of 6,000 feet below the surface and credited Gulf with all sand lying below such horizontal line and Palmer with all sand lying above such horizontal line. (R. 596, 916)

In determining the interest as between Gulf Oil Corporation and Palmer, the engineers' committee gave no consideration to the additional risks taken by Palmer in drilling seven wells on the Sterba lease, two of which were dry, nor of its ownership or drainage rights in that portion of the Medrano sand lying below 6,000 feet, the top of which is encountered above 6,000 feet.

The interests of certain tracts of the proposed unit were arbitrarily reduced by 50% of sand thickness because of a poor quality of sand. Certain other tracts because of having current income but a low estimated recoverable oil were given an accelerated payment over a period of the first five years under the proposed unit operation, which was to be made up in the succeeding five years. (R. 1288)

While the unit plan does not so provide, proponents' witness testified and the engineers' report stated (Ex. 72, R. 1425-1426) that the intention was to close in wells producing from the gas zone of the Medrano sand, to construct a compressor plant at some location within the unit area and inject gas into the oil zone. Witnesses for appellees proposing the plan also testified that seven additional oil wells would be drilled within the oil zone but no locations for any of these wells were estabished. The estimated cost of putting the unit into operation under a gas re-cycling procedure was two million dollars. (R. 575, 610)

The evidence conclusively showed that at the time the Order was entered two-thirds of the gas energy in the Medrano sand had been exhausted, that the produc-

tion of oil and gas in the West Cement Field had been and still is under the jurisdiction of the Commission pursuant to the General Oil and Gas Conservation Statutes of the State of Oklahoma, and that Palmer had, at all times, drilled, developed and operated its said Palmer-Sterba leasehold in accordance with the best known practices and procedures and without waste and in accordance with such Conservation Statutes, and that as an operator Palmer was unexcelled. (R. 1335, 729)

The Sterbas, the landowners and owning an undivided 1/8th royalty right under the Palmer-Sterba lease, were not, under the provisions of the Compulsory Unitization Act or the Plan of Unitization, given any voting voice and did not appear in said cause before the Commission or participate therein. After Order No. 20289 of the Commission was entered September 5, 1947, Palmer filed its motion to set aside Findings of Fact made by the Commission, which was denied, and within due time Palmer perfected its appeal to the Supreme Court of Oklahoma, which was docketed there as Cause No. 33336, as aforesaid. Palmer having failed to put up the supersedeas bond as required by the Commission, the Unit operator took over the operation of Palmer's leasehold and other tracts within the Unit on December 1, 1947, and has at all times since said date been operating the same. (R. 11, 17)

In Cause No. 33708, Paul Sterba and Paul Sterba, Jr., a minor, by and through his father and next friend, Paul Sterba, and The Palmer Oil Corporation, as petitioners, filed an application direct in the Supreme Court of Okla-

homa against the Corporation Commission of Oklahoma and the Unit Operating Committee, consisting of Phillips Petroleum Company, a corporation (the Unit Operator), Amerada Petroleum Corporation, a corporation; Anderson-Prichard Oil Corporation, a corporation; Cities Service Oil Company, a corporation; Foster Petroleum Corporation, a corporation; Gulf Oil Corporation, a corporation; Magnolia Petroleum Company, a corporation; Ray Stephens, Inc., a corporation; Stephens Petroleum Company, a corporation; Sunray Oil Corporation, a corporation, as defendants, to assume original jurisdiction on petitioner's petition for a Writ of Prohibition to prohibit and restrain the defendants from enforcing the Commission's Order No. 20289, (R. 1 to 14) which application to assume original jurisdiction was sustained, docketed as Cause No. 33708 and consolidated by Order of the Supreme Court dated September 28, 1948, with Cause No. 33336. (R. 16)

The petitioners alleged in their petition that the Order No. 20289 of said Commission was invalid and in violation of the various provisions of the Constitution of the United States, heretofore referred to, and that the defendants, in their enforcement of said Order and in the operation of said Unit were, therefore, exercising unlawful judicial and legislative authority and should be prohibited and restrained in further enforcing said Order No. 20289, and from the further operation of said Unit. (R. 8 to 13)

In due time the various defendants took issue on said petition and the consolidated cause was duly presented

to the Supreme Court of Oklahoma by oral argument on April 19, 1949. Thereafter, and on March 20, 1951, the Court held that the Compulsory Unitization Statute, House Bill 339 of the 1945 Oklahoma Legislature, was valid, affirmed Order No. 20289 of the Corporation Commission in Cause No. 33336, and denied the Writ of Prohibition in Cause No. 33708. Thereafter, and in due time appellants perfected their appeal to the Supreme Court of the United States. (R. 131-153)

The Supreme Court, being advised of the repeal of House Bill 339, by Enrolled Senate Bill No. 203 enacted May 26, 1951, by both Houses of the Oklahoma Legislature, sent the case back with the requirement that the appellants, with all convenient speed, have a determination made as to the effect of such repeal on their rights. Thereupon a motion was filed in the Supreme Court of Oklahoma to withdraw its Mandate setting up the repeal of said Statutes, whereupon, the Supreme Court of Oklahoma rendered a supplemental decision, finding that the rights of appellants, once established, by said Order and Statutes, were not affected by the subsequent repeal of such Statutes. Thereafter additional record was made in this Court with such showing and the Court noted probable jurisdiction on the 14th day of January, 1952. (R. 1536-1539)

SUMMARY OF ARGUMENT.

The over-all contention of Appellants is that the provisions of House Bill No. 339 of the 1945 Oklahoma Legislature (App. "A", pps. 77 to 91) and the written Plan of Compulsory Unitization approved by Order No. 20289 of the Corporation Commission of the State of Oklahoma (App. "C", pps. 105 to 157) do not reasonably promote conservation of oil or gas and protect correlative rights within the limitations required by the due process, equal protection and contract clauses of the Constitution of the United States, and, therefore, such Statute and Plan are an improper and unreasonable exercise of the police power of the State of Oklahoma.

In this Summary, the contentions made under the specifications of error in the "Argument" portion of this brief, hereinafter set forth, may be reduced to separate sub-arguments, as follows:

(A) Neither the Statute nor the Plan of Unitization, in reality, provides for or is the action of the State of Oklahoma, but rather constitutes an unlawful delegation of authority to private persons owning designated percentages of lessees' interests in the Unit area. *Carter v. Carter Coal Co.*, 298 U. S. 238, 56 S. Ct. 855, 80 L. Ed. 1160.

While in Oklahoma its Corporation Commission is a constitutional body (Oklahoma Constitution, Article IX, Sec. 15) and under the Oklahoma General Oil and Gas Conservation Laws (Statement as to Jurisdiction, Appendix "I", pp. 226-301) it for many years has been heretofore and is now authorized to and charged with

the duty of conserving oil and gas in that State, under this Statute complained of the Corporation Commission of Oklahoma cannot itself initiate, promulgate or issue a Plan of Compulsory Unitization for any oil or gas bearing sand in any common source of supply. Under this Statute only a percent (50 percent, see Par. 286.4, Appendix "A", page 78) of private parties may determine the policy of whether a particular oil field should be unitized; having so determined, the same percentage of private parties formulate the Plan of Unitization and decide whether the Corporation Commission shall be given jurisdiction to approve or reject their Plan of Unitization; if the Commission approves the Plan of Unitization, a percentage (15 percent to nullify, Par. 286.6, Appendix "A", page 82; 10 percent to amend, Par. 286.11, Appendix "A", page 88; 50 percent to enlarge, subject to veto of 15 percent, Par. 286.12, Appendix "A", page 88) of private parties may still nullify, amend or enlarge the Plan of Unitization. If the Plan is approved, and not nullified or amended, a percentage (66⅔ per cent and 75 percent, VIII of Plan, Appendix "C", p. 116) of private parties determine by whom and in what manner the Unit shall be operated and how and when it shall be wound up and closed, with the Commission having no power to control the action of such private parties.

The Statute specifically prohibits the Commission from naming the operators of the Unit (Par. 286.5, Appendix "A", page 79) or from expressing its views on appeal in the State Supreme Court (Par. 286.7, Appendix "A", page 83).

Cases like *Wurts v. Hoagland*, 114 U. S. 606, 5 S. Ct. 1086, 29 L. Ed. 229, supporting the drainage districts principle, or *Head v. Amoskeag Manufacturing Co.*, 113 U. S. 9, 5 S. Ct. 441, 28 L. Ed. 889, supporting the mill dam acts, are not authority for the Statute and Compulsory Plan of Unitization as presented in this case. Those cases establish that where the benefits of a recognized local public improvement accrues directly to property owners within the area involved such property owners may be assessed with the expense of such improvement on condition that the majority of them want the improvement; and a fair compensation is provided when property is actually taken. Those cases are not authority for the taking of property and destruction of contract rights for the purpose of conservation, which is of general public interest where no percent or group of private parties should ever control, especially where the facts are disputed.

The Statute on its face and the Plan of Unitization approved thereunder, disclose their purpose as not being one in the pubile interest for the conservation of oil and gas and the protection of correlative rights, but to place the business of producing oil and gas in the hands and under the control of the major integrated companies as distinguished from minor independent operators, also eliminating supervision by land or royalty owners.

(B) The Statute and Plan of Unitization do not provide for equal protection of the law as between the lessors and the lessees and as between persons or parties whose rights were definitely fixed at the time the Statute was enacted. Garvin, "*The Effect of Field Unit Operation*

upon the Royalty Interest and the Royalty", 21 Okla. St. B. J. 1793, 1798, 1799 (1950).

The inequality existing between the owners of major lessee interests as distinguished from the owners of minor lessee interests resulting from the percentage provisions of the Statute and Plan has previously been mentioned. Even more unfair and unreasonable is the failure of either the Statute or Plan to provide the lessors or royalty owners the same or similar rights granted to the lessees. A lessor or royalty owner has no right to initiate or formulate a Plan of Unitization or to petition the Commission for approval thereof. The only notice of a petition to establish a Plan of Unitization provided to a royalty owner is a publication notice and even should such royalty owner or lessor appear he is not given, under the Statute or the Plan, a voting right to nullify, amend or otherwise change the Plan, or in any way to control its operation.

Appellees will no doubt contend that the interests of the lessor and lessee are the same and that the royalty owner or lessor will be amply protected by the action taken by his particular lessee. It may be true that the interests of a lessor and lessee are in some respects the same but in many instances their interests are adverse. The development of the law of implied covenants is based upon the disparity of interest as between the lessor and lessee, providing the former a remedy against the latter, where there are no express provisions present.

The discrimination between the lessor and lessee is unfair and unnecessary, will not promote but will deter

conservation of oil and gas and will prevent protection of correlative rights. The Statute and Plan for this reason are unconstitutional in failing to provide equal protection of the law. Maurice H. Merrill, a Book Review on "*A Form for An Oil and Gas Conservation Statute*", 4 Okl. Ba Rev. 272, 274, (May, 1951).

Also, the Statute excludes from its operations all oil fields twenty years of age on the effective date of the Statute and all fields that, on such effective date, are being operated under pressure maintenance or secondary recovery methods. (Par. 286.2, Appendix "A", page 77) This discrimination has no justification in fact or in law, for a field twenty years of age or one being operated under pressure maintenance may be in much more need of unitization than a new field operated on the most competitive basis. Such unequal protection of the law has been criticized (21 Okl. St. B. J. 1801, 1802 (1950)) and is sufficient to render the Statute unconstitutional.

(C) The Statute and Plan of Unitization are not mere Regulations of a business or industry but provide Laws to be made and administered at the uncontrolled discretion of private parties which unreasonably and unnecessarily destroy vested business property and contract rights of others. Palmer acquired its leasehold in 1938 under the terms of which it had the right to engage in its business of producing oil or gas and to receive a stated share of the production from said leasehold in accordance with the then existing law. The Sterbas, Palmer's lessors, have the right to enforce the express and implied covenants of the lease, including the right

to require Palmer to drill, develop and operate such leasehold in accordance with the then settled law. (*Gruger v. Phillips Petroleum Co.*, 192 Okl. 259, 262, 135 P. (2d) 485, 488 (1943); *Gibbens, "The Effect of Conservation Legislation on Implied Covenants in Oil and Gas Leases,"* 4 Okl. L. Rev. 337, 339 (1951). The Sterbas were also entitled to 1/8th of the oil and gas produced from the leasehold, which experience in the oil industry had shown was the equivalent of 7/8ths usually received by the owner of the lease for the risk and expense required of him. (*Glassmire, Oil and Gas Leases and Royalties*, Sec. Ed. Par. 16, P. 60)

Palmer had drilled six wells, two of which were dry holes, before the Statute was enacted in 1945 and completed the seventh well before the Plan of Unitization was approved. Palmer was unexcelled as an operator, complied with the covenants, express and implied, of its lease and had operated the leasehold without waste in accordance with all Rules and Regulations of the existing General Conservation Laws of Oklahoma. Without compensation for its loss on dry holes, the risk taken, its ability as an operator or its compliance with the covenants of the leasehold, Palmer, by this Statute and Plan of Unitization, has been excluded from the operation of its own premises. Its leasehold has been forced into a unit with leaseholds owned by others, its competitors, some of whom have not drilled any wells, nor complied with the terms of their leases. It is being operated with such other leases as a unit by a unit operator, chosen also by Palmer's competitors. Palmer, in

lieu of its property and rights, is assigned the passive right to receive a share of the production from the unitized area, which share was fixed in the Plan by others, Palmer's competitors, in the whole field over which Palmer has no percentage control. The Sterbas are unable to enforce the express or implied covenants of the leasehold and have, therefore, lost the right to share in 1/8th of the production from such leasehold, based upon Palmer's operation or control thereof. They are, in lieu thereof, given the right to share in the production of the whole unit over which they have no control.

The complete disregard and destruction of Palmer's and the Sterbas' property and contract rights by a retroactive law which could not have been foreseen is unfair and not reasonably necessary for the conservation of oil and gas and the protection of correlative rights. See, *Antitrust Laws et al. v. Unit Operation of Oil and Gas Pools*, P. 161, 162 (1948).

(b) The undisputed evidence discloses that the Medrano sand of the West Cement Field is traversed by several impervious geological faults of such magnitude as completely to separate said Medrano sand into several separate bodies or separate common sources of supply of oil and gas, thereby making the Statute and the Plan improper and inapplicable as a reasonable exercise of the police power of the State of Oklahoma, since correlative rights are not involved. All of the known facts concerning the Medrano sand were derived through Appellees themselves on cross examination. The entire study of the Medrano sand by the engineers' committee and

the geologists' committee is predicated on the existence of four faults dividing the sand into five separate segments. Although Appellees' witnesses expressed the vague opinion that some of the faults were not complete barriers at least in the gas zone of the Medrano sand, no witness was bold enough to deny that all known facts clearly indicated that the Sterba fault constituted a complete barrier, and Appellants' expert witnesses so testified. All authority supporting conservation statutes are in agreement that there must be a protection of correlative rights which, of course, cannot exist where several separate and distinct sources of supply are treated as one common source of supply. In other words, there is no common property. (*Ohio Oil Company v. Indiana*, 177 U. S. 190, 20 S. Ct. 576, 44 L. Ed. 729.

(E) The Order and Plan, particularly the division of interest therein, are unreasonable, arbitrary and capricious when considered in the light of the undisputed evidence.

(1) At the time the Order was entered on September 5, 1947, two-thirds of the gas reservoir energy had been exhausted. The purpose of the unitization so far as the evidence disclosed was to conserve the gas energy by repressuring through the means of a cycling plant to reinject into the Medrano sand all gas produced. With two-thirds of the gas energy exhausted it is obviously unreasonable to require a unitization entailing the destruction of property and contract rights merely to conserve the remaining one-third gas energy. Moreover, the same result is substantially obtainable under the General Conservation

Laws without such a drastic effect upon individual property and contract rights. See *Denver Producing and Refining Company v. State, et al.*, 199 Okl. 171, 184 P. (2d) 961.

(2) The Plan included within the unit considerable acreage, which was not proven to contain productive oil or gas.

(3) The method used in assigning the divisions of interest fails to include certain specific requirements of the Statute and important factors under existing legal rights.

(a) The division of interest as between Gulf Oil Corporation and Palmer was unreasonable in dividing the oil merely on the basis of a horizontal plane extended 6000 feet below the surface.

(b) The division of interest method was unreasonable in failing to include factors such as the risk and expense in drilling and development and the comparative compliance of lessees with the implied covenants under their respective leases.

(c) The division of interest method gave no consideration to the comparative efficiency of operators or the "burden of operation", although the latter factor was specifically required by the Statute.

(d) The division of interest method did not fairly include a factor of "probable productivity *** in the absence of unit operation", as required by the Statute, but assumed an arbitrary 20 percent "current income" factor based upon the production allowables in three months rather than the productive capacity of the wells.

ARGUMENT.

As previously stated, the fundamental question is whether House Bill No. 339 and the Plan of Unitization approved thereunder constitutes a reasonable exercise of the police power under the facts of this case, within the limitations required by the due process, equal protection and contract clauses of the Constitution of the United States. For purpose of clarity, the errors assigned (this Brief, pages 4 to 8) will be separately or jointly presented and argued under the contentions hereinafter set forth, prefaced by a brief history of the conservation of oil and gas under the police power, with particular emphasis on the problem of field-wide unitization, which is here involved.

I.

SAID STATUTES, ORDER AND PLAN ARE AN UNREASONABLE EXERCISE OF THE POLICE POWER. THIS GENERAL CONTENTION IS COVERED BY ASSIGNMENT OF ERROR (a). (Brief page 5)

It is conceded, as a general principle, that Regulatory Legislation designed to conserve natural resources and protect correlative rights is sustained under the police power. See *Summers Law of Oil and Gas*, Vol. 1, Sec. 106, for a good general discussion with many authorities cited. *Legal History of Conservation of Oil and Gas, A Symposium, American Bar Association, 1938;* see Annotations, *24 ALR 307, 78 ALR 34, 86 ALR 418, 86 ALR 431, 13 ALR (2d) 1095; Republic Natural Gas Company v. Oklahoma*, 334 U. S. 62, 68 S. Ct. 972, 92 L. Ed. 1212,

dissenting opinion of Mr. Justice Rutledge, at 334 U. S. 74, 92 L. Ed. 1222.

It may also be conceded that early unitization of an entire common source of supply of oil and gas and unit operation thereof, may result, over a period of time, in the greatest recovery of oil and gas therefrom, and, depending upon many other facts and circumstances, may be the most efficient and modern method known under present scientific information. *Summers Law of Oil and Gas.* Vol. 1, Sec. 104.

To make the above concessions, however, does not mean that some proposed form of unitization is better for a particular oil and gas field than to drill and develop such field under standard practices; or, that a compulsory unitization will ever be wise policy for a State to follow, except, possibly, where the facts are undisputed and no reasonable objection exists. See *Glassmire, Oil and Gas Leases and Royalties,* 2nd edition, Section 11, page 41. For instance, the compulsory unitization by the Commission under House Bill 339, of the Chitwood Spiers Sand was a miserable failure. See 21 Okl. B. J. 1796 (1950).

It is not strange that field-wide unitization was, from the beginning, promoted by representatives of or those working closely in association with the major oil company interests. The late Henry L. Doherty, being fearful of an early depletion of our oil and gas reserves, and, realizing their necessity for defense purposes, in 1924 strenuously recommended unit operations of oil and gas fields and that the same be placed under Federal control.

He was considered radical chiefly because of his recommendation of Federal control. However, his ideas of Federal control did not necessarily mean compulsory unitization.

Subsequently, the matter of fieldwide unitization was studied by such organizations as the American Petroleum Institute, American Institute of Mining and Metallurgical Engineers, the American Bar Associaton, and others. Even the Federal Government gave consideration to unit operations on Government owned land, and by Statute enacted as early as 1930, the Secretary of the Interior was authorized to approve a proposed Plan of Unitization where it was in the public interest. James A. Veasey of The Carter Oil Company, who spear-headed the study made by the American Bar Association, heartily agreed with the idea of unitization but concluded that a Statute authorizing compulsory unitization based upon the will of the majority of the operators in an area would be unconstitutional as an unreasonable delegation of authority. See *Veasey, Legislative Control of the Business of Producing Oil and Gas; Reports of the American Bar Association*, Vol. 52, page 577, 628 (1927). In 1931, W. P. Z. German, then General Attorney for Skelly Oil Company, asserted the view that the State had authority to require unit operation of oil pools. See *Compulsory Unit Operation of Oil Pools*, 17 ABAJ 393 (June, 1931). However, Mr. German was not thinking of field-wide unitization so much as he was about unitization of small areas for well spacing purposes. From 1931 to 1940 very little was said or done about unitization, except,

some academic discussions before the Section on Mineral Law of the American Bar Association, (see M. L. Hader, Carter Oil Company "*The Principles of Petroleum Engineering, Which, If Properly Understood and Applied Should Uphold the Constitutionality of Any Reasonable State Pooling Statute Designed to Conserve, Maintain, and Require the Efficient Use of the Reservoir Energy of an Oil Pool to Enlarge the Ultimate Recovery*"; Northcutt Ely "*Legal Restraints on Drilling and Production*", *Pamphlet American Bar Association, Section of Mineral Law, Annual Meeting Kansas City, 1937*, pages 25 and 45), or in Law Review Articles. See "*The Conservation of Oil,*" 51 Har. Law Rev. 1209, (1938); Ford, "*Controlling Oil Production,*" 30 Mich. L. Rev. 1170 (1932).

The fear expressed twenty-five years ago when oil and gas reserves were approximately 9,000,000,000 barrels with an annual consumption of 750,000,000 barrels of an early depletion of our natural resources of oil and gas are hardly justified in the light of subsequent developments. (*Hardwicke Antitrust Laws, et al. v. Unit Operation of Oil or Gas Pools*, Appendix 180 (1948)). Proven oil reserves in the United States as of January 1, 1952, stood at 32,000,000,000 barrels with an annual consumption of somewhat in excess of 2,000,000,000 barrels. See *The Oil and Gas Journal*, Vol. 50, No. 38, page 218, January 28, 1952.

In 1940, the Oklahoma City Wilcox Secondary Recovery Association, which was organized through the efforts of

Phillips Petroleum Company, employed counsel to draft legislation providing for compulsory field-wide unitization in Oklahoma. There was a diversity of opinion among those in the Association whether such legislation was desirable even for secondary recovery operations. A compromise draft of a Bill was finally introduced in the 1941 Oklahoma Legislature but it failed to pass. Later a Committee was formed by the Mid-Continent Oil and Gas Association to work on such legislation, and, although submitted in 1943 as House Bill 332, this Bill also failed. Then House Bill 339 was prepared and submitted to the 1945 Oklahoma Legislature, passing under the banner of fostering secondary recovery. See "*Conservation of Oil and Gas, a Legal History*", 394-403 (1948). House Bill 339 was completely repealed by Enrolled Senate Bill No. 203 enacted by the 1951 Oklahoma Legislature. This latter Bill eliminated all, except possibly one, of the constitutional objections raised by Appellants on this appeal.

This case was filed before the Corporation Commission on the 22nd day of October, 1946, and during the trial thereof, and since Order No. 20289 was entered on September 5, 1947, the major oil companies began to realize that they could not, on this matter of unitization, run roughshod over all independent producers and all royalty owners. As a consequence an extensive campaign of education on the question of unitization has been conducted. In fact, there has been more literature in the past five years on the problem of unitization than in all preceding time.

See *Myers, "Spacing, Pooling and Field-wide Unitization"*, 18 Miss. L. J. 267 (1947); *Hardwicke, "Antitrust Laws, et al. v. Unit Operations of Oil or Gas Pools* (1948); *King, "Pooling and Unitization of Oil and Gas Lease,"* 46 Mich. L. Rev. 311, (1948); *Jacobs, "Unit Operation of Oil and Gas Fields"*, 57 Yale L. J. 1205 (1948); *Conservation of Oil and Gas, a Legal History* (1948); *Merrill, "Implied Covenants, Conservation and Unitization"*, 2 Okl. L. Rev. 469 (1949); *Unit Operation at Cotton Valley: An Alleged Violation of the Sherman Act*, 24 Tulane L. Rev. 76, (1949); *"Petroleum Conservation", by American Institute of Mining and Metallurgical Engineers*, (1950); *Proceeding of First Annual Institute on Oil and Gas Law, South Western Legal Foundation, Dallas, Texas*, pages 1-96, 519, 545 (1950); *Green, "Proposed Amendments to the Unitization Law*, 21 Okl. B. J. 1793 and 1801 (Dec. 1950); *Gibbens "The Effect of Conservation Legislation on Implied Covenants in Oil and Gas Leases"*, 4 Okl. L. Rev. 337, 362, (1951); *Merrill "Implied Covenants and Secondary Recovery"*, 4 Okl. L. Rev. 177, 189 (May, 1951); *Techniques of Field Wide Unitization"*, Voorhees, 24 Rocky Mountain L. Rev. 14 (1951); *Hardwicke, "Unitization Statutes: Voluntary Action or Compulsion"*, 24 Rocky Mountain Law Rev. 29 (1951); *"Oil and Gas Production", Engineering Committee, Interstate Oil Compact Commission* (1951); *"A Form for an Oil and Gas Conservation Statute" by T. Murry Robinson, et al., Legal Committee of Interstate Oil Compact Commission* (1951).

The Proceeding of Third Annual Institute on Oil and Gas Law, South Western Legal Foundation, Dallas, Texas, (1952), was devoted entirely to the matter of unitization but the proceedings have not yet been printed.

General Regulations on any type of satisfactory unitization of an oil field require a long time and considerable experience to formulate. Even the Secretary of the Interior required more than fifteen years to work out Regulations covering unit operation of oil and gas deposits owned by the United States of America. See 12 Fed. Reg. 528:2, January 25, 1947.

House Bill No. 339 of the 1945 Oklahoma Legislature (O. S. Supp. 1949, Title 52, Sec. 286.1 to Sec. 286.17, inclusive), is the first Statute of its kind and undertakes to provide for an enforced unitization and unit operation of an entire oil and gas field. There have been City Ordinances and Statutes which have provided for the pooling of small tracts for the establishment of drilling units for the production of oil and gas which have been sustained under the police power, (see *Marrs v. City of Oxford*, CCA 8th, 1929, 32 F. (2d) 134, Cir. Denied, 280 U. S. 573, 50 S. Ct. 29, 1929; *Gant v. Oklahoma City*, 159 Okl. 86, 6 P. (2d) 1065, (1931), affirmed 289 U. S. 98, 53 S. Ct. 530, 77 L. Ed. 1059; *Patterson v. Stanolind*, 182 Okl. 155, 72 P. (2d) 83, (1938), appeal dismissed 305 U. S. 76, 59 S. Ct. 25 (1939), but it is recognized that there is a major distinction between the pooling of small tracts for a drilling unit under spacing Statutes or Regulations, and the matter of an enforced unitization of an entire oil and gas field covering a great area. A. Allen

King, *"Pooling and Unitization"*, 46 Mich. L. Rev. 311, 312, (1948).

The general question of whether House Bill No. 339 and its application by the Commission in issuing Order No. 20289 approving the Plan of Unitization, constitutes a reasonable exercise of the police power of the State of Oklahoma, is a question which involves not one but many factors and considerations. The general question is whether the means chosen (in this case the Statute, the Order of the Commission and Written Plan of Unitization) have a reasonable relationship to the ends sought (conservation and protection of correlative rights) and are not more drastic than are reasonably necessary under the facts. *Thompson v. Consolidated Gas Utilities Corp.*, 300 U. S. 55, 81 L. Ed. 510, 57 S. Ct. 190.

Generally speaking, the perplexities arising under administrative orders issued pursuant to valid conservation legislation are outlined in the opinion of *Railroad v. Rowan and Nichols Oil Company*, 310 U. S. 573, 84 L. Ed. 1368, 60 S. Ct. 1021, rehearing denied 311 U. S. 727, 85 L. Ed. 473. When the facts upon which findings are made by the administrative body in support of its Order are not before the Court, the Court must accept or assume such findings to be true. *Patterson v. Stanolind Oil and Gas Company*, 305 U. S. 376, 83 L. Ed. 231, 59 S. Ct. 25; or where the findings and Order of the administrative body are based upon conflicting facts, the Court should, as it did in the *Rowan* case, accept the findings of the administrative tribunal as conclusive. *When, however, as in this appeal, the Statute itself is*

challenged as being unconstitutional, as well as the administrative Order approving the unitization thereunder, with a claim that certain basic facts upon which the Commission based the Order were unsupported by the evidence, the Court has the right to search the record to determine whether there is any support in the evidence for the findings which give rise to the constitutional questions. See *Baltimore & Ohio Railroad Company v. United States,* 80 L. Ed. 1209, 298 U. S. 349, 56 S. Ct. 797; *Ohio Valley Water Co. v. Ben Avon,* 253 U. S. 287, 64 L. Ed. 908, 4 S. Ct. 527; *St. Joseph Stock Yards Co. v. United States,* 298 U. S. 38, 80 L. Ed. 1033, 56 S. Ct. 720; *Niemotko v. Maryland,* 95 L. Ed. 267, 340 U. S. 268, 71 S. Ct. 325.

The various considerations and the specific facts which show that House Bill No. 339 and the Plan of Unitization approved thereunder are an unreasonable exercise of the police power of the State of Oklahoma are presented and argued under the pertinent Specifications of Error in sub-divisions hereinafter set forth 2 to 6 inclusive.

II.

SAID STATUTES, ORDER AND PLAN OF UNITIZATION CONSTITUTES AN UNREASONABLE AND UNLIMITED DELEGATION OF LEGISLATIVE AND JUDICIAL POWER TO PRIVATE PARTIES OWNING DESIGNATED PERCENTAGES OF INTERESTS, DISCRIMINATING IN FAVOR OF MAJOR INTEREST OWNERS AS AGAINST MINOR INTEREST OWNERS. THIS CONTENTION IS COVERED BY ASSIGNMENT OF ERRORS (j), (k), (l), (m) AND (n). (Brief, Pages 6, 7)

The pertinent portions of House Bill No. 339 provide as follows:

Sec. 286.3. "Subject to the limitations of this Act the Corporation Commission *** is hereby vested with jurisdiction, power and authority, and it shall be its duty, to supervise the administration of this Act."

Sec. 286.4, sub-division (d). " *** To give the Commission jurisdiction hereunder, the petition shall be filed by, or with the authority of, lessees of record of fifty percent (50%) or more of the area *** sought to be unitized. The petition shall set forth *** the proposed unit area with a map *** attached, must allege *** facts required to be found by the Commission *** and shall have attached *** a recommended plan of unitization applicable to such proposed unit area and which the petitioners consider to be fair, reasonable and equitable."

Sec. 286.5, sub-division (a). " *** The designation of the operator shall be by vote of the lessees in the unit in a manner provided in the plan of unitization and not by the Commission."

Sec. 286.6. "If at any time after the filing of a petition for the creation of a unit and within sixty (60) days after the entry of an order by the Commission approving the creation of the same, lessees

of record of fifteen percent (15%) or more of the proposed unit area, if prior to the entry of the order by the Commission, or lessees of record of fifteen percent (15%) or more of the unit area as defined by the approved plan of unitization and order of the Commission, if after the entry of such order, shall file written protest with the Commission against the creation of the unit, the Commission shall vacate all action of any kind theretofore taken and dismiss the proceedings for the creation of such unit. The fact that a lessee joined in the petition seeking authority to create the unit or otherwise participated in any of the steps thereafter taken with the view of creating the same, shall not preclude such lessee from filing a protest pursuant to the provisions of this Section.

Sec. 286.7. " *** Any person aggrieved by any order of the Commission made pursuant to this Act may appeal therefrom to the Supreme Court of the State of Oklahoma *** except in any such appeal the Commission shall be impartial, inactive and shall not be represented directly or indirectly *** ."

Sec. 286.11. "In any proceeding hereunder in which an order is entered creating a unit, the Commission shall retain jurisdiction *** for the purpose of amending the plan of unitization *** Such an amendment may be made only upon the petition of lessees of record of ten percent (10%) or more of the unit area. Any amendment to a plan of unitization made pursuant hereto shall be effective prospectively only from and after the date on which the order *** shall become final."

Sec. 286.12. "The unit area of a unit may be unitized with adjoining and contiguous portions of the same common source of supply *** upon the filing of a petition therefor and after notice and hearing, in the same manner, on the same conditions, but sub-

ject to the right of lessees of record of fifteen percent (15%) or more of an existing unit area to protest, and veto such enlargement *** all as herein provided with respect to the creation of a unit in the first instance."

(Appendix "A", pages 78 to 88)

The pertinent portions of the Plan of Unitization are quoted or summarized as follows:

Section VIII provides for an Operating Committee with various powers, including the power to remove the Unit Operator and select a successor, to determine the extent of drilling operations and development to be carried on by the Unit Operator, including drilling, plugging back, reconditioning, deepening, abandonment, etc., pass upon all costs of operation, to determine from which wells unit production shall be produced, to approve the purchase, construction, location, abandonment or sale of compressor plant, gasoline plant, tank batteries, salt water disposal system or other facilities, to determine the manner of injection of gas, to appoint sub-committees, including legal, engineering, plant, etc., to approve or disapprove expenditures for technical advice, to provide for finances, and further provides:

"In all matters except the removal of a Unit Operator the vote on behalf of Lessees having at least 66⅔% of the total voting interest in the Unit shall control.

A Unit Operator may be removed only by the vote of at least 75% in interest of the Lessees other than such Unit Operator."

Section X provides that the Unit Operator is to conduct all operations, keep records, make statements on production, comply with Workmen's Compensation Laws, etc., with a right to resign upon six months' written notice, and Phillips Petroleum Company is named as the Unit Operator.

Section XV provides that nothing shall prevent the Operating Committee from abandoning or changing in whole or in part any particular method or methods of operation.

Section XXV provides that the Operating Committee can abandon the Unit when it shall determine that unit production can no longer be produced from the Unit Area in paying quantities and that upon such abandonment all rights shall revert to the separately owned tracts, which may thereafter continue to operate wells upon payment to the Unit of their salvage value; if such wells are not taken over, the Unit Operator is to salvage the same and disburse the proceeds in accordance with the assigned percentages. See Appendix "C", page 105.

The Unitization Act, the Order of the Commission and the Written Plan of Unitization, as approved, are not merely matters of delegated legislation—they also provide delegation of judicial power and authority. There is involved the legislative policy of determining whether a particular oil and gas field should be unitized, and, if so, the judicial power of determining the manner in which such field should be unitized and the interests to be assigned to the respective owners thereof.

The matter of determining policy may be legislative, but the matter of completely taking away control and property rights and substituting therefor something entirely different, even with notice to the lessees, is a judicial determination of rights. Judicial power was also exercised when it was determined that there existed a single common source of supply which could be subject to unitization. Judicial power is also exercised when the Commission determined the respective interests of Gulf Oil Corporation and Palmer to share in the Sterba oil and gas leasehold.

The legislative and judicial power delegated is not a delegation to a State Agency but is rather a delegation to private parties. These private parties have the power in the first instance to decide the policy of whether an oil and gas field should be unitized. The Commission or State Agency has no authority in this respect. When these private parties once determine, as a matter of policy, that the Medrano sand bodies of the West Cement Field should be unitized, then, as a part thereof, they also decide the manner in which it should be unitized, and what should be assigned to each party as his interest in such unit. The only power vested in the Commission is to approve or reject the unitization as recommended by private parties. (See Paragraph 286.4, Appendix "A")

The Commission has no authority to enlarge a Unit Plan, to amend, to alter or change such Plan, or to supervise operations under the Plan except at the will of private parties. The unlawfulness of this type of dele-

gation is discussed and referred to in an annotation in 3 ALR (2d) 188.

Even more vicious than the delegation to private parties is the discriminatory nature of the delegation whereby certain large percentages of lessees can control minority interests and at the same time protect themselves from any unwanted unitizations.

It is true that the Supreme Court of Oklahoma did not pass upon the validity of the 15 percent veto provision, suggesting that such provision was not in issue, (R. 44), but whether in issue or not, all of these percentage provisions in the Statute indicate the underlying purpose of providing control in the major interest owners, rather than a police regulation to promote conservation and protect correlative rights.

Any Unitization Act, the life, existence and operation of which depends upon the will of a percentage in interest of private parties therein, is, on its face, contrary to the principle of conservation in the public interest, and arbitrary and unreasonable as to those having an insufficient percentage in interest to protect their rights and views. The obvious result of such a percentage control in the oil and gas industry is the same today as it was 10 years ago when Winston P. Henry testified before a Subcommittee of the Committee on Interstate and Foreign Commerce, House of Representatives, 76th Cong., 3d Sess. on H. Res. 290 and H. R. 7372 (Petroleum investigation), p. 1786, as follows:

> "Practically every major pool is either largely owned by the major integrated companies before the time of discovery, or later by the purchasing of lease

properties in those fields. For example, the great East Texas field was discovered by independent operators, but is now in the hands of major integrated companies through purchases. The same condition is true of Conroe. But other great fields, like Hastings, Friendswood, and Anahuac on the Gulf Coast of Texas, and La Fitte and Villa Platte in the Gulf Coast of Louisiana were discovered and largely dominated from inception by major oil companies.

" *** In nearly every case then, it is a fair presumption that unitized operations would be placed in the hands of major integrated companies, not only because of their domination of the larger fields, but because of their organizations and capital with which the development of a large unit could be accomplished. Independent operators would, therefore, be called on to accept minor interests. Direct control of their property would be taken away from them. They would, therefore, have no say as to how their properties would be developed, or to whom their oil would be sold, or any control over the costs of development and operations. It is a further fair assumption that the integrated company placed in control of a given pool would desire to control the supply of oil from this field for its own pipe lines and refineries, and therefore, would fix the price which is paid for the oil."

In the case of *Carter v. Carter Coal Co.*, 298 U. S. 238, 56 S. Ct. 855, 80 L. Ed. 1160, it was held that a statute which conferred upon a majority of coal operators the right to regulate the affairs of the minority of coal operators was denial of due process of law. In the opinion the Court said:

"The power conferred upon the majority is, in effect, the power to regulate the affairs of an unwilling minority. This is legislative delegation in

its most obnoxious form; for it is not even delegation to an official or an official body, presumptively disinterested, but to private persons whose interests may be and often are adverse to the interests of others in the same business. The record shows that the conditions of competition differ among the various localities. In some, coal dealers compete among themselves. In other localities, they also compete with the mechanical production of electrical energy and of natural gas. Some coal producers favor the code; others oppose it; and the record clearly indicates that this diversity of view arises from their conflicting and even antagonistic interests. The difference between producing coal and regulating its production is, of course, fundamental. The former is a private activity; the latter is necessarily a governmental function, since, in the very nature of things, one person may not be entrusted with the power to regulate the business of another, and especially of a competitor. And a statute which attempts to confer such power undertakes an intolerable and unconstitutional interference with personal liberty and private property. The delegation is so clearly arbitrary, and so clearly a denial of rights safeguarded by the due process clause of the Fifth Amendment, that it is unnecessary to do more than refer to decisions of this court which foreclose the question."

In the case of *Eubank v. City of Richmond*, 226 U. S. 137, 57 L. Ed. 156, an ordinance had been passed which required the committee on streets upon request of owners of 2/3rds of the abutting property to establish a building line not less than five feet or more than thirty feet from the street line. The Court held that such an ordinance was violative of due process and stated as follows:

"This we emphasize. One set of owners determines not only the extent of use, but the kind of use

which another set of owners may make of their property. In what way is the public safety, convenience, or welfare served by conferring such power? The statute and ordinance, while conferring the power on some property holders to virtually control and dispose of the property rights of others, creates no standard by which the power thus given is to be exercised; in other words, the property holders who desire and have the authority to establish the line may do so solely for their own interest, or even capriciously. Taste (for even so arbitrary a thing as taste may control) or judgment may vary in localities, indeed, in the same locality. There may be one taste or judgment of comfort or convenience on one side of a street and a different one on the other. There may be a diversity in other blocks; and, viewing them in succession, their building lines may be continuous or staggering (to adopt a word of the mechanical arts) as the interests of certain of the property owners may prompt against the interests of others. The only discretion, we have seen, which exists in the street committee or in the committee of public safety, is in the location of the line, between 5 and 30 feet. It is hard to understand how public comfort or convenience, much less public health, can be promoted by a line which may be so variously disposed."

In the case of *Washington ex rel. Seattle Title Trust Co. v. Roberge*, 278 U. S. 116, 73 L. Ed. 210, a zoning ordinance provided for the right to maintain a home for aged persons within a particular district dependent upon the consent of the owners of 2/3rds of the property within 400 feet of the proposed home. The Court held this portion of the ordinance to be unconstitutional and stated:

"The section purports to give the owners of less than one-half the land within 400 feet of the pro-

posed building authority—uncontrolled by any standard or rule prescribed by legislative action—to prevent the trustee from using its land for the proposed home. The superintendent is bound by the decision or inaction of such owners. There is no provision for review under the ordinance; their failure to give consent is final. They are not bound by any official duty, but are free to withhold consent for selfish reasons or arbitrarily, and may subject the trustee to their will or caprice. Yick Wo v. Hopkins, 118 U. S. 356, 366, 368, 30 L. Ed. 220, 225, 226, 6 Sup. Ct. Rep. 1064. The delegation of power so attempted is repugnant to the due process clause of the 14th Amendment."

The matter of having percentage control by parties in interest is contrary to the principle of a police statute to conserve natural resources, and has no relation to either conservation or the protection of correlative rights.

The principle recognized in *Parker v. Brown*, 317 U. S. 341, 63 S. Ct. 307, 87 L. Ed. 315 (1943), holding that a percentage control over a marketing program when approved by a State Agency was not invalid under the Sherman Act, cannot be extended to sustain the validity of percentage control over a police statute which drastically deprives persons of property and contract rights. The case of *Currin v. Wallace*, 306 U. S. 1, 83 L. Ed. 441, 59 S. Ct. 379, involving a delegation by Congress under the "commerce" power where uniformity is not required, is not an authority for a purported police statute.

III.

SAID STATUTES, ORDER AND PLAN OF UNITIZATION DEPRIVE LANDOWNERS AND ROYALTY OWNERS OF PROPERTY RIGHTS WITHOUT DUE PROCESS AND IMPAIR THEIR CONTRACT RIGHTS, DENYING THEM EQUAL PROTECTION OF THE LAW. THIS CONENTION IS COVERED BY ASSIGNMENT OF ERROR (h). (Brief page 6)

House Bill 339 mentions the land owner or royalty owner in very few places.

Section 286.9 provides:

> "The obligation or liability of the lessee or other owners of the oil and gas rights in the several separately-owned tracts for the payment of unit expense shall at all times be several *** the unit shall have a first and prior lien upon the leasehold interest only in the unitized common source of supply (exclusive of a one-eighth (⅛) royalty interest) in and to each separately owned tract *** the interest of the lessee or other person who *** are obligated or responsible for the cost and expense of developing and operating a separately-owned tract *** shall *** be primarily responsible *** for unit expense *** and resort may be had to overriding royalties, oil and gas payments, royalty interests in excess of a one-eighth (⅛) of the production *** only in the event the owner of the interest primarily responsible fails to pay such assessment *** A one-eighth (⅛) part of the unit production allocated to each separately owned tract shall in all events be regarded as royalty to be distributed *** the royalty owners free and clear of all unit expense *** ."

Section 286.10 provides, in part:

> "Property rights, leases and other contracts, and all rights and obligations shall meet the provisions

and requirements of this Act and to any valid and applicable plan of unitization or order of the commission made and adopted pursuant hereto, but otherwise to remain in full force and effect.

The amount of the unit production allocated to each separately owned tract within the unit *** shall be distributed among or the proceeds thereof paid to the several persons entitled to share in the production for (from) such separately owned tracts in the same manner *** same proportions and *** same conditions that they would have participated and shared *** from such separately owned tract had not said unit been organized. *** ."

Section 286.17 provides, in part:

"No agreement between or among lessees or other owners of oil and gas rights *** entered into pursuant hereto *** shall be held to violate any statutes of this State prohibiting monopolies *** ."

The Plan of Unitization, as approved, makes no mention of the land or royalty owners except provisions similar to the Statute for liens for expenses which is provided under Section 11 of the Plan.

No one would deny that under the Statute and the Plan of Unitization approved thereunder, the royalty owners had been deprived of substantial contract and property rights. It is true that some royalty owners appeared in the proceedings before the Commission (not the Sterbas) in an effort to protect their rights and on appeal are here as Appellants in Cause 302. However, under no provision of the Unitization Act are the land or royalty owners made necessary parties to the proceedings, nor is there any provision in the Unitization

Act for actual notice to them of the pendency of such proceedings. Although a general publication notice was given (R. 184, 200) it is doubtful whether such notice is sufficient under the due process clause of the Federal Constitution. See *Mullane v. Central Hanover Bank and Trust Company*, 339 U. S. 306, 70 S. Ct. 657, 94 L. Ed. 865.

In addition to this lack of actual or sufficient notice, there is no provision in the Statute giving the land and royalty owners the same or similar rights which are given to lessees, (percentagewise, or otherwise). As a matter of fact, the land and royalty owners are given no rights whatsoever under the provisions of the statute, which constitutes an unfair and unreasonable discrimination against them. No land or royalty owner or any percentage of them have the right to petition for, formulate or recommend a Plan of Unitization under the Statute. No land or royalty owner has the right to nullify, amend or enlarge a Plan of Unitization, or in any manner control or supervise the operation or final dissolution of any Plan which may be approved.

The rights of land and royalty owners under oil and gas leases have, for many years, been recognized under the laws and judicial decisions of Oklahoma and other States. The royalty owner usually, as in this case, has the right to one-eighth of the oil and gas produced, free and clear of cost of production, and the lessee owns 7/8ths, subject to the cost and expense of production, and, possibly further subject to overriding royalty, as in this case, is vested in Gulf Oil Corporation. The landowners and royalty owners under repeated judicial de-

cisions are entitled to compel their lessees to comply with all express and implied covenants of the oil and gas lease. The express covenants, of course, are contained within the terms and provisions of the lease (see Appendix "D", page 158, but the implied covenants have been developed by judicial decisions in recognition of the disparity of interests existing between the royalty owner and the lessee. See Merrill, "*Covenants Implied in Oil and Gas Leases*", (2d Ed., Sec. 15, (1940)). These implied covenants cover the duties of the lessee to reasonably explore, develop and operate the leasehold, including the marketing of the products produced therefrom. When, under House Bill 339, the royalty owners have no right to petition for unitization, formulate, enlarge, amend or otherwise control the operation of the Unit, there is a clear discrimination which has no relation to the conservation of oil and gas and militates against the principle of protecting correlative rights.

It is recognized in the oil industry that the customary one-eighth royalty which is free and clear of the cost of development and operation is substantially of the same value as the seven-eighths working interest burdened with the costs of development and operation in accordance with the established law. See *Glassmire, Oil and Gas Leases and Royalties,* 2d Ed., Sec. 16, page 60. If it is considered that unitization is a more efficient operation which will result in a greater ultimate recovery of oil at a less cost, the land and royalty owners, as well as the lessees, should share in the benefits thereof, which would necessitate an increase in the cus-

tomary one-eighth royalty or provide for some other form of compensation. See *Merrill, "Stabilization of the Oil and Gas Industry and Due Process of Law,* 3 S. Cal. L. Rev. 396, 408 (1930).

The Appellees will attempt to justify this inequality between land owners or royalty owners and lessees on the grounds that the lessees will fairly represent the rights of lessors, and, therefore, will be equally protected with the lessees. It is true that the landowners and the royalty owners have some interests in common with the lessees, but their interests are many times adverse and conflicting and they cannot safely expect to be protected by their lessees, or even by a disinterested Commission. See *Merrill, "Implied Covenants and Secondary Recovery,* 4 Okl. L. Rev. 177, 196, 198 (1951). It is also to be noted that the Statute (Sec. 286.2, Appendix "A", page 77) discriminates against those pools which, on the effective date, were being operated under pressure maintenance, or which are twenty years of age at the time of the effective date of such Statute. This discrimination has no relationship to conservation or the protection of correlative rights. See 21 Okl. Bar Journal 1802.

IV.

SAID STATUTES, ORDER AND PLAN ARE NOT MERE REGULATIONS BUT IN FACT CONSTITUTE LAWS ADMINISTERED BY THE UNCONTROLLED DISCRETION OF PRIVATE PARTIES WHICH DRASTICALLY AND UNREASONABLY DESTROY VESTED PROPERTY AND CONTRACT RIGHTS. THIS CONTENTION IS COVERED BY ASSIGNMENT OF ERRORS (b), (c), (d), (e), (g). (i) and (o). (Brief pages 5, 6, 7)

The pertinent portions of House Bill 339, provide as follows:

> Sec. 286.8. "From and after the effective date of an Order of the Commission approving the creation of a unit and approving the plan of unitization *** the drilling of any well into or the operation of any well producing from the common source of supply *** by persons other than the unit *** shall be unlawful and is hereby prohibited *** ."
>
> Sec. 286.10. "Property rights, leases and other contracts and all rights and obligations shall meet the provisions and requirements of this Act and to any valid and applicable Plan of unitization or order of the Commission made and adopted pursuant hereto *** ."

The pertinent portions of the Plan of Unitization provide as follows:

> Par. XX. "The unit shall have a servitude and right of way on, over and across all of the lands in the Unit Area for the purpose of laying, constructing, building, using and maintaining, operating, changing, repairing and removing pipe lines, tanks, telegraph and telephone lines, water lines and other facilities for the development and operation of the Unit Area for Oil and Gas and for the gathering, handling and disposal of the Unit Production; ***

Par. VI. "The adoption of this Plan *** and the creation of the Unit *** shall have the effect of unitizing all further development and operations for the production of oil and gas from the Unit Area and of pooling and unitizing the production so obtained *** as if the Unit Area had been included in a single lease and all rights thereunder owned by the lessees in undivided interests. Property rights, leases, contracts and all other rights and obligations in respect to the oil and gas leases in and to the several Separately Owned Tracts within the Unit Area are hereby amended and modified to the extent necessary to make the same conform to the provisions and requirements of this Plan. *** The relationship between lessees *** shall not be that of a trust, partnership or association but shall be in the nature of the tenancy in common. *** the unit production allocated to each separately owned tract and only that amount, regardless of the well or wells in the Unit Area from which it may be produced *** and whether it be more or less than the amount of production from the well or wells *** on any such separately owned tract shall, for all intents, uses and purposes, be regarded and considered as production from such separately owned tract. Operations carried on under *** this Plan shall be regarded *** as a fulfillment of and compliance with all provisions, covenants *** express or implied, of the several oil and gas mining leases within the Unit Area or other contracts pertaining to the development thereof, to the same extent that the development and operation of and the production of Oil and Gas from each of the several separately owned tracts within the Unit Area would have constituted a fulfillment of and compliance with such leases and contract. Wells drilled or operated on any part of the Unit Area *** shall for all purposes be regarded as wells drilled on each separately owned tract *** ."

There is no doubt that conservation of oil and gas is a wise policy and that under the police power of a State great latitude exists for the enactment of legislation to promote conservation, but there are limitations beyond which the State cannot go without encroaching upon the Federal Constitution. *Penn Coal Co. v. Mahon*, 260 U. S. 393, 43 S. Ct. 158, 676 L. Ed. 322. House Bill No. 339, Order of the Commission No. 20289, and the Written Plan of Unitization as approved thereunder, under the facts of this case, go much further than is reasonably necessary for the purpose of conserving oil or gas or protecting correlative rights, and in fact destroy contract and property rights without compensation.

It is said in *Summers, Law of Oil and Gas*, Vol. 1, Sec. 106, p. 304, as follows:

> "With the most modern scientific methods of locating earth structures, it is impossible now, as it was in the beginning of the oil and gas industry, for anyone to know, prior to actual drilling and production, of the existence and amount of oil or gas within or capable of being produced from a particular tract of land. This fact makes it unwise from the view point of either the landowner or the producer to sell the oil and gas or the privilege of producing it for a present cash consideration."

In this case, Palmer's and Sterbas' property and contracts are taken from them for a consideration fixed by private parties without even an appraisement being made by disinterested parties. Even where property is taken for condemnation for public purposes, an orderly and judicial procedure is required whereby the property

owner receives "just compensation". It must be assumed that neither Palmer nor Sterbas would have sold their rights under the leasehold to Phillips Petroleum Company or the Operating Committee at any price, or, if at any price, they would have the right to fix that price or at least negotiate for the consideration. The least that the Statute could have done in fairness to Palmer and Sterbas, and others similarly situated, would have been to make it possible for them to sell their entire interest to the Unit Operator, or the Operating Committee at a consideration to be fairly determined in a judicial proceeding rather than to turn over the operation of the leasehold to such parties merely for an assigned percent in future production from the Unit. Even where the State takes property for public purposes, it cannot fix the value of the property taken. That value must be determined in an orderly judicial procedure.

The impact of the Commission's Order 20289 approving the Written Plan of Unitization is to take from Palmer and give to private parties the operation of Palmer's oil and gas leasehold estate, such private parties, without Palmer's consent and over its objections, determining the interest to which Palmer will be entitled, thus putting Palmer, an independent oil producer, off its property and completely out of business in the field involved.

The impact of Order 20289 approving the Written Plan of Unitization for the Sterbas is to completely abrogate the oil and gas lease contract, destroying Sterbas' right

to have Palmer operate their lease and the right to compel performance of the lessee's contractual obligations, express and implied, under the lease without having participated in the proceedings before the Commission.

The property and contract rights of Sterbas and Palmer are fixed under the terms of the oil and gas lease dated February 13, 1936, and these parties had respected those rights and conformed thereto. Palmer had drilled and operated said leasehold in accordance with those rights, until the Order of the Commission of September 5, 1947, about ten years subsequent to the time that their rights were vested and established. It is one thing to have rights disturbed under provisions of a law existing at the time such rights are created; it is quite another thing to undertake a business enterprise or make a contract upon legal rights as they exist and at a subsequent time, by a law administered by the uncontrolled discretion of private parties and a Commission's Order approving the same, have those contract and property rights annihilated over one's objection. See *Merrill, Stabilization of The Oil Industry and Due Process of Law*, 3 S. Cal. L. Rev. 396, 409-410 (1930).

That Paragraphs 286.4 and 286.5 (Appendix "A", pp. 78, 79) of the Unitization Act are too vague, broad and unspecific to provide any reasonable guide to the Commission in approving any Order thereunder, was clearly shown by the fact that the Commission in its order was unable to be more specific or definite than the law itself, and the Plan of Unitization likewise was not positive or definite in purpose, time or manner of unitization, leav-

ing all of these matters within the uncontrolled discretion of the vote of 66 2/3 percent of lessees within the unit area. See annotation, 70 *L. Ed.* 322.

The so-called facts required to be found under Section 286.4 of the Unitization Act, after a finding of which the Commission is required to enter an order approving the Unit, are not facts in any sense of the word, but are merely generalities which could not operate as standards or guides for any specific Plan of Unitization.

V.

THE UNDISPUTED EVIDENCE ESTABLISHED THAT GEOLOGICAL FAULTS SEPARATED THE MEDRANO SAND INTO SEVERAL SEPARATE AND DISTINCT COMMON SOURCES OF SUPPLY. THIS CONTENTION IS COVERED BY ASSIGNMENT OF ERRORS (f) AND (r). (Brief pages 5, 8)

The pertinent portions of House Bill 339 are as follows:

> Sec. 286.2. "This Act shall apply only to common sources of supply of oil, oil and gas, or gas distillate in this State *** ."
>
> Sec. 286.5. " *** Each unit and unit area shall be limited to all or a portion of a single common source of supply. Only so much of a common source of supply as has reasonably been defined by actual drilling operations may be so included within the unit area *** ."

Irrespective of the specific requirements of House Bill 339 above quoted, it would not be a proper exercise of the police power to unitize several separate and distinct common sources of supply as one unit on the theory of

conservation and the protection of correlative rights, since the protection of correlative rights could not be reasonably provided for in such a unit. See *H. F. Wilcox Oil and Gas Company v. State,* 162 Okl. 89, 19 P. (2d) 37. That faults can and do constitute impervious barriers sufficient to separate a homogeneous sand dividing it into several common sources of supply is well demonstrated by the *Wilcox* case above referred to which involved several common sources of supply caused by faults in the Wilcox and other sands in the Oklahoma City Field.

The finding of the Commission that the Medrano sand of the West Cement Field constitutes a single common source of supply is wholly unsupported by the evidence. All of the known facts adduced in evidence disclosed that the Medrano sand of the West Cement Field is traversed by several impervious geological faults of such magnitude as to completely separate said sand into several separate and distinct sand bodies or separate common sources of supply. The conclusive nature of the evidence is demonstrated by the fact that it was, in its most important aspects, adduced by way of cross examination of appellees' witnesses proposing the Plan of Unitization. (R. 325-328, 389, 553-555, 903)

There was introduced into evidence as Exhibit 92, (R. 1047-1052), a letter written by C. P. Dimit, Vice-President of Phillips Petroleum Company, under date of March 21, 1944, to the Petroleum Administrator of War, the nature of which was to state almost positively that there were impervious barriers in the Medrano sand

caused by geological faults. (R. 1466-1477) The substance of this letter was never denied.

The engineers' committee report, Exhibit 71, is predicated upon the existence of five separate and distinct common sources of supply or segments, each of which has different characteristics and values. The only specific comment that the report of the engineers' committee made with respect to the faults is on page 4 thereof, which states:

> "Transverse faults divide the pool into five segments herein designated as segments a, b, c, d, and e, lettered from east to west."

The report of the engineers' committee considers all pertinent engineering factors, not from the standpoint of all Medrano sand bodies constituting one common source of supply, but as those factors relate to each separate segment of the Medrano sand bodies. All estimates, computations and calculations were separately made with reference to the information and characteristics of the sand conditions as existing in each of the separate segments. A more eloquent statement that the Medrano sand bodies of the West Cement Field constitute several common sources of supply can hardly be conceived of than that disclosed by Exhibit 71; (R. 1419-1460) and this conclusion is confirmed by the silent acquiescence of every member of the engineers' committee by their failing to explain the segment treatment given in their report. The Isobaric Map, Exhibit 72, R. 1506, 903, prepared by the engineers' committee in

1945, definitely showed pressure variances between each of the separate segments.

The only written geological report ever made by the geologists' committee, was introduced into evidence as Exhibit 68 (R. 1414-1449, 389) which was made in October, 1945. This report states that the committee concluded that the Edwards fault constituted a complete barrier and that there was lack of free communication between the several fault segments. All exhibits prepared by the geologists' committee, including 54 (R. 1495, 318), 55 (R. 1497, 325), 56 (R. 1499, 327), 57 (R. 1501, 328) and similar exhibits 54R (R. 1495, 899-90), 55R (R. 1497), 56R (R. 1499) and 57R, (R. 1501), which superseded the same, showed these various faults without limitations. For instance, on Exhibit 54 (R. 1495) the minus 4600 contour line on the left side of the Sterba fault meets the Sterba fault line at a point more than 350 feet from the point where the minus 4600 contour line on the right side of the Sterba fault meets the Sterba fault line, thus showing a complete separation of the oil zone in the Medrano sand. These contours were established from the actual information obtained from the Palmer-Sterba No. 6 dry hole. On the same exhibit the minus 3400 contour on the left side of the Sterba fault meets the Sterba fault line at a point more than 600 feet from the point where the minus 3400 contour line on the right side of the Sterba fault reaches the Sterba fault line, showing a vertical separation of approximately 600 feet between the Medrano sand on one side of the fault from the Medrano sand on the other side of the

fault. A minus 2900 foot contour on the left side of the Sterba fault meets the Sterba fault line at almost the same point where the minus 3100 foot contour line on the right side of the fault makes a 200 foot displacement in the Medrano sand on either side of the fault. These contours were established by the actual facts secured from Palmer-Sterba No. 5 dry hole and Magnolia-Henley No. 2 dry hole. The actual known facts establish, therefore, that the Sterba fault completely separates the Medrano sand into at least two common sources of supply and these known facts are reflected on Exhibit 54. (R. 1495) Various exhibits, prepared by Appellants, which were based upon Exhibits prepared by Appellees, including Exhibits 65 (R. 1503, 389), Exhibit 66 (R. 1504, 389) and Exhibit 67 (R. 1505, 389) show clearly that the Medrano sand was completely separated by the Sterba fault and Appellants' expert witnesses so testified. The only evidence in the record (which is not competent evidence) was the unfounded expert opinions of H. D. Kaveler and A. J. Montgomery, both employees of Phillips Petroleum Company, and witnesses for Appellees, and Exhibits 12 to 23, both inclusive, (R. 1345-1401), which were copies of previous orders made by the Commission under the General Conservation Law. Mr. Kaveler and Mr. Montgomery both admitted that faults completely separated the oil zone of the Medrano Sand, but disregard d the known facts upon which their expert opinions were purportedly based, and expressed the further opinion that somewhere in the gas zone these faults lost their effectiveness. (R. 732) An expert's

opinion cannot be accepted as competent evidence where inconsistent with the known facts upon which such opinion is based. *First National Bank v. Texas*, 20 Wall (U. S.) 72, 22 L. Ed. 295. The rule was applied in the case of *Myers, et al v. Shell Petroleum Company*, 153 K. 287, 110 P. (2d) 810, involving an action for damages for drainage in an oil and gas pool—a pool in Kansas quite similar in nature to the Medrano sand of the West Cement Field. Expert witnesses testified as to the porosity, permeability, pressure, etc., based upon factual information obtained from wells or control points approximately one-half mile from the point in question. The Supreme Court of Kansas held that expert opinions of this nature were nothing more than mere conjecture and the Court stated in paragraph 7 of the syllabus as follows:

> "In order to render expert opinion testimony sufficient, when tested by demurrer, it is necessary that the opinion be based upon facts sufficiently definite and certain to relieve the jury from reaching an arbitrary conclusion."

Referring to Exhibits 12 to 23, both inclusive (R. 1345-1401) the issue in those proceedings was proration under the General Conservation Laws. Those orders cannot be considered as evidence against Appellants in these proceedings where the basic fact is whether a single common source of supply exists. Be that as it may, the Commission never treated its previous orders with respect to the Medrano Sand as constituting a binding determination at any time. In each order, as will be

disclosed by a careful examination of Exhibits 12 to 23, inclusive, the Commission undertook to decide the question of single common sources of supply upon the evidence presented at each such time. It does not appear that the Commission was ever furnished, prior to these unitization hearings with evidence showing the nature and extent of the faults existing in the Medrano sand of the West Cement Field.

The decision of the Supreme Court of Oklahoma to the effect that the Commission's finding was conclusive being based upon conflicting expert opinion is indicative that the Supreme Court of Okahoma did not carefully examine the facts upon which the opinions were based but merely accepted the findings of the Commission as prima facie correct.

VI.

SAID ORDER AND PLAN, WITH ITS DIVISION OF INTEREST THEREIN ARE UNREASONABLE, ARBITRARY AND CAPRICIOUS IN THE LIGHT OF THE UNDISPUTED EVIDENCE. THIS IS COVERED BY ASSIGNMENT OF ERRORS (p) AND (q). (Brief page 8)

(1) The evidence disclosed that at the time the Order was entered two-thirds of the gas reservoir energy had been produced and expended. The operation of the compulsory unit contemplated the future drilling of approximately seven oil wells at uncertain locations; that certain gas wells would be shut in and any gas thereafter produced would be reinjected in the Medrano sand bodies. Since Appellees' pronounced purpose of this unitization is to conserve the gas energy, it is perfectly obvious that

the Unit, to be successful, should have been established before two-thirds of the gas energy has been expended. ("Petroleum Conservation", page 216, (1950)). Gas in the Medrano sand was first discovered in 1936. By the time oil was discovered in 1943, more than one-third of the total gas reservoir energy had been exhausted and by the time Order No. 20289 was entered more than two-thirds of the gas energy had been exhausted. (R. 609) This depletion of gas was largely the result of the operations of those who now propose compulsory unitization. Any compulsory unitization predicated on reinjection of gas where the gas energy is more than two-thirds exhausted, which at the same time destroys contract and property rights, has no reasonable basis. General conservation laws in Oklahoma already existing were amply sufficient to provide protection to the remaining one-third gas energy in the Medrano sand. See *Denver Producing and Refining Company v. State, et al.*, 199 Okl. 171, 184 P. (2d) 961.

(2) The Plan includes within the Unit considerable acreage not proven to contain productive oil or gas.

Thirty-four tracts of land upon which no well had been drilled (see Exhibit 24, R. 173, 210) were assigned interests and included within the Unit. There was also included within the Unit several tracts of land upon which completed wells to the Medrano sand thereon had established that such tracts were unable to produce oil and gas in commercial quantities. These tracts, undrilled and dry, constituted approximately 1020 surface acres. Under the established law, where no wells are drilled, or,

where the wells drilled result in dry holes, the tracts are valueless for oil and gas purposes; nevertheless, these tracts were included within the unit which was unfair to the other tracts proven by actual production.

(3) The chief objection to the basis of the division of interest is that it fails to include any consideration whatsoever of existing legal rights of the parties under established law and the leasehold contracts. It was clearly deficient in the following respects:

(a) Under the established law Palmer has the right to produce all oil from any well completed above 6000 feet on the Palmer-Sterba lease. This right included the right to produce all oil from any well completed at a depth of 6000 feet or above, whether such oil came from below or above 6000 feet. Palmer had two oil wells so completed. Although Gulf may have the right to produce from wells completed below a depth of 6000 feet, it never exercised this right by drilling such wells and, therefore, under the law had not established any right to produce oil from the Sterba lease. Nevertheless, Gulf's interest was determined by Appellees by running a horizontal plane at the depth of 6000 feet on the Palmer-Sterba lease and allowing Gulf all oil estimated to be in place below the depth of such plane.

(b) Palmer had, over a period of approximately ten years prior to the institution of this proceeding before the Commission, assumed the dry hole risk in the drilling of its several oil and gas test wells on the Sterba lease, two of which proved to be dry holes. The extent of this risk and expense on wells drilled to the depth

of approximately 6000 feet is a factor of great importance to one engaged in the oil and gas business as an independent operator. In the fixing of interests to the respective leases in the Plan, Palmer is given no consideration whatsoever for its risk and expense undertaken and incurred. Under the established law relating to a lessee's compliance with drilling obligations, express or implied, under an oil and gas lease the assumption of these risks and expenses would have had great weight in determining whether or not Palmer had complied with its duties and obligations to its lessors, the Sterbas.

(c) Palmer was admittedly an efficient (R. 729) operator and had fully complied with all of the express and implied covenants of its leasehold. Palmer received no consideration for these commendable qualities. No consideration was given to comparative lifting costs as between leases in the Unit, although the Statute specifically required that "burden of operation" be considered in determining the division of interest.

(d) The basis for the division of interest in the Plan also included unreasonable and arbitrary considerations, such as estimating acre feet of sand on the basis of contouring, which was mere guess-work, (R. 327), using uncertain recovery factors (R. 561, 562), and using an indefinite "current income" factor based upon allowable oil and gas runs rather than actual productive capacity of wells. (R. 708, 71)

CONCLUSION.

On May 26, 1951, prior to the time that the judgment and decision of the Supreme Court of Oklahoma became final in this Cause, House Bill 339, 1945 Oklahoma Legislature, was repealed by Senate Bill 203 of the 1951 Oklahoma Legislature. Thereupon, the Supreme Court of the United States required a decision by a Court of proper jurisdiction in Oklahoma on the effect of such repeal upon Appellants' rights in this cause. By additional proceedings in the Supreme Court of Oklahoma, a decision on this question was made under date of December 5, 1951, (R. 1536-1538) holding that Appellants' rights were not affected by such repeal.

Although the Supreme Court of Oklahoma in a sense minimized the extent of the repeal of House Bill 339, an examination of the repealing Statute, (Senate Bill 203; see Statement as to Jurisdiction, Appendices J, page 302) clearly discloses that it substantially enlarges the jurisdiction of the Corporation Commission of Oklahoma and eliminates many features of House Bill 339 that are objectionable under the Federal Constitution. In essence, Senate Bill 203 constitutes a new and different type of Unitization Statute.

Section 2 of the new Act vests in the Commission a broad jurisdiction. Section 3 permits the filing of a petition by anyone, including the Commission, with a recommended Plan of Unitization for any pool or field. All percentage provisions in respect to the amendment, enlargement or nullification of a Plan of Unitization have been completely eliminated, except the condition requir-

ing ratification of the Plan by sixty-three percent of the lease and royalty owners by unit area under Section 5. There is no discrimination between the landowner or royalty owner and lessees and the only percentage provision remaining in the Statute is that above referred to in Section 5 thereof.

The passage of this new Act and the repeal of the old Act complained of indicate legislative questioning of the fairness, constitutionality and separability of the provisions of House Bill No. 339 here objected to.

The Appellants in this case have been forced into a Unit under a Plan of Unitization pursuant to a Statute which no longer exists. The Statute and Plan are unconstitutional. It is requested that the Supreme Court of the United States adjudge that House Bill 339 of the Oklahoma Legislature and the Plan of Unitization were unconstitutional in their entirety and reverse the decision and judgment of the Supreme Court of Oklahoma entered March 20, 1951.

MARK H. ADAMS,
of Wichita, Kansas;
CHARLES E. JONES,
of Wichita, Kansas;
COLEMAN HAYES,

Counsel for Appellants.

APPENDIX "A"

HOUSE BILL NO. 339 OF THE 1945 OKLAHOMA LEGISLATURE

UNITIZED MANAGEMENT OF COMMON SOURCES OF SUPPLY (NEW)

Par. 286.1. LEGISLATIVE DECLARATION.—The Legislature finds and determines that it is desirable and necessary, under the circumstances and for the purposes hereinafter set out, to authorize and provide for unitized management, operation and further development of the oil and gas properties to which this Act[1] is applicable, to the end that a greater ultimate recovery of oil and gas may be had therefrom, waste prevented, and the correlative rights of the owners in a fuller and more beneficial enjoyment of the oil and gas rights, protected. Laws 1945, p. 162, Par. 1.

Par. 286.2. COMMON SOURCES OF SUPPLY TO WHICH ACT IS APPLICABLE.—This Act[1] shall apply only to common sources of supply of oil, oil and gas, or gas distillate in this State.

The provisions of this Act shall not apply to any common source of supply of oil, oil and gas, or gas distillate or any part or parts thereof which at the effective date of this Act are being operated by or under pressure maintenance, repressuring, or secondary recovery methods or operations, provided, that nothing contained in this Act shall prevent the voluntary inclusion and extension of areas in which are located such existing pressure maintenance, repressuring, or secondary recovery methods or operations as unit areas under the provisions of this Act. Provided this Act shall not apply to any field where the discovery well has been drilled twenty (20) years

---

[1]Sections 286.1-286.17 of this title. Approved April 19, 1945. Effective 90 days after April 26, 1945, date of adjournment.

prior to the effective date of this Act. Laws 1945, p. 162, Par. 2.

Par. 286.3. JURISDICTION OF CORPORATION COMMISSION.—Subject to the limitations of this Act[1] the Corporation Commission of the State of Oklahoma, hereinafter referred to as the "Commission", is hereby vested with jurisdiction, power and authority, and it shall be its duty, to supervise the administration of this Act. Laws 1945, p. 163, Par. 3.

Par. 286.4. THE PETITION FOR AND ORDER CREATING UNIT.—If upon the filing of a petition therefor and after notice and hearing, all in the form and manner and in accordance with the procedure and requirements hereinafter provided the Commission shall find (a) that the unitized management, operation and further development of a common source of supply of oil and gas or portion thereof is reasonably necessary in order to effectively carry on pressure-maintenance or repressuring operations, cycling operations, water flooding operations, or any combination thereof, or any other form of joint effort calculated to substantially increase the ultimate recovery of oil and gas from the common source of supply; and (b) that one or more of said unitized methods of operation as applied to such common source of supply or portion thereof are feasible, will prevent waste and will with reasonable probability result in the increased recovery of substantially more oil and gas from the common source of supply than would otherwise be recovered; and (c) that the estimated additional cost, if any, of conducting such operations will not exceed the value of the additional oil and gas so recovered; and (d) that such unitization and adoption of one or more of such unitized methods of operation is for the common good and will result in the general advantage of the owners of the oil and gas rights within the common source of supply or portion thereof directly affected, it shall make a finding to that effect and

[1]Sections 286.1-286.17 of this title.

enter an order approving the creation of a unit composed of the lessees and other persons who under the plan of unitization approved by the Commission are chargeable with the responsibility and cost of conducting such unitized methods of operation, development of the common source of supply or portion thereof described in the order, all upon such terms and conditions, as may be shown by the evidence to be fair, reasonable, equitable and which are necessary or proper to protect, safeguard, and adjust the respective rights and obligations of the several persons affected, including royalty owners, owners of overriding royalties, oil and gas payments, carried interests, mortgagees, lien claimants and others, as well as the lessees. To give the Commission jurisdiction hereunder, the petition shall be filed by, or with the authority of, lessees of record of fifty percent (50%) or more of the area of the common source of supply or portion thereof sought to be unitized. The petition shall set forth a description of the proposed unit area with a map or plat thereof attached, must allege the existence of the facts required to be found by the Commission as hereinabove provided and shall have attached thereto a recommended plan of unitization applicable to such proposed unit area and which the petitioners consider to be fair, reasonable and equitable. Laws 1945, p. 163, Par. 4.

Par. 286.5. UNIT AREA AND PLAN OF UNITIZATION.—The order of the Commission shall define the area of the common source of supply or portion thereof to be included within the unit area and prescribe with reasonable detail the plan of unitization applicable thereto.

Each unit and unit area shall be limited to all or a portion of a single common source of supply. Only so much of a common source of supply as has reasonably been defined by actual drilling operations may be so included within the unit area.

A unit may be created to embrace less than the whole of a common source of supply only where it is shown by the evidence that the area to be so included within the unit area is of such size and shape as may be reasonably

required for the successful and efficient conduct of the unitized method or methods of operation for which the unit is created, and that the conduct thereof will have no material adverse effect upon the remainder of such common source of supply.

The plan of unitization for each such unit and unit area shall be one suited to the needs and requirements of the particular unit dependent upon the facts and conditions found to exist with respect thereto. In addition to such other terms, provisions, conditions and requirements found by the Commission to be reasonably necessary or proper to effectuate or accomplish the purpose of this Act, and subject to the further requirements hereof, each such plan of unitization as the parties thereto may agree upon shall be fair, reasonable and equitable, and among other proper and equitable provisions, shall provide:

(a) For the efficient unitized management or control of the further development and operation of the unit area for the recovery of oil and gas from the common source of supply affected. Under such a plan the actual operations within the unit area may be carried on in whole or in part by the several lessees of leases within the unit area, subject to the supervision and direction of the unit, or may be conducted in whole or in part by the unit or some particular operator or operators of a lease or leases in the approved unit area dependent upon what is most beneficial or expedient. The designation of the operator shall be by vote of the lessees in the unit in a manner provided in the plan of unitzation and not by the Commission.

(b) The division of interest or formula for the apportionment and allocation of the unit production, among and to the several separately-owned tracts within the unit area such as will reasonably permit persons otherwise entitled to share in or benefit by the production from such separately-owned tracts to produce or receive, in lieu thereof, their fair, equitable and reasonable share of the unit production or other benefits thereof. A separately-owned tract's fair, equitable, and reasonable share of the unit

production shall be measured by the value of each such tract for oil and gas purposes and its contributing value to the unit in relation to like values of other tracts in the unit, taking into account acreage, the quantity of oil and gas recoverable therefrom, location on structure, its probable productivity of oil and gas in the absence of unit operations, the burden of operation to which the tract will or is likely to be subjected, or so many of said factors, or such other pertinent engineering, geological, or operating factors, as may be reasonably susceptible of determination. Unit production as that term is used in this Act shall mean and include all oil and gas produced from a unit area from and after the effective date of the order of the Commission approving the creation of the unit regardless of the well or tract within the unit area from which the same is produced;

(c) The manner in which the unit and the further development and operation of the unit area shall or may be financed and the basis, terms and conditions on which the cost and expense thereof shall be apportioned among and assessed against the tracts and interests made chargeable therewith, including a detailed accounting procedure governing all charges and credits incident to such operations. Upon and subject to such terms and conditions as to time and rate of interest as may be fair to all concerned, reasonable provisions shall be made in the plan of unitization for carrying or otherwise financing lessees who are unable to meet their financial obligations in connection with the unit.

(d) The procedure and basis upon which wells, equipment and other properties of the several lessees within the unit area are to be taken over and used for unit operations, including the method of arriving at the compensation therefor, or of otherwise proportionately equalizing or adjusting the investment of the several lessees in that project as of the effective date of unit operations.

(e) For the creation of an operating committee to have general over-all management and control of the unit and the conduct of its business and affairs and the operations

carried on by it, together with the creation or designation of such other subcommittees, boards or officers to function under authority of the operating committee as may be necessary, proper or convenient in the efficient management of the unit, defining the powers and duties of all such committees, boards or officers and prescribing their tenure and time and method for their selection. Each lessee within the unit area shall be entitled to representation on the operating committee and shall have a vote equal to the proportionate interest of such lessee in the unit, provided, where the voting interest of a lessee is such as to control the action taken by the committee, the vote of such lessee shall not serve to carry or defeat action by the committee unless such vote is supported by the vote of a majority of the remaining lessees.

(f) The time when the plan of unitization shall become and be effective;

(g) The time when and conditions under which and the method by which the unit shall or may be dissolved and its affairs wound up. Laws 1945, p. 164, Par. 5.

Par. 286.6. OBJECTION TO CREATION OF UNIT.—If at any time after the filing of a petition for the creation of a unit and within sixty (60) days after the entry of an order by the Commission approving the creation of the same, lessees of record of fifteen percent (15%) or more of the proposed unit area, if prior to the entry of the order by the Commission, or lessees of record of fifteen percent (15%) or more of the unit area as defined by the approved plan of unitization and order of the Commission, if after the entry of such order, shall file written protest with the Commission against the creation of the unit, the Commission shall vacate all action of any kind theretofore taken and dismiss the proceedings for the creation of such unit. The fact that a lessee joined in the petition seeking authority to create the unit or otherwise participated in any of the steps thereafter taken with the view of creating the same, shall not preclude such lessee from filing a protest pursuant to the provisions of this Section. Laws 1945, p. 165, Par. 6.

Par. 286.7. PROCEDURE AND APPEAL.—Except as otherwise herein expressly provided, all proceedings had under this Act[1] including the filing of petitions, the giving of notices, the conduct of hearings and other action taken by the Commission shall be in the form and manner and in accordance with the procedure and procedural requirements provided in Sections 84 to 135, inclusive, Title 52, Oklahoma Statutes, 1941, or any amendment thereof with reference to proceedings thereunder. Such additional notice shall be given as may be required by the Commission. The Conservation Officer, his assistant and deputies and the Conservation Attorney shall act without additional compensation as technical advisors to the Commission to the extent that the Commission may require. Any person aggrieved by any order of the Commission made pursuant to this Act may appeal therefrom to the Supreme Court of the State of Oklahoma upon the same conditions, within the same time and in the same manner as is provided in said Sections 84 to 135, inclusive, Title 52, Oklahoma Statutes, 1941, for the taking of appeals from the orders of the Commission made thereunder, except in any such appeal the Commission shall be impartial, inactive and shall not be represented directly or indirectly by the Conservation Attorney, the Attorney General or any other public official or person. The Supreme Court on appeal shall have jurisdiction and authority and it shall be its duty to review the record of proceedings and transcript of evidence and to consider the validity of the order of the Commission appealed therefrom. On appeal the order of the Commission appealed from shall be regarded as prima facie valid, fair, reasonable and equitable, but if the order is found to be contrary to the clear weight of the evidence, in any one of such respects, the same shall be vacated and set aside and the cause referred to the Commission for further proceedings not inconsistent with the judgment of the court; otherwise the said order shall be affirmed.

---

[1]Sections 286.1-286.17 of this title.

In addition to any other remedy provided in this Act any interested person, firm or corporation within a unit area feeling himself aggrieved by any order of the Commission or the action of a unit thereunder, may at any time institute a suit in the District Court of the County in which the greater part of the unit area is located, as in other civil suits in equity, against the other lessees within the unit and in such suit have his rights and equities determined. Any person aggrieved by the judgment entered in such an action may appeal therefrom to the Supreme Court of the State of Oklahoma in the time and manner as appeals are taken in other civil actions. To the extent possible under existing laws the Supreme Court shall give precedence to all such appeals in the hearing and disposition thereof. Laws 1945, p. 165, Par. 7.

Par. 286.8. OPERATIONS IN VIOLATION OF PLAN OF UNITIZATION UNLAWFUL.—From and after the effective date of an order of the Commission approving the creation of a unit and approving the plan of unitization applicable thereto the drilling of any well into or the operation of any well producing from the common source of supply or portion thereof within the unit area defined in the order by persons other than the unit or persons acting under its authority or except in the manner and to the extent provided in such plan of unitization shall be unlawful and is hereby prohibited. Laws 1945, p. 166, Par. 8.

Par. 286.9. THE NATURE, PURPOSES AND FUNCTIONS OF UNITS, AND LIABILITY OF OWNERS OF OIL AND GAS RIGHTS THEREIN FOR UNIT EXPENSE.—Each unit created under the provisions of this Act[1] shall be a body politic and corporate, capable of suing, being sued and contracting as such in its own name. Each such unit shall be authorized on behalf and for the account of all the owners of the oil and gas rights within the unit area, without profit to the unit, to supervise, manage and conduct the further development and operations for the production of oil and gas from

[1]Sections 286.1-286.17 of this title.

the unit area, pursuant to the powers conferred, and subject to the limitations imposed by the provisions of this Act and by the plan of unitization.

The obligation or liability of the lessee or other owners of the oil and gas rights in the several separately-owned tracts for the payment of unit expense shall at all times be several and not joint or collective and in no event shall a lessee or other owner of the oil and gas rights in the separately-owned tract be chargeable with, obligated or liable, directly or indirectly, for more than the amount apportioned, assessed or otherwise charged to his interest in such separately-owned tract pursuant to the plan of unitization and then only to the extent of the lien provided for in this Act.

Subject to such reasonable limitations as may be set out in the plan of unitization, the unit shall have a first and prior lien upon the lease-hold interest only in the unitized common source of supply (exclusive of a one-eighth (⅛) royalty interest) in and to each separately-owned tract, the interest of the owners thereof in and to the unit production and all equipment in the possession of the unit, to secure the payment of the amount of the unit expense charged to and assessed against such separately-owned tract. The interest of the lessee or other persons who by lease, contract or otherwise are obligated or responsible for the cost and expense of developing and operating a separately-owned tract for oil and gas in the absence of unitization shall, however, be primarily responsible for and charged with any assessment for unit expense made against such tract and resort may be had to overriding royalties, oil and gas payments, royalty interests in excess of a one-eighth (⅛) of the production, or other interests which otherwise are not chargeable with such cost, only in the event the owner of the interest primarily responsible fails to pay such assessment or the production to the credit thereof is insufficient for that purpose. In the event the owner of any royalty interest, overriding royalty, oil and gas payment or other interest which

under the plan of unitization is not primarily responsible therefor pays in whole or in part the amount of an assessment for unit expense for the purpose of protecting such interest, or the amount of the assessment in whole or in part is deducted from the unit production to the credit of such interest, the owner thereof shall to the extent of such payment or deduction be subrogated to all of the rights of the unit with respect to the interest or interests primarily responsible for such assessment. A one-eighth (⅛) part of the unit production allocated to each separately-owned tract shall in all events be regarded as royalty to be distributed to and among, or the proceeds thereof paid to, the royalty owners free and clear of all unit expense and free of any lien therefor. Laws 1945, p. 166, Par. 9.

Par. 286.10. Property and Contract Rights.—Property rights, leases and other contracts, and all rights and obligations shall meet the provisions and requirements of this Act[1] and to any valid and applicable plan of unitization or order of the Commission made and adopted pursuant hereto, but otherwise to remain in full force and effect.

Nothing contained in this Act shall be construed to require a transfer to or vesting in the unit of title to the separatey-owned tracts or leases thereon within the unit area, other than the right to use and operate the same to the extent set out in the plan of unitization; nor shall the unit be regarded as owning the unit production. The unit production and the proceeds from the sale thereof shall be owned by the several persons to whom the same is allocated under the plan of unitization. All property, whether real or personal, which the unit may in any way acquire, hold or possess shall not be acquired, held or possessed by the unit for its own account but shall be so acquired, held and possessed by the unit for the account and as agent of the several lessees and shall be the property of such lessees as their interests may appear under the plan of unitization, subject, however, to the right of

[1]Sections 286.1-286.17 of this title.

the unit to the possession, management, use or disposal of the same in the proper conduct of its affairs, and subject to any lien the unit may have thereon to secure the payment of unit expense.

The amount of the unit production allocated to each separately-owned tract within the unit, and only that amount, regardless of the well or wells in the unit area from which it may be produced, and regardless of whether it be more or less than the amount of the production from the well or wells, if any, on any such separately-owned tract, shall for all intents, uses, and purposes be regarded and considered as production from such separately-owned tract, and, except as may be otherwise authorized in this Act, or in the plan of unitization approved by the Commission, shall be distributed among or the proceeds thereof paid to the several persons entitled to share in the production for[2] such separately-owned tract in the same manner, in the same proportions, and upon the same conditions that they would have participated and shared in the production or proceeds thereof from such separately-owned tract had not said unit been organized, and with the same legal force and effect. If adequate provisions are made for the receipt thereof, the share of the unit production allocated to each separately-owned tract shall be delivered in kind to the persons entitled thereto by virtue of ownership of oil and gas rights therein or by purchase from such owners subject to the right of the unit to withhold and sell the same in payment of unit expense pursuant to the plan of unitization, and subject further to the call of the unit on such portions of the gas for operating purposes as may be provided in the plan of unitization.

Operations carried on under and in accordance with the plan of unitization shall be regarded and considered as a fulfillment of and compliance with all of the provisions, covenants, and conditions, express or implied, of the several oil and gas mining leases upon lands included within the unit area, or other contracts pertaining to the develop-

---

[2]Probably should read "from".

ment thereof, insofar as said leases or other contracts may relate to the common source of supply or portion thereof included in the unit area. Wells drilled or operated on any part of the unit area no matter where located shall for all purposes be regarded as wells drilled on each separately-owned tract within such unit area. Laws 1945, p. 167, Par. 10.

Par. 286.11. AMENDMENTS TO PLAN OF UNITIZATION.—In any proceeding hereunder in which an order is entered creating a unit, the Commission shall retain jurisdiction thereof and of all parties in interest for the purpose of amending the plan of unitization from time to time whenever by reason of changed conditions or otherwise for good cause shown it is made to appear that such amendment is necessary or proper. Such an amendment may be made only upon the petition of lessees of record of ten percent (10%) or more of the unit area. Any amendment to a plan of unitization made pursuant hereto shall be effective prospectively only from and after the date on which the order providing for such amendment shall become final. The procedure for any such amendment including the filing of a petition, the giving of notice and conduct of the hearing shall be the same as that required for the creation of a unit and the adoption of a plan of unitization in the first instance, insofar as applicable. Laws 1945, p. 168, Par. 11.

Par. 286.12. ENLARGEMENT OF UNITS.—The unit area of a unit may be unitized with adjoining and contiguous portions of the same common source of supply including the unit area of another or other units, and a unit created for the unitized management, operation and further development of such enlarged unit area upon the filing of a petition therefor and after notice and hearing, in the same manner, on the same conditions, but subject to the right of lessees of record of fifteen percent (15%) or more of an existing unit area to protest, and veto such enlargement or merger, all as herein provided with respect to the creation of a unit in the first instance. Upon the creation

of a larger unit embracing the unit area of one or more smaller units, the larger unit so created shall thereupon supersede such smaller unit or units. Laws 1945, p. 169, Par. 12.

Par. 286.13. PUBLIC LANDS.—The Commissioners of the Land Office, or other proper board or officer of the State having the control and management of State land, and the proper board or officer of any political, municipal, or other subdivision or agency of the State, are hereby authorized and shall have the power on behalf of the State or of such political, municipal, or other subdivision or agency thereof, with respect to land or oil and gas rights subject to the control and management of such respective body, board, or officer, to consent to or participate in any plan or program of unitization adopted pursuant to this Act.[1] Laws 1945, p. 169, Par. 13.

Par. 286.14. NO INCOME OR PROFIT SUBJECT TO TAXATION. —Neither the unit production or proceeds from the sale thereof, nor other receipts shall be treated, regarded, or taxed as income or profits of the unit; but instead, all such receipts shall be the income of the several persons to whom or to whose credit the same are payable under the plan of unitization. To the extent the unit may receive or disburse said receipts it shall only do so as a common administrative agent of the persons to whom the same are payable. Laws 1945, p. 169, Par. 14.

Par. 286.15. DEFINITIONS.—For the purposes of this Act,[1] unless the context otherwise requires:

(a) The term "lessee" refers not only to lessees under oil and gas leases but also to the owners of unleased lands or mineral rights having the right to develop the same for oil and gas.

(b) Any reference to a separately-owned tract, although in general terms broad enough to include the surface and all underlying common sources of supply of oil and gas

---

[1]Sections 286.1-286.17 of this title.

shall have reference thereto only in relation to the common source of supply or portion thereof embraced within the unit area of a particular unit.

(c) The phrase "oil and gas" shall refer not only to oil and gas as such in combination one with the other, but shall have general reference to oil, gas, casinghead gas, casinghead gasoline, gas-distillate, or other hydrocarbons, or any combination or combinations thereof, which may be found in or produced from a common source of supply of oil, oil and gas or gas-distillate.

(d) The term "person" shall mean and include any individual, corporation, partnership, common law or statutory trust, association of any kind, the State of Oklahoma or any subdivision or agency thereof acting in a proprietary capacity, guardian, executor, administrator, fiduciary of any kind, or any other entity or being capable of owning an interest in and to a common source of supply of oil and gas.

(*d*) The term "unit expense" shall include and mean any and-all cost, expense, or indebtedness incurred by the unit in the establishment of its organization, or incurred in the conduct and management of its affairs or the operations carried on by it, authorized by the approved plan of unitization. Laws 1945, p. 169, Par. 15.

Par. 286.16. CONSTRUCTION OF ACT.—The provisions of this Act[1] are declared to be severable, and, if any section, sentence, clause or part thereof be held invalid or unconstitutional for any reason, such invalidity or unconstitutionality shall not be construed to affect the validity of the remaining provisions of this Act. Laws 1945, p. 170, Par. 16.

Par. 286.17. UNITIZATION AGREEMENTS NOT VIOLATIVE OF ANTI-TRUST LAWS OR IN RESTRAINT OF TRADE.—No agreement between or among lessees or other owners of oil and gas rights in oil and gas properties, entered into pursuant hereto or with a view or for the purpose of bringing

[1]Sections 286.1-286.17 of this title.

about the unitized development or operation of such properties, shall be held to violate any of the statutes of this State prohibiting monopolies or acts, arrangements, agreements, contracts, combinations or conspiracies in restraint of trade or commerce. Laws 1945, p. 170, Par. 17.

APPENDIX "B"

ORDER No. 20289 OF THE CORPORATION COMMISSION OF THE STATE OF OKLAHOMA.

BEFORE THE CORPORATION COMMISSION OF THE STATE OF OKLAHOMA

Cause CD No. 1308 Order No. 20289

IN THE MATTER OF THE PETITION FOR THE CREATION OF THE WEST CEMENT MEDRANO UNIT HAVING FOR ITS PURPOSE THE UNITIZED MANAGEMENT, OPERATION AND FURTHER DEVELOPMENT OF THE WEST CEMENT MEDRANO COMMON SOURCE OF SUPPLY OF OIL AND GAS IN CADDO COUNTY, OKLAHOMA, THE DEFINING OF THE UNIT AREA THEREOF AND THE PRESCRIBING OF THE PLAN OF UNITIZATION APPLICABLE TO SUCH UNIT AND UNIT AREA.

REPORT AND ORDER OF THE COMMISSION

The above styled and numbered cause is a proceeding brought by the lessees of a substantial majority of the acreage in the West Cement Medrano oil and gas pool or field located in Caddo County, Oklahoma, seeking to unitize the management, operation and further development of said field for the purpose of preventing the waste of oil and gas and of substantially increasing the ultimate recovery of oil therefrom, all as authorized and provided for in H. B. 339 of the 1945 Oklahoma Legislature. The bringing of this proceeding followed months of cooperative study of the field and of the benefits of unitization en-

gaged in by substantially all of the operating lessees in the pool and in which all were invited to participate. The original petition herein, attached to which was a recommended Plan of Unitization applicable to said field, was filed October 23, 1946.

Pursuant to order of the Commission, said petition was first set for hearing November 7, 1946, at 10:00 o'clock, A. M., in the Commission Courtroom in the State Capitol Office Building at Oklahoma City, Oklahoma, and notice thereof published once a week for two consecutive weeks in a newspaper of general circulation in Caddo County, in which West Cement Medrano field is located, and for the same time in a newspaper of general circulation in Oklahoma County, Oklahoma.

At the time and place so fixed for said hearing, a large number of persons were present, not only lessees but also land owners, royalty owners and other persons having varying interests in the West Cement Medrano Field. A group of lessors and royalty owners, represented by their attorney, Reford Bond, Jr., advised the Commission that they had not had sufficient time within which to study the proposed Plan of Unitization and requested a continuance of the hearing. The granting of the continuance was agreed to by the petitioners who, through their attorneys, publicly announced that during the period of the continuance they stood ready and willing, upon request, to furnish any party in interest any factual data pertaining to the West Cement Medrano field and the proposed Plan of Unitization available to petitioners. At the same time Magnolia Petroleum Company, an operating lessee in the field, asked leave to sign the petition as one of the petitioners thereto. Whereupon, the Commission continued said hearing to December 9, 1946, at 10:00 o clock A. M. at the same place, permitted the Magnolia Petroleum Company to sign the petition as one of the petitioners, directed that the petition be refiled and ordered that notice of the refiling of the petition and of the date to which said hearing was continued be published in the same manner and

for the same time as was the first notice of hearing, all of which was done.

In advance of said original hearing date, as is its usual custom in oil and gas matters, the Commission mailed mimeographed copies of the petition, together with information as to the time of hearing, to all persons on its established mailing list, which includes all operating lessees within the West Cement Medrano field as well as a number of royalty and other interest owners.

The hearing of said cause was commenced at the time and place so fixed, namely, December 9, 1946, at 10:00 o'clock A. M., in the Commission Courtroom in the Capitol Office Building in Oklahoma City, Oklahoma, and continued at the same place throughout all the following days, to wit: December 9 and 23, 1946; January 6 and 7; February 25, 26, 27 and 28; May 13, 14, 15, 16, 20, 21, 22 and 23; July 15, 16, 17, 18, 22, 23, 24 and 25; all in 1947, except for said first mentioned dates in 1946. The continuance of said hearing from time to time was by proper orders of continuance. At said hearing the petitioners and subscribers to the proposed Plan of Unitization were represented by the following named attorneys: W. H. Brown, Russell G. Lowe, Booth Kellough, W. R. Wallace and R. M. Williams. The protestant, the Palmer Oil Corporation appeared by its attorneys, Mark H. Adams and Charles Jones, of Wichita, Kansas. Protestants Tom Potter, Clyde Kahle, Maude Kahle, Bob White Oil and Gas Company and a group of approximately 65 lessors and royalty owners appeared by their attorney, Reford Bond, Jr. The protestants B. E. Johnson, Virginia McIntyre and M. L. McIntyre appeared by their attorney, Jack Page. A number of royalty and other interest owners wrote letters to the Commission urging the granting of the petition, all of which appear in the record. Other royalty owners and various parties in interest were present at the hearing from time to time but took no part.

At the hearing everyone who desired to do so, regardless of the interest of such person, was given full opportunity to offer any and all competent evidence that any

such person chose to offer, either for or against the recommended Plan of Unitization or by way of amendment thereto, and to otherwise be heard in regard thereto. The evidence so introduced consisted of extensive geological, engineering and other proof concerning the history, discovery, development, operation and present condition of the West Cement Medrano field and the probable results obtainable both under present competitive methods of operation and through the unitization thereof; proof both pro and con as to the fairness, reasonableness and equitableness of the recommended Plan of Unitization; and proof by protestants with respect to certain amendments which they claim should be made in said Plan.

In addition to the knowledge gained from the evidence introduced at said hearing, the Commission has had, over a period of time, a general knowledge of the West Cement Medrano field and of conditions existing therein gained through the exercise by it of its jurisdiction over such field under the Conservation Laws of the State of Oklahoma, dating from the discovery thereof. As a result of the evidence, statements and arguments introduced and made in the hearing here under consideration, and by reason of its general knowledge of said West Cement Medrano field, as aforesaid, the Commission is of the opinion that it has sufficient knowledge and information upon which to base a proper order in this cause.

In addition to the proceedings and notices aforesaid, further mention is here made of the fact that during the course of said hearing, The Palmer Oil Corporation drilled and completed an additional well on a lease owned by it in the aforesaid field, necessitating a relatively slight change in the percentage of interests of the several separately owned tracts in the field shown in "Exhibit B" attached to the recommended Plan of Unitization, and also necessitating the inclusion of such additional well in "Exhibit D" attached to said Plan of Unitization. Also as a result of the time consumed by the hearing, it was considered desirable by the petitioners and subscribers to the recommended Plan of Unitization to strike from

Section XXVII of said Plan the time limitation therein contained. To accomplish the aforesaid objectives, the petitioners during the course of the hearing asked and without objection were granted leave to amend the petition accordingly. In order to permit persons not present at the hearing an additional opportunity to be heard with respect to said amendment, the Commission set the petition as amended for further hearing on July 29, 1947, at 10:00 o'clock A. M., in the Commission Courtroom in the State Capitol Office Building at Oklahoma City, Oklahoma, and caused notice of the amendment to said petition and of the hearing thereon to be published, ten (10) days prior to said hearing date, in a newspaper of general circulation in Oklahoma County, Oklahoma. At the time and place so named, the further hearing was had in said cause upon the petition as amended, no one appearing, however, in opposition thereto.

Now, on this 5th day of September, 1947, the Commission having previously taken said cause under advisement and having considered the matter in conference and each of the Commissioners being well and fully advised, the Commission makes the following findings of fact, conclusions of law, and enters the following order authorizing and approving the creation of the West Cement Medrano Unit, defining of the Unit Area thereof and prescribing of the Plan of Unitization applicable to such Unit and Unit Area.

Findings of Fact and Conclusions of Law

The Commission finds:

1. That notice of the filing of the original petition, the refiling thereof after being signed by the Magnolia Petroleum Company, the filing of the amendment thereto and the time, place and purpose of the hearings on the petition, both as originally filed and as amended, was given in all respects as by law required, and that the Commission has jurisdiction of the subject matter of said petition and amended petition and of all persons interested therein,

and has jurisdiction to make and promulgate the hereinafter prescribed order.

2. That the lands (hereinafter designated and referred to as the "Unit Area") located in Caddo County, Oklahoma and outlined by the hatched line on the map marked "Exhibit A" and attached to the Plan of Unitization attached to and made a part of this order, are underlaid with an oil and gas-bearing formation known as the Medrano sandstone found at a depth ranging from approximately 4500 feet along the North and Northeast side of the Unit Area and an approximate depth of 6241 feet along the South and Southwest side of the Unit Area; that a gas cap exists along the high part of the producing formation from which the primary production is gas, whereas, the primary production from wells drilled lower on the structure is oil; that the average sand or formation thickness in the gas cap area or zone is approximately 65 feet; that the average sand or formation thickness in the oil area or zone is approximately 95 feet; that the said Medrano sandstone underlying said above described lands as aforesaid constitute a single common source of supply of oil and gas, all parts of which are permeably connected so as to permit the migration of oil or gas or both from one portion of said common source of supply to another wherever and whenever pressure differentials are created as a result of the production or operations for the production of oil or gas from said producing formation; that although faults are known to exist in parts of said common source of supply said faults do not prevent substantial migration of oil and gas and of pressures from one part of said common source of supply to another; that said common source of supply of oil and gas has heretofore been designated by the Commission and is generally known as the West Cement Medrano pool.

3. That said common source of supply of oil and gas was first discovered in October, 1936, by the drilling and completion of the Magnolia Petroleum Company's Medrano No. 6 gas well in the SE/4 of the NE/4 of the SW/4 of Section 36, Township 6 North, Range 10 West,

Caddo County, Oklahoma; that the presence of oil in said common source of supply of oil and gas was first discovered in March, 1943, by the drilling and completion of the Stephens Petroleum Company's Pierson No. 1 oil well in the SE/4 of the SW/4 of the SE/4 of Section 35, Township 6 North, Range 9 West, Caddo County, Oklahoma; that at the present time there are 37 oil wells and 19 gas wells producing from said common source of supply of oil and gas.

4. That the outer boundaries of said common source of supply of oil and gas underlying and by this Order included within the aforesaid Unit Area have been reasonably defined by actual drilling operations, both by the drilling of wells within and the drilling of wells outside said Unit Area; that said Unit Area consists of approximately 3700 acres of land.

5. That the lands embraced within the aforesaid Unit Area are divided into a large number of individual tracts of varying size and shape, and owned in severalty by a large number of different individuals, firms and corporations owning varying interests therein, including oil and gas leasehold interests, royalty interests and various and sundry other rights and interests; that the several oil and gas leases covering said lands are owned by not less than 25 different lessees; that the royalty interests under said land are divided among and owned by several hundred royalty owners; that the petitioners in this cause are lessees of record of 73.32% of the area of the common source of supply sought to be unitized; that the subscribers to the recommended Plan of Unitization and other lessees favoring its adoption are lessees of record of approximately 94% of the area of said common source of supply; that the lessees appearing at the hearing and protesting the granting of the petition herein are lessees of approximately 4% of the proposed Unit Area; that the lessees of the remaining percentage of the Unit Area have not appeared for or against the granting of the petition herein.

6. That without the unitization of said West Cement Medrano common source of supply of oil and gas the only method whereby said pool can be feasibly and effectively operated and produced for the recovery of oil and gas therefrom is by and under individual competitive pressure depletion methods of operation, the methods now being used in the pool, that is to say, by treating each separately owned tract or lease as a separate unit for operating and production purposes and depending on the natural energy in the producing formation to move what oil and gas can be moved thereby out of the formation to the well bore where it can be produced; that the principal natural energy mechanism in said pool is gas in solution with the oil coupled with a gas cap expansion; that under present competitive methods of operation, treating each tract or lease as a separate operating unit, there has been and still continues to be a disproportionate, inequitable and wasteful utilization and dissipation of the gas energy in the pool by certain tracts to the detriment and disadvantage of other tracts and to the injury of the pool as a whole; that by and under the best known competitive pressure depletion methods of operation not more than 25% or approximately 24 million barrels of the 97 million barrels of oil originally in place in the reservoir can be economically recovered, leaving the remaining 75%, or approximately 73 million barrels of oil in the ground unrecovered and unrecoverable except through and by means of unitization of the pool and the adoption of unitized methods of operation therein; that to permit the owners of gas wells and high gas-oil ratio wells to continue to produce such wells will result in robbing the oil wells of gas energy required to produce the oil; that to shut in the gas wells and the high gas-oil ratio wells without permitting the owners thereof to share in the oil and gas production from the oil wells, would deprive the owners of the gas wells of their fair share of the production from the pool; that the value of the recoverable oil exceeds many times the market value of the gas; that the return to the reservoir of the gas produced from the oil to supplement the remain-

ing natural gas energy and retard the decline in reservoir pressure and perhaps the injection at some later date of water low on structure is desirable and necessary to obtain the greatest ultimate recovery of oil from the pool, but which cannot be done in the absence of unitization because of the migratory nature of the injected gas or water and the effect that the injection thereof into the reservoir would have upon properties in the pool other than the property on which the gas or water is injected and upon the pool as a whole.

7. That by and through the unitization of the proposed Unit Area and the unitized management and operation and fur.her development thereof as a unit, all as set out and provided for in the Plan of Unitization hereto attached, full use can be made of the gas energy in the reservoir to the mutual advantage of all the owners of the said common source of supply of oil and gas, that waste of large volumes of oil and gas can be prevented, gas can and will be returned to the reservoir to supplement the natural reservoir energy, water encroachment, either natural or artificial, on the lower side of the pool can be properly controlled and utilized, substantially more oil, amounting to many millions of barrels, can be recovered from the common source of supply than can otherwise be recovered, a more equitable distribution of the recoverable oil and gas can be had as between the several owners of the pool and the correlative rights of the several owners can be more fully protected.

8. The unitization and unitized management and operation and further development of said common source of supply as a unit is reasonably necessary to effectively carry on the unitized methods of operation described in the proposed Plan of Unitization.

9. That any one or all of the unitized methods of operation described in the attached Plan of Unitization as applied to the common source of supply underlying and included within the Unit Area are feasible, will prevent waste, and will, with reasonable probability, result in the increased recovery of substantially more oil and gas from

the common source of supply than would otherwise be recovered; that the estimated additional cost of conducting such operations will not exceed the value of the additional oil and gas so recovered; that such unitization and the adoption of any one or more of such unitized methods of operation is for the common good and will result in the general advantage to the owners of the oil and gas rights in and to the common source of supply thereby affected.

10. That neither said West Cement Medrano common source of supply of oil and gas nor any part or parts thereof were being operated by or under pressure maintenance, repressuring or secondary recovery methods of operation as of the effective date of H. B. 339 of the 1945 Oklahoma Legislature.

11. That the Plan of Unitization attached to this order and which is made a part hereof, is one suited to the needs and requirements of the West Cement Medrano Unit, the creation of which is hereby authorized and approved, taking into account all the facts and conditions found by the Commission to exist in respect thereto; that said Plan of Unitization is fair, reasonable and equitable and contains all the terms, provisions, conditions and requirements reasonably necessary and proper to protect, safeguard and adjust the respective rights and obligations of the several persons affected, including royalty owners, owners of overriding royalty interests, oil and gas payments, carried interests, mortgagees, lien claimants, and others, as well as the lessees and such as will effectuate and accomplish the purposes of H. B. 339 of the 1945 Oklahoma Legislature; that said Plan of Unitization provides for the efficient unitized management and control of the further development and operation of the Unit Area for the recovery of oil and gas from the common source of supply affected; that the division of interests set forth in "Exhibit B" attached to said Plan of Unitization pursuant to which the unit production is to be apportioned and allocated among and to the several separately owned

tracts within the Unit Area is fair and equitable and is such as will reasonably permit persons otherwise entitled to share in or benefit by the production from such separately owned tracts to receive, in lieu thereof, their fair, equitable and reasonable share of the unit production or other benefits thereof; that the division of interest assigned to the several separately owned tracts in the Unit Area as set out in said "Exhibit B" to said Plan of Unitization is fair and reasonably representative of the value of said several tracts for oil and gas purposes and the contributing value thereof to the unit in relation to like values of other tracts in the unit; that the basis used to arrive at said division of interest takes into account the acreage of the several separately owned tracts, the quantity of oil and gas recoverable therefrom, the location thereof on structure, the probable productivity of oil and gas from such tracts in the absence of unitization, the burden of operation to which such tracts will or are likely to be subjected, together with all other pertinent engineering, geological and operating factors as are reasonably susceptible of determination; that the manner in which and the basis, terms and conditions on which the cost and expense of the further development and operation of the Unit Area shall be financed and apportioned among and assessed against the tracts and interests chargeable therewith are fair, reasonable and equitable; that the provisions of the said Plan with respect to taking over and using the wells, equipment and other properties of the several lessees within the Unit Area, including the method of arriving at the compensation therefor and otherwise proportionately equalizing and adjusting the investment of the several lessees in the project as of the effective date of the unit operations are fair, reasonable and equitable; that the provisions of said Plan with respect to the creation of an operating committee and the powers and duties of such committee are fair, reasonable and equitable.

12. That the Plan of Unitization hereto attached in all respects conforms to and complies with the requirements of H. B. 339 of the 1945 Oklahoma Legislature.

13. That the West Cement Medrano pool is a field within the meaning of that term as used in the second paragraph of Section 2 of H. B. 339 of the 1945 Oklahoma Legislature; that the term "field" in ordinary usage has no fixed or definite meaning but is sometimes used to refer to the general area where a number of oil or gas producing formations are found and at other times used to refer to a particular common source of supply or pool; that as used by the Legislature aforesaid, the term was intended to relate to the particular common source of supply or pool sought to be unitized under the Act and not to any general area which in a broader sense could be termed a field; that in effect said Act throughout relates to and deals only with single common sources of supply of oil and gas.

Order

It is therefore ordered by the Corporation Commission of the State of Oklahoma as follows:

1. That the petition filed herein be and the same is hereby granted.

2. That the creation of the West Cement Medrano Unit as prayed in said petition be and the same is hereby authorized and approved.

3. That the Unit Area of said unit shall extend to and include all of the West Cement Medrano common source of supply of oil and gas outlined by the hatched lines on the map marked "Exhibit A" attached to the Plan of Unitization attached to this order.

4. That the Plan of Unitization hereto attached and which by reference is made a part of this order is hereby approved and shall constitute the Plan of Unitization of and for said West Cement Medrano Unit and the Unit Area of said Unit, all to the same extent and with the same force and effect as if copied herein in its entirety.

5. Nothing herein contained shall be construed as a waiver by the Commission of any of its powers or authority over the West Cement Medrano Unit or the persons

comprising said unit, or the development and operation of the Unit Area thereof under the general oil and gas conservation laws of the State of Oklahoma, it being expressly recited that the Commission has and retains continuing jurisdiction over the operations carried on by the unit to the same extent that it would have jurisdiction over any other lessee or person producing oil and gas from the West Cement Medrano pool or field in the absence of unitization.

6. The Unit shall from time to time make such reports to the Commission concerning the operation by it of the Unit Area as may be requested by the Commission.

Done and performed by the Corporation Commission at its office in the Capitol Office Building, Oklahoma City, Oklahoma, this 5th day of September, 1947.

PLAN OF UNITIZATION OF WEST CEMENT MEDRANO UNIT

Know all men by these presents:

The following shall constitute the Plan of Unitization applicable to the West Cement Medrano Unit created pursuant to authority of House Bill 339 of the 1945 Legislature of the State of Oklahoma and having for its purpose the unitized management, operation and further development of the Medrano Sand common source of supply of Oil and Gas underlying the lands outlined by the hatched line on the map hereto attached and marked "Exhibit A", all to the end that a greater ultimate recovery of Oil and Gas may be had therefrom, waste prevented and the correlative rights of the respective owners protected.

I

Definitions

As used in this Plan of Unitization, the following terms and expressions are defined as follows:

(a) "Unit" shall mean the West Cement Medrano Unit.

(b) "Commission" shall mean the Corporation Commission of the State of Oklahoma.

(c) "Person" shall mean any individual corporation, partnership, common law or statutory trust, association of any kind, the State of Oklahoma or any subdivision or agency thereof acting in a proprietary capacity, guardian, executor, administrator, fiduciary of any kind or any other entity capable of holding an interest in and to the Unit Area.

(d) The pronoun "it" is used to refer to any person regardless of gender.

(e) "Unit Production" shall mean and include all Oil and Gas produced from the Unit Area from and after the Effective Date hereof regardless of the well or tract within the Unit Area from which the same is produced.

(f) "Lessee" shall mean any owner, in whole or in part, of an Oil and Gas Lease or any unleased mineral interest, who alone or in association with another person or persons has the right, except for this Plan of Unitization, to explore, develop and operate a Separately Owned Tract for Oil and Gas and in so doing would be personally chargeable with a proportionate part of the cost and expense of the operation thereof. An owner of an overriding royalty interest, oil payment, carried interest, net profit contract, or other oil and gas rights of a similar nature, who is not personally chargeable with the cost and expense of operations, shall not be regarded as a Lessee.

(g) "Unit Operator" shall mean and refer to the Lessee designated to carry on and conduct the Unitized Operations within the Unit Area as provided in Section X hereof.

(h) "Oil and Gas" shall not only refer to oil and gas as such in combination one with the other, but shall have reference to oil, gas, casinghead gas, casinghead gasoline or other hydrocarbons, or any combination or combinations thereof, or any one thereof, which may be found in or produced from the Unit Area.

(i) "Oil and Gas Rights" shall mean and include the right to explore, develop and operate lands within the Unit Area for the production of Oil and Gas, to reduce the same to possession or to share in the production so obtained or the proceeds thereof.

(j) "Effective Date" shall mean the date on which the Unit assumes and takes over the operation of the Unit Area as is provided in Section IX hereof.

(k) "Unit Expense" shall include any and all cost, expense or indebtedness incurred by the Unit or Unit operator as authorized by this Plan of Unitization or the order of the Commission creating the Unit.

(l) "Unqualified Subscribers" shall mean and refer to those Lessees who sign this Plan of Unitization as Unqualified Subscribers as is provided for in Section XXVII hereof.

(m) "Qualified Subscribers" shall mean and refer to those Lessees who sign this Plan of Unitization as Qualified Subscribers as is provided for in Section XXVII hereof.

II

Name

The name of the Unit created hereby shall be West Cement Medrano Unit.

III

Unit Area

The Unit Area of the Unit shall extend to and include all of the Medrano Sand formation underlying the lands outlined by the hatched line on the map hereto attached, marked "Exhibit A" and made a part hereof, the same being a single common source of supply of Oil and Gas, located in Caddo County, Oklahoma.

IV

Separately Owned Tracts

Each tract of land within the Unit Area, which by virtue of the ownership thereof in fee, or by common ownership of the Oil and Gas Rights therein or by lease or other agreement among the owners thereof, is presently regarded as a single tract or leasehold estate for the purpose of Oil and Gas development and operation shall be defined, regarded and treated as a Separately Owned Tract within the purview and meaning of this Plan of Unitization. The Separately Owned Tracts as so defined and established are shown on the map hereto attached and marked "Exhibit A" and are for convenient identification numbered thereon and may be referred to by number.

V

General Powers of Unit

The Unit is authorized and empowered on behalf and for the account of all the Lessees within the Unit Area, without profit to the Unit, to supervise, manage and conduct the further development and operation of the Unit Area for the production of Oil and Gas, pursuant to the powers conferred and subject to the limitations imposed by the provisions of House Bill 339 of the 1945 Session of the Oklahoma Legislature and by this Plan of Unitization.

VI

Effect of Unitization

The adoption of this Plan of Unitization and the creation of the Unit as herein provided shall have the effect from and after the Effective Date hereof of unitizing all further development and operations for the production of Oil and Gas from the Unit Area and of pooling and unitizing the production so obtained, all to the same extent as if the Unit Area had been included in a single lease and all rights thereunder owned by the Lessees in undivided interests. Property rights, leases, contracts and all other rights and obligations in respect of the Oil and Gas Rights in and to the several Separately Owned Tracts within the Unit Area are hereby amended and modified to the extent necessary to make the same conform to the provisions and requirements of this Plan of Unitization, but otherwise to remain in full force and effect.

The relationship between the Lessees within the Unit Area, resulting from the creation of the Unit shall not be that of a trust, partnership or association but shall be in the nature of the tenancy in common.

Nothing herein contained shall be construed to require or result in a transfer to or the vesting in the Unit of title to the Separately Owned Tracts within the Unit Area or to the leases thereon, other than the right to use

and operate the same to the extent set out in this Plan of Unitization; nor shall the Unit be regarded as owning any of the Unit Production. The Unit Production and the proceeds from the sale thereof shall be owned by the several persons to whom the same is allocated under this Plan of Unitization. All property, real or personal, acquired, held or possessed for use in the operation of the Unit Area shall be the property of the Lessees as their interests may appear under this Plan of Unitization, subject, however, to the rights and powers herein granted the Unit and the Unit Operator.

The amount of the Unit Production allocated to each Separately Owned Tract and only that amount, regardless of the well or wells in the Unit Area from which it may be produced, and regardless of whether it be more or less than the amount of the production from the well or wells, if any, on any such Separately Owned Tract shall, for all intents, uses and purposes, be regarded and considered as production from such Separately Owned Tract.

Operations carried on, under and in accordance with this Plan of Unitization shall be regarded and considered as a fulfillment of and compliance with all the provisions, covenants and conditions, express or implied, of the several oil and gas mining leases upon lands included within the Unit Area, or other contracts pertaining to the development thereof, to the same extent that the development and operation of and the production of Oil and Gas from each of the several Separately Owned Tracts within the Unit Area would have constituted a fulfillment of and compliance with such leases and contracts. Wells drilled or operated on any part of the Unit Area, no matter where located, shall for all purposes be regarded as wells drilled on each Separately Owned Tract within the Unit Area.

VII

Allocation of Unit Production

All Unit Production, except so much thereof as is used in the development and operation of the Unit Area, including repressuring, pressure maintenance and other operations carried on in accordance with this Plan of Unitization, or is unavoidably lost, shall be apportioned among and allocated to the several Separately Owned Tracts within the Unit Area in accordance with the percentage and division of interest set forth and shown in Part I of "Exhibit B" hereto attached, subject, however, to the further provisions of Part II of said Exhibit.

Except as may be otherwise authorized or provided in this Plan of Unitization, the Unit Production allocated to each Separately Owned Tract shall be distributed among or the proceeds thereof paid to the several persons entitled to share in the production from such Separately Owned Tract in the same manner, in the same proportions, and upon the same conditions that they would have participated and shared in the production from such Separately Owned Tract, or the proceeds thereof, had not the Unit been organized, and with the same legal force and effect.

Except as may be otherwise authorized or provided in this Plan of Unitization, and provided adequate provisions are made for the receipt thereof, the share of the Unit Production allocated to each Separately Owned Tract shall be delivered in kind to the persons entitled thereto by virtue of ownership of Oil and Gas Rights therein or by purchase from such owners, subject, however, to the right of the Unit Operator to withhold and sell the same in payment of Unit Expense pursuant to this Plan of Unitization, and subject further to the right of the Unit Operator to take and use such portion of the Unit Production (including residue gas) as may be required for operating purposes, including repressuring, pressure maintenance and any other operation carried on, pursuant to this Plan of Unitization. Persons so entitled

to take and receive in kind any portion of the Unit Production shall have the right to construct, maintain and operate within the Unit Area all necessary facilities for that purpose, provided the same are so constructed, maintained and operated as not to interfere with the operations carried on pursuant hereto.

To the extent that any person entitled to take and receive in kind any portion of the Unit Production shall fail to take and receive the same currently as and when produced, the Unit Operator, as agent and for the account and at the expense of such person, is authorized to market and sell or itself purchase, at not less than the market price prevailing at the time of such sale or purchase, the portion of Unit Production not so taken in kind by the person entitled to take and receive the same. Proceeds of the Unit Production so sold, or purchased by the Unit Operator, shall be paid by the Unit Operator to the person or persons for whose account the same is so marketed.

The person or persons receiving in kind the Unit Production allocated to any Separately Owned Tract or receiving the proceeds of such Unit Production, if the same is marketed and sold, or purchased by the Unit Operator, shall be responsible for the payment of, and shall indemnify the Unit, the other Lessees and the Unit Operator against any liability for, any and all royalties, overriding royalties, production payments, gross production taxes and any and all other payments and taxes chargeable against or payable out of the Unit Production which is received in kind by, or the proceeds of which are paid to, such person or persons, and neither the Unit nor the Unit Operator shall have any responsibility or liability for payment of such royalties, overriding royalties, production payments, gross production taxes or the other payments or taxes.

If at any time the title or right of any person claiming the right to receive in kind all or any portion of the Unit Production allocated to a Separately Owned Tract is in

dispute or is disapproved by the Operating Committee, the Unit Operator shall at the direction of the Operating Committee either (a) withhold and market, or itself purchase the portion of the Unit Production, title to which is in dispute or is disapproved, and impound the proceeds thereof until such time as the title or right thereto is established, by final judgment of a court of competent jurisdiction or otherwise to the satisfaction of the Unit Operator, whereupon, the proceeds so impounded shall be paid, without interest, to the person or persons rightfully entitled thereto, or (b) may require that the person or persons to whom such Unit Production is delivered, or to whom the proceeds thereof are paid, furnish security for the proper accounting therefor to the rightful owner or owners in the event the title or right of such person or persons shall fail, in whole or in part.

The Unit Operator shall have the right to take and utilize so much of the Unit Production as may be necessary or desirable in the development and operation of the Unit Area, including but without being limited to, the use of gas (including residue gas) for repressuring, pressure maintenance or other operations carried on in accordance with this Plan of Unitization. No royalties, overriding royalties, production payments or other payments shall be payable upon or with respect to that portion of the Unit Production so taken and utilized by the Unit Operator or which may be lost in handling or otherwise without want of due diligence on the part of the Unit Operator.

VIII

Operating Committee

An Operating Committee is hereby created to consist of one representative to be designated by each Lessee within the Unit Area, provided that an individual Lessee may himself be a member of the Committee. Such designation shall be in writing and with respect to the representative to participate at the organization meeting of the

Committee shall be presented at such meeting, or if thereafter made, shall be filed with the Secretary of the Operating Committee. Any such Lessee may in like manner (a) designate an alternate representative on the Operating Committee, who, in the absence of the Lessee or its regular representative, shall have the same full right and power to represent the interest of such Lessee, or (b) may from time to time discharge any such regular or alternate representative and designate a new representative to act for such Lessee on the Operating Committee.

The Operating Committee shall have the general overall management and control of the Unit and the conduct of its business and affairs and the operations carried on by it, and is authorized and empowered, subject to the terms and provisions hereof, to do all things necessary, proper and convenient for carrying out the terms and spirit of this Plan of Unitization and to that end, not excluding or limiting any other power or powers that may be necessary or proper for that purpose, shall have the following specific powers and duties:

(a) To adopt rules and regulations for the proper functioning of the Operating Committee, including such matters as the time and places of holding meetings, the calling thereof or the manner of taking the vote on any question all in a manner not inconsistent with the express requirements of this Plan of Unitization.

(b) To remove any Unit Operator.

(c) To select a successor to any Unit Operator.

(d) To determine the extent of drilling operations and development to be carried on by the Unit Operator, including the approval or disapproval of the contemplated drilling, deepening, plugging back, reconditioning, abandonment or the use to be made of any well or wells.

(e) To pass upon and approve or disapprove all costs and estimates of costs and any proposed expenditure by the Unit Operator; provided, that the Committee may permit without prior approval by it the incurring of normal operating expense and any proposed expenditure by

the Unit Operator of not more than Five Thousand ($5,000.00) Dollars; and provided further that the approval by the Operating Committee of the drilling of any well or wells or carrying out any specific project of development or operation shall mean and include the approval of all necessary expenditures in drilling, completing and equipping such well or wells or carrying out such project.

(f) To determine from time to time the rate at which and the wells from which the Unit Production shall be produced in conformity with good engineering practices and any applicable conservation laws or regulations.

(g) To pass upon, approve or disapprove the purchase, sale or other disposal of materials and equipment by the Unit Operator otherwise than in the normal course of approved operations.

(h) To approve and authorize the purchase, construction, location, abandonment, sale or other disposal of any compressor plant, gasoline plant, tank batteries, salt water disposal system or other facilities serving the Unit Area.

(i) To determine the manner in which, the location at which and the extent to which gas can best and should be injected into the reservoir to accomplish the Plan of Operation set forth in Section XV hereof.

(j) To provide for the proper auditing of the accounts of the Unit Operator with respect to the operation and development of the Unit Area.

(k) To appoint such sub-committees as it may deem proper and requisite, as for example, an advisory committee, legal committee, engineering committee, plant committee, geological committee and tax committee to act under the authority and subject to the control of the Operating Committee consonant with the terms of this Plan of Unitization.

(l) To approve or disapprove any proposed plan of development or operation or amendment thereof required to be submitted to any regulatory body having jurisdiction of the subject matter thereof.

(m) To approve or disapprove any proposed expenditures for expert technical advice, including any extra services rendered by the Unit Operator's technical staff, not contemplated by the provisions of the accounting procedure hereto attached, marked "Exhibit C" and not covered by the overhead charges therein authorized, which overhead charges in said accounting procedure are intended to cover only normal lease development and lease operations.

(n) To direct and consult with the Unit Operator in all matters pertaining to the duties and functions of the Unit Operator.

(o) To provide for the finances in the manner herein provided for the carrying on of the Unit Operations hereunder.

Each Lessee within the Unit Area who is represented on the Operating Committee shall have a vote equal to the proportionate interest of said Lessee in the Unit determined as follows:

(a) In respect of each Separately Owned Tract, the Lessee or Lessees thereof shall have a vote equal to the percentage indicated opposite such Separately Owned Tract in Part I of "Exhibit B" hereto attached.

(b) Should there be more than one Lessee of a Separately Owned Tract, the vote in respect thereof shall be divided between such Lessees in proportion as such Lessees share in the Unit Expense chargeable to such tract.

(c) The vote of a Lessee having an interest in more than one Separately Owned Tract shall be the sum total of the votes of such Lessee in respect of all such tracts.

In all matters except the removal of a Unit Operator the vote on behalf of Lessees having at least 66⅔% of the total voting interest in the Unit shall control.

A Unit Operator may be removed only by the vote of at least 75% in interest of the Lessees other than such Unit Operator.

If at any time the voting interest of a Lessee should be such as to control the action taken by the Committee,

the vote of such Lessee shall not serve to carry or defeat action taken by the Committee unless such vote is supported by the vote of a majority in interest of the remaining Lessees.

Minutes shall be made of all meetings of the Operating Committee and kept as a part of the permanent records of the Unit. Such minutes need not be a verbatim record of all the proceedings, but shall show and reflect (a) the names of all members present at the meeting; (b) all motions and resolutions offered or acted upon, together with the result of such action; and (c) such other formal action as may be taken by the Committee. A copy of the minutes of each such meeting shall be mailed to each member of the Committee within a reasonable time after the meeting.

Notices or other communications addressed and sent to the Unit or to the Operating Committee by United States mail or telegraph in care of the Unit Operator shall be deemed to have been properly given to or served upon the Operating Committee. The Unit Operator shall promptly deliver all such notices or communications to the Chairman or Secretary of the Operating Committee.

IX

Organization of Unit and Effective Date of Plan

Subject to call by Lessees of record owning 50% or more in interest in and to the Unit as shown in Part I of "Exhibit B" hereto attached the representatives designated by the several Lessees to serve on the Operating Committee shall meet at some convenient place to perfect the organization of the Operating Committee. Such meeting may be held at any time after twenty (20) days from the date of the order of the Commission approving this Plan of Unitization. Notice of the time and place of said meeting shall be mailed at least ten (10) days prior thereto to all Lessees within the Unit Area whose names and addresses are known to the Lessees calling said meeting, as well as those Lessees who shall have within ten

(10) days from the date of said order notified the Secretary of the Commission in writing of their desire to be so notified of the meeting. Any Lessee within the Unit Area desiring notice of such meeting may file a statement of such desire with the Secretary of the Commission, giving its name and the address to which it desires the notice to be sent.

The Operating Committee shall organize by selecting a Chairman, a Vice-Chairman, a Secretary and such other officers as to the Committee may seem proper. The Chairman and Vice-Chairman shall be selected from among the members of the Operating Committee. The Secretary and other officers may or may not be members of the Committee. The Chairman shall preside at all meetings of the Operating Committee when he is present and shall be the Chief Executive Officer of the Unit. The Vice-Chairman shall perform all duties of the Chairman in the absence of the Chairman. The Secretary shall keep and maintain all the records of the Committee and shall also be Secretary of the Unit. Such officers shall serve at the will of the Operating Committee and perform such other duties as are delegated to them by the Operating Committee.

Upon completion of its organization, the Operating Committee shall proceed to make plans and preparations and take such steps as are necessary for the taking over of the unitized operations and further development of the Unit Area by the Unit, and shall in advance thereof fix the time when the Unit will take over such operation and development, and give the Lessees within the Unit Area reasonable notice thereof. The time so fixed shall not be less than sixty-one (61) days after the entry of the order of the Commission approving this Plan of Unitization nor more than three months after the time when said order shall have become final.

The time when the Unit takes over the operation and further development of the Unit Area shall be the Effective Date of this Plan of Unitization.

In the event the Unit shall fail to assume and take over the operation of the Unit Area on or before three (3) months after the time when the order of the Commission approving this Plan of Unitization shall have become final, then and in that event the Unit shall, without further action on the part of the Operating Committee or the Commission, be dissolved and all rights and obligations under this Plan of Unitization shall be at an end, except that any and all cost and expense incurred by the Unit incident to its organization or preparatory to the taking over of the operation of the Unit Area shall be borne and paid for by the Lessees whose representatives on the Operating Committee by their vote authorized the incurring of such expense, in proportion as the interest of each such Lessee in and to the Unit as set out in Part I of "Exhibit B" bears to the total interest of all such Lessees in and to the Unit as shown on said Part I of "Exhibit B." In the event the Unit assumes and takes over the operation of the Unit Area within the time so named, this Plan of Unitization shall thereafter remain in force and effect until such time as the Unit is dissolved and abandoned as provided in Section XXV hereof."

The order of the Commission approving this Plan of Unitization shall be regarded as having become final at the end of the time allowed by law for any appeal therefrom, if no appeal is taken, or, if an appeal is taken, then upon the final determination of any such appeal.

The Unit on or before five (5) days after the Effective Date hereof shall submit to the County Clerk of Caddo County, Oklahoma, for filing, a written declaration signed by the Chairman and Secretary of the Operating Committee, setting forth

(a) The hour, day and year on which the Unit took over the operation of the Unit Area;

(b) A description or plat of the lands included within the Unit Area; and

(c) The cause number and date of the Commission order approving this Plan of Unitization, with an appro-

priate reference to such order and the files of the Commission for further information concerning this Plan of Unitization.

X

Unit Operator

Subject to the further provisions of this Plan of Unitization, operations in connection with the development and the operation of the Unit Area for Oil and Gas shall be carried on and conducted by a Unit Operator in accordance with the instructions of the Operating Committee.

The Unit Operator shall:

(a) Conduct all such operations in a good and workmanlike manner.

(b) Keep full, true and correct books, accounts and records of its operations hereunder which shall be made available for inspection at all reasonable times by any of the Lessees within the Unit Area.

(c) Mail to each Lessee on or before the 10th day of each calendar month a full, true and correct statement of all Unit Production during the preceding calendar month.

(d) Comply, to the extent of its operations within the Unit Area, with the Workmen's Compensation Laws of the State of Oklahoma and with all other valid and applicable federal and state laws and regulations.

(e) Carry such insurance as may be required by the Operating Committee.

(f) Keep the land and leases within the Unit Area free from liens and encumbrances occasioned by the operations of the Unit Operator save only the lien granted the Unit and the Unit Operator under this Plan of Unitization.

The Operating Committee may by the vote hereinbefore provided remove a Unit Operator at any time. A Unit Operator may resign only after giving the Operating Committee six months' written notice of its intention to resign, or sooner if a successor is selected and has assumed the duties of Unit Operator prior to the end

of such time. Upon the removal or resignation of a Unit Operator the Operating Committee shall designate a successor Unit Operator from among the Lessees within the Unit Area.

Phillips Petroleum Company is hereby designated as Unit Operator.

XI

Unit Expense

The Unit Operator in the first instance shall pay and discharge all cost and expense incurred in the development and operation of the Unit Area and in the conduct of the activities and affairs of the Unit. All such cost and expense incurred in the development and operation of the Unit Area shall be in accordance with the Accounting Procedure hereto attached, marked "Exhibit C" and made a part hereof. All other costs and expense shall be only such sums as are approved by the Operating Committee.

All such Unit Expense as it accrues shall be charged to the several Separately Owned Tracts in the Unit Area in proportion to the percentage of interest of such tracts in and to the Unit as set forth and shown in Part I of "Exhibit B" hereto attached.

Except as may be otherwise hereinafter specifically provided, a Lessee or Lessees obligated or responsible for the cost and expenses of operating a Separately Owned Tract for Oil and Gas in the absence of unitization shall, in the same proportion and to the same extent, be chargeable with and responsible for the payment of the Unit Expense charged against such Separately Owned Tract.

The Unit Operator shall on or before the last day of each calendar month render to each Lessee within the Unit Area an itemized statement of all charges and credits during the preceding month and of the amount due from or to each such Lessee with respect to each Separately Owned Tract. If the Unit Operator so elects, such state-

ment of account may also include a charge by way of an advance of the proportionate part of the estimated Unit Expense for the ensuing month chargeable to the Lessee against whom such statement is rendered, using as a basis therefor the budget hereinafter provided for. Except as may be otherwise provided herein, each Lessee chargeable with the payment thereof shall, within fifteen (15) days from the receipt of such statement, pay to the Unit Operator the amount thereof. If not paid when due, the unpaid balance shall bear interest at the rate of 6% per annum until paid. Payment of any such statement shall not prejudice the right of any Lessee to protest or question the correctness thereof; provided, the Unit Operator shall not be required to adjust any item of charge or credit unless a claim therefor has been presented in writing within six (6) months after the approval by the Operating Committee of the annual audit for the period in which the charge or credit was made.

Before or as soon as practical after the Effective Date hereof, the Operating Committee, acting in conjunction with the Unit Operator, shall prepare a budget of estimated Unit Expense for the remainder of the calendar year and on or before the first day of each December thereafter shall prepare a budget of estimated Unit Expense for the ensuing calendar year, which budgets shall set forth the estimated Unit Expense by quarterly periods. Unless otherwise specified in the budget, it shall be presumed for the purpose of advance billings as aforesaid, that the estimated Unit Expense for each month of a quarterly period shall be one-third (⅓) of the estimate for the quarterly period. Budgets so prepared shall be estimates only and shall be subject to adjustment and correction by the Operating Committee and Unit Operator from time to time whenever it shall appear that an adjustment or correction is proper. A copy of each such budget and adjusted budget shall be promptly furnished each Lessee within the Unit Area.

Any Lessee, other than an Unqualified Subscriber, who does not elect to pay its proportionate share of the Unit

Expense, shall not be personally obligated for the payment thereof, but the amount thereof or such portion thereof as such Lessee shall elect not to pay, together with interest thereon at the rate of 6% per annum, shall be carried and shall be payable, so far as such Lessee is concerned, as follows:

(a) So much of said charge as is made up of current operating costs, as distinguished from items of investment, together with interest thereon, shall be payable out of proceeds from all Unit Production to the credit of the interest or interests chargeable therewith.

(b) So much of said charge as is made up of items of investment, together with interest thereon, shall be payable out of 50% of the net proceeds of the Unit Production to the credit of the interest or interests chargeable therewith after deducting the charge for Operating costs under subparagraph (a) last above.

(c) All credits to any such Lessee on account of the sale or other disposal of surplus material or equipment or otherwise shall be applied against any such unpaid Unit Expense charged against such Lessee.

Amounts so carried as aforesaid, shall be billed to and paid by the Lessees who sign this Plan of Unitization as Unqualified Subscribers, in the proportion that the interest of each in the Unit bears to the total interests in the Unit of all of the Unqualified Subscribers to this Plan of Unitization, Lessees so paying the same shall be reimbursed therefor, together with interest thereon, as and when the amounts so carried and the interest thereon are collected from the Lessees or interests primarily chargeable therewith.

The Unit shall have a first and prior lien upon the leasehold interest (exclusive of a 1/8 royalty interest) in and to each Separately Owned Tract, the interest of the owners thereof in and to the Unit Production and all equipment in possession of the Unit, to secure the payment of the Unit Expense and other items of cost charged to and against such Separately Owned Tract, provided

such lien may be enforced as against overriding royalty, oil and gas payments, royalty interests in excess of a 1/8 of the production, or other interests which otherwise are not chargeable with such costs, only in the event the owner of the interest or interests primarily responsible fails to pay such Unit Expense when due, and the production to the credit thereof is insufficient for that purpose. In the event the owner of any royalty interest, overriding royalty, oil and gas payment or other interest which under the Plan of Unitization is not primarily responsible therefor pays any part of such Unit Expense for the purpose of protecting such interest or the amount of such Unit Expense in whole or in part is deducted from the Unit Production to the credit of such interest, the owner thereof shall, to the extent of such payment or deduction, be subrogated to all of the rights of the Unit and of the Unit Operator with respect to the interest or interests primarily chargeable with such Unit Expense. A one-eighth (1/8) part of the Unit Production allocated to each Separately Owned Tract shall in all events be regarded as royalty to be distributed to and among or the proceeds thereof paid to the royalty owners free and clear of all Unit Expense and free of any lien therefor. The lien hereinabove provided for shall be for the use, benefit and protection of Unit Operator or other Lessees or persons entitled to receive or share in the monies, the payment of which is secured thereby, and in the event of failure of the Unit to enforce such lien, the Unit Operator or other person entitled to the benefit thereof, shall be subrogated to the lien rights of the Unit, including the right of foreclosure.

In the event of a failure of any Lessee to pay its share of the Unit Expense when due, and also in the case of a Lessee who elects to be carried as aforesaid, the Unit Operator shall be entitled to take and market, or itself purchase the Unit Production to the credit of such Lessee or to the credit of the interest or interests chargeable with such Unit Expense, or to otherwise collect and re-

ceive the proceeds from the sale thereof, and shall apply all such sums so collected against the delinquent or unpaid Unit Expense due from such Lessee or interest, the balance of such proceeds, if any, to be paid to the Lessee or other person entitled thereto. The Unit Operator may likewise take any other credit due any such Lessee or interest and apply the same against sums due from such Lessee or interest for Unit Expense.

Any and all income and credits received by Unit Operator on account of Unit Operations hereunder, from whatever source received, shall currently be accounted for and credited to the Lessees or interests entitled to credit therefor.

XII

Initial Adjustment of Investment

Upon the Effective Date hereof the Unit shall assume control and management of the further development and operation of the Unit Area and, except as may be otherwise herein provided, each Lessee within the Unit Area shall deliver possession to the Unit Operator of (a) all wells within the Unit Area, (b) all lease and other operating equipment used in the operation of such wells, and (c) all production and well records and other pertinent data pertaining thereto.

(1) Completed Wells

All wells which as of the Effective Date are completed as producing wells in the Medrano Sand shall be taken over by the Unit, except that in the case of wells determined by the Operating Committee to be unnecessary to Unit operations, the owners thereof may upon request retain possession thereof for the purpose of completing the same in some other formation not a part of the Unit Area, provided, the owners thereof shall immediately cause the Medrano Sand to be sealed off in a manner satisfactory to the Operating Committee.

(2) Wells Being Drilled or Reconditioned

Any well being drilled, repaired, deepened or plugged back to the Medrano Sand as of the Effective Date hereof may be completed by the separate owner or owners thereof and if so completed as a producing well in the Medrano Sand, shall be taken over by the Unit except that in the case of wells determined by the Operating Committee to be unnecessary to Unit Operation, the possession thereof may be retained by the owners thereof under the circumstances and upon the conditions named in (1) last above.

(3) Casing, Tubing and Wellhead Connections

All casing, one string of tubing and wellhead connections in or on wells taken over by the Unit shall be treated and regarded as a part of such wells.

(4) Lease and Operating Equipment

As of the Effective Date hereof the Operating Committee shall determine what part of the lease and other operating equipment (exclusive of warehouses, lease houses, camps and office buildings) used in the operation of wells taken over by the Unit it considers necessary or desirable to take over and use in connection with the unitized development and operation of the Unit Area including, by way of example, but not thereby excluding, other equipment of a like or different kind, derricks, tank batteries, separators, rods, pumps, tubing in excess of one string, flow lines, water lines, gas lines, etc., which said lease and operating equipment (exclusive of warehouses, lease houses, camps and office buildings) shall be delivered to and taken over by the Unit. All lease and operating equipment not so taken over shall remain the separate property of the several owners thereof and may be used by said separate owners in the operation of wells producing from formations other than the Medrano Sand or reclaimed as such separate owners may desire. The acquisition of existing warehouses, lease houses, camps, or office buildings considered desirable to the operation and development of the Unit Area shall be by negotiation and sep-

arate contract of purchase with the owner or owners of such warehouses, lease houses, camps and office buildings.

(5) Adjustment of Well Investment -

(a) Each Separately Owned Tract on which is one or more wells taken over by the Unit shall be given credit for the value assigned to such well or wells as follows: wells listed in "Exhibit D" hereto attached shall have the assigned value therein shown; wells not listed in "Exhibit D" shall be assigned a value determined in the same manner as was used in determining the values assigned to the wells listed in "Exhibit D".

(b) Each Separately Owned Tract within the Unit Area shall thereupon be charged with the total value of all such wells in proportion to such tract's percentage of interest in and to the Unit as shown in Part I of "Exhibit B" hereto attached, less the amount of the credit due such tract under (a) last above, resulting in either a net debit or a net credit with respect to each Separately Owned Tract.

(c) The amount of any net debit chargeable against a Separately Owned Tract under (b) above shall be payable by the Lessee or Lessees of such tract out of 10% of 7/8 of the Unit Production of oil allocated to such tract if such tract has a credit under (a) above, or 25% of 7/8 of said oil if said tract has no credit under (a) above. The oil applicable to the oil payment with respect to each Separately Owned Tract having a net debit shall be sold by the Unit Operator, at not less than the prevailing market price, for the account of the Lessees of Separately Owned Tracts having net credits under (b) above until such time as the accumulated proceeds thereof equal the amount of such net debit. The Lessee or Lessees of each Separately Owned Tract having a net debit shall have the right to designate the purchaser to whom said oil shall be sold, provided the purchaser so designated will take and purchase said oil at the prevailing market price. Amounts collected by the Unit Operator under the provisions of this paragraph shall be paid by said Unit Operator to the

Lessees of Separately Owned Tracts having net credits under (b) above in proportion to the percentages which the net credit due each bears to the net credit due all such Lessees. The amounts of the debits and credits under (a) and (b) above in respect to Separately Owned Tracts held by the same Lessee may, at the option of such Lessee, be grouped for the purpose of arriving at a combined net debit for all such tracts payable out of such fraction of 7/8 of the Unit Production of oil allocated to all such tracts as will result in the application of the same amount of oil each month to the payment of said combined net debit as would have been applied to the payment of the separate net debits against said several tracts in the absence of such grouping.

(6) Accounting for Lease and Operating Equipment

An accounting for the lease and operating equipment so transferred to and taken over by the Unit shall be had as between the owners thereof, and all Lessees within the Unit Area on the basis of the value thereof determined in accordance with Section IV of the accounting procedure hereto attached marked "Exhibit C", plus a reasonable allowance for the cost of installation, if installed, to be determined by the Operating Committee, and proper charges and credits entered against the several Separately Owned Tracts, all to the end that on and after the Effective Date hereof each of the several Lessees within the Unit Area instead of separately owning the equipment delivered to the Unit by such Lessees, will have exchanged the same for an undivided interest in and to all the equipment so taken over and acquired by the Unit and will have paid or have been paid, as the case may be, for any difference in value. The amount of any net charge made against a Separately Owned Tract under this paragraph shall be treated and regarded in all respects the same as any other charge for Unit Expense chargeable to such tract.

XIII.

Oil in Lease Tankage as of Effective Date

A proper and timely gauge shall be made of all lease or other tanks taken over by the Unit to ascertain the amount of oil in such tanks at the time the Unit assumes and takes over the development and operation of the Unit Area. So much of such oil as is legally produced shall remain and be the property of the parties entitled thereto had not the Unit been created, and upon request, shall be delivered in kind to persons entitled thereto, or in the absence of such request, shall be sold by the Unit Operator for the credit of such persons at not less than the prevailing market price and the proceeds thereof paid to such persons.

XIV

Settlement with Respect to Gas Produced and Underproduction of Gas Prior to Effective Date

A settlement with respect to gas produced and underproduction of gas prior to the Effective Date shall be made as follows:

(a) Each Separately Owned Tract having underproduction to its credit as of the Effective Date shall be given credit for such underproduction, less so much thereof as may have accumulated between November 1, 1946, and the Effective Date, on the basis of 95% of what the Lessee or Lessees of each such tract would have received and been paid therefor, less seller's cost of dehydration, had said gas been produced and sold currently during the period or periods in which such underproduction accumulated.

(b) Each Separately Owned Tract shall be charged with the sales of gas from such tract during the four months' period from November 1, 1945, to March 1, 1946, plus any overproduction charged against such tract as of the Effective Date other than overproduction as may have accumulated during said four months' period, on the basis of 7/8 of 95% of the average price, less seller's cost of dehydra-

tion, received for gas sold from such tract during said four months' period from November 1, 1945 to March 1, 1946.

(c) Unit Operator shall pay to the Lessee or Lessees of each Separately Owned Tract having a net credit after deducting the amount of the charge under (b) from the credit under (a) the amount of such net credit.

(d) The Lessee or Lessees of each Separately Owned Tract against which there is a net charge after deducting the amount of the credit under (a) from the amount of the charge under (b) shall be charged with and shall pay to the Unit Operator the amount of said net charge in the same manner and on the same terms and conditions as if said net charge was a charge for Unit Expense against such Separately Owned Tract.

(e) If the amounts collected under (d) are less than the amounts paid under (c) the difference shall be charged against the several Separately Owned Tracts within the Unit Area in proportion to their respective percentages of interest as set out in Part I of Exhibit B hereof as an item of Unit Expense. If the amounts collected under (d) are more than the amount paid out under (c), the difference shall be credited to the several Separately Owned Tracts and paid to the Lessees thereof in proportion to the percentages of interest of such tracts as set out in Part I of Exhibit B hereof.

(f) The amounts credited to each Separately Owned Tract and paid to the Lessee or Lessees thereof under (c) and (e) shall be distributed and paid by such Lessee or Lessees to the owners of the Oil and Gas Rights in and to such tract, including the Royalty Owners, in the same proportion and to the same extent that they share in the Unit Production allocated to such tract as of the Effective Date hereof.

(g) The underproduction and overproduction of gas and the amount of sales of gas from any Separately Owned Tract at any time or during any period shall be determined from the books and records of the Commission.

XV

Plan of Operation

To the end that the quantity of Oil and Gas ultimately recoverable from the Unit Area may be substantially increased and waste prevented, the further development and operation of the Unit Area, from and after the Effective Date hereof, shall be conducted by the application to the Unit Area of the following unitized method of operation:

(a) As soon as practical after the Effective Date hereof, the Unit shall make the necessary preparations therefor and with diligence and in accordance with good engineering and production practices engage in pressure maintenance or repressuring operations through the return of gas to the reservoir to the extent and in the manner best calculated to efficiently and without waste result in the greatest ultimate recovery of Oil and Gas from the Unit Area. In so doing, the Unit is authorized to construct, purchase or otherwise acquire and operate such gasoline plants, processing plants or compressor plants and other facilities as may in the best judgment of the Operating Committee be desirable for that purpose, or is authorized, should it so elect, to contract with the owners of an individually owned plant or plants and facilities to render in whole or in part the desired services in connection therewith.

(b) The oil produced from the Unit Area shall be produced from those wells in the Unit Area from which the same can be obtained with the smallest loss or dissipation of reservoir energy reasonably possible under practical operating conditions as they may exist from time to time.

(c) Gas wells and wells which produce oil with gas-oil ratios found to be excessive in relation to the gas-oil ratios of other wells producing oil from the Unit Area shall be shut in or the production therefrom restricted in such manner as to make the most effective utilization of the gas energy of the reservoir reasonably possible under practical operating conditions as they may exist from time to time.

(d) Production of Oil and Gas from different parts of the Unit Area shall be regulated in such manner as to retard, control or effectively utilize water encroachment, in such manner and to such extent as may be found reasonably possible and economically advisable from time to time.

(e) Gas (other than gas produced in connection with the production of oil) shall be produced from the Unit Area only at such time or times and in such manner as in the judgment of the Operating Committee such gas may be produced without materially decreasing the quantity of oil economically recoverable from the Unit Area.

(f) Such other unitized method or methods of operation as may from time to time be determined by the Operating Committee to be feasible, necessary or desirable to efficiently and substantially increase the ultimate recovery of Oil and Gas from the Unit Area, provided the estimated additional cost thereof does not exceed the value of the additional Oil and Gas to be so recovered.

Nothing herein contained shall prevent the Unit from abandoning or changing in whole or in part any particular method or methods of operation, including the pressure maintenance or repressuring operations required under (a) above, if and in the event at such time, and to the extent that any such method of operation as applied to the Unit Area is, in the best judgment of the Operating Committee, no longer in accord with good engineering or production practices.

XVI

Right to Information Regarding Unit Operations

Each and all Lessees within the Unit Area shall have access to the entire Unit Area at all reasonable times to inspect and observe operations of every kind and character on the property, and shall have access at all reasonable times to any and all information pertaining to wells drilled, production secured, marketing of Unit Production and to the books, records and vouchers relating to the

operation of the Unit Area. Unit Operator shall, upon request, furnish to any such lessee tank tables, daily gauge and run tickets and reports of stock on hand at the first of each month and any other pertinent information pertaining to the Unit Area or development and operation thereof. All of the rights herein granted shall apply with equal force to the construction and operation by the Unit of any repressuring or pressure maintenance plant or other facilities in connection therewith.

XVII

Liability

No member of the Operating Committee or any other committee shall be personally liable or individually responsible for any act, error, default or omission as a member of such committee or committees.

Neither the Unit nor the Unit Operator shall be liable or responsible under any of the provisions of this Plan of Unitization for any acts or omissions resulting from causes beyond the control of the Unit or such Unit Operator, or other causes which by the exercise of due diligence could not have been prevented or overcome.

Unit Operator shall not be liable or responsible for any damage to the Unit Area or the property, equipment or facilities used in the development and operation thereof, or for the loss of any production arising out of its operation of the Unit Area, except only for bad faith or gross negligence in connection therewith.

If and in the event, notwithstanding the foregoing provisions of this section, the Unit, the Unit Operator or any member of the Operating Committee is held liable by a court of competent jurisdiction for any matter or thing for which it is herein provided the Unit or person so named shall not be liable, the amount of such liability as finally determined shall thereupon be treated, regarded and paid as an item of Unit Expense.

XVIII

Change of Interest

All transfers, assignments and conveyances of any interest in, or with respect to, any of the Separately Owned Tracts within the Unit Area shall be subject to the terms, provisions and conditions of this Plan of Unitization, but shall not be binding on the Unit or the Unit Operator unless and until a photostatic or certified copy of the recorded instrument evidencing such change of ownership has been delivered to the Unit Operator. Each such transfer, assignment or conveyance, whether so stating or not, shall operate to impose upon the person or persons acquiring such interest the obligation of the assignor or grantor with respect to the interest so transferred and shall likewise operate to give and grant to the person or persons acquiring such interest all benefit attributable hereunder to such interest.

XIX

Audits

The Operating Committee shall cause an audit to be made of the books, accounts and records of the Unit Operator in respect to matters pertaining to the Unit and the operation of the Unit Area at least once each year and shall furnish a copy thereof to each of the Lessees within the Unit Area. Each such audit shall cover the period intervening since the last audit. The audit may be made by an auditor or auditing committee from the accounting staff of one or more of the Lessees within the Unit Area, or by an independent auditor or auditors employed by the Unit to make such audit.

XX

Rights of Way

The Unit shall have a servitude and right of way on, over and across all of the lands in the Unit Area for the

purpose of laying, constructing, building, using and maintaining, operating, changing, repairing and removing pipe lines, tanks, telegraph and telephone lines, water lines, and other facilities for the development and operation of the Unit Area for Oil and Gas and for the gathering, handling and disposal of the Unit Production; provided, the Unit shall pay all damages to growing crops, timber, fences, improvements and structures on the land resulting from the exercise of the rights and privileges granted to it in this section.

XXI

Claims, Suits and Judgments Against Individual Owners of Unit Area

In the event claim is made against any of the owners of the Unit Area or any of such owners are sued on account of any matter or thing growing out of the development and operation of the Unit Area by the Unit and over which such owner or owners have no control because of the rights, powers and duties herein granted the Unit, said owner or owners shall immediately notify the Operating Committee in writing of such claim or suit. The Operating Committee shall assume and take over the further handling of such claim or suit and in pursuance thereof may select an attorney or attorneys for that purpose, who, subject to the directions of the Operating Committee, shall have the exclusive right to direct and control the settlement or defense thereof. Should such claim be settled, final judgment be entered against any such defendant or defendants upon said cause of action and any such defendant is required to pay or satisfy such judgment or expense of litigation in whole or in part, the amount of such settlement or judgment shall be treated, regarded and paid as any other item of Unit Expense. Nothing herein contained shall apply to or relieve any such owner or owners of liability which may have accrued prior to the effective date of this Plan of Unitization.

XXII

Title Information

Upon request of either the Operating Committee or the Unit Operator, the Lessees of the several Separately Owned Tracts shall furnish and make available to the Unit or the Unit Operator, as the case may be, an abstract brought to the date of the request, together with all other title information in the possession and files of such Lessees, title opinions, original or true copies of all leases, assignments, contracts, curative matter and all other data and information pertaining to or otherwise affecting titles to the Oil and Gas Rights in and to the Unit Area.

XXIII

Other Formations

It is understood that the common source of supply described herein as the Unit Area, namely, the Medrano Sand of the West Cement Field, underlies and may overlie other reservoirs or common sources of supply of Oil and Gas not a part of the aforesaid Medrano Sand or a part of the Unit Area of the Unit created hereby. Except as specifically provided in this Plan of Unitization, all rights of any and all persons in and to such other reservoirs or common sources of supply of Oil and Gas and the production therefrom, together with the right of ingress and egress and the use of the surface of the Unit Area for the exploration, development and operation of such other reservoirs or common sources of supply of Oil and Gas, are expressly reserved unto the separate owners thereof and shall remain unaffected by the creation of the Unit and the adoption of this Plan of Unitization, all to the same extent as if this Plan of Unitization had not been adopted except that in the exercise of such rights the owners thereof shall have due regard for the rights granted the Unit with respect to its operations hereunder. Likewise, any reference in this Plan of Unitization to a Separately Owned Tract or to the Unit Area, although in

general terms broad enough to include the surface and all underlying common sources of supply of Oil and Gas, shall have reference to the lands embraced within such Separately Owned Tract and within the Unit Area only in relation to the Medrano Sand of the West Cement Field.

XXIV

Abandonment of Wells

If the Operating Committee at any time desires to abandon any well completed in the Medrano Sand and salvage the casing and other equipment that is a part of the well, the Lessee or Lessees of the Separately Owned Tract on which such well is located shall be notified in writing of such decision and shall have and be granted thirty (30) days from receipt of such notice within which to elect to take over such well for the purpose of completing the same in some other formation not a part of the Unit Area. Any such Lessee electing to take over such a well shall pay the salvage value of the casing and other equipment in and on the well, determined in accordance with Section IV of the accounting procedure hereto attached marked "Exhibit C", and shall agree to assume full responsibility for the proper plugging and abandonment thereof at such time as the well is ultimately abandoned. No such well shall be operated or used for the production of Oil and Gas from the Unit Area and to that end the Lessee taking over such a well shall immediately cause the Medrano Sand in such well to be sealed off in a manner satisfactory to the Operating Committee. In the event the Lessee or Lessees of such a Separately Owned Tract do not elect to take over such well, the Unit Operator shall proceed to properly plug and abandon the same and salvage the casing and other equipment therefrom.

XXV

Abandonment of Operations and Dissolution of Unit

At such time as it is determined by the Operating Committee that Unit Production can no longer be produced

from the Unit Area in paying quantities the further development and operation of the Unit Area by the Unit shall be abandoned, the Unit dissolved and its affairs wound up.

Upon abandonment of Unit Operations,

(a) All rights in and to the several Separately Owned Tracts shall revert to the separate owners and Lessees thereof;

(b) The owner or Lessee of a Separately Owned Tract desiring to take over and continue to operate a well located on such Separately Owned Tract may do so by paying the salvage value of the casing and other equipment in and on the well determined in accordance with Section IV of the accounting procedure hereto attached marked "Exhibit C" and by agreeing to properly plug and abandon the well at such time as it is ultimately abandoned;

(c) With respect to all wells not taken over by the owner or Lessees of the Separately Owned Tracts as aforesaid, the Unit Operator shall salvage so much of the casing and other equipment therein as can economically and reasonably be salvaged and shall cause such well to be properly plugged and abandoned;

(d) The salvaging, liquidation or other distribution of assets and properties used in the operation of the Unit Area shall be in a manner determined by the Operating Committee; provided, any Lessee desiring to take its share of the physical assets or any portion thereof in kind may do so. All such assets and property shall belong to the several Lessees in proportion to their respective interests in the Unit.

At such time as the Unit Operations are abandoned and the affairs of the Unit wound up, the Unit shall submit for filing a declaration to that effect with the Secretary of the Corporation Commission and with the County Clerk of Caddo County, Oklahoma, whereupon the rights, powers and duties of the Unit shall be at an end.

XXVI

Amendment to Plan of Unitization and Enlargement of Unit

Any amendment of this Plan of Unitization or any enlargement of the Unit or Unit Area shall be in accordance with the provisions of Sections 11 and 12 of House Bill 339 of the 1945 Legislature of the State of Oklahoma or any amendment thereto.

XXVII

Subscribers

Provision is made below for the signing of this Plan of Unitization by Lessees within the Unit Area who wish to expressly signify their agreement to the terms, provisions and conditions hereof. Such Lessees may sign either as Unqualified or Qualified Subscribers. Those signing as Unqualified Subscribers agree to all the terms, provisions and conditions hereof, including the agreement to participate in carrying the Lessees who elect to be carried under the provisions of Section XI. Those signing as Qualified Subscribers agree to all the terms, provisions and conditions hereof, except that they reserve the right to be carried in respect to the payment of Unit Expense as is provided in Section XI and do not agree to participate in carrying the other Lessees who elect to be carried under the terms of said Section. This Plan of Unitization may be so signed by the subscribers hereto at any time, the original of which shall at all times from and after the approval hereof by the Commission remain on file in the office of the Secretary of the Commission. In lieu of signing the original of this Plan of Unitization, any Lessee desiring to subscribe hereto, either as an Unqualified or Qualified Subscriber, may do so by separate instrument filed with the Secretary of the Commission, all with the same effect as if such Lessees signed the original.

The signing hereof by any Lessee shall be binding upon the heirs, personal representatives, successors and assigns of such Lessees.

The signing hereof by each of the subscribers hereto is conditioned upon the approval of this Plan of Unitization by the Corporation Commission.

The signing hereof by the Unqualified Subscribers is further conditioned upon the signing hereof by Unqualified Subscribers who, under this Plan of Unitization based on present lease ownership, will own sixty-five per cent (65%) or more in interest in the Unit.

Part II

For the purpose of this exhibit:

(a) The following amounts of the Unit Production of Oil shall be regarded as *"Normal Production"* for the years shown opposite the amounts so named:

Year Following Effective Date	Daily Average in Barrels
1st year	5,225 Barrels
2nd year	5,075 "
3rd year	4,925 "
4th year	4,775 "
5th year	4,775 "
6th year	4,203 "
7th year	3,872 "
8th year	3,788 "

(b) All Unit Production of Oil in excess of said Normal Production shall be regarded as *"Excess Production"*.

(c) *"Time of Acceleration"* shall mean and include the time from the Effective Date to the end of five consecutive periods, each consisting of 12 calendar months, with the exception that any month shall not be counted as a month fixing the term of each such period if the Unit Production of Oil during such month is less than the Normal Production as a sole and direct consequence of a statewide proration order of the Corporation Commission. The five periods aforesaid shall be designated consecutively as Periods 1, 2, 3, 4 and 5.

(d) *"Time of Deceleration"* shall mean and include the time from the end of the Time of Acceleration and continuing until such time as the total number of additional barrels of Oil allocated to Separately Owned Tracts numbered 56, 57, 58, 64 and 65 during the Time of Acceleration as hereinafter provided, is offset by a like number of barrels of Oil allocated to the other Separately Owned Tracts during such Time of Deceleration, as hereinafter provided.

During the Time of Acceleration the Normal Production of Oil as hereinabove defined shall be allocated to all the several Separately Owned Tracts within the Unit Area in proportion to their respective percentages of interest shown in Part I of this Exhibit.

The Excess Production, if any, in any month during the Time of Acceleration and if sufficient for that purpose, shall be allocated to Separately Owned Tracts numbered 56, 57, 58, 64 and 65 in such amounts as to allocate to each such Separately Owned Tract the following amounts of Oil in excess of the number of barrels of Normal Production allocated to such Separatey Owned Tracts.

Number of Period	Percent in Excess of Normal
1	100%
2	75%
3	50%
4	25%
5	10%

If the Excess Production in any month during the Time of acceleration exceeds the amount required to satisfy the aforesaid increased allocations to the 5 Separately Owned Tracts last hereinabove named, the excess shall be allocated to all of the Several Separately Owned Tracts within the Unit Area in proportion to their respective percentages of interest as shown in Part I of this Exhibit.

If the Excess Production, if any, in any month during the Time of Acceleration is not sufficient to satisfy in full the aforesaid increased allocations to the 5 Separately Owned Tracts hereinabove named, then and in that event the amount of such Excess Production shall be allocated to said 5 Separately Owned Tracts in the proportion that the percentage of interest of each such tract bears to the sum of the percentages of interest of all of said 5 Tracts, as shown in Part I of this Exhibit.

During the Time of Deceleration the amount of the Unit Production of Oil allocated each month to the 5 Separately Owned Tracts hereinabove specifically named, shall be 50% of their respective percentages of interest as shown in Part I of this Exhibit, until such time as the total accumulated number of barrels of Oil so withheld from such tracts by reason of said 50% reduction in percentage shall exactly equal the total accumulated number of additional barrels of Oil allocated to said tracts by reason of the special increase in allocation granted such tracts during the Time of Acceleration as hereinabove provided. The Unit Production of Oil so withheld from said 5 Separately Owned Tracts hereinabove specifically named by reason of said 50% reduction in the percentage allocation to such tracts shall be allocated to the other Separately Owned Tracts in the Unit Area, exclusive of the 5 tracts hereinabove specifically named, in the proportion that the percentages of interest of each bears to the sum of the percentages of interest of all such other tracts, exclusive of the 5 specifically named tracts, as shown in Part I of this Exhibit.

After the End of the Time of Deceleration all Unit Production shall be allocated to all the several Separately

Owned Tracts within the Unit Area in proportion to their respective percentages of interest as shown in Part I of this Exhibit.

EXHIBIT "C"

Accounting Procedure

The term "joint property" as herein used shall be construed to mean the Unit Area covered by the Plan of Unitization to which this "Accounting Procedure" is attached, together with any processing or other plants and facilities used in the development and operation of such Unit Area.

The term "Operator" as herein used shall be construed to mean the Unit Operator designated to conduct the development and operation of the joint property for the joint account.

I—Development and Operating Charges

Subject to limitations hereinafter prescribed, Operator shall charge the joint account with the following items:

(1) Delay or other rentals, when such rentals are paid by Operator for the joint account.

(2) Labor, teaming and other services necessary for the development, maintenance and operation of the joint property.

(3) Materials, equipment and supplies purchased or furnished by Operator from its warehouse stocks or from its other leases for use on the joint property. Insofar as is practical and consistent with efficient and economical operation, only such materials shall be purchased for or transferred to the joint property as are required for immediate use, and the accumulation of warehouse or lease stock on the joint property shall be avoided.

(4) Moving materials to the joint property from vendor's or from Operator's warehouse in the district or from other properties of Operator, but in either of the last events no charge shall be made to the joint account

for a distance greater than the distance from the nearest reliable supply store or railway receiving point.

(5) Moving surplus materials from the joint property to outside vendees, if sold f. o. b. destination, or minor returns to Operator's warehouse or other storage point. No charge shall be made to the joint account for moving major surplus materials to Operator's warehouse or other storage point for a distance greater than the distance to the nearest reliable supply store or railway receiving point, except by authority of the Operating Committee; and no charge shall be made to the joint account for moving materials to other properties belonging to operator, except by authority of the Operating Committee.

(6) Use of and service by Operator's exclusively owned equipment and utilities as provided in Paragraph (6) of Section II: "Basis of Charges to Joint Account."

(7) Damages or losses incurred by fire, flood, storm or from any other cause not controllable by Operator through the exercise of reasonable diligence. Operator shall furnish the Operating Committee written notice of damages or losses incurred by fire, storm, flood or other natural or accidental causes as soon as practicable after report of the same has been received by Operator.

(8) Expenses of litigation, liens, judgments and liquidated claims involving the joint property or incident to its development and operation. Actual expenses incurred by Operator in securing evidence pertaining to the joint property shall be a proper charge against the joint account.

(a) When any case, by prior agreement, is handled by Operator's legal staff, thereby eliminating the retaining of outside counsel, a charge commensurate with the cost of services rendered may be made to the joint account. Charges of this nature shall not be rendered until the Operating Committee has approved the amount thereof.

(b) Fees and expenses of outside attorneys shall not be charged to the joint account except where the employ-

ment of such outside attorneys is authorized by the Operating Committee.

(9) All taxes paid for the benefit of the parties in interest including ad valorem, property, gross production, occupation and any other taxes assessed against the jointly-owned properties, the production therefrom or the operations thereon.

(10) Insurance:

(a) Premiums paid for insurance carried for the benefit of the joint account together with all expenditures incurred and paid in settlement of any and all losses, claims, damages, judgments and other expenses, including legal services, not recovered from insurance carrier.

(b) If no insurance is required to be carried, all actual expenditures incurred and paid by Operator in settlement of any and all losses, claims, damages, judgments and any other expenses, including legal services, shall be charged to the joint account.

(11) Overhead:

In lieu of any charge for the salaries and expense of officers and employees of Operator other than employees directly assigned to the operation of the joint property and employees performing special work pursuant to authority of the Operating Committee, and, in lieu of any charge for office and camp expense other than the expense of a field office or camp, if any, required for the operation of the joint property, the Operator shall have the right to charge the joint account with the following overhead charges:

(a) $150.00 per month for each drilling well, beginning on the date the well is spudded and terminating when it is on production or is plugged, as the case may be, except that no charge shall be made during suspension of drilling operations for fifteen (15) or more consecutive days.

(b) $50.00 per well per month for the first ten (10) producing wells.

(c) $40.00 per well per month for the second ten (10) producing wells.

(d) $25.00 per well per month for all producing wells over twenty (20).

(e) $20.00 per well per month for injection wells.

(f) An allowance to be agreed upon between the Operator and Operating Committee with respect to the construction and operation of any gas injection plant and facilities if and when the construction and operation thereof is authorized.

In connection with overhead charges, the status of wells shall be as follows:

(1) Producing gas wells shall be included in overhead schedule the same as producing oil wells.

(2) Wells permanently shut down but on which plugging operations are deferred, shall be dropped from overhead schedule at the time the shutdown is effected. When such wells are plugged, overhead shall be charged at the producing well rate during the time required for plugging operation.

(3) Wells being plugged back or drilled deeper shall be included in overhead schedule the same as drilling wells.

(4) If and when a well is temporarily shut down (other than for proration) and not produced or worked upon for a period of a full calendar month, it shall not be included on the overhead schedule for such month.

(5) Salt water disposal wells shall not be included in overhead schedule.

The above specific overhead rates are subject to adjustment and shall be amended from time to time by agreement between Operator and the Operating Committee if, in practice, they are found to be insufficient or excessive.

(12) Warehouse Handling Charges: None.

(13) Any other expenditures incurred by Operator for the necessary and proper development, maintenance, and operation of the joint property, except that Operator shall not charge the joint account with any expenditure or contribution made by Operator towards employes'

stock purchase plan, group life insurance, pension, retirement, or bonus, other than such expenditures or contributions imposed or assessed by governmental authority.

II—Basis of Charges to Joint Account

(1) Outside Purchases: All materials and equipment purchased and all service procured from outside sources shall be charged at their actual cost to Operator, after deducting any and all trade or cash discounts actually allowed off invoices, or received by Operator.

(2) New materials furnished by Operator (Condition "A"):

New materials transferred to the joint property from Operator's warehouse or other properties shall be priced f. o. b. the nearest supply store or railway receiving point at replacement cost of the same kind of materials. This will include large equipment such as tanks, rigs, pumps, boilers and engines. All tubular goods (2" or over) shall be charged on the basis of mill shipment or carload price. Other materials, where the replacement cost cannot be readily ascertained, may, for the purposes of consistency and convenience, be charged on the basis of a reputable supply company's preferential list price f. o. b nearest supply store or railway receiving point tc the joint property prevailing on the date of transfer of the materials to the joint property.

In determining the value of any transferred materials, all special and preferential discounts shall be allowed but the regular cash discount shall not be considered.

(3) Secondhand materials furnished by Operator (Conditions "B" and "C"):

(a) Tubular goods (2" and over), fittings, machinery and other equipment which is in sound and serviceable conditon at date of transfer, will be classed as condition "B" and charged at 75% of the price of new materials, in accordance with the provisions of Paragraph (2) above.

(b) Tanks, derricks, and buildings or other equipment

involving erection costs shall be charged on a basis not to exceed 75% of knocked-down new price for similar materials.

(c) Other secondhand materials, such as units of machinery or other equipment that is serviceable, but substantially not good enough to be considered first-class secondhand material when transferred to the joint property, shall be classed as condition "C" and charged at 50% of the new price.

(d) There may also be cases where some items of equipment, due to their unusual condition, should be fairly and equitably priced by Operator.

(4) Warranty of Materials Furnished by Operator: Operator does not warrant the materials furnished from its warehouse or other properties beyond or back of the dealers' or manufacturer's guaranty, and in case of defective materials, credits shall not be passed until adjustment has been received by Operator from the manufacturers or their agents.

(5) If materials required are not available in Operator's surplus stocks, Operator shall whenever in its judgment it is practical to do so, give to other lessees within the Unit Area opportunity of furnishing the materials required in proportion to their interest, provided that the same can be furnished at the time such materials are required, and further provided that any such materials so furnished shall be in condition acceptable to Operator and shall be charged to the joint account on the same terms and conditions as are provided herein to cover the furnishing of materials by Operator.

(6) Operator's Exclusively-owned Facilities: The following rates shall apply to service rendered to the joint property by facilities owned exclusively by Operator:

(a) Water service, gas, teaming, power, and compressor service: All at rates currently prevailing in the field where the joint property is located.

(b) Automotive Equipment: Rates commensurate with cost of ownership and operation and in line with schedule

of rates adopted by the Petroleum Motor Transport Association as recommended uniform standardized charges against the joint account. Automotive charges will be based on use in actual service on or in connection with the joint property. Truck, tractor and pulling unit rates shall include wages and expenses of driver.

(c) A fair rate shall be charged for the use of drilling and cleaning-out tools and any other items of Operator's fully-owned machinery or equipment which shall be ample to cover maintenance, repairs, depreciation and the service furnished the joint property. Provided, however, that such charges shall not exceed those currently prevailing in the field where the joint property is located.

(d) Whenever requested, Operator shall inform the other lessees within the Unit Area in advance of the rates it proposes to charge.

(e) Rates shall be revised and adjusted from time to time when found to be either excessive or insufficient.

III—Disposal of Lease Equipment and Materials

(1) Materials purchased by Operator shall be credited to the joint account and included in the monthly statement of operations for the month in which the materials are removed from the joint property.

(2) Materials purchased by other lessees within the Unit Area shall be invoiced by Operator and paid for by such lessees to Operator immediately following receipt of invoice and delivery of materials. Operator shall thereupon immediately pass credit to the joint account and include the same in the monthly statement of operations for the month in which the materials were paid for by such lessees.

(3) Division of materials in kind, if made between Operator and other lessees within the Unit Area shall be in proportion to their respective interests in the joint property. Each party will thereupon be charged individually with the value of the materials received or receivable and corresponding credits will be made to the

joint account by the Operator, and, both credits shall appear in the same monthly operating statement.

(4) Sales to outsiders of major materials shall be made only with the approval of the Operating Committee as to both terms and price and where made the proceeds shall be credited by Operator to the joint account at the full amount collected from vendee. Any claims by vendee for defective materials or otherwise shall be charged back to the joint account, if and when paid by Operator.

IV—Basis of Pricing Materials Transferred from Joint Account

Materials and equipment purchased by either Operator or the lessees in the Unit Area, or divided in kind between them, unless otherwise approved by the Operating Committee, shall be valued on the following basis of condition and price: (New price as used in the following paragraphs shall have the same meaning and application as that used above in Section II: "Basis of Charges to Joint Account").

(1) New Materials: (Condition "A") being new equipment or supplies purchased or procured from the joint property but never used thereon; at 100% of current new prices.

(2) Good Secondhand Materials: (Condition "B") being good serviceable materials which are further usable without repair, at:

(a) 75% of current new prices, if materials were new when originally charged to the joint property.

(b) 75% of current new prices less depreciation consistent with their usage on and service to the joint property, if materials were originally charged to the joint property as secondhand at 75% of new prices.

(3) Other Used Materials: (Condition "C") being materials further usable for their original function only after repair and reconditioning; at 50% of current new prices.

(4) Bad Order Materials: (Condition "D") being materials not further usable for their original function but

for possible other service; at 25% of current new prices.

(5) Junk: (Condition "E") being obsolete and unserviceable materials; at prevailing junk prices in the district. Where practicable, junk should be disposed of at the joint property.

(6) Temporarily Used Materials: When the use of certain items of equipment on the joint property has been only temporary, and the time of actual use thereon does not justify the deduction of depreciation as listed in (a) and (b) of Paragraph (2) hereof, such materials will be priced on a basis that will leave a net charge against the joint account consistent with the service rendered and adequate for the time the materials were in use.

V—Inventories

Periodic inventories of the materials and equipment of the joint property, which shall include such materials and equipment as are ordinarily considered controllable by Operators of oil and gas properties, shall be taken by Operator at such times and under such conditions as may be prescribed by the Operating Committee.

APPENDIX "D"

OIL AND GAS LEASE OWNED BY THE PALMER OIL CORPORATION, WITH ROYALTY RIGHTS OWNED BY PAUL STERBA AND PAUL STERBA, JR.

Filed for record Feb. 26, 1936 at 11:00 A. M.
R. L. Goodfellow County Clerk (Seal)

Oil & Gas Lease

Agreement, made and entered into the 12th day of February, 1936, by and between Paul Sterba and wife, Gertrude K. Sterba, and Helen Catherine Jackson, nee Sterba, and husband Clifford Jackson, of Kay County & Canadian County, Oklahoma, hereinafter called lessor (whether one or more) and Chris Pearson, hereinafter called lessee:

Witnesseth: That the said lessor, for and in consideration of One & No/Dollars, cash in hand paid, the receipt of which is hereby acknowledged, and of the covenants and agreements hereinafter contained on part of lessee to be paid, kept and performed, has granted, demised, leased and let and by these presents does grant, demise, lease and let unto the said lessee for the sole and only purpose of mining and operating for oil and gas and of laying of pipe lines, and of building tanks, powers, stations and structures thereon to produce, save and take care of said products, all that certain tract of land situate in the county of Caddo, State of Oklahoma, described as follows, to-wit:

The Southwest Quarter, of Section 35, Township 6 N, Range 10 W, and containing 160 acres, more or less.

It is agreed that this lease shall remain in force for a term of five years from this date, and as long thereafter as oil or gas or either of them is produced from said land by lessee.

In consideration of the premises the said lessee covenants and agrees:

1st. To deliver to the credit of lessor, free of cost, in the pipe line to which lessee may connect wells on said land, the equal one-eighth part of all oil produced and saved from the leased premises.

2nd. To pay lessor one-eighth (⅛) of the gross proceeds each year, payable quarterly for the gas from each well where gas only is found, while the same is being used off the premises and if used in the manufacture of gasoline a royalty of one-eighth (⅛) payable monthly at the prevailing market rate for gas; and lessor to have gas free of cost from any such well for all stoves and all inside lights in the principle dwelling on said land during the same time, by making lessor's own connections with the well at lessor's own risk and expense.

3rd. To pay lessor for gas produced from any oil well and used off the premises or in the manufacture of gasoline or any other product a royalty of one-eighth (⅛) of the proceeds, at the mouth of the well, payable monthly at the prevailing market rate.

If no well be commenced on said land on or before the 12th day of February, 1937, this lease shall terminate as to both parties, unless the lessee shall on or before that date pay or tender to the lessor or to the lessors credit in the The Security Bank of Ponca City, Okla., or its successors, which shall continue as the depository regardless of changes in the ownership of said land, the sum of One hundred sixty & No/100 Dollars which shall operate as a rental and cover the privilege of deferring the commencement of a well for twelve months from said date. The payment herein referred to may be made in currency, draft or check at the option of the lessee; and the depositing of such currency, draft or check in any post office, with sufficient postage and properly addressed to the lessor, or said bank, on or before said last mentioned date, shall be deemed payment as herein provided. In like manner and upon like payments or tenders, the commencement of a well may be further deferred for like periods of the same number of months successively.

And it is understood and agreed that the consideration first recited herein, the down payment, covers, not only the privilege granted to the date when said first rental is payable as aforesaid, but also the lessee's option of extending that period as aforesaid, and any and all other rights conferred.

Should the first well drilled on the above described land be a dry hole, then and in that event, if a second well is not commenced on said land within twelve months from the expiration of the last rental period for which rental has been paid, this lease shall terminate as to both parties, unless the lessee on or before the expiration of said twelve months shall resume the payment of rentals, in the same amount and in the same manner as hereinbefore provided. And it is agreed that upon the resumption of the payment of rentals as above provided, that the last preceding paragraph hereof governing the payment of rentals and the effect thereof, shall continue in force just as though there had been no interruption in the rental payments, and if the lessee shall commence to drill a well within the terms of this lease or any extension thereof, the lessee shall have the right to drill such well to completion with reasonable diligence and dispatch, and if oil or gas, or either of them, be found in paying quantities, this lease shall continue and be in force with like effect as if such well had been completed within the ferm of years first mentioned.

If said lessor owns a less interest in the above described land than the entire and undivided fee simple estate therein, then the royalties and rentals herein provided for shall be paid the said lessor only in the proportion which lessor's interest bears to the whole and undivided fee.

Lessee shall have the right to use, free of cost, gas, oil and water produced on said land for lessee's operations thereon, except water from the wells of lessor.

When requested by lessor lessee shall bury lessee's pipe lines below plow depth.

No well shall be drilled nearer than 200 feet to the house or barn now on said premises without written consent of lessor.

Lessee shall pay for damages caused by lessee's operations to growing crops on said land.

Lessee shall have the right at any time to remove all machinery and fixtures placed on said premises, including the right to draw and remove casing.

If the estate of either party hereto is assigned and the privilege of assigning in whole or in part is expressly allowed, the covenants hereof shall extend to their heirs, executors, administrators, successors or assigns, but no change in the ownership of the land or assignments of rental or royalties shall be binding on the lessee until after the lessee has been furnished with a written transfer or assignment or a true copy thereof and it is hereby agreed that in the event this lease shall be assigned as to a part or as to parts of the above described lands and the assignee or assignees of such part or parts shall fail or make default in the payment of the proportionate part of the rents due from him or them, such default shall not operate to defeat or affect this lease in so far as it covers a part or parts of said lands, upon which the said lessee or any assignee thereof shall make due payment of said rental, and this lease shall never be forfeited for non-payment of any rental due until after at least ten days written notice by registered mail or in person shall have been given the lessee.

Lessor hereby warrants and agrees to defend the title to the lands herein described and agrees that the lessee shall have the right at any time to redeem for lessor, by payment, any mortgages, taxes or other liens on the above described lands, in the event of default of payment by lessor, and be subrogated to the rights of the holder thereof, and the undersigned, lessors, for themselves and their heirs, successors, and assigns, hereby surrender and release all right of dower and homestead in the premises described herein, insofar as said right of dower and homestead may in any way affect the purposes for which this lease is made as recited herein.

In Testimony Whereof We Sign, this the 12th day of February, 1936.

HELEN CATHERINE JACKSON (s)
CLIFFORD JACKSON (s)
PAUL STERBA (s)
GERTRUDE K. STERBA (s)

STATE OF OKLAHOMA,
County of Canadian, SS:

Be it remembered, That on this 12th day of February A. D. 1936, before me, a Notary Public in and for said County and State, personally appeared Helen Catherine Jackson, nee Sterba, and Clifford Jackson, her husband, to me known to be the identical persons described in and who executed the within and foregoing instrument and acknowledged to me that they executed the same as their free and voluntary act and deed for the uses and purposes therein set forth.

In witness whereof, I have hereunto set my official signature and affixed my notarial seal, the day and year first above written.

(SEAL) H. C. KIMNER, *Notary Public.*

My commission expires January 2nd, 1938.

STATE OF OKLAHOMA,
County of Kay, SS:

Before me, the undersigned, a Notary Public within and for said County and State, on this 13 day of February, 1936, personally appeared Paul Sterba and wife, Gertrude K. Sterba, to me known to be the identical persons who executed the within and foregoing instrument and acknowledged to me that they executed the same as their free and voluntary act and deed for the uses and purposes therein set forth.

In testimony whereof I have hereunto set my hand and official seal the day and year last above written.

(SEAL) J. R. MEET, *Notary Public.*

My commission expires Feb. 14, 1936.

APPENDIX "E"

EXHIBIT 35

12-1-1938 Jacob Roessler Lease No. 29,873 RGL.W

Assignment

This Assignment, made in duplicate, this 6th day of December, 1938, between Gulf Oil Corporation, a Pennsylvania corporation, with offices at Tulsa, Oklahoma, hereinafter referred to as "Gulf, first party, and The Palmer Oil Corporation, of Wichita, Kansas, second party," hereinafter called "Palmer",

Witnesseth That

Whereas, Gulf is the owner and holder of an oil and gas mining lease dated February 12, 1936, executed by Paul Sterba and wife, Gertrude K. Sterba, and Helen Catherine Jackson, nee Sterba, and husband, Clifford Jackson, as lessors, to Chris Pearson, as lessee, covering the Southwest quarter of Section 35, Township 6 North, Range 10 West, Caddo County, Oklahoma, filed for record in the office of the County Clerk of Caddo County, Oklahoma on February 26, 1936 at eleven o'clock A. M. and duly recorded in Book 75 at page 316; and,

Whereas, on the 6th day of September, 1938 a contract was entered into between Gulf Oil Corporation as first party and The Palmer Oil Corporation as second party by the terms of which Gulf was to assign the lease to Palmer, hereinabove referred to, to the depth of 6,000 feet, retaining and reserving the oil and gas mining lease as to all oil, gas and other minerals below the depth of 6,000 feet, together with an overriding royalty; and,

Whereas, Palmer has complied with the contract in so far as to entitle it to an assignment of the lease in accordance with the terms of the contract;

Now, therefore, in consideration of the premises, Gulf hereby sells, assigns, transfers and sets over to Palmer, without covenants of warranty, all of its right, title and

interest in and to the above described lease to the depth of 6,000 feet, retaining the lease as to the oil, gas and casing- [fol. 228] head gas, together with all the rights, privileges and appurtenances thereunto belonging, below the depth of 6,000 feet.

To have and to hold the same, subject to all the covenants, conditions and provisions in said lease contained.

Gulf hereby reserves and retains the lease as to the oil, gas and casinghead gas below the depth of 6,000 feet, together with an overriding royalty of 1/16th of the 7/8ths working interest in the oil produced from the leased premises when the total daily production from the leased premises is fifty (50) barrels or less, per day, and 1/8th of the 7/8ths working interest in the oil produced saved and marketed from the premises when the total daily production from the leased premises exceeds fifty (50) barrels per day, also reserving and retaining an overriding royalty of 1/8th of the 7/8ths working interest in the gas and casinghead gas produced, saved and marketed or taken off the premises, which overriding royalty shall be paid in the following manner, to-wit:

Palmer agrees to run the oil produced, saved and marketed from the premises to the pipe line, or pipe lines, to which it may connect the well, or wells, under division orders placing to the credit of Gulf 1/16th of the 7/8ths working interest in the oil produced, saved and marketed from the premises, when the total gross oil produced from the leased premises is fifty (50) barrels, or less, per day, and 1/8th of the 7/8ths working interest in the oil produced, saved and marketed from the premises during the time the total gross oil produced, saved and marketed from the premises exceeds fifty (50) barrels per day, and to pay Gulf 1/8th of the proceeds of the 7/8ths working interest in the gas and casinghead gas produced, saved and marketed from the premises, payment to be made on the 20th day of each month for the gas and casinghead gas produced and sold from the premises, or used off the premises, during the preceding month. The overriding

royalty hereinabove shall be in addition to the royalty provided in the lease and payable to the lessors or their assigns.

The daily production shall be ascertained and determined, for the purposes of this contract, by taking the gross pipe line runs for the month and dividing into the same the number of days in such month, and the quotient shall be considered the total daily production from the leased premises for such month. If the test well comes into production [fol. 229] after the first of any month, the daily production for such month shall be ascertained and determined by taking the pipe line runs for the number of days the oil is run for such month and dividing into the same the number of such days, and the quotient shall be the daily production for such month for such portion of the month.

8. Palmer agrees to furnish Gulf copies of daily run tickets, to be mailed to Gulf Oil Corporation, P. O. Box 661, Tulsa, Oklahoma, once each week, enclosing the daily run tickets for the preceding week, and, at the close of the month and as soon as obtainable, production tickets for the entire month. Palmer further agrees to furnish Gulf copies of all tank tables.

9. Palmer promises and agrees to produce and market each month the total allowable production for such month and if for any reason Palmer fails, neglects or refuses to produce and market such allowable, Palmer shall promptly advise Gulf, in writing, furnishing in detail the reasons for not producing and running the allowable for such month.

This Assignment is made subject to contract of September 6th, 1938 between Gulf Oil Corporation, first party, and The Palmer Oil Corporation, second party, which contract is hereby referred to and made a part hereof, the same as if herein copied in full.

It is further agreed that any assignment by Palmer shall by reference incorporate the contract of September 6, 1938 as a part thereof and specifically provide for the payment of the overriding royalty to Gulf.

Dated the day and date first above written.

Gulf Oil Corporation, By Rush Greenslade, Vice-President. The Palmer Oil Corporation, By Tom Palmer, President.

Attest: D. B. Catterlin, Assistant Secretary.
Attest: Otto H. Schnepel, Secretary.

[fol. 230] STATE OF OKLAHOMA,
County of Tulsa, ss.:

Before me, the undersigned, a Notary Public in and for said County and State, on this 15th day of December, 1938, personally appeared Rush Greenslade, to me known to be the identical person who subscribed the name of the Maker thereof, Gulf Oil Corporation, to the foregoing instrument as its Vice-President, and acknowledged to me that he executed it as his free and voluntary act and deed and as the free and voluntary act and deed of such corporation, for the uses and purposes therein set forth.

Witness my hand and seal, the day and year last above written.

E. B. Benton, Notary Public.

My commission expires Dec. 17, 1938.

STATE OF KANSAS,
County of Sedgwick, ss.:

Before me, the undersigned, a Notary Public in and for said County and State, on this 6th day of December, 1938, personally appeared Tom Palmer, to me known to be the identical person who subscribed the name of the Maker thereof, The Palmer Oil Corporation, to the foregoing instrument as its President, and acknowledged to me that he executed it as his free and voluntary act and deed and as the free and voluntary act and deed of such corporation, for the uses and purposes therein set forth.

Witness my hand and seal, the day and year last above written.

Jewell Thompson, Notary Public.

My Commission expires March 3, 1941.

APPENDIX "F"

Exhibit 34

This Agreement made in duplicate this 6th day of September, 1938, between Gulf Oil Corporation, a Pennsylvania corporation, with offices at Tulsa, Oklahoma, first party, hereinafter called "Gulf", and The Palmer Oil Corporation, of Wichita, Kansas, second party, hereinafter called "Palmer",

Witnesseth, that

Whereas, Gulf is the owner and holder of an oil and gas mining lease dated February 12, 1936, executed by Paul Sterba and Gertrude K. Sterba, his wife, and Helen Catherine Jackson, nee Sterba, and Clifford Jackson, her husband, as lessors, to Chris Pearson, as lessee, covering the

> Southwest Quarter (SW¼) of Section 35, Township 6 North, Range 10 West, Caddo County, Oklahoma,

and filed for record in the office of the County Clerk of Caddo County, Oklahoma, February 26, 1936 at 11:00 o'clock A. M., and recorded in book 75 at page 316; and,

Whereas, Gulf has agreed to assign the lease without covenants of warranty to Palmer and the oil, gas and other minerals above the depth of 6000 feet, retaining an overriding royalty, in consideration of the covenants and promises and agreements hereinafter contained:

Now, therefore, in consideration of the premises and the mutual covenants and agreements hereinafter set out, it is agreed as follows, to-wit:

1. Palmer agrees within thirty (30) days from the date of the execution of this contract to commence drilling operations for oil and gas, or either of them, in the center of the

> Northeast Quarter (NE¼) of the Northeast Quarter (NE¼) of the Southwest Quarter (SW¼) of Section 35, Township 6 North, Range 10 West, Caddo County, Oklahoma,

and with diligence and dispatch and at its sole cost and expense drill said well to a total depth of six thousand (6000) feet unless oil and gas, or either of them, or igneous rock or other impenetrable formation is encountered at a lesser depth.

2. During drilling operations, Palmer shall at all times afford Gulf free access to said well and the records thereof, and once each week shall forward to W. R. Thawley, P. O. Box 661, Tulsa, Oklahoma, written report showing all formations encountered, including the depth thereof, and [fol. 182] upon request and in receptacles furnished by Gulf, send to W. R. Thawley samples or cuttings of formations and waters penetrated. In event said well shall be completed to a dry hole, Palmer shall forthwith measure the depth of said well by running a steel measuring line therein, and shall notify Gulf of its intention to measure said well in time for Gulf to have a representative at the well to witness the measurement thereof. Upon completion of said well Palmer shall furnish Gulf with complete certified log thereof and samples and cuttings of formations saved in the course of drilling, and such other information disclosed by said drilling as may be demanded by Gulf.

3. In event Palmer shall fail to commence and complete the aforesaid well, or cease drilling operations on the same for a period of more than ten (10) days, unless such delay is due to the Act of God or the public enemy, then all rights of Palmer under this agreement shall forthwith terminate.

4. If the aforesaid well shall be drilled and shall be found dry, Palmer shall promptly plug the same at its sole cost and expense and retain all salvage from said well as his own, said work to be performed in compliance with the laws of the State of Oklahoma and the Rules and Regulations of any regulatory body having jurisdiction in the State of Oklahoma.

5. Before plugging any well and abandoning the same, Palmer shall give notice of such intention to Gulf at least

ten (10) days before the date on which said well shall be plugged and abandoned, during which ten (10) days Gulf shall have the right, but shall not be obligated so to do, to take over said hole by paying Palmer the cost of drilling such hole, plus the cost of the equipment in the well as reflected by the books and records of Palmer, and thereupon such hole and equipment therein shall become the property of Gulf, it being understood and agreed that in event Gulf takes over the hole, Palmer shall deliver the hole to Gulf free, clear and discharged of all encumbrances, and in event there are any debts or claims unpaid, Gulf shall have the power and authority to pay such indebtedenss out of the purchase price of such hole, accounting to Palmer for the balance due, if any.

6. Palmer agrees to comply with the Workmen's Compensation Laws of the State of Okahoma and furnish satisfactory evidence of such compliance, and further agrees to save harmless and indemnify Gulf from and on account of all liabilities of every kind or character either to person or [fol. 183] property incurred during the performance of this agreement.

7. Gulf further promises and agrees, upon full compliance with all the covenants, conditions and agreements herein contained, and completion of the test well to the depth of six thousand (6000) feet, unless oil and gas, or either of them, are found in commercial quantities at a lesser depth, or igneous rock or other impenetrable formation is encountered at a lesser depth, and upon satisfactory proof that all debts have been paid, it will assign the oil and gas mining lease hereinabove described, without covenants of warranty, insofar as it covers the oil, gas and other minerals above the depth of six thousand (6000) feet, retaining and reserving the oil and gas and other minerals below the depth of six thousand (6000) feet, and also retaining an overriding royalty of 1/16th of the 7/8ths working interest in the oil produced when the total daily production from the leased premises is fifty (50) barrels or less per day, and 1/8th of the 7/8ths working

interest in the oil produced saved and marketed from the premises when the total daily gross oil produced from the leased premises exceeds fifty (50) barrels per day; also reserving and retaining an overriding royalty of 1/8th of the 7/8ths working interest in the gas and casinghead gas produced, saved and marketed or used off the premises, which overriding royalty is to be paid in the following manner, to-wit:

Palmer agrees to run the oil produced, saved and marketed from the premises to the pipe line or pipe lines to which it may connect the well or wells under division orders placing to the credit of the Gulf 1/16th of the 7/8ths working interest in the oil produced, saved and marketed from the premises, when the total gross oil produced from the leased premises is fifty (50) barrels or less per day, and 1/8th of the 7/8ths working interest in the oil produced, saved and marketed from the premises during the time the total gross oil produced, saved and marketed from the premises exceeds fifty (50) barrels per day, and to pay Gulf 1/8th of the proceeds of the 7/8ths working interest in the gas and casinghead gas produced, saved and marketed from the premises, payment to be made on the 20th day of each month for the gas and casinghead gas produced and sold from the premises or used off the premises during the preceding month. The overriding royalty hereinabove shall be in addition to the royalty provided in the lease and payable to the lessor or their assigns.,

[fol. 184] The daily production shall be ascertained and determined, for the purposes of this contract, by taking the gross pipe line runs for the month and dividing into the same the number of days in such month, and the quotient shall be considered the total daily production from the leased premises for such month. If the test well comes into production after the first of any month, the daily production for such month shall be ascertained and determined by taking the pipe line runs for the number of days the oil is run for such month and dividing into the same the number of such days, and the quotient shall be

the daily production for such month for such portion of the month.

8. Palmer agrees to furnish Gulf copies of daily run tickets, to be mailed to Gulf Oil Corporation, P. O. Box 661, Tulsa, Oklahoma, once each week, enclosing the daily run tickets for the preceding weeks, and, at the close of the month and as soon as obtainable, production tickets for the entire month. Palmer further agrees to furnish Gulf copies of all tank tables.

9. Palmer promises and agrees to produce and market each month the total allowable production for such month and if for any reason Palmer fails, neglects or refuses to produce and market such allowable, Palmer shall promptly advise Gulf in writing, furnishing in detail the reasons for not producing and running the allowable for such month.

10. After the execution of the foregoing assignment, Palmer agrees to perform all of the covenants, express and implied, in the lease insofar as oil and gas development or offsets of oil and gas wells are concerned, and to save harmless Gulf from any claims on the part of the lessors or any of them, or royalty owners on account of any alleged failure to perform any such obligation, and further agrees to defend any suits that may be filed against Gulf on account of such failure, and to pay any judgment that may be obtained against Gulf, and in event Palmer shall fail to offset any paying oil or gas well, Gulf shall have the right and option, but shall not be obligated so to do, it being purely optional with it, to drill such well if Palmer shall fail to commence actual operations on the land for the drilling of such well or wells within forty-five (45) days after demand in writing by Gulf to Palmer, and shall thereafter diligently continue the drilling of such well, and in such case, if Gulf drills such well or wells, it shall have the sole right in such leases as to each well drilled, including a plot [fol. 185] of ground in square form containing ten (10) acres, the center of which shall be the well.

NOTE: All leases are subject to the adjustment outlined in Exhibit "B"—Part II.

11. It is further agreed that if at any time Palmer desires to abandon any oil or gas well drilled by it on the leased premises or desires to abandon the entire leased premises, Gulf shall be given (30) days' notice of such intention and during such 30 days Gulf shall have the option to take over such well or wells or Palmer's interest in the entire leased premises by paying Palmer the salvage value of the equipment in the well or wells, and/or the leased premises and, upon Gulf exercising such option, Palmer shall assign to Gulf its interest in the leased premises as to the well or wells taken over or the entire leased premises, as the case may be, free, clear and discharged of all liens or encumbrances of whatsoever kind or nature. In event Gulf does not elect to take over any well or wells Palmer has drilled on the leased premises and/or the entire leased premises, Gulf shall be entitled, if it so demands, to a re-assignment of the lease free, clear and discharged of all liens and encumbrances and Palmer shall be entitles to the salvage value of the equipment placed thereon; Provided, in event Gulf shall take over a well or wells as herein provided and not the entire leased premises, the re-assignment shall extend only to a tract of land surrounding each well containing ten (10) acres in a square form, the center of which shall be the well taken over.

12. It is further agreed between the parties that Palmer will at all times keep said lease free, clear and discharged of all liens, charges or encumbrances of whatsoever kind or character and protect and save harmless and indemnify Gulf on account of any loss, damage, or liability it may suffer or sustain, or become subject to, on account of the operation of the premises by Palmer.

13. It is further agreed that Palmer shall not assign or release the lease, or any interest therein, without procuring the consent of Gulf in writing.

14. This contract is entered into in accordance with and shall at all times be subject to the laws of the State of Oklahoma, and the rules and regulations of the Corpora-

tion Commission, the laws of the United States, and the rules and regulatory orders of any Board, Federal or State, having jurisdiction in the premises.

[fol. 186] 15. All notices necessary to be given under the terms of this agreement shall be in writing, by registered mail, addressed to the Gulf Oil Corporation, P. O. Box 661, Tulsa, Oklahoma, and The Palmer Oil Corporation, Wichita, Kansas.

Witness the signatures of the parties hereto the day and year first above written.

Gulf Oil Corporation, by Rush Greenslade, Vice-President.

Attest: D. B. Catterlin, Assistant Secretary.

The Palmer Oil Corporation, by Tom Palmer, President.

Attest: Otto H. Schnepel, Secretary.

[fol. 187] STATE OF OKLAHOMA,
County of Tulsa, ss:

Before me, the undersigned notary public in and for said county and state, on this 7th day of September, 1938, personally appeared Rush Greenslade, to me known to be the identical person who subscribed the name of the Gulf Oil Corporation, a corporation, the maker thereof, to the within and foregoing instrument as its Vice President, and acknowledged to me that he executed the same as his free and voluntary act and deed and as the free and voluntary act and deed of such corporation, for the uses and purposes therein set forth.

Witness my hand and seal the day and year last above written.

E. G. Grear, Notary Public.

My commission expires Dec. 31, 1941.

BRIEF OF PETITIONERS

OPINION BELOW

The opinion of the Supreme Court of the State of Oklahoma (R. 28) is reported at 204 Okl. 543, 231 P. 2d 997.

JURISDICTION

The final judgment of the Supreme Court of the State of Oklahoma, the highest court in the State of

Oklahoma was entered May 22, 1951 (R. 116). The application for appeal was presented to the Supreme Court of Oklahoma, July 30, 1951. The jurisdiction of this Court rests on Title 28, U.S.C.A.; Sec. 1257; June 25, 1948, Ch. 646, 62 Stat. 929, and Title 28, U.S.C.A., Sec. 2101 (c); June 25, 1948, Ch. 646, 62 Stat. 961, amended May 24, 1949, Ch. 139, Sec. 106, 63 Stat. 104, and the following decisions also sustain the appellate jurisdiction:

Champlin Refining Co. v. *Corporation Commission*, 286 U.S. 210, 76 L. ed. 1062;

Thompson v. *Consolidated Gas Utilities*, 300 U.S. 55, 81 L. ed. 510;

Hunter Co. v. *McHugh*, 320 U.S. 222, 88 L. ed. 5.

The petitioners first raised the Federal questions sought to be reviewed by filing Answers to the Application of the respondents before the Corporation Commission of the State of Oklahoma on May 21, 1947 (R. 813 and 815 - 821 and 825), introduced (R. 809) leave having been first granted to file such Answers. The same Federal questions were again raised on Motion for Judgment before the Corporation Commission (R. 1312 to 1319) and in the Motion for New Trial filed before the Corporation Commission (R. 1300 and 1314). The questions were again raised in their Petition in Error filed in the Supreme Court of the State of Oklahoma appealing from the judgment of the Corporation Commission

(R. 146) and in their Briefs filed in the Supreme Court of Oklahoma and in oral argument before the Supreme Court of Oklahoma, and again in the Petition for Rehearing filed before the Supreme Court of the State of Oklahoma after the decision of said court was first made (R. 79).

The Corporation Commission of the State of Oklahoma did not pass upon the Federal questions raised as appears from Order No. 20289 (R. 1239).

The Supreme Court of the State of Oklahoma by opinion and decision of March 20, 1951, Order of May 22, 1951, denying Petition for Rehearing (R. 116), and Order of the 5th day of June, 1951, denying Application to file Second Amended Petition (R. 130), held that the Unitization Act and Order No. 20289 did not violate Sec. 10, Art. I of, or the 5th, or 14th Amendments to the United States Constitution (R. 28).

1 a. Excerpt from Answer of oil and gas lessors filed with the Corporation Commission May 21, 1947:

> "2. For further defense, the undersigned allege that the statute of the State of Oklahoma, being Title 52, Sections 286.1 to 286.17, Oklahoma Statutes Annotated, upon which the petitioners base their application for the creation of the West Cement Medrano Unit, violates:
>
> "(a) The Fourteenth Amendment to the United States Constitution, Section 1, in that it attempts to take the property of the undersigned without due process of law and denies to the undersigned the equal protection of the laws.

"(b) The Fifth Amendment to the Constitution of the United States in that it seeks to take the property of the undersigned without due process of law and without just compensation.

"(c) Article 1, Section 10 of the United States Constitution, in that said statute impairs the obligation of the contract between the undersigned lessors and the petitioning lessees.

"(d) The Fourteenth Amendment to the United States Constitution, Section 1, prohibiting abridgement of privileges and immunities of citizens of the United States", (R. 816).

1 b. Excerpts from Answer of Clyde Kahle, overriding royalty owner, filed May 21, 1947:

(Same as allegations in Paragraph 1 a.) (R. 827).

1 c. Excerpts from Answer of Tom Potter, minority-lessee, filed May 21, 1947:

(Same as allegations in Paragraph 1 a.) (R. 822).

Note: Corporation Commission of the State of Oklahoma did not pass upon or even mention constitutional questions.

3. Excerpt from Petition in Error filed in Supreme Court of the State of Oklahoma:

"1. The said Commission erred in rendering judgment for the defendants in error in that statutes of Oklahoma, Title 52, Sections 286.01 to 286.17 Oklahoma Statutes Annotated and upon which said Commission based its authority to render said judgment, violate the Constitution of the United States of America and particularly violate the following Amendments and Articles thereof to-wit:

"(a) The Fourteenth Amendment to the United States Constitution, Section 1 in that said statutes attempt to take the property of the plaintiffs in error without due process of law and denies to them the equal protection of the laws.

"(b) The Fifth Amendment to the Constitution of the United States in that said statutes seek to take the property of the plaintiffs in error without due process of law and without just compensation.

"(c) Article 1, Section 10 of the United States Constitution, in that said statutes impair the obligation of the several separate contracts between the lessor, plaintiff in error, and the lessee, defendants in error.

"(d) The Fourteenth Amendment to the United States Constitution, Section 1, prohibiting abridgement of privileges and immunities of citizens of the United States" (R. 159).

4. Excerpt from opinion of the Supreme Court of Oklahoma denying petitioner's contention that Oklahoma's Unitization Act violates United States Constitution:

"3. House Bill 339 of the 1945 Legislature (Tit. 52, O.S. Supp. 1947, Secs. 286.1 to 286.17) known as the Unitization Act is not violative of Secs. 7, 15, 23 or 24 of Art. II, or Sec. 1 of Art. IV or Secs. 1 or 51 of Art. V of the Constitution of the State of Oklahoma, nor violative of Sec. 10 of Art. I, of, or of the Fifth or Fourteenth Amendments to the Constitution of the United States" (R. 29).

5. Excerpt from Petition for Rehearing filed in the Supreme Court of the State of Oklahoma:

"The plaintiffs in error call the Honorable Court's attention to the fact that said decision overlooked the

questions decisive of the case and duly submitted by counsel as follows:

"* * * 2. The 14th Amendment to the Constitution of the United States, Section 1, quotes as follows:

> 'All persons born or naturalized in the United States and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside. *No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States, nor shall any State deprive any person of* life, liberty, or *property, without due process of law, nor deny to any person within its jurisdiction the equal protection of the laws.*'

"(a) The Unitization Act provides that it can be set in operation only by lessees of 50% of the area of the common source of supply and authorizes said majority owners to expunge the contracts of the lessors and lessees depriving the lessors of valuable contractual rights and relieving the lessees from heavy contractual burdens under the leases and authorizing the said majority owners to take the lands and property of the lessees and use the same for oil and gas purposes and to fix the compensation of the lessors therefor and gives the minority lessees the right to place the Act in operation or to fix the compensation of the parties involved for the loss of their royalty or any other contractual rights or property which patently denies to the lessors and to the minority lessees, all of whom are citizens of the United States, the equal protection of the laws as provided in the above provisions of the United States Constitution. * * *

"Article 1, Section 10 of the United States Constitution quotes as follows:

> 'No *State shall* enter into any treaty, alliance or confederation; grant letters of marque and

reprisal: coin money; emit bills of credit; make anything but gold and silver coin a tender of payment of debts; *pass any* bill of attainder, *ex post facto law*, or *law impairing the obligation of contracts*; or grant any title of nobility.' [The latter part of the above Section has been omitted.]

"The Unitization Act violates the Constitution of the United States in that the above Section thereof prohibits any State from passing any law impairing the obligation of contract. An exception has been made to said provision of the Constitution of the United States which permits the States in the exercise of the police power to enact laws impairing contracts provided the exercise of such power is reasonable and nondiscriminatory. The purpose of the exercise of the police power by the State of Oklahoma under the Unitization Act is to insure unit operation of common sources of supply of oil and gas in proper cases. In order to accomplish such unit operation it is not necessary to deprive the lessor of his right to the termination of the lease (under its own terms) for failure to produce oil or gas from the premises, because immediately upon the termination of the lease under its own terms, the lessor and owner of the minerals may be substituted for the former lessee in the unitization program without affecting in any way the unit operation of the common source of supply. The Unitization Act deprives the lessor of his right to terminate his oil and gas lease for failure of the lessee to produce oil or gas from the premises after the expiration of the primary term. It has always been the very essence of 'unless' oil and gas leases that the lessee was obligated to spend large sums of money in the development of the premises for oil and gas in order to extend the lease beyond the primary term and that unless the lessee did drill on the lands and produced oil and gas from the premises within the primary term of the lease that the said lease would expire and

the oil and gas rights revert to the lessor. The oil and gas rights are very valuable otherwise, the lessees would not be engaged in such extensive and expensive operations and litigation. The lessor has the right to hold the lessee to the terms of the contract as they have been fixed and construed for years by the courts of this State, particularly since the enforcement of such contractual rights and obligations in no way interferes with, or impairs the unit operation of any common source of supply which may underlie any part of such oil and gas lease.

"The Unitization Act expunges the implied covenants of the oil and gas leases which require the lessee to fully develop and market and to protect the lease against drainage. It is not necessary to the unit operation of a common source of supply to strike out these covenants. The lessee can still be required to fully develop the common source of supply, to market the oil and gas therefrom, and to protect the same from drainage without affecting, in any way the unit operation of said common source of supply, yet the Unitization Act specifically provides for the expungment of implied covenants of the oil and gas leases. The Act further provides that the oil and gas leases, after unitization, should constitute one single oil and gas lease and there is no reason why the said one single lease should not bear all three of the said implied covenants. The Act further provides that a part of a common source of supply may be unitized which patently leaves open an avenue for the drainage of oil and gas to the area of the common source of supply not included in the unit. Drainage from the common source of supply may occur through a well bore drilled through the common source of supply to another common source of supply lying either above or below the unitized common source of supply. It is evident from the physical nature of things that the implied covenants requiring full development subject to the conservation laws of the State, protection against drainage,

and marketing of the oil and gas may be retained in the single lease contract and enforced against lessees without, in any way, interfering with the unit operation of the common source of supply.

"There are also numerous special provisions in the various oil and gas leases which provided, among other things, that the lessor shall have the free use of gas in houses and structures located on the premises. This particular provision is very important to the lessor and was a moving consideration in his execution of the lease. The Unitization Act expunges this provision but such expungement in no way affects the unit operation of the common source of supply. Inasmuch as many of the gas wells will be closed in it might cause the lessee to pipe gas to the lessor's premises, however, this expense would be, as the majority lessees say, *'de minimus.'*" (R. 84 to 89).

6. Excerpt from Order of the Supreme Court of the State of Oklahoma denying petitioners' Petition for Rehearing in the Supreme Court of the State of Oklahoma:

"In the Supreme Court of the State of Oklahoma, May 22, 1951.

"The Clerk is Hereby Directed to Enter the Following Orders:

"* * * 33,336 *The Palmer Oil Corporation et al.* v. *Phillips Petroleum Co.*

"All petitions for rehearing and applications for oral argument in the above styled and numbered causes denied" (R. 116).

7. Excerpt from Application for Leave to File Second Petition for Rehearing filed in the Supreme Court of Oklahoma:

"That the opinion of this court is in conflict with * * * the Constitution of the United States, and the decision of the Supreme Court of the United States in the case of *Mullane* v. *Central Hanover Bank & Trust Company*, 339 U.S. 306, decided April 24, 1950, as more fully appears from the attached Second Petition for Rehearing" (R. 128).

8. Excerpt from Order of the Supreme Court of the State of Oklahoma denying Application for Leave to File Second Petition for Rehearing:

"*In the Supreme Court of the State of Oklahoma.* June 5, 1951.

"*The Clerk is Hereby Directed to Enter the Following Orders:*

"* * * 33,336 *The Palmer Oil Corp. et al.* v. *Phillips Petroleum Co.* Application for Leave to File Second Amended Petition for Rehearing in the above styled and numbered cause denied" (R. 130).

The appeal having been perfected within ninety days from date on which the judgment of the Oklahoma Supreme Court became final is timely.

Sec. 2101, Title 28,
U. S. Code Revised.

Appeal is the proper remedy for review of a decision of a State court of last resort in favor of the validity of State statutes and of administration orders issued pursuant to legislative authority claimed to be delegated by such statutes where the statutes and the orders thereunder issued are alleged to contravene the Federal Constitution.

Sec. 1257, Title 28,
U. S. Code Revised;

Hamilton v. *Regents of the University of California*, 293 U.S. 245, 79 L. ed 343;

QUESTIONS PRESENTED

We believe the questions can best be presented by first setting forth a Brief of the State's statutes in question (52 O.S.A. 286.1 to 286.17) in chronological procedural order as follows:

Excerpt 1

Section 286.3. Jurisdiction of Corporation Commission:

"* * * the Corporation Commission of the State of Oklahoma is hereby vested with jurisdiction, power and authority, and *it shall be its duty, to supervise the administration* of this Act."

Excerpt 2

Section 286.4 (Last two sentences):

"To give the Commission jurisdiction * * *, the petition shall be filed by, * * * lessees of record of fifty per cent (50%) * * * of the area * * *. The petition * * * shall have attached thereto a recommended *plan of unitization* * * *."

Excerpt 3

Section 286.5. Plan of Unitization (4th paragraph):

"In addition to such other *terms, provisions, and conditions* found by the Commission to * * * effectuate or accomplish the purpose of this Act, and subject to the further requirements hereof, each such plan of unitization as the parties thereto may agree upon * * *, shall provide:

"(a) * * * The designation of the operator shall be by vote of the lessees in the unit in a manner provided in the plan of unitization and not by the Commission.

"(b) The division of interest * * * of the unit production among * * * the * * * tracts within the unit area * * *.

"(d) * * * the method of arriving at the compensation therefor, * * * (wells, equipment and other properties).

"g The time when * * * the unit shall or may be dissolved * * *."

Excerpt 4

Section 286.4 (1st paragraph):

"If * * * the Commission shall find * * * [here are set forth under (a), (b), (c) and (d), a statement of the cardinal principles of conservation of oil and gas and prevention of waste] * * * it shall * * * enter an order approving the creation of a unit * * * the plan of unitization approved * * * upon such terms and conditions, which are, * * * proper to protect, * * * and adjust the respective rights and obligations of the several persons affected, including royalty owners, * * *, as well as the lessees."

Excerpt 5

Section 286.6:

"If * * * within sixty (60) days after the entry of an order * * * approving the creating of the same (unit), * * * lessees of record of fifteen per cent. (15) * * * of the unit area * * * shall file written protest * * * against the creation of the unit, the Commission shall vacate all action of any kind theretofore taken and dismiss the proceedings * * *."

Excerpt 6

Section 286.9:

"Each unit * * * shall be * * * corporate, capable of suing, being sued and contracting * * * in its own name. Each such unit shall be authorized on behalf * * * of all the owners of the oil and gas rights within the unit area, * * * to supervise, manage, and conduct the further development and operations for the production of oil and gas from the unit area, pursuant to the powers conferred by the plan of unitization.

"The * * * liabilities of the lessee * * * for the payment of unit expense shall * * * be several * * * and in no event shall a lessee * * * be * * * liable * * * for more than the amount * * * charged to

his interest * * * pursuant to the plan of unitization * * *.

"* * * the unit shall have a first * * * lien upon the leasehold interest * * * in the unitized common source of supply * * * in and to each * * * tract * * * to secure the payment of * * * the unit expense charged to * * * such * * * tract. * * *"

Excerpt 7

Section 286.10. Property and contract rights (second sentence, 2nd paragraph):

"* * * The unit production * * * shall be owned by the several persons to whom the same is allocated under the plan of unitization. * * *"

(3rd paragraph):

"The amount of the unit production allocation to each separately-owned tract within the unit, and only that amount, regardless of the well or wells in the unit area from which it may be produced, and regardless of whether it be more or less than the amount of the production from the well or wells, if any, on any such separately-owned tract, shall for all intents, uses, and purposes be regarded and considered as production from such separately-owned tract, and, * * * shall be distributed among * * * the several persons entitled to share in the production for such separately-owned tract * * * in the same proportions, * * * that they would have * * * shared * * * had not said unit been organized * * *."

(Paragraph 4):

"Operations carried on * * * in accordance with the plan * * * shall be * * * considered as a * * * compliance with all of the provisions, covenants, and conditions, express or implied, of the several oil and gas mining leases upon lands included within the unit area, * * *. Wells drilled or operated on

shall * * * be regarded as wells drilled on each separately-owned tract."

In view of the rights given the majority lessees under the above quoted excerpts from the Unitization Act, there are presented the following:

QUESTIONS

1. Whether the failure of the Act [Section 286.4, last two sentences, Excerpt 2, Page 13 of the Brief] to permit the lessors to file a Petition to invoke the statute violates the Article 1, Section 10 of, or the 5th Amendment to or the 14th Amendment to the U. S. Constitution.

2. Whether the failure of the Act [Section 286.5 (b), Excerpt 3, Page 12 of the Brief] to permit the lessors to file a plan for the division of the unit production—violates Article 1, Section 10 of, or the 5th Amendment to, or the 14th Amendment to the U. S. Constitution.

3. Whether the provisions of the Act [Section 286.10, 4th paragraph, Excerpt 7, Page 14 of the Brief], expunging, the provisions, covenants and conditions expressed and implied of the leases favorable to the lessors —violates Article 1, Section 10, of, or the 5th Amendment to, or the 14th Amendment to the U. S. Constitution.

4. Whether the provisions of the Act [Section 286.10, 3rd paragraph, Excerpt 7, Page 14 of the Brief], denying the lessors any right to adjustment on the roy-

alties provided in leases as against the lessees therein—violates Article 1, Section 10 of, or the 5th Amendment to, or the 14th Amendment to the U. S. Constitution.

5. Whether the provisions of the Act [Section 286.10, 4th paragraph, Excerpt 7, Page 14 of the Brief], extending the term of the leases in favor of the lessees and against the lessors—violates Article 1, Section 10 of, or the 5th Amendment to, or the 14th Amendment to the U. S. Constitution.

6. Whether the failure of the Act [Section 286.5 (d), Excerpt 3, Page 12 of the Brief] to permit a minority lessee to file a plan for the fixing of compensation for wells and equipment taken by the majority lessees—violates Article 1, Section 10 of, or the 5th Amendment to, or the 14th Amendment to the U. S. Constitution.

7. Whether the failure of the Act [Section 286.6, Excerpt 6, Page 13 of the Brief] to permit the lessors to file a protest and thereby vacate all action taken under the Act (the division of the oil and gas)—violates Article 1, Section 10, of, or the 5th Amendment to, or the 14th Amendment to the U. S. Constitution.

STATUTES INVOLVED

The statutes involved are printed in the appendix.

STATEMENT

This action was commenced under authority of Tit. 52, O.S.A., Secs. 286.1 to 286.17, by Phillips Petroleum

Company and others constituting the leases of record of more than 50% of the area overlying the Medrano Pool, a common source of supply of oil and gas, located in the West Cement Oil Field, Caddo County, Oklahoma, by filing a Petition with a "plan" attached with the Corporation Commission of the State of Oklahoma for the unitization of said common source of supply (R. 172 to 183).

A reproduction of a map of the area with ownership lines and designating various tracts by number appears opposite. (R. 1512 introduced R. 81—Exhibit 81)

The Oklahoma Corporation Commission is a constitutional body created by Article IX, Section 15, Oklahoma Constitution, and is given authority under Article IX, Section 19, Oklahoma Constitution of a court of record with certain powers therein stated and such additional powers and duties as may be prescribed by law. Title 52, O.S.A., Secs. 241 and 249 charge the Commission with the duty of enforcing the conservation of oil and gas and the prevention of waste thereof. The Commission is not a court of general jurisdiction.

The purpose of the proceeding, among other things, was to expunge the express and implied provisions of the 72 oil and gas leases (R. 1521, per September 7, 1951, Stipulation, R. 1535), covering the 72 severally owned tracts shown on the map insofar as they covered the said common source of supply and to create one oil and gas lease covering the entire common source of sup-

ply; to designate the operator thereof and define his authority over the property; to fix liability for the expenses incurred by the operator; and to divide the oil and gas produced by the operator among the former owners thereof and compensate the lessees for their wells and equipment so taken.

All of these appellants, except Mr. Kahle and Mr. Potter are lessors under the oil and gas leases involved (R. 1473-1474 introduced and stipulated R. 1196-1197). The land of some produced gas only from the common source of supply, the land of others produced oil only therefrom, the land of yet others produced both oil and gas therefrom, the land of still yet others produced nothing whatsoever therefrom, but did produce oil and gas from some other common source of supply, and others produced nothing from any common source of supply. Mr. Kahle owned an overriding royalty under one of the leases involved. Mr. Potter owned a lease with a gas well thereon (see division formula of "Plan," Exhibit 53, Tables 1; 2 and 3, R. 1484 to 1489), introduced R. 305).

The preceding facts appear from the stipulation of interest (R. 1473-1474, introduced R. 1196-1197), giving the name of each appellant lessor with his interest in the oil, gas and minerals set opposite by tracts. The tables attached to the plan showing the oil and gas under each tract and whether or not it is being produced—are said Exhibit 53. There is also set opposite each name the

number or numbers of the tracts as numbered on the map shown after the Appendix of the Brief. Exhibit 53 also shows the estimated amount of oil and gas under each numbered tract and whether or not wells have been drilled thereon, and whether they are oil or gas wells or combination wells and produce both.

The appellants appeared in the proceeding and leave having been granted filed their Answers (R. 815 to 825). The petitioners offered evidence establishing the 72 oil and gas leases (R. 1535, Stipulation of September 7, 1951), a representative copy of all of said leases per Stipulation of September 7, 1951, is set forth as follows:

> "Agreement, Made and entered into the 4th day of June, 1941, by and between Mrs. Margaret F. Holland, a widow, of Anadarko, Oklahoma, party of the first part, hereinafter called lessor (whether one or more) and Phillips Petroleum Company, part of the second part, hereinafter called lessee.
>
> "Witnesseth, That the said lessor, for and in consideration of One and no/100 Dollars, cash in hand paid, receipt of which is hereby acknowledged and of the covenants and agreements hereinafter contained on the part of lessee to be paid, kept and performed, has granted, demised, leased and let and by these presents does grant, demise, lease and let unto the said lessee, for the sole and only purpose of mining and operating for oil and gas, and laying pipe lines, and building tanks, power stations and structures thereon to produce, save and take care of said products, all certain tract of land situate in the County of Caddo, State of Oklahoma, described as follows, to-wit:
>
> N½ NW¼ (Lots 3 and 4), Section 2-5N-10W and containing 80 acres, more or less.

"It is agreed that this lease shall remain in force for a term ending August 6, 1946, and as long thereafter as oil or gas, or either of them, is produced from said land by the lessee, or the premises are being developed or operated.

"In consideration of the premises the said lessee covenants and agrees:

"1st. To deliver to the credit of lessor, free of cost, in the pipe line to which he may connect his wells, the equal one-eighth part of all oil produced and saved from the leased premises.

"2nd. To pay the lessor one-eighth value of gas from each well where gas only is found, while the same is being used off the premises, and lessor to have gas free of cost from any such well for all stoves and all inside lights in the principal dwelling house on said land during the same time by making his own connections with the wells at his own risk and expense.

"3rd. To pay lessor for gas produced from any oil well and used off the premises or for the manufacture of casinghead gasoline one-eighth, at the market price for the gas so used, for the time during which such gas shall be used, said payments to be made quarterly.

"If no well be commenced on said land on or before the 6th day of August, 1942, this lease shall terminate as to both parties unless the lessee on or before that date shall pay or tender to the lessor or to the lessor's credit in the Anadarko Bank and Trust Company, Bank at Anadarko, Oklahoma, or its successors, which shall continue as the depository regardless of changes in the ownership of said land, the sum of ($80.00) Eighty and no/100 Dollars, which shall operate as a rental and cover the privilege of deferring the commencement of a well for 12 months from said date. In like manner and upon like payments or tenders the commencement of a well

may be further deferred for like periods of the same number of months successively. And it is understood and agreed that the consideration first recited herein, the down payment, covers not only the privileges granted to the date when said first rental is payable as aforesaid, but also the lessee's option of extending that period as aforesaid, and any and all other rights conferred.

"Should the first well drilled on the above described land be a dry hole, then, and in that event, if a second well is not commenced on said land within twelve months from the expiration of the last rental period for which rental has been paid, this lease shall terminate as to both parties, unless the lessee on or before the expiration of said twelve months shall resume the payment of rentals in the same amount and in the same manner as hereinbefore provided. And it is agreed that upon the resumption of the payments of rentals, as above provided, that the last preceding paragraph hereof, governing the payment of rentals and the effect thereof, shall continue in force just as though there had been no interruption in the rental payments.

"If said lessor owns a less interest in the above described land than the entire and undivided fee simple estate therein, then the royalties and rentals herein provided shall be paid by the lessor only in the proportion which his interest bears to the whole and undivided fee.

"Lessee shall have the right to use, free of cost, gas, oil and water produced on said land for its opertions thereon, except water from wells of lessor.

"When requested by lessor, lessee shall bury its pipe lines below plow depth.

"No well shall be drilled nearer than 200 feet to the house or barn now on said premises, without the written consent of the lessor.

"Lessee shall pay for damages caused by its operations to growing crops on said land.

"Lessee shall have the right at any time to remove all machinery and fixtures placed on said premises, including the right to draw and remove casing.

"If the estate of either party hereto is assigned and the privilege of assigning in whole or in part is expressly allowed—the covenants hereof shall extend to their heirs, executors, administrators, successors or assigns, but no change in the ownership of the land or assignment of rentals or royalties shall be binding on the lessee until after the lessee has been furnished with a written transfer or assignment or a true copy thereof; and it is hereby agreed in the event this lease shall be assigned as to a part or as to parts of the above described lands and the assignee or assignees of such part or parts shall fail or make default in the payment of the proportionate part of the rents due from him or them, such default shall not operate to defeat or affect this lease insofar as it covers a part or parts of said lands upon which the said lessee or any assignee thereof shall make due payment of said rental.

"Lessor hereby warrants and agrees to defend the title to the lands herein described, and agrees that the lessee shall have the right at any time to redeem for lessor, by payment, any mortgages, taxes or other liens on the above described lands, in the event of default of payment by lessor, and be subrogated to the rights of the holder thereof, and lessor hereby agrees that any such payments made by the lessee for the lessor shall be deducted from any amounts of money which may become due the lessor under the terms of this lease.

"In Testimony Whereof, We Sign, this the 9th day of June, 1941.

MRS. MARGARET HOLLAND.

"State of Oklahoma, County of Caddo, SS:

"Be It Remembered, That on this 9th day of June in the year of our Lord one thousand nine hundred and forty-one, before me, a Notary Public, in and for said County and State, personally appeared Margaret F. Holland and to me known to be the identical person who executed the within and foregoing instrument and acknowledged to me that she executed the same as her free and voluntary act and deed for the uses and purposes therein set forth. In witness whereof, I have hereunto set my official signature and affixed my notarial seal the day and year first above written.

ROY H. HAWKINS,
Notary Public.

(Seal)

"My commission expires 10-26-42" (R. 1512, Stipulation, R. 1535).

Further evidence was offered substantiating the Petition and "Plan." The Corporation Commission entered Order No. 20289, granting the petitioners everything they asked for (R. 1239) as follows:

1. Express and implied covenants of the 72 oil and gas leases were expunged.

   The expunged covenants included:

   (a) Obligation of lessee to develop, to protect land against drainage and to market the production.

   (b) The term of the leases (the statute and order perpetuated the leases).

   (c) The royalty clause (the statute and order and petitioners "plan" arbitrarily fixed a new and different royalty).

2. Exclusive operation of the leases was delivered to Phillips Petroleum Company.

3. Liability for the expense incurred by the operator was saddled on each lease owner.
4. The oil and gas produced by the operator was divided among the former owners thereof according to the petitioners' "plan" and the statute.
5. The compensation for the wells and equipment taken was fixed according to the petitioners' "plan."

The appellants appealed from this Order to the Supreme Court of the State of Oklahoma on the ground that the Order and the Unitization Statute, Title 52, O.S.A., Secs. 286.1 to 286.17, upon which it is based unreasonably impair the appellants' contractual rights set forth in said leases and unreasonably take their property without due process of law or just compensation and unreasonably deny the equal protection of the laws to them, contrary to the United States Constitution.

The Supreme Court of Oklahoma held that there was no unreasonable or discriminatory use of the police power by the State in enacting the Unitization Statute or in entering the Corporation Commission Order No. 20289 complained of; nor did the procedure thereunder deny the appellants the equal protection of the laws; nor did the proceeding take their property without just compensation or due process of law.

From this decision the appellants have appealed here.

SUMMARY OF ARGUMENT

The case at Bar does not come within the rule laid down by this Court in the case of *Champlin Refining Co. v. Corporation Commission*, 286 U.S. 210; 52 S. Ct. 559, as follows:

> "Every person has the right to drill wells on his own land and take from the pools below all the gas and oil that he may reduce to possession including that coming from land belonging to others, but the right to take and thus acquire ownership is subject to the *reasonable exertion of the power* of the State to prevent unnecessary loss, destruction or waste."

The Unitization Act is an unreasonable exercise of police power by the State of Oklahoma.

It is unreasonable:

1. To impair contractual rights when unnecessary to accomplish the purpose for which the police power is being exercised. The contractual rights impaired are as follows:

   (a) Expungement of implied covenants of lease.

   (b) Change of stipulated royalty which is the principal moving consideration of the lease.

   (c) Extension of the agreed term of lease.

2. (If it is necessary to impair contractual rights), then it is unreasonable to deny due process of law to one whose property is taken and whose contractual rights are impaired. The due process denied follows:

   (a) A hearing denied lessors to determine whether or not they,

1. Are damaged by expungement of implied covenants of lease and if so, how much.
2. Are damaged by extension of the term of their leases and if so, how much.
3. Are entitled to an adjustment of their stipulated royalties because of the expungement of the implied covenants and extension of the term of the leases.

3. (If it is necessary to impair contractual rights), then it is unreasonable to deny equal protection of the laws to one whose property is taken and whose contractual rights are impaired. The discrimination practiced follows:

(a) The lessors are not allowed to,

1. Submit a plan for division of the oil and gas, nor
2. Defeat the plan of division by protest. Whereas, the lessees are given these rights and remedies.

ARGUMENT

The rights and properties of the appellant lessors involved in this appeal are evidenced by the representative oil and gas lease (R. 1521, Stipulation R. 1535) appearing at Page 19 of the Brief. The parties have stipulated that the said lease is representative of each lease between each appellant lessor and his separate lessee (R. 1535). The stipulation was made because the leases are practically identical in form and there were so many

leases introduced in evidence that it would have been extremely burdensome to the record, as well as, repetitious to have included all of them. It will be borne in mind that there were approximately 72 separate and distinct oil and gas leases involved, all of which were between different sets of parties.

The appellant lessors have certain definite rights and property and the lessees definite obligations under the terms of said leases. The leases have been construed and defined by the Oklahoma courts as to their nature and type, and rights and liabilities of the parties and definition of various terms. In order to better understand the rights of the appellant lessors, and obligations of the lessees we think that it is helpful to set out the various decisions of the Oklahoma courts construing the leases.

DEFINITION OF OIL AND GAS LEASE

"Under Oklahoma law, an 'oil and gas lease' is an 'incorporeal hereditament' or a 'profit *a prendre*,' and an 'interest' in real property."

United States v. *Stanolind Crude Oil Purchasing Co.* (Okl., C.C.A.), 113 F. 2d 194, Syl. 1.

LAWS APPLICABLE AND CONSTRUCTION

"Rights granted by oil and gas deeds and leases, made in Oklahoma, where property is situated, are to be determined by Oklahoma laws."

Crain v. *Pure Oil Co. et al.* (Okl., C.C.A.), 25 F. 2d 824. Syl. 2.

"Under the laws of Oklahoma, oil and gas leases should be construed most strongly against the lessees."

Crain v. *Pure Oil Co., supra*, Syl. 12.

"Under the laws of Oklahoma, oil and gas leases should be construed so as to promote development and prevent delay, where the terms thereof will permit it."

Crain v. *Pure Oil Co., supra*, Syl. 13.

"Oil and gas leases in this jurisdiction are construed strongly against the lessee, and in favor of the lessor, and where its terms will permit it under the rules of law, such lease will be construed so as to promote development and prevent delay."

Garfield Oil Co. v. *Champlin et al.*,
78 Okl. 92, Syl. 3.

"Where an oil and gas lease expressly provides that rights of parties shall terminate if no well be drilled within a fixed period unless the lessee on or before that date shall pay or tender to the lessor a fixed sum, time is of the essence of the contract."

Garfield Oil Co. v. *Champlin et al.*,
supra, Syl. 4.

"Under the decisions in this State, oil and gas, while in the earth, unlike solid minerals, are not subject to ownership distinct from the soil and the grant of the oil therefore is a grant, not of the oil that is in the ground, but of such a part as the grantee may find. An 'unless' lease is subject to termination at the will of the lessee, which privilege may be exercised by a mere failure to pay the stipulated rental at the time due, upon the happening of which the lease automatically terminates, and the

lessor cannot maintain an action against the lessee for rentals."

Garfield Oil Co. v. *Champlin et al.*, *supra*, Syl. 5.

CHARACTER OF CONTRACT

The representative oil and gas lease at Page 19 of the Brief is what is commonly termed by the courts an "unless" lease. The nature of the contract created by the "unless" lease is stated as follows:

"'Unless' lease is a valid mutual contract."

Brunson v. *Carter Oil Co.* (Okl., D.C.), 263 F. 935.

DEFINITIONS OF PARTICULAR TERMS USED IN LEASE

The terms "bonus," "royalty," "rental," and "working interest" are defined as follows:

"(a) 'Bonus' is said to mean a premium, paid to a grantor or vendor, and strictly as the cash consideration or down payment paid, or agreed to be paid, for the execution of an oil and gas lease.

"(b) The term 'rental,' as used in oil and gas leases, refers to the consideration paid to the lessor for the privilege of delaying drilling operations.

"(c) The term 'royalty,' in the strict sense, is held to mean a share of the product or proceeds therefrom, reserved to the owner for permitting another to use the property."

Hinkle et al. v. *Gauntt et al.*, 210 Okl. 434, 206 P. 2d 1001, Syl. 3.

"Working interest" is defined in *Lathrop* v. *Eyestone*, 170 Kan. 419, 227 P. 2d 136, 141, as follows:

"The lessee's interest in the oil produced, commonly seven-eighths or whatever the lease provides, is called the working interest."

RIGHTS AND LIABILITIES OF PARTIES UNDER LEASE

"Under the ordinary oil and gas lease, the lessee in developing the premises in the production of oil and gas is entitled to the possession and use of all that part of the leased premises reasonably necessary in producing and saving the oil and gas, including space to construct tanks and ponds, in which to confine salt water and other waste matter coming from the wells, and also including the space necessary to transport such waste matter from the wells into such tanks or ponds in a reasonably prudent manner."

Pure Oil Co. v. *Gear et al.*,
183 Okl. 489, Syl. 1.

"Neither party to the contract is the arbiter as to whether or not due diligence has been exercised to operate an oil and gas lease."

Patsy Oil & Gas Co. v. *Baker*,
127 Okl. 77, Syl. 3.

See:

Strange et al. v. *Hicks et al.*,
78 Okl. 1.

OBLIGATION FOR PAYMENT OF ROYALTY WHEN LEASE UNITIZED WITH ANOTHER

"Leaseholders of two separate tracts may unitize their working interests in their leases without consent of royalty holders, and in absence of consent by royalty holders their interests are not bound by unitization agreement."

Bruce v. *Ohio Oil Co. et al.*
(Okl., C.C.A.), 169 F. 2d 719, Syl. 3.

"If holder of two leases on two separately owned tracts unitizes them without consent of royalty owners and drills a single well upon one of tracts and produces gas under combined acreage through one well, royalty holders of tract on which well is located would receive all of royalty interest in entire production, and operator would become liable for an additional amount to royalty holders under other tract."

Bruce v. *Ohio Oil Co., et al., supra,* Syl. 4.

FAILURE TO PAY ROYALTY BY LESSEE CONSTITUTES A CONVERSION OF OIL

"When by the terms of an oil and gas lease, it is incumbent upon the lessee to deliver the lessor's share of the oil in the pipe line, and he fails to do so, and the lessor demands the delivery of the oil in the pipe line, settlement for the oil on the basis of its delivery in the pipe line, and the lessee fails, neglects, or refuses to deliver the lessor's share of the oil in the pipe line or make settlement on the basis of the oil delivered in the pipe line, this constitutes conversion of such oil by the lessee."

Clark v. *Slick Oil Co.*,
88 Okl. 55, Syl. 5.

TERM OF LEASE

"Lease for definite term and so long thereafter as oil is found in paying quantities *survives* definite term, if oil is then being produced in paying quantities, for so long as such production continues and terminates therewith; otherwise it expires within definite term, except where lessor has prevented such production."

Continental Oil Co. et al. v. *Osage Oil & Refining Co. et al.* (Okl., C.C.A.),
69 F. 2d 19, Syl. 1.

"Lessee remaining in possession after expiration of oil lease is tenant at will, and such tenancy may be terminated by either party on notice."

Continental Oil Co. et al. v. *Osage Oil & Refining Co. et al.*, *supra*, Syl. 2.

See, also:

United States v. *Brown et al.* (Okl., C.C.A.), 15 F. 2d 565, Syl. 2.

"The terms 'produced' and 'produced in paying quantities,' as used in an oil and gas lease for a given term and as much longer as oil or gas is produced or produced in paying quantities, have substantially the same meaning, and an oil and gas lease containing the following habendum clause: It is agreed that this lease shall remain in force for a term of five years from this date, and as long thereafter as oil or gas, or either of them, is produced from said land by the lessee,' expired five years from the date thereof unless oil or gas was produced in paying quantities from the leased premises."

Woodruff v. *Brady*, 181 Okl. 105, Syl. 1.

"Where an oil and gas mining lease is executed for a given term and as long thereafter as oil or gas is produced from the leased premises, if the lessee at any time subsequent to the expiration of the primary, or given, term, fail to produce oil or gas in paying quantities, except where production may be lessened by reason of a bona fide attempt to increase the same in existing wells, the lease will expire by its own terms."

Woodruff v. *Brady*, *supra*, Syl 2.

It will be noted from the above decisions that the lessor appellants, are under the terms of their respective leases entitled to ⅛th of the oil and gas produced from

their lands and that unless oil or gas is produced from the lands through a well drilled thereon within the primary term of years of the lease that said lease automatically expires either at the end of the term of years or upon sooner termination through failure to pay rentals. Under the terms of the lease the lessee is bound to drill a well on the lessor's premises, and produce oil or gas in paying quantities, or his lease will terminate and the oil, gas and mineral rights will revert to the lessor free of all rights of the lessee.

IMPLIED COVENANTS OF OIL AND GAS LEASES

In addition to the above expressed provisions of the oil and gas leases the courts have decreed certain implied covenants.

In the case of *Strange et al.* v. *Hicks et al.*, 78 Okl. 1, the court held:

Syl. 4:

"If an oil and gas lease does not expressly provide for the operation of the lease after the discovery of either oil or gas or both then there is an implied contract to exercise diligence, under the facts and circumstances of the case, to operate the same, thus making the lease remunerative to the parties to it."

Syl. 5:

"Neither party to the contract is the arbiter as to whether or not due diligence has been exercised to operate an oil and gas lease. If an oil and gas lease is not operated with due diligence under the facts and circumstances of the case, then a court, upon proper showing, may declare the lease forfeited."

In the case of *Pelham Petroleum Co.* v. *North*, 78 Okl. 39, the court held:

Syl. 4:

"Where the object of the operations contemplated by an oil and gas lease is to obtain a benefit or profit for both lessor and lessee, neither is, in the absence of a stipulation to that effect, the arbiter of the extent to which, or the diligence with which, the operations shall proceed; but both are bound by the standard of what, in the circumstances, would be reasonably expected of operators of ordinary prudence, having regard to the interests of both."

Syl. 5:

"A stipulation in an oil and gas lease whereby the lessee obligates itself 'to protect the side lines in case oil is found in paying quantities' imposes upon the lessee the same obligation to protect the lessor's land from actual or threatened drainage that the courts universally hold to be upon it in the absence of express stipulation to that effect."

In the case *Amerada Petroleum Corp. et al.* v. *Sledge*, 151 Okl. 160, the court held:

Syl. 1:

"The oil and gas lease in the case at bar was for a term of two years and as long thereafter as oil or gas was found in paying quantities. Lessee brought in a gas well which produced gas in paying quantities. There is an implied covenant that lessee should use reasonable diligence in further developing said property for oil and gas. The fact that one gas well was brought in on a tract of 110 acres will not relieve the lessee from further development, where the surrounding lands and surrounding development would require that a reasonably prudent person continue to develop said premises."

In the case of *Carter Oil Co.* v. *Mitchell* (Okl., C.C.A.), 100 F. 2d 950, the court held:

> "In order to comply with the implied covenants of a lease to drill off-set wells and to diligently develop the lease, a lessee must do that which, under the circumstances, an operator of ordinary prudence, having regard to the interests of both lessor and lessee, would do."

It appears that under the implied covenants of the oil and gas lease the lessee is required to make an outlay of substantial sums of money in order to hold the leased premises even though he has discovered oil and gas thereon and is producing the same in paying quantities. These covenants were established by the courts on the ground that the leases were mutual and that due regard should be given to the interests of both the lessor and the lessee and that neither the lessor nor the lessee was the sole arbiter as to how or when or the extent to which the leased premises were to be developed under the terms of the lease. In other words the courts hold that because the moving consideration for the lease is the royalty oil and gas produced that the lessor has some say as to how and when the lease shall be developed and the extent of the development thereof.

The Oklahoma Legislature made the Corporation Commission of Oklahoma the arbiter of the number or density of the wells required to be drilled to fully develop each producing oil sand or common source of supply by the enactment of the Well Spacing Act of 1935. Title 52,

O.S.A., Sec. 87.1 (Amended by Session Laws 1947, Page 328, Sec. 1). This Court passed upon the Act in the case of *Patterson* v. *Stanolind Oil & Gas Co. et al.*, 305 U.S. 376, 379, 83 L. ed. 231. It will be noted that the Act authorizes the Corporation Commission of Oklahoma to establish well spacing and drilling units of uniform size and shape [Sec. 87.1 (a)] and limits the size of the units to 40 acres in common sources of supply of oil above 9,990' deep [Sec. 87.1 (c)] and limits the wells thereon to one well [Sec. 87.1 (b) (1) second paragraph]. The Act also authorizes the Commission to require the owners of the lands within each unit to develop the same as a unit and to divide the royalty among the royalty owners [Sec. 87.1 (d)].

UNCONSTITUTIONAL SECTIONS OF UNITIZATION ACT POINTED OUT

It will be noted from the foregoing decisions of the Oklahoma courts that the implied covenants of oil and gas leases in Oklahoma have been long recognized by the courts and have become a rule of property. It will be also noted that the term clause of the leases has been definitely construed and fixed. The "unless" oil and gas lease automatically expires for failure to pay a rental when due—if the rentals are paid, the lease automatically expires at the end of the primary term, *unless* oil or gas is being produced in paying quantities—if oil or gas is being produced in paying quantities at the end of the

primary term, the lease automatically expires upon the failure of the lessee to produce oil or gas therefrom in paying quantities. It will be also noted that the royalty is the principal moving consideration for the lease and that the lessee's failures to pay the royalty provided in the lease constitutes a conversion of the royalty oil. It will also be noted that the courts have pointed to the royalty clause in establishing the implied covenants of the oil and gas leases and in determining that the "unless" lease is a *mutual lease* and that neither party to the lease is the arbiter as to the extent and manner of the development and management thereof. The courts of Oklahoma have always been the tribunals before which the lessors might bring the lessees for a determination as to how and when the lease should be developed and the manner and extent thereof. This was the situation of the lessors and lessees at the time of the passage of the Unitization Act by the Oklahoma Legislature.

It is apparent that the Act legislates away the property and contractual rights of the lessors. The royalty clause is legislated away by Sec. 286.4, Excerpt 2, Page 14 of the Brief, which provides for the filing of the Petition with a "plan" of unitization attached, and Sec. 286.5, Excerpt 3, Page 12 of the Brief, which states that the plan shall provide the division of interest of the unit production among the tracts within the unit area and Sec. 286.10, Par. 3, Excerpt 7, Page 14 of the Brief,

which provides that the production allotted to each tract and only that amount shall be distributed among the owners of the tract in the same proportions that they would have been shared had not the unit been organized, and Sec. 286.4, Excerpt 4, Page 12 of the Brief, which provides that the Commission shall enter an order creating a unit and approving a "plan" of unitization. In addition the statute further provides that the amount of production allocated to each *tract* and *only that amount* regardless of the actual production of oil and gas from the *tract* shall be considered the production from that *tract* and shall be distributed among the persons entitled thereto in the same proportions in which they would have shared had not the unit been organized. It will be observed from the above mentioned excerpt from the Unitization Act that only the majority lessees are permitted to file a "plan" and that the only method of division of the unit production is fixed by *that plan* which allots a certain percentage of the unit production to each tract. It will be pointed out by the respondents that the Unitization Act, Sec. 286.4, Excerpt 4, Page 12 of the Brief, provides that the unit shall be created upon such *terms and conditions* which are proper to protect and adjust the respective rights and obligations of the several persons affected including royalty owners and overriding royalty owners, as well as, lessees. It will probably be said that this clause gives the Corporation Commission jurisdiction and authority to adjust "rights"

between the lessors and the lessees. By "rights" it is meant the implied covenants of the lease, the term of the lease and the royalty provided therein. We ask that the Court note that the statute provides that the Order of the Commission shall be upon such "terms" and "conditions" as are proper to "protect" and "adjust" the "rights and obligations" of the lessors and lessees. We ask this Court to define and construe what is meant by that wording of the statute. The appellants contend that it has no force because, Sec. 286.10, Excerpt 7, Page 14 of the Brief, provides that the lessor shall receive no more than 1/8th of the unit production allotted to the tract which he owns. This clause of the Act precludes any adjustment between the lessor and lessee as to the royalty provided in the lease. The royalty, it will be borne in mind, is the principal moving consideration of the lease. The lessors now inquire, "what relief can the Corporation Commission give us under the statute? What terms or conditions can they add to the order which will adjust, the loss of the royalty, the term of our lease and the implied covenants thereof?" The appellants contend that the words "terms" and "conditions" are not sufficient in their scope and meaning to give authority to the Corporation Commission to render a money judgment, this being the only adjustment that could possibly be made between the lessors and the lessees, inasmuch as, the statute precludes an adjustment of the royalty provided in the leases. We submit that it is not sufficient,

particularly since the jurisdiction of the Commission is definitely limited by the Oklahoma Constitution and the statutes. The constitutional provision creating the Commission is hereinabove set forth showing that it is not a court of general jurisdiction; that its jurisdiction is limited to that fixed by the Oklahoma Constitution and granted by the Oklahoma Legislature.

It will also be noted that in addition to expunging the royalty clause that the Oklahoma Legislature by Sec. 286.10, Paragraph 4, Excerpt 7, Page 14 of the Brief, has stricken down and nullified the implied covenants of the oil and gas leases as well as the express covenants thereof, which include the *term* and *royalty* of the leases. The Act provides that operations carried on in accordance with the "plan" shall be considered a compliance with all of the provisions, covenants and conditions express or implied of the oil and gas leases and that wells drilled or operated on any part of the unit area no matter where located shall be regarded as wells drilled on each separately owned tract. It will be noted that the Legislature provided that any well which was *operated* on any part of the unit area would be regarded as a well *drilled* on each separately owned tract. In other words, if a well had already been drilled at the time the Unitization Act was passed by the Oklahoma Legislature still it would, under the Act, be considered as having been drilled on every tract included within the unit; so that the primary term of each undeveloped oil and gas lease

is actually extended by the Legislature the same as if the lessees had actually drilled a well on the land and obtained production of oil and gas therefrom. It will be observed from the map on Page 17 of the Brief and the Exhibit 81 (R. 1512), that there are numerous tracts included in the unit upon which no well has been drilled to the common source of supply in question and that some tracts are included upon which no well has been drilled to any common source of supply. The legislative Act therefore arbitrarily extends the term of the lessor's leases.

The same above referred to Section of the Act also relieves the lessees of their obligations under the implied covenants of the oil and gas lease. It will be noted that they are relieved of these obligations, provided their operations are carried on in accordance with the "plan" —and again we call the Court's attention to the fact that these same operators are the ones who have formulated and fixed the "plan."

The appellants contend that the expungement by the Oklahoma Legislature of the royalty clauses, the term clauses, and implied covenants of their leases is done without compensation, whatsoever. That under the Unitization Act the Corporation Commission of Oklahoma can not give the lessors any compensation or adjustment whatsoever. Incidentally this was the position the Corporation Commission took upon the trial and hearing.

The appellants contend that the Unitization Act fails to provide a forum for the determination of whether or not the lessors have suffered any damage, and if so, whether or not they are entitled to any compensation or adjustment for the loss of their rights and property.

The appellants further contend that it is apparent from the evidence and from the record of this case that in order to operate a common source of supply of oil and gas as a unit that it is not necessary to strike out either the royalty clause or the term clause or the implied covenants of the leases. This is undoubtedly a proper statement of the facts and the law for the reason that the State has as much right to regulate the operation for the production of oil and gas whether the ownership thereof is in the hands of the lessee as in the hands of the landowner; in other words the State can regulate and enforce unit operation of pools just as well, whether the land is leased or not. The perpetuation of the leases in the present lessees can certainly neither add to nor detract from the unit operation of the common source of supply. It will be argued no doubt by the respondents that huge and vast sums of money are required to operate a common source of supply and that somehow or other the lessees will have this great store of money, whereas the lessors will not. In this connection we call the Court's attention to the fact that there are poor lessees the same as there are poor lessors and that there are rich lessors, as well as rich lessees. We also wish the Court to note

that if the enterprise is at all profitable that there will be no lack of new lessees with capital to take over in the event any of the oil lessees become discouraged and let their leases expire by their own terms either express or implied.

PORTIONS OF THE ORDER OF THE OKLAHOMA CORPORATION COMMISSION VIOLATIVE OF THE UNITED STATES CONSTITUTION

We call the Court's attention to Order No. 20289, of the Corporation Commission of Oklahoma (R. 1239) and particularly to Paragraphs 3, 4 and 5 of the Findings. The Commission found that the unit area consisted of approximately 3700 acres of land; that there were 37 oil wells and 19 gas wells producing from the Medrano Pool; that the lands embraced in the Unit Area were divided into a large number of individual tracts of various size and shape and owned in severalty by a large number of different individuals.

In Paragraph 6, the Commission found that under present competitive methods of operation, treating each tract or lease as a separate operating unit; that there has been and still continues to be wasteful utilization and dissipation of the gas energy in the Medrano Pool to the detriment and injury of the pool as a whole. In connection with this finding we call the Court's attention to the fact that during the hearing of this case before the Commission that an order was entered by the Commis-

sion shutting down every gas well in the Medrano Pool. This order appears at Page 1239 of the record. The gas wells in the pool were actually shut down from the date of the said order and have been shut down ever since. We ask that this Court consider these facts in connection with the above finding of the Commission. We also call the Court's attention to the fact that the finding on dissipation of gas energy appears to be the only practice constituting waste, the prevention of which would result in the conservation of oil and gas as found by the Commission. The Commission further found in Paragraph 6, that to permit the owners of gas wells and high gas-oil ratio wells to continue to produce will result in robbing the oil wells of gas energy required to produce the oil; and that to shut in the said wells would deprive the owners thereof of their fair share of the production from the pool. That it is desirable to return to the reservoir the gas produced from the oil wells to supplement the remaining natural gas energy in the pool and retard the decline of reservoir pressure and aid in a water flooding program to be introduced at a later time. That such gas recycling and water injection in the pool can not be done practically without the control of the entire reservoir.

Paragraph 7, of the findings is a reiteration of the statements of Paragraph 6. It is quite apparent that the above practices can be conduced by a unitization of the leases without affecting the royalty clauses, term clauses, or implied covenants thereof. The royalty can very

easily be measured as it is produced from the wells. In the event it is desirable to shut down the production of gas on some leases, then under the law in Oklahoma the lessee may pay "off-set royalty" and continue the primary term of his lease or he may drill a well and thus perpetuate his lease beyond the primary term and still pay "off-set royalty."

Citing:

As to whether or not the implied covenants are satisfied by paying "off-set royalty" is a matter that has long been determined by the Oklahoma courts.

In connection with the loss of the implied covenants of their leases by the lessors, we have said that the lessees have been relieved of heavy development burdens to the lessors, which is not necessary to enforce compulsory unitization of oil and gas pools. The respondents will probably say that the additional cost of applying unitized methods of production such as gas recycling and water flooding will equal the value of the additional oil recovered plus the money saved by the lessees by reason of relief from their heavy drilling obligations. This argument by the respondents is negatived in Paragraph 9 of the Commission's findings. The Commission found that, the estimated additional cost of conducting the recycling and water flooding operations will not exceed the value of the additional oil and gas so recovered. It will be noted that under this finding the drilling cost, from which the lessees have been relieved, is pure profit to

them. We hope the Court will bear this in mind in considering the lessors' loss of their implied covenants by operation of the Unitization Act (Sec. 286.10, Paragraph 4, Excerpt 7, Page ___ of the Brief).

In Paragraph 11, the Commission found that the Plan of Unitization is fair, reasonable and equitable and contains all the terms, provisions, conditions and requirements reasonably necessary and proper to protect, safeguard and adjust the respective rights and obligations of the several persons affected, including royalty owners, as well as, the lessees, and *as will effectuate and accomplish the purposes of the Unitization Act;* that the division of interest set forth in Exhibit B, to the "plan" is fair and equitable and will permit persons to receive their fair and equitable share of the unit production; that the division of interest is fair and reasonably representative of the value of said several tracts for oil and gas purposes; that the taking over and using of the wells and equipment and the compensation therefor are fair, reasonable and equitable. We again call the Court's attention to the fact that the Commission's findings, as to the adjustment of the respective rights and obligations between the royalty owners and the lessees, are qualified by the further finding that said findings are such as will *effectuate and accomplish the purposes of the Unitization Act.* It will be borne in mind that the Unitization Act permits no adjustment of royalty as between the lessor and lessee and also makes no provision for money judg-

ment, so that, although, it may appear from a casual reading of the statute and the Commission's findings that a fair and equitable adjustment has been made between the lessors and the lessees, still, upon a more careful reading of the statute and the findings, it is apparent that no adjustment, whatsoever, has been made. It will be further noted that the Commission's findings that the division of interest as set forth in Exhibit B, of the "plan" are fair and equitable. This may be true but there is no finding that such a division is necessary to the unit operation of the pool, nor is such a finding required by the statute. But it should be. The appellants contend that just because a division is fair and equitable that the same is not necessarily justified and that persons should be secure in their property, unless it is necessary to take the same under some reasonable exercise of the police power. The fact that the accounting for the oil and gas produced under unit operation is simplified by nullifying the royalty clause, the term clause and implied covenants of the appellants' leases, certainly contributes in no way to gas recycling or water flooding in connection with the recovery of oil and gas.

The Order of the Commission is in comparison with the findings, very brief. It grants the Petition, approves the creation of the unit, defines the area and approves the "plan" and makes it a part of the order. In this connection we call the Court's attention to the fact that the Unitization Statute requires that the Commission make

such an order and gives it no alternative (Sec. 286.4. first paragraph, Excerpt 4, Page 12 of the Brief).

The Commission retains continuing jurisdiction over the operations carried on by the unit to the same extent as it would have jurisdiction over any other lessee or person producing oil or gas from the Medrano Pool in the absence of the unitization. We frankly admit that we do not know what this part of the order means but we doubt that the Commission is authorized by any statute of Oklahoma to make any change in the division of interest and fixing of rights of the parties as set forth in the Plan of Unitization. We have made a diligent search of the statutes and fail to find any clause in any statute of Oklahoma, which would authorize the Commission to make any adjustment between the lessors and the lessees.

PORTIONS OF THE OPINIONS OF THE SUPREME COURT OF OKLAHOMA VIOLATIVE OF THE UNITED STATES CONSTITUTION

The decision of the Supreme Court of the State of Oklahoma, in *Palmer Oil Corp. et al.* v. *Phillips Petroleum Co. et al.*, 204 Okl. 543, 558, violates the above mentioned Sections of the United States Constitution. The second syllabus of the said opinion reads as follows:

> "The police power of the State extends to defining the correlative rights of owners in a common source of oil and gas supply, providing for the management, operation and further development of such

common source of supply and distributing the proceeds thereof among those entitled thereto."

We call the Court's attention to the absence of a qualifying clause in the statement of law in Syllabus 2. There should be added to said syllabus, the following:

"Provided, however that no contractual rights shall be impaired unless it is reasonably necessary to the management, operation and development of said common source of supply and distributing the proceeds thereof."

Syllabus 4 of the opinion reads as follows:

"The Unitization Act does not involve any unconstitutional delegation of legislative power by the provision which requires the petition of lessees of record of more than fifty per cent of the area of the common source of supply in order to give the Commission jurisdiction under the Act."

The appellants contend the above statement of the law should be modified by a clause as follows:

"Provided, however, that in the event the petition of the lessees involves impairment of the contractual rights of the lessors that unless such Act permits the filing of a petition and a plan of division said rights by the lessors of record of *more* than 50% of the area, said Unitization Act will deny to the lessors the equal protection of the laws."

The appellants contend that the fact that the Unitization Act permits the majority lessees to file a petition and plan, does in itself not involve an unconstitutional delegation of legislative power. The unconstitutional delegation of legislative and judicial power arises by the Act permitting the lessees to arbitrarily fix the lessors'

royalty and annul the term and implied covenants of the leases. It could not make any difference whether the Act required only one lessee or all of the lessees to join in the Petition as far as delegation of legislative or judicial power is concerned. The proposition of permitting the lessees to Petition and nullify the lessors' rights without giving the lessors the same privilege violates the unequal protection of laws clause. The unconstitutional delegation of legislative and judicial power goes to that portion of the Act permitting the lessees to nullify the lessors' contractual rights by their sole and arbitrary action and setting up the Corporation Commission as a "stalking horse," as it were, with no alternative but to approve the nullification of the lessors' rights by the lessees' so-called "plan" and the action of the Act itself. We are of the opinion that this is more a delegation of judicial than legislative power and so argued to the State court.

The opinion in Oklahoma Report 204, Page 547, states:

> "Therefore, it necessarily follows that the contention challenges the authority of the Legislature in dealing with matters of policy, which is a realm that is without the scope of judicial inquiry."

This conclusion was based upon two premises that were not at all contended for by the lessors. The said conclusion is later used in the opinion to answer the contention of the lessors that the nullification of the lessors' rights by the lessees' "plan" and the Act, itself, is an

unauthorized delegation of legislative and judicial power. On Page 549, the opinion states:

> "It was within the power of the Legislature to do so because being within its police power to enact the law without the consent of either lessees or royalty owners it was optional with it to require the consent of either. Where privilege is granted to some in such situation the Constitution is satisfied if all similarly situated are treated alike."

The appellants take issue with this statement of the law, as applicable to the case at Bar, in that, the result of the operation of the Petition, and "plan" and the action of the Unitization Act, itself, are to nullify a contract between the lessors and the lessees. It certainly can not be held constitutional to grant a privilege, *i.e.*, filing the "plan" of division, to one contracting party as against another especially when the privilege granted is to nullify the contract itself even if such nullification is required in the necessary and reasonable exercise of the police power, which in this case we do not, by any matter of means, admit. The appellants also contend that the statement of the Oklahoma court above quoted to the effect that since the Legislature could enact the law without the consent of the lessees or lessors that it could require the consent of either, is not substantial reasoning. It is not difficult to get the consent of a lessee to a proceeding that will relieve him of his contractual obligations and rewrite the contract to his heart's desire and at the same time gag and bind his opposing contracting

party. A reading of the excerpts from the Unitization Act and of the findings of the Corporation Commission and of the "plan" clearly and definitely bears out the above statement. If the Legislature had seen fit to require only the consent of the lessors to the activation of the Unitization Act, it is not difficult to discern that the Act would never have been activated. It is true that the lessors have no active part whatsoever, in the gas recycling or water flooding contemplated by the exercise of the Unitization Act, but, on the other hand their royalty rights, lease term rights, and implied covenants are in no way contractually sufficient to prohibit the unit operation of the common source of supply by the voluntary or compulsory joint action of the lessees. We submit that the above quoted conclusions reached by the Oklahoma court are beside the point and beg the question. Again on Page 550 of the opinion the Oklahoma court quotes from the case of *Field* v. *Barber Asphalt Paving Co.*, 194 U.S. 618, 24 S. Ct. 784, 48 L. ed. 1142, in part as follows:

> "The provision in the Federal Constitution is satisfied if all persons similarly situated are treated alike in privileges conferred or liabilities imposed."

This case dealt with an improvement ordinance that made a distinction between majority resident owners and non-resident owners. This case is clearly distinguished from the case at Bar by the facts. Surely it can not be said that the same privileges are conferred on the lessees

or that the liabilities are the same. The lessors and lessees are parties to the same contract and when a privilege is conferred on one it is to the detriment of the other and vice versa as to liabilities or the relief therefrom.

The Oklahoma court again on Page 550 said:

> "Such rights have been so committed in reliance upon the ability of the lessees to produce. Neither the fact of nor the amount of the royalty interest presents any problem for solution in establishing unification because same is recognized and fixed by the law."

The rights referred to by the court in the above quotation are the rights to explore, develop, produce and market oil and gas from the various tracts of land. The appellants take issue with the court's statement that they made their leases in reliance upon the ability of the lessees to produce. No doubt the lessees will so contend in their Brief and in their argument, however, it will be noted from the decisions of the courts in establishing the implied covenants of the leases requiring the lessee to fully develop and protect the lands against drainage, that if the lessee did not develop and produce, that his lease became forfeited or was terminated by the express provisions thereof. There is no evidence in this record and there is no provision in the leases to the effect that the moving consideration for the lease is the lessee's ability to produce. The lessee is either required to produce or his lease terminates and the lessor does not have to rely on the lessee's ability. If the lessee does not have the

ability to produce, the lease terminates according to its own terms and the lessor is at liberty to lease his lands again or operate thereon himself. These statements are borne out by the terms of the leases themselves, as well as, the decisions of the Oklahoma courts hereinabove cited. The statement of the Oklahoma court that neither the fact nor the amount of royalty interest presents any problem for solution in establishing unification because the same is fixed by law, causes the appellants great concern for their rights. In the first place the royalty is not fixed by law but is fixed by private contract by the parties as appears from the leases themselves. The Unitization Act attempts to nullify the private contract and to fix the royalty by law, which the appellants believe presents a serious question and is their reason for being before this Court.

Again on Page 550 the Oklahoma court said:

> "By reason of their responsibility the lessees have an interest that is distinctive from that of the royalty owners but it is not adverse thereto because the interests of the latter are dependent upon and must rise or fall with that of the lessees."

The responsibility of the lessees above mentioned is the development of the property and the production of oil and gas therefrom. No doubt the lessees will strongly contend that the above statement of fact by the Oklahoma court is correct, however, the appellants again call the Court's attention to the terms of the leases themselves and of the Oklahoma decisions construing the

same. The appellants submit to the Court that if the lessees' interests had not been adverse to the lessors' interests that the doctrine of implied covenants of oil and gas leases would never have been established. Under the doctrine of implied covenants, one operator must operate as diligently as another; the ability of the operator is not a matter for consideration. Regardless of his ability he must operate in accordance with the covenants, express and implied, of his lease or his lease will terminate. The proponents of the Unitization Act desire that the above statement of the Oklahoma courts may be made true by the decisions of this Court and the appellants in defense can only point to their written contracts and the rules of property construing them. Again the appellants wish to make their position clear to this Court and say that they do not seek the right to engage in the operation of the leases or in the unitized operation of the pool. That is the province of the lessee. But they do object to the nullification of their contracts when such nullification is not necessary in any way to further the unit operation and development of the various leases overlying the Medrano Pool.

On Page 551 the Oklahoma court discussed the Section of the Unitization Statute which limited the royalty to 1/8th of the production attributed by the "plan" to each separate tract and we quote a portion thereof, as follows:

"The importance of the segregation of a definite amount of the total production as royalty is manifest and it is further attested by the fact it is made an integral part of all leases where the cost of operation is to be borne by the lessee. It follows that such segregation is as fully important where the operation is unitized and operated as one lease. In such situation the question is whether the proportion of the production to be regarded as royalty is reasonable. The amount thereof is not called in question so far as the same affords the basis of the unit operation, but it is held that the effect thereof is to impose an unlawful burden on any royalty interest in excess of the one-eighth, if such there be. Considering, as we must, that the one-eighth royalty prescribed is reasonable to accomplish the overall purpose, it follows that the right to the exceptional royalty as such must yield to the extent it militates against the plan but should be preserved to the extent it may be done consistently with such plan. We hold that the Act gives full recognition to such right and only varies the method prescribed in the lease for its enjoyment."

We suggest in answer to the above quoted portion of the opinion that, in the event, the lessee failed to pay the royalty stipulated in the oil and gas lease that, then, the lessors would have an action against the lessee for the conversion of oil by the lessee or, in the event, the lessee's share of the unit cost of operation exceeded the amount of the royalty provided in the lease, that, then and in that event, the lease would terminate by its own terms and the landowner would stand in the shoes of the former lessee.

Of course the appellants contend that the dissenting opinions of the Oklahoma court minority state the cor-

rect rule. The appellants see no need to discuss or amplify the dissenting opinions but adopt them in their entirety.

IMPLIED COVENANTS

(a) Well Spacing Act distinguished from Unitization Act.

The Well Spacing Act is distinguished from the Unitization Act in that the Commission determines the shape and size of the drilling units and the location at which each unit well is to be drilled and also adjusts the correlative rights of the parties in accordance with the evidence in each particular case.

Under the Unitization Act the area to be unitized, the number of wells to be drilled into the entire common source of supply and the location thereof and the division of oil and gas among the parties entitled thereto and the compensation of the lessees for their wells and equipment is fixed by the petitioners.

Under the Well Spacing Act the royalty is divided among the land owners as their interest bears to the whole which the court has held to be equitable since only one well is drilled on the unit. To the contrary under the Unitization Statute the royalty is arbitrarily fixed at an 1/8th part of the oil attributable to the particular tract owned by the land owner, and no court is allowed to determine whether or not the lessor is entitled to any

adjustment of his royalty interest by reason of the loss of beneficial and valuable terms of his lease contract. Also the Unitization Act relieves the lessees of their burden under the express and implied covenants of the lease to drill a well on each drilling unit, and permits them to drill as many or as few wells as they desire, thereby relieving the lessee of great financial burdens. The usual 1/8th royalty has been fixed at 1/8th because the lessees are obligated under the implied covenant to fully develop the land; *i.e.*, to drill one well on each spacing unit. When the lessee is relieved of this heavy drilling obligation the lessor should be compensated and if the parties were in the same position as they were before the lease was made, the amount of the royalty would probably be increased in such cases.

The evidence in the case at Bar discloses that the appellant lessors at the time of the filing of the Petition for unitization were entitled under the implied covenants of their leases to have many additional wells drilled on their lands (R. 933-934). The respondents' expert witnesses testified that the field should be developed on a basis of one well to 20 acres (R. 535). The map at Page 17 of the Brief shows that the respondents were obligated to drill many additional wells on the various leases in order to fully develop the leases on a basis of one well to 20 acres. As a matter of fact ten-acre spacing applied to the field at the time the Petition was filed (R. 538). This onerous obligation was also upon the

shoulders of the respondents when the Unitization Act was first enacted, as well as, at the time the Petition for Unitization was filed (R. 538). We call the Court's attention to the fact that the restrictions against drilling oil wells imposed by the Petroleum Administration for War during World War II had been relaxed for only a short time before the Petition for Unitization was filed so that the various lessors had not had much time to assert their rights for additional development of their respective leases.

Order No. 20289 of the Commission relieved the respondents of these heavy drilling obligations which added nothing to the conservation of oil and gas or to the unit operation of the pool, but did save the lessee a lot of money. We call the Court's attention to the fact that under Order No. 20289 of the Commission and under the Unitization Act the lessors received no compensation or remuneration in damages of any kind for the relief of the lessees from these drilling obligations. If the respondents had been required by the Unitization Act to submit the 1/8th royalty clause of their leases to the Corporation Commission for adjustment and the royalty owners had been allowed under the Act to appear and offer their evidence in support of an increase of their royalty or to show the amount of this damage resulting from the relief of the lessees from their drilling obligations, they would have at least had a day in court. The question of fact as to whether or not the lessors

had been damaged or were entitled to some compensation or adjustment of their royalty interest has never been determined by any court and cannot be under the Unitization Act. The findings of the Commission in Paragraph 9 of the order are that the additional cost of unit operation will not exceed the value of the additional oil and gas so recovered. Thus the due process clause is violated. In fact the Act precludes the royalty owners from an adjudication of any kind of their damage for the loss of their valuable rights as aforesaid (Title 52, O.S.A., Sec. 286.10, Paragraph 3, Excerpt 7, Page 14 of the Brief). If the question could have been adjudicated under the Act it could have resulted in an increase in the royalties agreed upon by the lessors and the lessees or it may have resulted as it has. However, the lessees contend that they have a right under the Constitution of the United States to have a court of competent jurisdiction pass upon the facts and determine whether or not they are entitled to any damage or adjustment and if so how much.

At the time the leases were made the parties contemplated that the lessees would develop the leases under existing law which called for one well to each 10-acre tract or one well to each such spacing unit as the Commission might order under the Well Spacing Act not to exceed 40-acre units. Such facts warranted a royalty of 1/8th and the lessors leased their lands accordingly. How, however, if it had been within the contemplation of the

parties at the time the leases were made that the lessees would have been relieved of the ordinary and customary drilling obligations for the full development of the lease, the royalty could well have been substantially increased.

The same situation exists as to the so-called "edge leases" appearing on the map at the back of the Brief. These "edge leases" lie at the edges of the common source of supply and are only small areas—possibly 10 acres—and overlie the common source of supply as shown by the map. The "edge lessees" were obligated to drill off-set wells on the edge tracts in order to hold their leases (R. 176), under the law in force at the time the leases were made. The Commission by Order No. 20289 relieved the lessees of this onerous obligation without determining whether or not the lessors should be compensated therefore. The Commission could do nothing else since the Unitization Statute, prohibits any adjustment of correlative rights between the lessors and lessees (see Sec. 286.10, Par. 3). The lessors have no right to such a hearing under the Unitization Act.

We submit that in order to operate a common source of supply of oil and gas as a unit that it is not necessary to deprive the lessors of their contractual rights. In the event the lessors' contracts with the lessees become forfeited or terminate for failure to comply with the expressed or implied covenants of the lease such as the failure to develop, protect the premises from drainage or failure to drill within the primary term, the lessor should

have his remedy at law or in equity or either cancel the lease or quiet his title against the lessee, and have his land free of the lease. In such event the lessor would immediately stand in the lessee's shoes, thus in no way affecting the unit operation any more than a transfer of interest by a lessee. The fact that the lessor has entered into an advantageous contract with the lessee is a very good reason to prohibit the lessee from escaping therefrom by an Act of the Legislature cancelling the onerous portion of his contract in the name of conservation of oil and gas when the cancellation of such onerous burden in no way tends to conserve oil or gas. Or if such cancellation does conserve oil or gas which the appellants do not admit and the obligation should be cancelled, still the lessor should not be precluded from a judicial determination as to whether or not he is entitled to an adjustment of his relative rights with the lessee and if so, what?

The case of *Patterson* v. *Stanolind Oil & Gas Co.*, 305 U.S. 378, 380, 83 L. ed. 233, held constitutional the Oklahoma Well Spacing Act (Okla. Session Laws 1935, Chap. 59: Amended Laws 1947, Sec. 1—Title 52, O.S.A. 87.1). This case can be distinguished from the case at Bar on every point herein contended for. In dismissing the appeal for failure of the plaintiff to raise a substantial question this Court said:

> "It is admitted that the Commission made its findings and order after due hearing. The evidence underlying its findings is not in the record. Accord-

> ingly, as the State court said, it must be assumed 'that the source of supply of the well in question is common to the land adjoining it and that said pool underlies not only the 6¼ acres of land on which the well is located but that it also extends beneath the 3¾ acre tract.' In that view the State court applied well settled principles in denying plaintiff's contention under the Fourteenth Amendment."

It will be noted that in the *Stanolind case* it was admitted by the parties that the statute provided for an adjustment of the correlative rights of the parties and that the order complained of was made after hearing thereon. It will also be noted that the evidence underlying the order was not in the record of the case. Whereas, in the case at Bar the Unitization Act expressly prohibits the Commission from adjusting any rights whatsoever between the lessor and lessee and establishes a new contract between the parties and arbitrarily fixes the lessors' royalty without provision for a hearing or an adjudication of any kind (Sec. 286.10, third paragraph, Excerpt 7, Page 14 of the Brief). In addition—the undisputed evidence in the case at Bar disclosed that the lessees had onerous drilling obligations under their leases (R. 934) from which they were relieved by the Unitization Act and Order No. 20289 of the Commission (see Sec. 286.10, Paragraph 4 of the Statute). The Oklahoma Supreme Court in *Palmer Oil Corp.* v. *Phillips Petroleum Co.*, 204 Okl. 550, said as follows:

> "Neither the fact nor the amount of the royalty interest presents any problem for solution in estab-

lishing unitization because the same is recognized and fixed by the law."

We respectfully submit to this Court that the amount of the lessors' royalty in an oil and gas lease is fixed by the private agreement of the parties as set out in the written lease contract. The Oklahoma court failed to otherwise pass upon the lessors' loss of the express and implied covenants of their leases.

It was argued to the Oklahoma Supreme Court that if the destruction of the lessors' rights will not reasonably assist in the accomplishment of the purpose for which the exercise of the police power by the State is authorized or permitted under the United States Constitution, namely and to-wit: the conservation of oil and gas and prevention of waste, then and in that event, the application of the police power is unreasonable and foolish as can easily be seen by the application of simple logic. The evidence of the respondents opines (R. 254) that 50% more oil will be recovered under unit operation than under former methods and that the cost of development will be greatly reduced by reason of the lessees being relieved of onerous drilling obligations placed upon them by the implied covenants of the leases. We will for the purpose of argument admit that this is true since the Corporation Commission so found from the evidence offered by the petitioners and the Supreme Court of Oklahoma so sustained. Considering this proof and these facts, how, now, can the respondents contend

that they did not receive great profit in money under Order No. 20289 of the Commission by reason of their being relieved from their onerous drilling obligations to the lessors? If the lessees do receive such profit and benefit from the order then the lessors, surely, are entitled to some compensation or damage for the lessees' relief from their onerous drilling obligations and if so, how much, rather than have the same arbitrarily fixed at 1/8th of the unit production attributed by the lessees to their land.

ROYALTY CLAUSE AND TERM OF LEASES

Returning again to the dicta of the Oklahoma court in which they said the 1/8th royalty is fixed by law. It is true that the royalty is usually 1/8th part of the oil and gas produced by there are many oil and gas leases in Oklahoma and other States that bear a greater royalty than 1/8th of the oil and gas. The only statute in Oklahoma which attempts to fix the royalty between the lessor and the lessee is the Unitization Statute which we are attacking as unconstitutional. It is true that for the purpose of operating a common source of supply of oil and gas as a unit that 1/8th of the production thereof may be set aside and not used to defray the expense of operation and this can be done without impairing the contract between the lessors and the lessees. For instance, if an oil and gas lease bearing a royalty of 1/4th of the oil and gas produced became a part of a unit operation of a common source of supply and the expense of the operation became so great that it required more than the

value of ¾ ths of the oil and gas produced to operate the unit, the lessee might then, at his option and under his private contract pay the lessor the difference and maintain his lease in force; or he might surrender his lease saying that the same is terminated for the reason that oil and gas is not being produced in paying quantities to the lessee, in which event the lessor would then immediately step into the lessee's shoes, insofar as, the unit operation is concerned and would pay his part of the cost of operation and would receive the part of the oil and gas assigned to his land. It is apparent that the Unitization Act, in the name of the conservation of oil and gas and unit operation of pools, extends the term of the leases to the detriment of the lessors and overriding royalty owners which in no way furthers the conservation of oil and gas or the unit operation of common sources of supply thereof.

CONCLUSION

For the reasons stated it is respectfully submitted that the Judgment of the court below should be reversed.

Respectfully submitted,

JIM HATCHER,
REFORD BOND, JR.,
Chickasha, Oklahoma,
Attorneys for Appellants.

APRIL, 1952.

APPENDIX

THE STATUTE OF THE STATE THE VALIDITY OF WHICH IS INVOLVED

"UNITIZED MANAGEMENT OF COMMON SOURCES OF SUPPLY

"#286.1. LEGISLATIVE DECLARATION.

"The Legislature finds and determines that it is desirable and necessary, under the circumstances and for the purposes hereinafter set out, to authorize and provide for unitized management, operation and further development of the oil and gas properties to which this Act[1] is applicable, to the end that a greater ultimate recovery of oil and gas may be had therefrom, waste prevented, and the correlative rights of the owners in a fuller and more beneficial enjoyment of the oil and gas rights, protected. Laws 1945, p. 162, #1.

"#286.2. COMMON SOURCES OF SUPPLY TO WHICH ACT IS APPLICABLE.

"This Act[1] shall apply only to common sources of supply of oil, oil and gas or gas distillate in this State.

"The provisions of this Act shall not apply to any common source of supply of oil, oil and gas, or gas distillate or any part or parts thereof which at the effective date of this Act are being operated by or under pressure maintenance, repressuring, or secondary recovery methods or operations, provided, that nothing contained in this Act shall prevent the voluntary inclusion and extension of areas in which are located such existing pressure maintenance, re-

1 Sections 286.1-286.17 of this title.

pressuring, or secondary recovery methods or operations as unit areas under the provisions of this Act. Provided this Act shall not apply to any field where the discovery well has been drilled twenty (20) years prior to the effective date of this Act. Laws 1945, p. 162, #2.

"#286.3. JURISDICTION OF CORPORATION COMMISSION.

"Subject to the limitations of this Act[1] the Corporation Commission of the State of Oklahoma, hereinafter referred to as the 'Commission,' is hereby vested with Jurisdiction, power and authority, and it shall be its duty, to supervise the administration of this Act. Laws 1945, p. 163, #3.

"#286.4. THE PETITION FOR AND ORDER CREATING UNIT.

"If upon the filing of a petition therefor and after notice and hearing, all in the form and manner and in accordance with the procedure and requirements hereinafter provided, the Commission shall find (a) that the unitized management, operation and further development of a common source of supply of oil and gas or portion thereof is reasonably necessary in order to effectively carry on pressure-maintenance or repressuring operations, cycling operations, water flooding operations, or any combination thereof, or any other form of joint effort calculated to substantially increase the ultimate recovery of oil and gas from the common source of supply; and (b) that one or more of said unitized methods of operation as applied to such common source of supply or portion thereof are feasible, will prevent waste and will with reasonable probability result in the increased recovery of substantially more oil and gas from the common source of supply than would otherwise be recovered; and (c) that the estimated

1 Sections 286.1-286.17 of this title

additional cost, if any, of conducting such operations will not exceed the value of the additional oil and gas so recovered; and (d) that such unitization and adoption of one or more of such unitized methods of operation is for the common good and will result in the general advantage of the owners of the oil and gas rights within the common source of supply or portion thereof directly affected, it shall make a finding to that effect and enter an order approving the creation of a unit composed of the lessees and other persons who under the plan of unitization approved by the Commission are chargeable with the responsibility and cost of contracting such unitized methods of operation, development of the common source of supply or portion thereof described in the order, all upon such terms and conditions, as may be shown by the evidence to be fair, reasonable, equitable and which are necessary or proper to protect, safeguard, and adjust the respective rights and obligations of the several persons affected, including royalty owners, owners of overriding royalties, oil and gas payments, carried interests, mortgages, lien claimants and others, as well as the lessees. To give the Commission jurisdiction hereunder, the petition shall be filed by, or with the authority of, lessees of record of fifty per cent (50% or more of the area of the common source of supply or portion thereof sought to be unitized. The petition shall set forth a description of the proposed unit area with a map or plat thereof attached, must allege the existence of the facts required to be found by the Commission as hereinabove provided and shall have attached thereto a recommended plan of unitization applicable to such proposed unit area and which the petitioners consider to be fair, reasonable and equitable. Laws 1945, p. 163, #4.

"#286.5. UNIT AREA AND PLAN OF UNITIZATION.

"The order of the Commission shall define the area of the common source of supply or portion thereof to be included within the unit area and prescribe with reasonable detail the plan of unitization applicable thereto.

"Each unit and unit area shall be limited to all or a portion of a single common source of supply. Only so much of a common source of supply as has reasonably been defined by actual drilling operations may be so included within the unit area.

"A unit may be created to embrace less than the whole of a common source of supply only where it is shown by the evidence that the area to be so included within the unit area is of such size and shape as may be reasonably required for the successful and efficient conduct of the unitized method or methods of operation for which the unit is created and that the conduct thereof will have no material adverse effect upon the remainder of such common source of supply.

"The plan of unitization for each such unit and unit area shall be one suited to the needs and requirements of the particular unit dependent upon the facts and conditions found to exist with respect thereto. In addition to such other terms, provisions, conditions and requirements found by the Commission to be reasonably necessary or proper to effectuate or accomplish the purpose of this Act[1] and subject to the further requirements hereof, each such plan of unitization as the parties thereto may agree upon shall be fair, reasonable and equitable, and among other proper and equitable provisions, shall provide:

"(a) For the efficient unitized management or control of the further development and operation of

1 Sections 286.1-286.17 of this title.

the unit area for the recovery of oil and gas from the common source of supply affected. Under such a plan the actual operations within the unit area may be carried on in whole or in part by the several lessees of leases within the unit area, subject to the supervision and direction of the unit, or may be conducted in whole or in part by the unit or some particular operator or operators of a lease or leases in the approved unit area dependent upon what is most beneficial or expedient. The designation of the operator shall be by vote of the lessees in the unit in a manner provided in the plan of unitization and not by the Commission.

"(b) The division of interest or formula for the apportionment and allocation of the unit production, among and to the several separately-owned tracts within the unit area such as will reasonably permit persons otherwise entitled to share in or benefit by the production from such separately-owned tracts to produce or receive, in lieu thereof, their fair, equitable and reasonable share of the unit production or other benefits thereof. A separately-owned tract's fair, equitable, and reasonable share of the unit production shall be measured by the value of each such tract for oil and gas purposes and its contributing value to the unit in relation to like values of other tracts in the unit, taking into account acreage, the quantity of oil and gas recoverable therefrom, location on structure, its probable productivity of oil and gas in the absence of unit operators, the burden of operation to which the tract will or is likely to be subjected, or so many of said factors, or such other pertinent engineering, geological, or operating factors, as may be reasonably susceptible of determination. Unit production as that term is used in this Act shall mean and include all oil and gas produced from a unit area from and after the effective date of the order of the Commission approving the creation of the unit regardless of the well or tract within the unit area from which the same is produced.

"(c) The manner in which the unit and the further development and operation of the unit area shall or may be financed and the basis, terms and conditions on which the cost and expense thereof shall be apportioned among and assessed against the tracts and interests made chargeable therewith, including a detailed accounting procedure governing all charges and credits incident to such operations. Upon and subject to such terms and conditions as to time and rate of interest as may be fair to all concerned, reasonable provisions shall be made in the plan of unitization for carrying or otherwise financing lessees who are unable to meet their financial obligations in connection with the unit.

"(d) The procedure and basis upon which wells, equipment and other properties of the several lessees within the unit area are to be taken over and used for unit operations, including the method of arriving at the compensation therefor, or of otherwise proportionately equalizing or adjusting the investment of the several lessees in the project as of the effective date of unit operations.

"(e) For the creation of an operating committee to have general over-all management and control of the unit and the conduct of its business and affairs and the operations carried on by it, together with the creation or designation of such other subcommittees, boards or officers to function under authority of the operating committee as may be necessary, proper or convenient in the efficient management of the unit, defining the powers and duties of all such committees, boards or officers and prescribing their tenure and time and method for their selection. Each lessee within the unit area shall be entitled to representation on the operating committee and shall have a vote equal to the proportionate interest of such lessee in the unit, provided, where the voting interest of a lessee is such as to control the action taken by the committee, the vote of such lessee shall not serve to carry or defeat action by the committee un-

less such vote is supported by the vote of a majority of the remaining lessees.

"(f) The time when the plan of unitization shall become and be effective.

"(g) The time when and conditions under which and the method by which the unit shall or may be dissolved and its affairs wound up. Laws 1945, p. 164, #5.

"#286.6. OBJECTION TO CREATION OF UNIT.

"If at any time after the filing of a petition for the creation of a unit and within sixty (60) days after the entry of an order by the Commission approving the creation of the same, lessees of record of fifteen per cent (15%) or more of the proposed unit area, if prior to the entry of the order by the Commission, or lessees of record of fifteen per cent (15%) or more of the unit area as defined by the approved plan of unitization and order of the Commission, if after the entry of such order, shall file written protest with the Commission against the creation of the unit, the Commission shall vacate all action of any kind theretofore taken and dismiss the proceedings for the creation of such unit. The fact that a lessee joined in the petition seeking authority to create the unit or otherwise participated in any of the steps thereafter taken with the view of creating the same, shall not preclude such lessee from filing a protest pursuant to the provisions of this Section. Laws 1945, p. 165, #6.

"#286.7. PROCEDURE AND APPEAL.

"Except as otherwise herein expressly provided, all proceedings had under this Act[1] including the filing of petitions, the giving of notices, the conduct of hearings and other action taken by the Commission shall be in the form and manner and in accord-

1 Sections 286.1-286.17 of this title.

ance with the procedure and procedural requirements provided in Sections 84 to 135, inclusive, Title 52, Oklahoma Statutes 1941, or any amendment thereof with reference to proceedings thereunder. Such additional notice shall be given as may be required by the Commission. The Conservation Officer, his assistant and deputies and the Conservation Attorney shall act without additional compensation as technical advisors to the Commission to the extent that the Commission may require. Any person aggrieved by any order of the Commission made pursuant to this Act may appeal therefrom to the Supreme Court of the State of Oklahoma upon the same conditions, within the same time and in the same manner as is provided in said Sections 84 to 135, inclusive, Title 52, Oklahoma Statutes 1941, for the taking of appeals from the orders of the Commission made thereunder, except in any such appeal the Commission shall be impartial, inactive and shall not be represented directly or indirectly by the Conservation Attorney, the Attorney General or any other public official or person. The Supreme Court on appeal shall have jurisdiction and authority and it shall be its duty to consider the validity of the order of the Commission appealed therefrom. On appeal the order of the Commission appealed from shall be regarded as *prima facie* valid, fair, reasonable and equitable, but if the order is found to be contrary to the clear weight of the evidence, in any one of such respects, the same shall be vacated and set aside and the cause referred to the Commission for further proceedings not inconsistent with the judgment of the court; otherwise the said order shall be affirmed.

"In addition to any other remedy provided in this Act any interested person, firm or corporation within a unit area feeling himself aggrieved by any order of the Commission or the action of a unit thereunder, may at any time institute a suit in the District Court of the County in which the greater part

of the unit area is located, as in other civil suits in equity, against the other lessees within the unit and in such suit have his rights and equities determined. Any person aggrieved by the judgment entered in such an action may appeal therefrom to the Supreme Court of the State of Oklahoma in the time and manner as appeals are taken in other civil actions. To the extent possible under existing laws the Supreme Court shall give precedence to all such appeals in the hearing and disposition thereof. Laws 1945, p. 165, #7.

"#286.8. OPERATIONS IN VIOLATION OF PLAN OF UNITIZATION UNLAWFUL.

"From and after the effective date of an order of the Commission approving the creation of a unit and approving the plan of unitization applicable thereto the drilling of any well into or the operation of any well producing from the common source of supply or portion thereof within the unit area defined in the order by persons other than the unit or persons acting under its authority or except in the manner and to this extent provided in such plan of unitization shall be unlawful and is hereby prohibited. Laws 1945, p. 166, #8.

"#286.9. THE NATURE, PURPOSES AND FUNCTIONS OF UNITS, AND LIABILITY OF OWNERS OF OIL AND GAS RIGHTS THEREIN FOR UNIT EXPENSE.

"Each unit created under the provisions of this Act[1] shall be a body politic and corporate, capable of suing, being sued and contracting as such in its own name. Each such unit shall be authorized on behalf and for the account of all the owners of the oil and gas rights within the unit area, without profit to the unit, to supervise, manage and conduct the further development and operations for the pro-

1 Sections 286.1-286.17 of this title.

duction of oil and gas from the unit area, pursuant to the powers conferred, and subject to the limitations imposed by the provisions of this Act and by the plan of unitization.

"The obligation or liability of the lessee or other owners of the oil and gas rights in the several separately-owned tracts for the payment of unit expense shall at all times be several and not joint or collective and in no event shall a lessee or other owner of the oil and gas rights in the separately-owned tract be chargeable with, obligated or liable, directly or indirectly, for more than the amount apportioned, assessed or otherwise charged to his interest in such separately-owned tract pursuant to the plan of unitization and then only to the extent of the lien provided for in this Act.

"Subject to such reasonable limitations as may be set out in the plan of unitization, the unit shall have a first and prior lien upon the leasehold interest only in the unitized common source of supply [exclusive of a one-eighth (1/8) royalty interest] in and to each separately-owned tract, the interest of the owners thereof in and to the unit production and all equipment in the possession of the unit, to secure the payment of the amount of the unit expense charged to and assessed against such separately owned tract. The interest of the lessee or other persons who by lease, contract or otherwise are obligated or responsible for the cost and expense of developing and operating a separately-owned tract for oil and gas in the absence of unitization shall, however, be primarily responsible for and charged with any assessment for unit expense made against such tract and resort may be had to overriding royalties, oil and gas payments, royalty interests in excess of a one-eighth (1/8) of the production, or other interests which otherwise are not chargeable with such cost, only in the event the owner of the interest primarily responsible fails to pay such assessment or the production to the credit thereof is insufficient for that

purpose. In the event the owner of any royalty interest, overriding royalty, oil and gas payment or other interest which under the plan of unitization is not primarily responsible therefor pays in whole or in part the amount of an assessment for unit expense for the purpose of protecting such interest, or the amount of the assessment in whole or in part is deducted from the unit production to the credit of such interest the owner thereof shall to the extent of such payment or deduction be subrogated to all of the rights of the unit with respect to the interest or interests primarily responsible for such assessment. A one-eighth (1/8) part of the unit production allocated to each separately-owned tract shall in all events be regarded as royalty to be distributed to and among, or the proceeds thereof paid to, the royalty owners free and clear of all unit expense and free of any lien therefor. Laws 1945, p. 166, #9.

"#286.10. PROPERTY AND CONTRACT RIGHTS.

"Property rights, leases and other contracts, and all rights and obligations shall meet the provisions and requirements of this Act[1] and to any valid and applicable plan of unitization or order of the Commission made and adopted pursuant hereto, but otherwise to remain in full force and effect.

"Nothing contained in this Act shall be construed to require a transfer to or vesting in the unit of title to the separately-owned tracts or leases thereon within the unit area, other than the right to use and operate the same to the extent set out in the plan of unitization; nor shall the unit be regarded as owning the unit production. The unit production and the proceeds from the sale thereof shall be owned by the several persons to whom the same is allocated under the plan of unitization. All property, whether real or personal, which the unit may in any way acquire, hold or possess shall not be acquired, held or possessed by the unit for its own account but shall be

1 Sections 286.1-286.17 of this title.

so acquired, held and possessed by the unit for the account and as agent of the several lessees and shall be the property of such lessees as their interests may appear under the plan of unitization, subject, however, to the right of the unit to the possession, management, use or disposal of the same in the proper conduct of its affairs, and subject to any lien the unit may have thereon to secure the payment of unit expense.

"The amount of the unit production allocated to each separately-owned tract within the unit, and only that amount, regardless of the well or wells in the unit area from which it may be produced, and regardless of whether it be more or less than the amount of the production from the well or wells, if any, on any such separately-owned tract, shall for all intents, uses, and purposes be regarded and considered as production from such separately-owned tract, and, except as may be otherwise authorized in this Act, or in the plan of unitization approved by the Commission, shall be distributed among or the proceeds thereof paid to the several persons entitled to share in the production for[2] such separately-owned tract in the same manner, in the same proportions, and upon the same conditions that they would have participated and shared in the production or proceeds thereof from such separately-owned tract had not said unit been organized, and with the same legal force and effect. If adequate provisions are made for the receipt thereof, the share of the unit production allocated to each separately-owned tract shall be delivered in kind to the persons entitled thereto by virtue of ownership of oil and gas rights therein or by purchase from such owners subject to the right of the unit to withhold and sell the same in payment of unit expense pursuant to the plan of unitization, and subject further to the call of the unit on such portions of the gas for operating purposes as may be provided in the plan of unitization.

2 Probably should read "from."

"Operations carried on under and in accordance with the plan of unitization shall be regarded and considered as a fulfillment of and compliance with all of the provisions, covenants, and conditions, express or implied, of the several oil and gas mining leases upon lands included within the unit area, or other contracts pertaining to the development thereof, insofar as said leases or other contracts may relate to the common source of supply or portion thereof included in the unit area. Wells drilled or operated on any part of the unit area no matter where located shall for all purposes be regarded as wells drilled on each separately-owned tract within such unit area. Laws 1945, p. 167, #10.

"#286.11. AMENDMENTS TO PLAN OF UNITIZATION.

"In any proceeding hereunder in which an order is entered creating a unit, the Commission shall retain jurisdiction thereof and of all parties in interest for the purpose of amending the plan of unitization from time to time whenever by reason of changed conditions or otherwise for good cause shown it is made to appear that such amendment is necessary or proper. Such an amendment may be made only upon the petition of lessees of record of ten per cent (10%) or more of the unit area. Any amendment to a plan of unitization made pursuant hereto shall be effective prospectively only from and after the date on which the order providing for such amendment shall become final. The procedure for any such amendment including the filing of a petition, the giving of notice and conduct of the hearing shall be the same as that required for the creation of a unit and the adoption of a plan of unitization in the first instance, insofar as applicable. Laws 1945, p. 168, #1.

"#286.12. ENLARGEMENT OF UNITS.

"The unit area of a unit may be unitized with adjoining and contiguous portions of the same common source of supply including the unit area of another or other units, and a unit created for the unitized management, operation and further development of such enlarged unit area upon the filing of a petition therefor and after notice and hearing, in the same manner, on the same conditions, but subject to the right of lessees of record of fifteen per cent (15%) or more of an existing unit area to protest, and veto such enlargement or merger, all as herein provided with respect to the creation of a unit in the first instance. Upon the creation of a larger unit embracing the unit area of one or more smaller units, the larger unit so created shall thereupon supersede such smaller unit or units. Laws 1945, p. 169, #12.

"#286.13. PUBLIC LANDS.

"The Commissioners of the Land Office, or other proper board or officer of the State having the control and management of State land, and the proper board or officer of any political, municipal, or other subdivision or agency of the State, are hereby authorized and shall have the power on behalf of the State or of such political, municipal, or other subdivision or agency thereof, with respect to land or oil and gas rights subject to the control and management of such respective body, board, or officer, to consent to or participate in any plan or program of unitization adopted pursuant to this Act.[1] Laws 1945, p. 169, #13.

1 Sections 286.1-286.17 of this title.

"#286.14. NO INCOME OR PROFIT SUBJECT TO TAXATION.

"Neither the unit production or proceeds from the sale thereof, nor other receipts shall be treated, regarded, or taxed as income or profits of the unit; but instead, all such receipts shall be the income of the several persons to whom or to whose profit the same are payable under the plan of unitization. To the extent the unit may receive or disburse said receipts it shall only do so as a common administrative agent of the persons to whom the same are payable. Laws 195, p. 169, #14.

"#286.15. DEFINITIONS.

"For the purposes of this Act,[1] unless the context otherwise requires:

"(a) The term 'lessee' refers not only to lessees under oil and gas leases but also to the owners of unleased lands or mineral rights having the right to develop the same for oil and gas.

"(b) Any reference to a separately-owned tract, although in general terms broad enough to include the surface and all underlying common sources of supply of oil and gas shall have reference thereto only in relation to the common source of supply or portion thereof embraced within the unit area of a particular unit.

"(c) The phrase 'oil and gas' shall refer not only to oil and gas as such in combination one with the other, but shall have general reference to oil, gas, casinghead gas, casinghead gasoline, gas-distillate, or other hydrocarbons, or any combination or combinations thereof, which may be found in or produced from a common source of supply of oil, oil and gas or gas-distillate.

"(d) The term 'person' shall mean and include any individual, corporation, partnership, common

1 Sections 286.1-286.17 of this title.

law or statutory trust, association of any kind, the State of Oklahoma or any subdivision or agency thereof acting in a proprietary capacity, guardian, executor, administrator, fiduciary of any kind, or any other entity or being capable of owning an interest in and to a common source of supply of oil and gas.

"(e) The term 'unit expense' shall include and mean any and all cost, expense, or indebtedness incurred by the unit in the establishment of its organization, or incurred in the conduct and management of its affairs or the operations carried on by it, authorized by the approved plan of unitization. Laws 1945, p. 169 #15.

"#286.16. CONSTRUCTION OF ACT.

"The provisions of this Act[1] are declared to be severable, and, if any section, sentence, clause or part thereof be held invalid or unconstitutional for any reason, such invalidity or unconstitutionality shall not be construed to affect the validity of the remaining provisions of this Act. Laws 1945, p. 170, #16.

"#286.17. UNITIZATION AGREEMENTS NOT VIOLATIVE OF ANTI-TRUST LAWS OR IN RESTRAINT OF TRADE.

"No agreement between or among lessees or other owners of oil and gas rights in oil and gas properties, entered into pursuant hereto or with a view or for the purpose of bringing about the unitized development or operation of such properties, shall be held to violate any of the statutes of this State prohibiting monopolies or Acts, arrangements, agreements, contracts, combinations or conspiracies in restraint of trade or commerce. Laws 1945, p. 170, #17."

1 Sections 286.1-286.17 of this title.

SUBJECT INDEX

Statement 1

Facts Giving Rise to Statute 2

Statute Involved 4

Title 52, O. S. 1951, Secs. 81-279, 291-303 (House Bill 339) 4-16

Findings and Order in Respect to West Cement Medrano Common Source of Supply of Oil 16

Evidence in Support of Order 23

Action Taken Pursuant to Order 25

Proceedings on Appeal 26

Other Units 28

Summary of Argument 29-37

Argument 38

Point I: House Bill 339 providing for unitized operation of separately owned tracts within a common source of supply of oil and gas is a proper and reasonable exercise of the Police Power of the State 38

A. Unit operations necessary to proper use and control of reservoir energy and greatest recovery of oil and gas 38

INDEX CONTINUED PAGE

B. Purposes of Act within scope of State's Police Power 46

C. Unitization of separately owned tracts within common source of supply of oil and gas recognized means of accomplishing purposes within Police Power 48

D. Unitization and unitized operation of Separately owned tracts authorized under Principles of Swampland, Irrigation, Mill Dam, and similar cases 54

E. Numerous other states have laws providing for unitization of separately owned tracts within a common source of supply 61

F. Provisions and requirements of the law are reasonable 23

G. Being within the scope of the Police Power, debatable questions of reasonableness, wisdom or propriety of the Act are for the Legislature and not the Courts 68

Point II: Provisions requiring that petition be filed by designated percentage in interest of lessees and providing that proceeding be dismissed on protest of a certain percentage are not an unlawful delegation of legislative authority to private parties 70

Point III: The procedural and other rights granted the lessees as distinguished from the lessors or royalty owners do not deny to the lessors or royalty owners the equal protection of the law 79

Point IV: Order and Plan of Unitization are reasonable and are supported by the evidence 83

A. The Unit is a single common source of supply 85

INDEX CONTINUED PAGE

B. It was not too late to accomplish beneficial results merely because approximately two-thirds of the reservoir energy had been produced or expended 87

C. The Plan does not include acreage not proven to contain productive oil and gas 89

D. The division of interest is fair and reasonable 90

Point V: The enactment of Senate Bill 203 amending House Bill 339 has no effect in this case 94

Conclusion 95

Appendix follows brief.

BRIEF OF APPELLEES

STATEMENT

Involved herein is the validity of House Bill 339 of the 1945 Oklahoma Legislature[1] providing for the unitized operation and further development of separately owned

---

1. Sections 286.1-286.17, Title 52, O. S. Supp. 1949, the more important substantive provisions of which are set out in the Statement that follows.

tracts within a common source of supply of oil and gas and of Order No. 20289 of the Oklahoma Corporation Commission dated September 5, 1947 (R. 1239) so unitizing the West Cement Medrano common source of supply in Caddo County, Oklahoma.

The Supreme Court of Oklahoma in the judgment from which these cases are appealed, March 20, 1951, not yet officially reported in the Oklahoma Reports, 231 P.2d 997 (R. 28-56), has sustained the validity of the law and order and determined that the order was amply supported by the evidence. The appellants attack the correctness of such judgment and the validity of the law and order. Appellees appear in support thereof.

Facts Giving Rise to Statute

It has long been recognized by the oil and gas industry, the oil and gas regulatory agencies of the several states, the several boards and agencies empowered by the federal government to investigate the matter, the Interstate Oil Compact Commission, the courts, and other persons and agencies familiar therewith that an oil and gas reservoir, pool or common source of supply, as it is variously called, is inherently a physical unit and should be developed and operated as such; that what is done in one part of the reservoir directly affects other parts thereof; that the primary force resulting in the recovery of oil is the presence under pressure of either gas or water, or both, associated with the oil, known as reservoir energy, which, when a pressure differential is created due to the opening

of a well, expands or otherwise drives the oil to the well bore where it can be produced; that the reservoir energy is common to the reservoir as a whole and, as was said by the Oklahoma Supreme Court in the case of *Russell* v. *Walker* (1932), 160 Okla. 145, 15 P.2d 114, 117, "is owned in common by the owners of the common source of supply"; that once the pressure or reservoir energy is depleted, production ceases; that by dividing the reservoir into a large number of small tracts and operating each such tract as a separate unit, using the best known methods of operation possible under such conditions, results in the wasteful use and dissipation of the reservoir energy and, as a rule, results in the recovery of not to exceed 20 to 25 per cent of the oil in the reservoir, leaving unrecovered, and in most instances unrecoverable, as much as 75 to 80 per cent; that by treating and operating the reservoir as a single indivisible unit whereby a full and proper use can be made of the natural reservoir energy and pressure maintenance or repressuring operations can be carried on through the return of gas or water to the reservoir, from twice to three times as much oil can be recovered than can otherwise be recovered; that the maximum efficiency, waste prevention and conservation generally can only be obtained where the reservoir is treated and operated as a unit.[2]

Although there are many pools or parts of pools in the United States today which, by agreement, have been unitized and are being successfully operated as units, progress in this regard has been hampered and the unitization of many other pools blocked because of divided owner-

ship and the failure or refusal of a minority owner or owners, for selfish or other reasons, to so agree.[2]

Statute Involved

In order to make possible the unitized operation of oil reserves in the State of Oklahoma, the Oklahoma Legislature in 1945 enacted House Bill 339, providing a means and procedure therefor. The object of the legislation is stated in Section 1 thereof, as follows:

> "The Legislature finds and determines that it is desirable and necessary, under the circumstances and for the purposes hereinafter set out, to authorize and provide for unitized management, operation and further development of the oil and gas properties to which this Act is applicable, to the end that a greater ultimate recovery of oil and gas may be had therefrom, waste prevented and the correlative rights of the owners in a fuller and more beneficial enjoyment of the oil and gas rights, protected."

Although set out in full at pages 111-125 of the printed Statement As to Jurisdiction of appellant, The Palmer Oil Corporation, and as an appendix to said appellant's brief, a brief summary of the Act and a quotation of the more important substantive provisions will, we think, here prove helpful to a better understanding of the case.

---

2. See bibliography of source materials, including court decisions, attached hereto as Appendix "A". For a clearly stated informative, up-to-date discussion of the engineering and operating facts requiring the unitized operation of oil and gas pools, we invite the court to, in particular, read the book entitled **Oil and Gas Production: An Introductory Guide to Production Techniques and Conservation Methods,** compiled by the Engineering Committee of the Interstate Oil Compact Commission, published by the University of Oklahoma Press, Norman, Oklahoma, March, 1951.

Section 2 defines and limits the common sources of supply to which the Act is applicable.

Section 3 vests the Oklahoma Corporation Commission, the body having general supervision over oil and gas conservation in the state,[3] with authority to administer the Act.

Sections 4 and 5 read as follows:

"Section 4. If upon the filing of a petition therefor and after notice and hearing, all in the form and manner and in accordance with the procedure and requirements hereinafter provided, the Commission shall find (a) that the unitized management, operation and further development of a common source of supply of oil and gas or portion thereof is reasonably necessary in order to effectively carry on pressure-maintenance or repressuring operations, cycling operations, water flooding operations, or any combination thereof, or any other form of joint effort calculated to substantially increase the ultimate recovery of oil and gas from the common source of supply; and (b) that one or more of said unitized methods of operation as applied to such common source of supply or portion thereof are feasible, will prevent waste and will with reasonable probability result in the increased recovery of substantially more oil and gas from the common source of supply than would otherwise be recovered; and (c) that the estimated additional cost, if any, of conducting such operations will not exceed the value of the additional oil and gas so recovered; and (d) that such unitization and adoption of one or more of such unitized methods of operation is for the common good and will result in the general advantage of the owners of the oil and gas rights

3. Sections 81-279, 291-303, Title 52, O. S. 1951.

within the common source of supply or portion thereof directly affected, it shall make a finding to that effect and enter an order approving the creation of a unit composed of the lessees and other persons who under the plan of unitization approved by the Commission are chargeable with the responsibility and cost of conducting such unitized methods of operation, development of the common source of supply or portion thereof described in the order, all upon such terms and conditions, as may be shown by the evidence to be fair, reasonable, equitable and which are necessary or proper to protect, safeguard, and adjust the respective rights and obligations of the several persons affected, including royalty owners, owners of overriding royalties, oil and gas payments, carried interests, mortgagees, lien claimants and others, as well as the lessees. To give the Commission jurisdiction hereunder, the petition shall be filed by, or with the authority of, lessees of record of fifty percent (50%) or more of the area of the common source of supply or portion thereof sought to be unitized. The petition shall set forth a description of the proposed unit area with a map or plat thereof attached, must allege the existence of the facts required to be found by the Commission as hereinabove provided and shall have attached thereto a recommended plan of unitization applicable to such proposed unit area and which the petitioners consider to be fair, reasonable and equitable.

"Section 5. The order of the Commission shall define the area of the common source of supply or portion thereof to be included within the unit area and prescribe with reasonable detail the plan of unitization applicable thereto.

"Each unit and unit area shall be limited to all or a portion of a single common source of supply. Only

so much of a common source of supply as has reasonably been defined by actual drilling operations may be so included within the unit area.

"A unit may be created to embrace less than the whole of a common source of supply only where it is shown by the evidence that the area to be so included within the unit area is of such size and shape as may be reasonably required for the successful and efficient conduct of the unitized method or methods of operation for which the unit is created, and that the conduct thereof will have no material adverse effect upon the remainder of such common source of supply.

"The plan of unitization for each such unit and unit area shall be one suited to the needs and requirements of the particular unit dependent upon the facts and conditions found to exist with respect thereto. In addition to such other terms, provisions, conditions and requirements found by the Commission to be reasonably necessary or proper to effectuate or accomplish the purpose of this Act, and subject to the further requirements thereof, each such plan of unitization as the parties hereto may agree upon shall be fair, reasonable and equitable, and among other proper and equitable provisions, shall provide:

"(a) For the efficient unitized management or control of the further development and operation of the unit area for the recovery of oil and gas from the common source of supply affected. Under such a plan the actual operations within the unit area may be carried on in whole or in part by the several lessees of leases within the unit area, subject to the supervision and direction of the unit, or may be conducted in whole or in part by the unit or some particular operator or operators of a lease or leases in the approved unit area dependent upon what is most

beneficial or expedient. The designation of the operator shall be by vote of the lessees in the unit in a manner provided in the plan of unitization and not by the Commission.

"(b) The division of interest or formula for the apportionment and allocation of the unit production, among and to the several separately-owned tracts within the unit area such as will reasonably permit persons otherwise entitled to share in or benefit by the production from such separately-owned tracts to produce or receive, in lieu thereof, their fair, equitable and reasonable share of the unit production or other benefits thereof. A separately-owned tract's fair, equitable, and reasonable share of the unit production shall be measured by the value of each such tract for oil and gas purposes and its contributing value to the unit in relation to like values of other tracts in the unit, taking into account acreage, the quantity of oil and gas recoverable therefrom, location on structure, its probable productivity of oil and gas in the absence of unit operations, the burden of operation to which the tract will or is likely to be subjected, or so many of said factors, or such other pertinent engineering, geological, or operator factors, as may be reasonably susceptible of determination. Unit production as that term is used in this Act shall mean and include all oil and gas produced from a unit area from and after the effective date of the order of the Commission approving the creation of the unit regardless of the well or tract within the unit area from which the same is produced;

"(c) The manner in which the unit and the further development and operation of the unit area shall or may be financed and the basis, terms and conditions on which the cost and expense thereof shall be apportioned among and assessed against the tracts

and interests made chargeable therewith, including a detailed accounting procedure governing all charges and credits incident to such operations. Upon and subject to such terms and conditions as to time and rate of interest as may be fair to all concerned, reasonable provisions shall be made in the plan of unitization for carrying or otherwise financing lessees who are unable to meet their financial obligations in connection with the unit.

"(d) The procedure and basis upon which wells, equipment and other properties of the several lessees within the unit area are to be taken over and used for unit operations, including the method of arriving at the compensation therefor, or of otherwise proportionately equalizing or adjusting the investment of the several lessees in that project as of the effective date of unit operations.

"(e) For the creation of an operating committee to have general over-all management and control of the unit and the conduct of its business and affairs and the operations carried on by it, together with the creation or designation of such other subcommittees, boards or officers to function under authority of the operating committee as may be necessary, proper or convenient in the efficient management of the unit, defining the powers and duties of all such committees, boards or officers and prescribing their tenure and time and method for their selection. Each lessee within the unit area shall be entitled to representation on the operating committee and shall have a vote equal to the proportionate interest of such lessee in the unit, provided, where the voting interest of a lessee is such as to control the action taken by the committee, the vote of such lessee shall not serve to carry or defeat action by the committee unless such vote is supported by the vote of a majority of the remaining lessees.

"(f) The time when the plan of unitization shall become and be effective;

"(g) The time when and conditions under which and the method by which the unit shall or may be dissolved and its affairs wound up."

Section 6 provides that if at any time after the filing of the petition and within sixty days after the entry of the order creating the unit, lessees of record of 15 per cent or more of the area affected file written protests, the proceeding shall be dismissed.

Section 6, together with the provisions of the next to the last sentence of Section 4, makes as a legislative condition to the creation of a unit under the Act the approval or acquiescence of lessees of record of not less than 85 per cent of the area affected. If, however, as pointed out in the argument to follow, a unit is to be created, it is the Corporation Commission under the requirements of the law, after notice and hearing and subject to the right of review on appeal, that fixes and prescribes the terms, provisions and conditions of the plan of unitization applicable thereto and not the petitioners or any percentage of the lessees.

Section 7 provides for a full and direct appeal from an order made by the Corporation Commission under the Act by "any person aggrieved" thereby to the Supreme Court of Oklahoma in the same manner that appeals from other orders pertaining to oil and gas conservation are taken. The authority of the Supreme Court on appeal is stated as follows:

"The Supreme Court on appeal shall have jurisdiction and authority and it shall be its duty to review the record of proceedings and transcript of evidence and to consider the validity of the order of the Commission appealed therefrom. On appeal the order of the Commission appealed from shall be regarded as *prima facie* valid, fair, reasonable and equitable, but if the order is found to be contrary to the clear weight of the evidence, in any one of such respects, the same shall be vacated and set aside and the cause referred to the Commission for further proceedings not inconsistent with the judgment of the court; otherwise the said order shall be affirmed."

Section 7 further provides that, in addition to any other remedy provided in the Act, any interested person, firm or corporation within the unit area feeling himself aggrieved by any order of the Corporation Commission or the action of a unit thereunder may at any time institute a suit in the District Court of the county in which the greater part of the unit area is located and in such suit have his rights determined, coupled with the right of appeal to the State Supreme Court from the action of the District Court.

Section 8 makes operations in violation of the plan of unitization prescribed by the Commission unlawful.

Sections 9 and 10 are as follows:

"Section 9. Each unit created under the provisions of this Act shall be a body politic and corporate, capable of suing, being sued and contracting as such in its own name. Each such unit shall be authorized on behalf and for the account of all the owners of the oil and gas rights within the unit area, without profit

to the unit, to supervise, manage and conduct the further development and operations for the production of oil and gas from the unit area, pursuant to the powers conferred, and subject to the limitations imposed by the provisions of this Act and by the plan of unitization.

"The obligation or liability of the lessee or other owners of the oil and gas rights in the several separately-owned tracts for the payment of unit expense shall at all times be several and not joint or collective and in no event shall a lessee or other owner of the oil and gas rights in the separately-owned tract be chargeable with, obligated or liable, directly or indirectly, for more than the amount apportioned, assessed or otherwise charged to his interest in such separately-owned tract pursuant to the plan of unitization and then only to the extent of the lien provided for in this Act.

"Subject to such reasonable limitations as may be set out in the plan of unitization, the unit shall have a first and prior lien upon the leasehold interest only in the unitized common source of supply (exclusive of a one-eighth (1/8) royalty interest) in and to each separately-owned tract, the interest of the owners thereof in and to the unit production and all equipment in the possession of the unit, to secure the payment of the amount of the unit expense charged to and assessed against such separately-owned tract. The interest of the lessee or other persons who by lease, contract or otherwise are obligated or responsible for the cost and expense of developing and operating a separately-owned tract for oil and gas in the absence of unitization shall, however, be primarily responsible for and charged with any assessment for unit expense made against such tract and resort may be had to overriding royalties, oil and gas payments, roy-

alty interests in excess of a one-eighth (⅛) of the production, or other interests which otherwise are not chargeable with such cost, only in the event the owner of the interest primarily responsible fails to pay such assessment or the production to the credit thereof is insufficient for that purpose. In the event the owner of any royalty interest, overriding royalty, oil and gas payment or other interest which under the plan of unitization is not primarily responsible therefor pays in whole or in part the amount of an assessment for unit expense for the purpose of protecting such interest, or the amount of the assessment in whole or in part is deducted from the unit production to the credit of such interest, the owner thereof shall to the extent of such payment or deduction be subrogated to all of the rights of the unit with respect to the interest or interests primarily responsible for such assessment. A one-eighth (⅛) part of the unit production allocated to each separately-owned tract shall in all events be regarded as royalty to be distributed to and among, or the proceeds thereof paid to, the royalty owners free and clear of all unit expense and free of any lien therefor.

"Section 10. Property rights, leases and other contracts, and all rights and obligations shall meet the provisions and requirements of this Act and to any valid and applicable plan of unitization or order of the Commission made and adopted pursuant hereto, but otherwise to remain in full force and effect.

"Nothing contained in this Act shall be construed to require a transfer to or vesting in the unit of title to the separately-owned tracts or leases thereon within the unit area, other than the right to use and operate the same to the extent set out in the plan of unitization; nor shall the unit be regarded as owning the unit production. The unit production and the pro-

ceeds from the sale thereof shall be owned by the several persons to whom the same is allocated under the plan of unitization. All property, whether real or personal, which the unit may in any way acquire, hold or possess shall not be acquired, held or possessed by the unit for its own account but shall be so acquired, held and possessed by the unit for the account and as agent of the several lessees and shall be the property of such lessees as their interests may appear under the plan of unitization, subject, however, to the right of the unit to the possession, management, use or disposal of the same in the proper conduct of its affairs, and subject to any lien the unit may have thereon to secure the payment of unit expense.

"The amount of the unit production allocated to each separately-owned tract within the unit, and only that amount, regardless of the well or wells in the unit area from which it may be produced, and regardless of whether it be more or less than the amount of the production from the well or wells, if any, on any such separately-owned tract, shall for all intents, uses, and purposes be regarded and considered as production from such separately-owned tract, and, except as may be otherwise authorized in this Act, or in the plan of unitization approved by the Commission, shall be distributed among or the proceeds thereof paid to the several persons entitled to share in the production for such separately-owned tract in the same manner, in the same proportions, and upon the same conditions that they would have participated and shared in the production or proceeds thereof from such separately-owned tract had not said unit been organized, and with the same legal force and effect. If adequate provisions are made for the receipt thereof, the share of the unit production allocated to each separately-owned tract shall be delivered in kind to

the persons entitled thereto by virtue of ownership of oil and gas rights therein or by purchase from such owners subject to the right of the unit to withhold and sell the same in payment of unit expense pursuant to the plan of unitization, and subject further to the call of the unit on such portions of the gas for operating purposes as may be provided in the plan of unitization.

"Operations carried on under and in accordance with the plan of unitization shall be regarded and considered as a fulfillment of and compliance with all of the provisions, covenants, and conditions, express or implied, of the several oil and gas mining leases upon lands included within the unit area, or other contracts pertaining to the development thereof, insofar as said leases or other contracts may relate to the common source of supply or portion thereof included in the unit area. Wells drilled or operated on any part of the unit area no matter where located shall for all purposes be regarded as wells drilled on each separately-owned tract within such unit area."

Section 11 makes provision for the subsequent amendment of a plan of unitization.

Section 12 provides for the enlargement of units.

Section 13 relates to the inclusion of public lands within a unit.

Section 14 provides that a unit as such shall have no income but that instead, all receipts shall be the income of the several persons to whom or to whose credit the same are payable under the plan of unitization.

Section 15 defines certain terms used in the Act.

Section 16 is a severability clause to the effect that if any sentence, clause, etc., be held invalid or unconstitutional for any reason, such invalidity or unconstitutionality shall not affect the remaining provisions of the Act.

Section 17 provides that agreements among lessees or other owners of oil and gas rights entered into with the view of bringing about the unitized development and operation of such rights shall not be violative of the antitrust laws.

Findings and Order in Respect to West Cement Medrano Common Source of Supply of Oil

Pursuant to the provisions of House Bill 339, *supra*, lessees of more than 50 per cent of the West Cement Medrano common source of supply of oil in Caddo County, Oklahoma, on October 22, 1946, filed a petition (R. 173) in Cause CD No. 1308 with the Oklahoma Corporation Commission for an order creating the West Cement Medrano Unit and prescribing the applicable Plan of Unitization for the purpose of the unitized management, operation and further development of said common source of supply of oil, alleging the facts required to be alleged by said unitization law. Commencing on December 9, 1946 (R. 201), and continuing with twenty-four days of testimony extending over a period of eight months (R. 201-1237), the Corporation Commission heard the testimony of every person who desired to be heard, either in full or in opposition to the petition, including all of the appellants and appellees in this Court, and on September 5, 1947, en-

tered its Order No. 20289 (R. 1239) creating the West Cement Medrano Unit, defining the Unit Area thereof and prescribing the Plan of Unitization applicable thereto.

The Commission, in respect to the West Cement Medrano Pool unitized by its order, found that such pool was a single common source of supply of oil and gas (R. 1243) embracing approximately 3,700 acres of land (R. 1244); that said source of supply consisted of a gas cap along the high part of the producing formation, from which primary production was gas, whereas the primary production from wells lower on the structure was oil; that all parts of the common source of supply are permeably connected so as to permit the migration of oil or gas, or both, from one portion of the common source of supply to another wherever and whenever pressure differentials are created as a result of the production or operations for the production of oil or gas from the producing formations (R. 1243); that the lands embraced within the Unit Area are divided into a large number of individual tracts of varying size and shape and owned in severalty by a large number of different individuals, firms and corporations owning varying interests therein, including not less than 25 different lessees and several hundred royalty owners (R. 1244).

In respect to the waste and inequities resulting from nonunitized operations and the increased recovery and benefits resulting from unit operations, the Commission, in Paragraphs 6, 7, 8 and 9 of its Findings of Fact (R. 1245-1247), found as follows:

"6. That without the unitization of said West Cement Medrano common source of supply of oil and gas the only method whereby said pool can be feasibly and effectively operated and produced for the recovery of oil and gas therefrom is by and under individual competitive pressure depletion methods of operation, the methods now being used in the pool, that is to say, by treating each separately owned tract or lease as a separate unit for operating and production purposes and depending on the natural energy in the producing formation to move what oil and gas can be moved thereby out of the formation to the well bore where it can be produced; that the principal natural energy mechanism in said pool is gas in solution with the oil coupled with a gas cap expansion; that under present competitive methods of operation, treating each tract or lease as a separate operating unit, there has been and still continues to be a disproportionate, inequitable and wasteful utilization and dissipation of the gas energy in the pool by certain tracts to the detriment and disadvantage of other tracts and to the injury of the pool as a whole; that by and under the best known competitive pressure depletion methods of operation not more than 25% or approximately 24 million barrels of the 97 million barrels of oil originally in place in the reservoir can be economically recovered, leaving the remaining 75%, or approximately 73 million barrels of oil in the ground unrecovered and *un*recoverable except through and by means of unitization of the pool and the adoption of unitized methods of operation therein; that to permit the owners of gas wells and high gas-oil ratio wells to continue to produce such wells will result in robbing the oil wells of gas energy required to produce the oil; that to shut in the gas wells and the high gas-oil ratio wells without permitting the owners thereof to share in the oil and gas production from

the oil wells, would deprive the owners of the gas wells of their fair share of the production from the pool; that the value of the recoverable oil exceeds many times the market value of the gas; that the return to the reservoir of the gas produced from the oil to supplement the remaining natural gas energy and retard the decline in reservoir pressure and perhaps the injection at some later date of water low on structure is desirable and necessary to obtain the greatest ultimate recovery of oil from the pool, but which cannot be done in the absence of unitization because of the migratory nature of the injected gas or water and the effect that the injection thereof into the reservoir would have upon properties in the pool other than the property on which the gas or water is injected and upon the pool as a whole.

"7. That by and through the unitization of the proposed Unit Area and the unitized management and operation and further development thereof as a unit, all as set out and provided for in the Plan of Unitization hereto attached, full use can be made of the gas energy in the reservoir to the mutual advantage of all the owners of the said common source of supply of oil and gas, that waste of large volumes of oil and gas can be prevented, gas can and will be returned to the reservoir to supplement the natural reservoir energy, water encroachment, either natural or artificial, on the lower side of the pool can be properly controlled and utilized, substantially more oil, amounting to many millions of barrels, can be recovered from the common source of supply than can be otherwise recovered, a more equitable distribution of the recoverable oil and gas can be had as between the several owners of the pool and the correlative rights of the several owners can be more fully protected.

"8. The unitization and unitized management and operation and further development of said common source of supply as a unit is reasonably necessary to effectively carry on the unitized methods of operation described in the proposed Plan of Unitization.

"9. That any one or all of the unitized methods of operation described in the attached Plan of Unitization as applied to the common source of supply underlying and included within the Unit Area are feasible, will prevent waste, and will, with reasonable probability, result in the increased recovery of substantially more oil and gas from the common source of supply than would otherwise be recovered; that the estimated additional cost of conducting such operations will not exceed the value of the additional oil and gas so recovered; that such unitization and the adoption of any one or more of such unitized methods of operation is for the common good and will result in the general advantage to the owners of the oil and gas rights in and to the common source of supply thereby affected."

In respect to the Plan of Unitization attached to and made a part of the order and which by the terms of the unitization statute and of the order governs the operation of the Unit, the Commission (R. 1247-1248) found:

"11. That the Plan of Unitization attached to this order and which is made a part hereof, is one suited to the needs and requirements of the West Cement Medrano Unit, the creation of which is hereby authorized and approved, taking into account all the facts and conditions found by the Commission to exist in respect thereto; that said Plan of Unitization is fair, reasonable and equitable and contains all the terms, provisions, conditions and requirements reasonably

necessary and proper to protect, safeguard and adjust the respective rights and obligations of the several persons affected, including royalty owners, owners of overriding royalty interests, oil and gas payments, carried interests, mortgages, lien claimants, and others, as well as the lessees and such as will effectuate and accomplish the purposes of H. B. 339 of the 1945 Oklahoma Legislature; that said plan of unitization provides for the efficient unitized management and control of the further development and operation of the Unit Area for the recovery of oil and gas from the common source of supply affected; that the division of interests set forth in 'Exhibit B' attached to said Plan of Unitization pursuant to which the unit production is to be apportioned and allocated among and to the several separately owned tracts within the Unit Area is fair and equitable and is such as will reasonably permit persons otherwise entitled to share in or benefit by the production from such separately owned tracts to receive, in lieu thereof, their fair, equitable and reasonable share of the unit production or other benefits thereof; that the division of interest assigned to the several separately owned tracts in the Unit Area as set out in said 'Exhibit B' to said Plan of Unitization is fair and reasonably representative of the value of said several tracts for oil and gas purposes and the contributing value thereof to the unit in relation to like values of other tracts in the unit; that the basis used to arrive at said division of interest takes into account the acreage of the several separately owned tracts, the quantity of oil and gas recoverable therefrom, the location thereof on structure, the probable productivity of oil and gas from such tracts in the absence of unitization, the burden of operation to which such tracts will or are likely to be subjected, together with all other pertinent engineering, geological and operating factors as are reasonably sus-

ceptible of determination; that the manner in which and the basis, terms and conditions on which the cost and expense of the further development and operation of the Unit Area shall be financed and apportioned among and assessed against the tracts and interests chargeable therewith are fair, reasonable and equitable; that the provisions of the said Plan with respect to taking over and using the wells, equipment and other properties of the several lessees within the Unit Area, including the method of arriving at the compensation therefor and otherwise proportionately equalizing and adjusting the investment of the several lessees in the project as of the effective date of the unit operations are fair, reasonable and equitable; that the provisions of said Plan with respect to the creation of an operating committee and the powers and duties of such committee are fair, reasonable and equitable.

"12. That the Plan of Unitization hereto attached in all respects conforms to and complies with the requirements of H. B. 339 of the 1945 Oklahoma Legislature."

Attached to and made a part of the order was the Plan of Unitization prescribed by the Commission (R. 1250-1303),[4] which in great detail defined the Unit, its Unit Area, the powers and duties of the Unit, the effect of unitization, how the production was to be allocated, the powers of an Operating Committee consisting of a representative of each lessee, the time when the Unit shall become effective, the manner of selection and powers of a Unit Operator, the method of payment and of apportionment of the cost and expense of the project, the man-

4. Also attached as Appendix "C" to brief of appellants, The Palmer Oil Corporation, et al.

ner of initially adjusting the investment of the several lessees, the general plan of operation, and all other matters material to the unitized operation of the pool and the rights and obligations of all parties in respect thereto, found by the Commission to comply in all respects with the requirements of the unitization law (R. 1248).

The Commission further found that at the time of the making of its order the Plan of Unitization so prescribed by it had been signed by lessees of record and of approximately 94 per cent of the area of the common source of supply and that the lessees appearing at the hearing and protesting the granting of the petition were lessees of approximately 4 per cent thereof (R. 1244-1245).

Evidence in Support of Order

Contrary to the statements of appellants, every finding required to be made by the statute and every finding by the Commission in its order is amply sustained by an abundance of evidence. The evidence in the case occupies approximately 1036 pages of the printed record, beginning at page 201 and continuing through page 1237, plus 116 exhibits. The Commission, in respect to the evidence, in its order said (R. 1241):

> "At the hearing everyone who desired to do so, regardless of the interest of such person, was given full opportunity to offer any and all competent evidence that any such person chose to offer, either for or against the recommended plan of unitization or by way of amendment thereto, and to otherwise be heard in regard thereto. The evidence so introduced

consisted of extensive geological, engineering and other proof concerning the history, development, discovery, operation and present condition of the West Cement Medrano field and the probable results obtainable both under present competitive methods of operation and through the unitization thereof; proof both pro and con as to the fairness, reasonableness and equitableness of the recommended Plan of Unitization; and proof by protestants with respect to certain amendments which they claim should be made in said Plan.

"In addition to the knowledge gained from the evidence introduced at said hearing, the Commission has had, over a period of time, a general knowledge of the West Cement Medrano field and of conditions existing therein gained through the exercise by it of its jurisdiction over such field under the Conservation Laws of the State of Oklahoma, dating from the discovery thereof. As a result of the evidence, statements and arguments introduced and made in the hearing here under consideration, and by reason of its general knowledge of said West Cement Medrano field, as aforesaid, the Commission is of the opinion that it has sufficient knowledge and information upon which to base a proper order in this cause."

The Supreme Court of Oklahoma, which under the statute was required to and did review the evidence, found the same to be sufficient.

To avoid repetition, appellees do not here detail the evidence but refer the court to Point IV of the argument wherein reference is made to the evidence sustaining the parts of the order which appellants assert are not supported by the evidence.

The most that appellants can say is that in certain respects there was a conflict of evidence. The Corporation Commission of Oklahoma, the duly constituted and well qualified governmental body charged by the state with hearing the evidence and determining the facts, resolved this conflict in favor of the findings and order in this case.

Action Taken Pursuant to Order

Although not appearing in the record in this case because of their occurrence subsequent to the completion of the record and proceedings before the Commission, the following are pertinent facts which are matters of record known to the parties in interest and concerning which there can be no dispute.

Pursuant to the order of the Commission, the West Cement Medrano Unit created thereby on December 1, 1947, took over the operation of the West Cement Medrano Pool as a single unit and has since continued to operate the same as such. In compliance with the order the Unit has installed gas gathering, compression and injection facilities at a cost in excess of one million dollars and has returned all produced gas the reservoir. In addition, it has drilled five additional oil production wells strategically located along the lower flank of the oil producing portion of the field. Two additional wells have yet to be drilled.

At the time the Unit took over the operation of the pool, the pool was producing approximately 4,600 barrels of oil per day. Today, after four years and four months of unit operation, the field is still producing an average of

4,500 barrels of oil per day, having in the meantime produced 6,460,000 barrels of oil over and above what had been produced at the time the pool was unitized. From the time that oil was first discovered in the pool in March, 1943, to the date of unitization on December 1, 1947, the pool by nonunitized methods of production only produced approximately 11,000 barrels of oil per pound of reservoir pressure drop. Subsequent to unitization the pool has produced 43,000 barrels of oil per pound of reservoir pressure drop. Before unitization, the pool had produced about 60 per cent of the gas in the reservoir with only 6.7 per cent of the oil initially in place (R. 246). Since unitization the pool has produced approximately the same percentage of the oil in place with only 3.6 per cent of the gas. Considering the vital importance of reservoir pressure and the efficient use of the gas energy to the production of oil, the increased recovery of oil per pound of pressure drop and the reduced ratio between produced gas and oil recovery clearly evidences the success of the project. No gas is being blown to the air but, except for that used as fuel, is all being returned to the reservoir. At such time as the maximum oil recovery is obtained, a large portion of the gas so returned to the reservoir and utilized as reservoir energy will be available for sale or light, heat and power purposes for the benefit of all concerned.

Proceedings on Appeal

In due time after the entry by the Corporation Commission of its unitization order, the appellants in this court lodged their appeals in the Supreme Court of Okla-

homa (R. 146-167), as authorized by the unitization law. In addition, The Palmer Oil Corporation, Paul Sterba and Paul Sterba, Jr., appellants in this court, filed an original proceeding in the Supreme Court of Oklahoma seeking a writ of prohibition against the enforcement of the unitization order by the Corporation Commission (R. 1-14). The appeals and the original action for prohibition were consolidated in such court (R. 16) and there fully briefed, argued and considered by the Supreme Court of Oklahoma in respect to all of the matters raised on appeal to this court. The Supreme Court of Oklahoma on March 20, 1951, handed down its opinion and decision in the consolidated cases, sustaining the Oklahoma unitization law and the order of the Commission relating to the West Cement Medrano Pool made pursuant thereto and finding that said order was fully sustained by the evidence (R. 28-56). Petition for rehearing was thereupon filed by appellants herein and denied (R. 78-130).

The cases now come to this court on appeal from the judgment and final action of the Supreme Court of Oklahoma.

The appellees in this court consist of the Corporation Commission of Oklahoma and owners of oil and gas leases upon and covering 94 per cent of the unitized area who favor the unitization of the pool pursuant to the order of the Corporation Commission.

The appellants herein are the lessees of approximately 4 per cent of the unitized area and royalty owners who are but a small part of the "several hundred royalty owners" found by the Commission (R. 1244) to own royalty

interests within the Unit Area. As further stated by the Commission in its order (R. 1241), a number of other royalty owners urged upon the Commission that the petition be granted.

Other Units

Attention is called to the fact that the particular unit here under consideration is not the only unit that has been created pursuant to the Oklahoma unitization law and that may be affected by the decision herein. In addition, thirteen other units have been so created by orders of the Corporation Commission pursuant to the same law, following substantially the same procedure and the same pattern as was followed in the case of the West Cement Medrano Unit. Several of the units so created embrace some of the larger and more active oil fields in the state, such as the West Edmond Hunton Lime Unit consisting of 30,000 acres, the Southwest Antioch Gibson Sand Unit embracing 7,500 acres, the Elk City Hoxbar-Conglomerate Sand Unit embracing approximately 4,500 acres, the Northeast Elmore Third Deese Sand Unit embracing 4,240 acres, *et al.* Several other such units have been created or are now in the process of being created or enlarged under the unitization law as subsequently amended by the 1951 Legislature.

Subsequent to the judgment in the cases from which these appeals are taken, the Supreme Court of Oklahoma in the cases of *Spiers* v. *Magnolia Petroleum Company, et al.*, October 23, 1951, Vol. 22, Okla. Bar Journal, pp. 1577, 1583, 1584, again sustained the validity of the law as well

as the sufficiency of orders of the Corporation Commission creating the Chitwood Spiers Sand Unit and the Chitwood Cunningham Sand Unit in Grady County, Oklahoma.

SUMMARY OF ARGUMENT

Point I.

House Bill 339 providing for unitized operation of separately owned tract within a common source of supply of oil and gas is a proper and reasonable exercise of the Police Power.

A. Unit operations necessary to proper use and control of reservoir energy and greatest recovery of oil and gas. Cited is a substantial amount of source material and court decisions showing that an oil and gas reservoir is inherently and by nature a single unit and that in order to properly operate the same, to recover the greatest quantity of oil and gas therefrom and to properly protect the correlative rights of the several owners, it is necessary that the same be operated as a unit. Included is the citation of the opinion in the case of *Burford* v. *Sun Oil Company* (1943), 319 U. S. 315, wherein this court said, "For these, and many other reasons based on geologic realities each oil and gas field must be regulated as a unit for conservation purposes." The point is made that an oil and gas reservoir is a "common source of supply", that the reservoir energy therein is "owned in common", and that the oil and gas constitutes a common fund", authorities being cited for each such statement.

B. Purposes of Act within scope of State's Police Power. Cited are the oil and gas conservation and correla-

tive rights cases by this court, commencing with *Ohio Oil Company* v. *Indiana*, (1900), 177 U. S. 190, down to *Cities Service Gas Company* v. *Peerless Oil and Gas Company* (1950), 340 U. S. 179. Although unnecessary to so decide in this case inasmuch as the statute and order under consideration have to do both with conservation and adjustment of correlative rights, it is pointed out that under the cases cited, the authority of the state in the exercise of the police power extend not only to matters of conservation and the adjustment of correlative rights in relation thereto, but also to the adjustment of the correlative rights of the owners of a common source of supply of oil and gas separate and apart from any question of conservation. Cited as further support for the statement just made is the opinion of Justices Rutledge, Black, Murphy and Burton in *Republic Natural Gas Company* v. *Oklahoma* (1950), 334 U. S. 62.

C. Unitization of separately owned tracts within common source of supply of oil and gas is recognized means of accomplishing purposes within Police Power. Cited are the cases of *Hunter* v. *McHugh* (1943), 320 U. S. 222; *Patterson* v. *Stanolind Oil & Gas Company* (1940), 305 U. S. 376; and *Ramsey* v. *City of Oxford* (1929), 280 U. S. 563, sustaining the authority of the state, or a city in the *Ramsey* case, in the exercise of their police power to require the unitization and unitized operation of separately owned tracts within a common source of supply for purposes within the police power. So far as the constitutional questions and the effect on the property rights and contracts of the several owners are concerned, there is no difference whatever between the operation and effect of unitization

and unitized operation of separately owned tracts within a drilling or spacing unit or a city drilling block on the one hand, and the unitization and unitized operation of some larger segment of the common source of supply on the other. The only difference is the size of the unit area and the number of tracts involved. Both involve identically the same operating problems.

D. Unitization and unitized operation of separately owned tracts authorized under Principles of Swampland, Irrigation, Mill Dam, and similar cases. Cited are the cases of *Wurts* v. *Hoagland* (1885), 114 U. S. 606; *Head* v. *Amoskeag Manufacturing Company* (1883), 113 U. S. 9; *Fallbrook Irrigation District* v. *Bradley* (1896), 164 U. S. 112, and cases to the same effect holding that it is within the power of the state where adjoining property or other rights are held by various persons in severalty, and in the improvement of which all have a common interest, that the law will provide a way whereby they may compel one another to submit to measures necessary to secure the full improvement and enjoyment thereof through joint effort and expense. There is a striking analogy between the necessity for the application of such principles to the drainage of privately owned swamplands, the irrigation of privately owned arid lands, and the creation of other types of conservancy and improvement districts, and that of the common source of supply of oil and gas which cannot be fully and properly developed and the greatest recovery obtained therefrom without the joint or unitized effort of the several owners and at their joint expense. In the cited cases the means adopted to accomplish such purpose was the creation of the long recognized drainage,

irrigation or like type of district. The unit provided for under the Oklahoma unitization law is no different from a drainage or irrigation district in design and purpose except that it is called a unit instead of a district.

E. Numerous other states have laws providing for unitization of separately owned tracts within a common source of supply. Cited are the laws of Arkansas and Louisiana, which provide for compulsory field-wide unitization of common sources of supply of oil and gas. The Louisiana law, in particular, has been made applicable to a number of the larger and more important fields in the state. Only one such order has been taken to the Supreme Court of the state and was there sustained in the case of *Crichton* v. *Lee* (1946), 209 La. 561, 25 So.2d 229. Reference is also made to the fact that a large number of the oil producing states have laws providing for the compulsory pooling and unitized operation of separately owned tracts within spacing or well drilling units. The laws in the other states are not cited as a reason for upholding the validity of the Oklahoma law except as showing that unitization of properties for oil and gas purposes is an accepted practice.

F. Provisions and requirements of House Bill 339 are reasonable. Analysis of the law shows that it conforms in all respects to due process by way of providing a full and complete hearing in respect to all matters, a full and complete review in the courts on appeal, and adequate safeguards to protect against abusive action by the unit in its unitized operation of the properties affected. Contrary to the statement of appellants, the Act does not arbitrarily turn over to any particular lessee or group of

lessees, large or small, integrated or nonintegrated, or other private persons, the right at will to dictate the manner and method in which a pool shall be unitized and operated, the property to be included, the apportionment of the unit production, or the operation of the properties of others. Instead, what is done, is done pursuant to order of the Corporation Commission, after notice and hearing, and upon such terms as the Corporation Commission prescribes. It is pointed out that the operation of the unitized properties is not by lessees as private persons but by the unit, which under the law is made "a body politic and corporate", a public corporation performing functions of government. This court in the case of *Fallbrook Irrigation District* v. *Bradley* (1896), 164 U. S. 112, upheld the power of the states to create such agencies of government consisting of interested property owners and to prescribe the powers with which they shall be endowed. The court in that case said that the officers of such a public corporation are public officers. It is pointed out how that in the management of the unit every lessee, whether he be a petitioner or not, has a voice in proportion to the interest of such lessee in the unit. Once the unit is organized, former reasons for differences cease to exist inasmuch as all then have only a common purpose, working in cooperation to recover the greatest possible volume of oil and gas from the common source of supply under and in accordance with the best and most efficient engineering and operating practices. There is nothing in the unitization law that takes away from the Corporation Commission its continuing jurisdiction under the general conservation laws, which jurisdiction was specifically reserved in the Commission by

the order in respect to the West Cement Medrano Unit (Paragraph 4 of Order, R. 1249).

G. Being within the scope of the Police Power, debatable questions of reasonableness, wisdom or propriety of the Act are for the Legislature, not the courts. Cited are the cases of *C. B. & Q. Railway Company* v. *McGuire* (1910), 219 U. S. 549; *McLean* v. *Arkansas* (1908), 211 U. S. 539; *Standard Oil Company* v. *Marysville* (1929), 279 U. S. 582; *Cities Service Gas Company* v. *Peerless Oil & Gas Company* (1950), 340 U. S. 179, and cases to the same effect.

Point II.

Provisions of the law requiring that petition be filed by designated percentage of interest of lessees and providing that proceeding be dismissed on protest of a certain percentage are not an unlawful delegation of legislative authority to private parties.

Under the decisions in *Currin* v. *Wallace* (1939), 306 U. S. 1; *Miller* v. *Schoene* (1928), 276 U. S. 272; *Doty* v. *Love* (1935), 295 U. S. 64; *Fallbrook Irrigation District* v. *Bradley* (1896), 164 U. S. 112; *United States* v. *Rock Royal Co-operative* (1939), 307 U. S. 533; *Parker* v. *Brown* (1942), 317 U. S. 341; and *Booth* v. *Indiana* (1915), 237 U. S. 391, the vesting in a percentage or class of private parties the exclusive right to institute some proceeding, or provision that the action of an agency of government be made subject to approval of a percentage or class of persons affected, is but a procedural step or condition prescribed by the legislature as a condition to the exercise of its legislative will and does not amount to the

delegation to such parties of legislative authority where if anything is to be done, it is done by or under the supervision of a governmental agency, and particularly where the right of judicial review is provided. In the case of the creation of a unit under Oklahoma House Bill 339, the petitioners are given no authority to impose their will upon the minority. If anything is done, it is done by or pursuant to order of the Corporation Commission, whose action is made subject to review on appeal by the Supreme Court of Oklahoma.

The cases of *Eubank* v. *City of Richmond* (1912), 226 U. S. 137; *Carter* v. *Carter Coal Company* (1936), 298 U. S. 238; and *Washington ex rel. Seattle Title & Trust Company* v. *Roberge* (1928), 278 U. S. 116, have no application inasmuch as in those cases the statutes or ordinances gave to a percentage or a class of persons the right, at their will and without any other legislative standard being provided, of saying what should be done with respect to the conduct, rights or property of a minority. No discretion or supervisory action of any kind by any agency of government was involved. No hearings were provided for. There was no right of appeal. These cases are expressly distinguished in the case of *Currin* v. *Wallace*.

Point III.

The procedural and other rights granted the lessees as distinguished from the lessors or royalty owners do not deny to the lessors or royalty owners the equal protection of the law.

The problem is merely one of reasonable classification of persons affected. The states have the power to

classify and treat differently parties and objects affected thereby so long as there is reasonable basis for such classification in respect to the lawful objects to be accomplished. Every presumption is in favor of the validity of the legislation and the reasonableness of the classification, and the burden is on the party attacking the same to show the lack of reasonable basis therefor. The reasons for classifying and treating differently oil and gas lessees and the lessors are obvious, some of which are that the lessee by its lease contract is given the right and is charged with the responsibility of the development and operation of the leased premises; the lessee is the one that has the geological, engineering and operating staff and is in the better position to know what should or should not be done from the standpoint of competitive or unit operations of properties in a common source of supply; the lessee is the one required to advance and pay the cost of the project; the lessee has the greater quantum of interest, namely, seven-eighths as compared with one-eighth; the lessor or royalty owner normally and usually does not have the technical staff or operating knowledge to know what should or should not be done in respect to the operation of oil and gas properties; and as a rule, the lessors are scattered throughout the United States.

All of the rights given to a lessee under House Bill 339 and not extended to lessors are rights in respect to which the lessee, as distinguished from the lessor, is in a position to know best what should be done. Certainly the class of persons who are called upon to pay the cost of the project are entitled to consideration not extended those who are not so called upon to defray such cost.

So far as participating in the hearing and pointing out to the Commission what should go into its order and the plan of unitization, or the right of appeal, is concerned, the royalty owners under House Bill 339 have every right granted the lessee.

Point IV.

Order and Plan of Unitization are reasonable and are supported by the evidence.

Pointed out is the fact that appellants' real objection on this score is one of evidence. Although it is assumed that under the decisions of this court in *Milk Wagon Drivers Union* v. *Meadowmoor Dairies* (1940), 312 U. S. 287, 294, *Pennekamp* v. *Florida* (1946), 328 U. S. 331, and *Railroad Commission of Texas* v. *Rowan & Nichols Oil Company* (1940), 310 U. S. 573, this Court will rely upon the findings of fact and the determination by the Corporation Commission of what is reasonable, as affirmed by the Supreme Court of Oklahoma, nevertheless under this Point, reference is made to sufficient evidence in the record to show that the challenged findings of fact by the Commission are supported thereby and that the order is not contrary to the undisputed evidence.

Point V.

The enactment of Senate Bill 203 by the 1951 Oklahoma Legislature amending House Bill 339 has no effect in this case.

This Point has no material bearing in this case except to eliminate confusion as to the effect of such amendment. The Supreme Court of Oklahoma has determined

that Senate Bill 203 is but a re-enactment and continuation of House Bill 339, with certain amendments, and has no effect on the rights of the parties in this case. Being an interpretation of the operation and effect of a state law, it is conclusive here. The amendment does not indicate a question in the minds of the Oklahoma Legislature as to the "legal" sufficiency of the law prior to amendment. It is significant, however, to demonstrate that after six years of experience under House Bill 339, under which fourteen units have been created, the state has through its Legislature redeclared its purpose and policy of fostering unitized operation of oil and gas pools by the enactment of the amended unitization law.

ARGUMENT

Point I.

House Bill 339 providing for unitized operation of separately owned tracts within a common source of supply of oil and gas is a proper and reasonable exercise of the Police Power of the State.

A. Unit operations necessary to proper use and control of reservoir energy and greatest recovery of oil and gas.

The technical reports, reports of investigation by governmental agencies, articles, court decisions, and other sources of authority cited in the Appendix to this brief leave no doubt that in fact and on the basis of sound engineering, a common source of supply or reservoir of oil and gas is the natural and proper unit of operation and that the operation thereof as a unit is necessary to a full and proper use of the reservoir energy, the greater re-

covery of oil and gas therefrom and the full protection of the coequal rights of the several persons having the right to produce or share in the production therefrom. The unitized control and operation of an oil and gas reservoir is the recognized scientific way in which an oil and gas reservoir should be operated.

Such facts have long been recognized by the courts.

This court in the case of *Burford* v. *Sun Oil Company* (1943), 319 U. S. 315, 318, in discussing the "unit" characteristics of an oil reservoir and the functions of the gas and gas energy therein as related to the production of oil, said:

> "Oil exists in the pores and crevices of rock and sand and moves through these channels. A large area of this sort is called a pool or reservoir and the East Texas field is a giant pool. The chief forces causing oil to move are gas and water, and *it is essential that the pressures be maintained at a level* which will force the oil through wells to the surface. As the gas pressure is dissipated, it becomes necessary to put the well 'on the pump' at great expense; *and the sooner the gas from a field is exhausted, the more oil is irretrievably lost.* Since the oil moves through the entire field, one operator can not only draw the oil from under his own surface area, but can also, if he is advantageously located, drain oil from the most distant parts of the reservoir. The practice of attempting to drain oil from under the surface holdings of others leads to offset wells and other wasteful practices; and this problem is increased by the fact that the surface rights are split up into many small tracts.
> * * *

*"For these, and many other reasons based on geologic realities, each oil and gas field must be regulated as a unit for conservation purposes. * * *"*

And further, p. 324:

"Of far more importance than any other private interest is the fact that the over-all plan of regulation, as well as each of its case by case manifestations, is of vital interest to the general public which must be assured that the speculative interests of individual tract owners will be put aside when necessary to prevent the irretrievable loss of oil in other parts of the field" (Emphasis ours).

As early as 1900 this court, in the case of *Ohio Oil Company* v. *Indiana*, 177 U. S. 190, 202, recognized that the source of supply of oil and gas is a "common reservoir" and that what occurs in one part of the reservoir directly affects the other portions thereof. It is in that case that this court refers to the oil and gas in common reservoir as being a "common fund". The court said:

> "True it is that oil and gas, like other minerals, are situated beneath the surface of the earth, but except for this one point of similarity, in many other respects they greatly differ. They have no fixed *situs* under a particular portion of the earth's surface within the area where they obtain. They have the power, as it were, of self-transmission. No one owner of the surface of the earth, within the area beneath which the gas and oil move can exercise his right to extract from the common reservoir, in which the supply is held, without, to an extent, diminishing the source of supply as to which all other owners of the surface must exercise their rights. The waste by one owner, caused by a reckless enjoyment of his right of striking

the reservoir, at once, therefore, operates upon the other surface owners. Besides, whilst oil and gas are different in character they are yet one, because they are unitedly held in the place of deposit."

And continuing, p. 209:

"But there is a coequal right in them all to take from a common source of supply the two substances which in the nature of things are united, though separate. It follows from the essence of their right and from the situation of the things as to which it can be exerted, that he use by one of his power to seek to convert a part of the common fund to actual possession may result in an undue proportion being attributed to one of the possessors of the right to the detriment of the others, or by waste by one or more to the annihilation of the rights of the remainder. * * *"

The court in the case of *Danciger Oil & Refining Company* v. *Railroad Commission* (Texas) (1932), 49 S. W.2d 837, 842, said:

"To make each well or each lease a unit of regulation and the validity of a general order dependent upon whether waste was taking place as to it would obviously render impossible the enforcement of any conservation measure, general in scope, as was contemplated by the statute. Appellant might, in the operation of its leases, under approved methods, if considered as a unit, extract without physical waste as to its particular leases the maximum amount of oil or gas recoverable therefrom. But if in doing so it causes what has come to be commonly known to that industry as 'coning,' 'water channeling,' gas dissipation, or destruction of 'reservoir energy' available to the reservoir or pool as a whole, and so trap

off and lose oil that would otherwise be recovered by the owners of adjacent lands; and so reduce the ultimate aggregate recovery from the field, waste, as contemplated by the law, would necessarily result. *No particular lease or well can therefore be taken as a unit, but must be considered in its relation to adjacent leases or wells, with a view to conserving the whole, and is subject to regulation accordingly*" (Emphasis ours).

The Supreme Court of California in the case of *People ex rel. Stevenot* v. *Associated Oil Company* (1930), 211 Cal. 93, 294 P. 717, 724, said:

"For present purposes it need only be noted that oil in this state is found under layers of rock in a sand or sandstone formation termed a lentille or 'lentil,' under pressure caused by the presence of natural gas within the formation. The layers of rock thus form a gas-tight dome or cover for the oil reserve. The oil adheres in the interstices between the sand particles. The natural gas may be in a free state at the top of the dome, but is also in solution with the oil, thus increasing the fluidity of the oil and the ease with which the oil is lifted with the gas in solution when the pressure on the gas is released by drilling into the oil 'sand.' *It is estimated that only from 10 to 25 per cent of the total amount of oil deposited in a reservoir is ultimately recovered, depending on the natural characteristics of the reservoir and the methods employed in utilizing the lifting power of the gas.* The importance of gas in the oil-producing industry has, therefore, become a question of great concern to the industry itself and to government, to the end that its function may be fully utilized without waste" (Emphasis ours).

As stated earlier in the brief, the Supreme Court of Oklahoma in the case of *Russell* v. *Walker* (1932), 160 Okla. 145, 15 P.2d 114, 117, in describing the nature and ownership of the reservoir energy in a common source of supply, said that "it is owned in common by the owners of the common source of supply." The full statement of the court is as follows:

> "That rule applies, not only to the natural gas pressure, but to the hydrostatic pressure and to all other forces combining to constitute the reservoir energy incident to or existing in the common source of supply. That reservoir energy is essential to the production of oil from the source of supply. Without it, it would be impracticable, if not impossible, to produce oil from the depth at which it is found in the Oklahoma City field. It is owned in common by the owners of the common source of supply."

The function of reservoir pressure or energy and what can be accomplished by controlled maintenance of pressure through the return of gas or water to the reservoir is described in the case of *Utilities Production Corporation* v. *Carter Oil Company* (10 C. C. A., 1934), 72 F.2d 655, 659, as follows:

> "1. *Repressuring of oil wells.* When an oil well plays out, it is not because all the oil has been recovered, but because the gas or water pressure has been exhausted. When the strata overlying an oil sand is penetrated by the drill, the gas within the formation, being under pressure, seeks the outlet, carrying with it the oil. When that pressure is gone, there is nothing left to bring the oil within reach of the pump, except gravity, the operation of which is limited to upper strata of the sand, and there counteracted by

> properties of viscosity, capillarity and adhesion of oil to its mother sand. Oil is produced by the lateral thrust of the gas pressure to the hole, and, after it quits flowing, the vertical lift of the oil to the top by a pump. Many years ago it was conceived that played-out wells could be given a new lease on life by injecting gases or liquids under pressure into the oil sands, thus starting the cycle anew. * * *".

See also *Champlin Refining Company* v. *Corporation Commission* (1932), 286 U. S. 210; *Patterson* v. *Stanolind Oil and Gas Company* (1938), 182 Okla. 155, 77 P.2d 83, 91.

The conclusion from what has been said above has been well recognized in Summers on Oil and Gas, Permanent Edition (1938), Volume 1, Section 104, an eminent authority on oil and gas law, wherein it is said:

> "In the light of all the physical facts respecting an oil and gas reservoir *there can be no doubt but that the single reservoir or pool is the natural unit of development.* Through such development many of the evils of physical and economic waste resulting from waste or inefficient use of reservoir energy, competitive drilling and overproduction may be avoided and a greater quantity of oil or gas ultimately produced from the formation. *While the desirability of this type of development may be clear, the ownership of lands by many persons within a single pool, each privileged to drill and produce oil or gas, makes unit development of the entire pool impossible, unless by voluntary agreement or legislative compulsion these interests can be merged or unitized*" (Emphasis ours).

The facts and conclusions so stated, as related to the West Cement Medrano common source of supply, are most

forcibly expressed in the findings of the Oklahoma Corporation Commission in this case.[5] In substance the Commission found that without unitization, treating such tract as a separate operating unit, there was resulting a disproportionate, inequitable and wasteful utilization and dissipation of the gas energy to the detriment and disadvantage of the other tracts and to the injury of the pool as a whole; that by best known nonunitized methods of operation not more than 25 per cent of the oil in place could be recovered; that by and through unitized management and operation of the reservoir as a unit, full use could be made of the reservoir energy and many millions of barrels of additional oil could thus be recovered, a more equitable distribution of the recoverable oil and gas could be had between the several owners and the correlative rights of the several owners more fully protected.

In fact, appellants nowhere in the record nor in their briefs, either in the court below or this court, seriously challenge the propriety and benefits to be gained by and through the unitized operation of a common source of supply of oil and gas.

Appellant, The Palmer Oil Corporation, in its brief, at page 37, says, "It may also be conceded that early unitization of an entire common source of supply of oil and gas and unit operation thereof, may result, over a period of time, in the greatest recovery of oil and gas therefrom, and, depending upon many other facts and circumstances, may be the most efficient and modern method known under present scientific information [Cit-

5. Paragraphs 6, 7, 8, 9, 11 and 12 of Findings of Fact, Order No. 20289 (R. 1245-47) quoted in full at pages 18-22 of this brief.

ing Summers on Oil and Gas, Volume 1, Section 104]." In this connection it should be noted that by the express terms of Sectfon 4 of the law under consideration, unitization under such law can be accomplished only in those cases where the Commission finds from the evidence that the desired beneficial results are likely to result. The law does not contemplate or authorize the indiscriminate unitization of all pools.

B. Purposes of Act within scope of State's Police Power.

The purpose of the Act is clearly stated and evidenced by its provisions and the legislative declaration of policy, namely, to bring about the greater ultimate recovery of oil and gas, prevent waste and protect and adjust the correlative rights of the owners thereof.

The authority of the state in the exercise of the police power to so enact reasonable legislation for such purposes is no longer subject to question. *Ohio Oil Co.* v. *Indiana* (1900), 177 U. S. 190; *Lindsley* v. *Natural Carbonic Gas Co.* (1911), 220 U. S. 61; *Walls* v. *Midland Carbon Co.* (1920), 254 U. S. 300; *Bandini Petroleum Co.* v. *Superior Court* (1931), 284 U. S. 8; *Champlin Refining Co.* v. *Corporation Commission* (1932), 286 U. S. 210; *Thompson* v. *Consolidated Gas Utilities Corp.* (1937), 300 U. S. 55; *Patterson* v. *Stanolind Oil & Gas Co.* (1940), 305 U. S. 573; *Hunter* v. *McHugh* (1943), 320 U. S. 222; *Cities Service Gas Co.* v. *Peerless Oil & Gas Co.* (1950), 340 U. S. 179.

This court, in its latest expression, in the *Cities Service* case, last cited, said (p. 185):

"The Due Process and Equal Protection issues raised by appellant are virtually without substance. It is now undeniable that a state may adopt reasonable regulations to prevent economic and physical waste of natural gas. This Court has upheld numerous kinds of state legislation designed to curb waste of natural resources and to protect the correlative rights of owners through ratable taking, *Champlin Refining Co.* v. *Corporation Commission*, 286 U. S. 210 (1932), or to protect the economy of the state. *Railroad Commission* v. *Rowan & Nichols Oil Co.*, 310 U. S. 573 (1940). These ends have been held to justify control over production even though the uses to which property may profitably be put are restricted. *Walls* v. *Midland Carbon Co.*, 254 U. S. 300 (1920).

"Like any other regulation, a price-fixing order is lawful if substantially related to a legitimate end sought to be attained. *Nebbia* v. *New York*, 291 U. S. 502 (1934) and cases therein cited. In the proceedings before the Commission in this case, there was ample evidence to sustain its finding that existing low field prices were 'resulting in economic waste, and conductive to physical waste.' That is a sufficient basis for the orders issued."

Although it is unnecessary to so decide in this case inasmuch as the purposes involved have to do both with conservation and the adjustment of correlative rights, it is clear from the cases cited that the power of the state so relied upon extends not only to matters of conservation and the adjustment of correlative rights in relation thereto, but also to the adjustment of correlative rights of owners of a common source of supply of oil and gas separate and apart from any question of conservation.

Thompson v. *Consolidated Gas Utilities Corporation, supra; Ohio Oil Co.* v. *Indiana, supra; Bandini Petroleum Co.* v. *Superior Court, supra.* See also opinion of Justices Rutledge, Black, Murphy and Burton in *Republic Natural Gas Co.* v. *Oklahoma* (1950), 334 U. S. 62.

C. Unitization of separately owned tracts within common source of supply of oil and gas recognized means of accomplishing purposes within Police Power.

This court has recognized and held constitutional the forced unitization and unitized operation of separately owned tracts within a common source of supply to accomplish conservation of oil and gas or other purposes equally within the scope of the police power.

The case of *Hunter* v. *McHugh* (1943), 320 U. S. 222, involved a statute and order by the Commissioner of conservation of Louisiana, requiring unitized development and operation of a 640-acre drilling unit embracing a number of separately owned tracts, wherein provision was made for the development and operation thereof by one of the owners and for the sharing of the production and costs by other owners. Appellant's assignment of error in that case was "that the act and order deprive it of property without due process of law by compelling it to combine its leasehold with the land of others within the drilling unit for the purpose of gas production and to share with them its pipe line and other facilities for the production and marketing of gas, for which no compensation is provided by the act or order. Although this court did not pass on the reasonableness of the particular apportionment of

production and costs because no final order in that respect had been made, it, in respect to the constitutional question relating generally to the compulsory pooling and unitized operation of the tracts comprising the drilling unit, said (p. 227):

> "In the present posture of the record, so far as the appeal seeks to bring before us for review the judgment of the state court sustaining the constitutionality of the statute, the record presents no substantial Federal question. We have held that a state has constitutional power to regulate production of oil and gas so as to prevent waste and to secure equitable apportionment among landholders of the migratory gas and oil underlying their land, fairly distributing among them the cost of production and of the apportionment [Citing cases]."

The case of *Patterson* v. *Stanolind Oil & Gas Company* (1940), 305 U. S. 376, involved an attack, under the due process, contract and equal protection clauses of the Federal Constitution, upon the Oklahoma well spacing law and an order of the Oklahoma Corporation Commission which, like the statute and order involved in the *Hunter-McHugh* case, provided for the pooling of separately owned tracts within a well spacing unit and the apportionment of the production therefrom to the several owners on an acreage basis. This court said (305 U. S. 379):

> "In the light of our previous decisions, the plaintiff has failed to raise a substantial federal question and the appeal is dismissed for the want of jurisdiction."

The case of *Marrs* v. *City of Oxford* (1929), 32 F.2d 134, 140, certiorari denied 280 U. S. 563, involved a city

ordinance of the City of Oxford, Kansas, requiring the pooling and unitized operation for oil and gas purposes of separately owned lots within a city block. The court said:

> "We do not doubt the validity of the ordinance here challenged. Its requirements and regulations are in protection of the public welfare, effective if enforced to accomplish that purpose; and the passage and adoption of it cannot in our judgment be justly said to be an arbitrary and unreasonable exercise of the city's power. This is enough to dispose of the appeal.
>
> "But looking to the substance of things, as equity does, what are the rights of plaintiffs that will be encroached upon or denied to them by the enforcement of this ordinance? It is not the mere right to drill a well on one or two lots at great cost and stop with that, or to take the proportionate part of the oil and gas in the pool that might be said to lie under or be fairly attributed to those lots. The obvious purpose was to reach the pool as quickly as possible and take all of the oil and gas obtainable before others could get it, thus seriously encroaching upon and probably destroying the same rights of adjoining lot owners. If one or more lot owners have given a lease for which no permit is obtainable their lessee may join a lessee who has a permit in the same block on terms that are fair to both lessor and lessee. If a lot owner has not given a lease he is protected by the asking in a fair proportion of the mineral produced by a permittee. The regulations make every effort to protect, rather than to destroy rights. They extend equal opportunity to all who have an interest and eliminate the race between those having equal rights in a common source of wealth, so that some may not take all and leave others with nothing. Under the law in Kansas there is no property in oil and gas, because of their migratory nature, until they have been captured, though each

surface owner may take without limit, unless lawfully restrained. *Phillips* v. *Springfield Crude Oil Co.*, 76 Kan. 783, 92 P. 1119; *National Supply Co.* v. *McLeod*, 116 Kan. 477, 227 P. 350. This is the rule also in Pennsylvania and Indiana. The nature of this right was fully discussed and defined in *Ohio Oil Co.* v. *Indiana*, 177 U. S. 190, 20 S. Ct. 576, 44 L. Ed. 729. The court in that case, after accepting the general practice as a settled principle, that every owner of the surface within a gas or oil field might prosecute his efforts and reduce to his possession if possible all of the deposits without violating the rights of other surface owners, in the absence of regulations to the contrary, said:

"'But there is a co-equal right in them all to take from a common source of supply, the two substances which in the nature of things are united, though separate. It follows from the essence of their right and from the situation of the things, as to which it can be exerted, that the use by one of his power to seek to convert a part of the common fund to actual possession may result in an undue proportion being attributed to one of the possessors of the right, to the detriment of the others, or by waste by one or more, to the annihilation of the rights of the remainder. Hence it is that the legislative power, from the peculiar nature of the right and the objects upon which it is to be exerted, can be manifested for the purpose of protecting all the collective owners, by securing a just distribution, to arise from the enjoyment by them, of their privilege to reduce to possession, and to reach the like end by preventing waste.'

"If this right in each and all of the surface owners can be thus restrained and its exercise regulated by a law of the state enacted for the purpose, how can it be held that a valid police regulation, which incidentally and in caution embodies the same restraint

and regulation, can be made the basis of a claim that plaintiffs have a right to take all of it, and any restraint of that right violates constitutional guaranties? The basis of a statute, suggested in the Indiana case, is the governmental power to equally protect each surface owner in his right to a common fund. * * *"

Other state decisions sustaining the validity of the unitization and unitized operation of separately owned tracts of land within drilling or spacing units are *Hood* v. *Southern Production Co.* (1944), 206 La. 642, 19 So.2d 336; *Placid Oil Co.* v. *North Central Texas Oil Co.* (1945), 206 La. 693, 19 So.2d 616; *Hardy* v. *Union Producing Co.* (1945), 207 La. 137, 20 So.2d 734; *Alston* v. *Southern Producing Co.* (1945), 207 La. 370, 21 So.2d 363; *Hunter* v. *Shell Oil Co.* (1947), 211 La. 893, 31 So.2d 10; *Croxton* v. *State* (1939), 186 Okla. 249, 97 P.2d 11; *Wood Oil Co.* v. *Corporation Commission* (1951) (not yet officially reported), 139 P.2d 1023. Other decisions upholding the validity of the unitization provisions of city drilling ordinances are *Blevins* v. *Harris* (1935), 172 Okla. 90, 44 P.2d 112; *Amis* v. *Bryan Petroleum Co.* (1939), 186 Okla. 206, 90 P.2d 936; *Anderson-Kerr Drilling Co.* v. *Van Meter* (1933), 162 Okla. 176, 19 P.2d 1068; *Helmerich & Payne* v. *Roxanna Drilling Corp.* (1932), 136 Kan. 254, 16 P.2d 663; *Marblehead Land Co.* v. *City of Los Angeles* (9. C. C. A., 1931), 47 F.2d 528; *Hunter* v. *Justice's Court of Centinela Township, County of Los Angeles* (1950), 36 Cal.2d 315, 223 P.2d 465.

So far as the constitutional questions and the effect on the property rights and contracts of the several owners are concerned, there is no difference whatever between the operation and effect of unitization and unitized opera-

tion of separately owned tracts within a drilling or spacing unit or a city drilling block, on the one hand, and the unitization and unitized operation of some larger segment of the common source of supply for some reason equally within the police power, on the other. The only difference is the size of the unit area and the number of tracts involved. There is the same centralized management and operation of the tracts whatever the size or number of tracts—the same sharing of facilities—the same adjustment of lease and other contract rights—the same apportionment of production to the separately owned tracts and owners—the same distribution of costs. The same questions in respect to the due process and contract clauses of the Constitution that are here raised were raised in the well spacing and city drilling ordinance cases. Under the Constitution there is no magic in the size of the unitized area so long as the purpose is within the police power.

It follows, therefore, that if the unitization of an entire common source of supply or some substantial portion thereof is reasonably required in the proper management, development and operation thereof, to procure therefrom the greatest ultimate recovery of oil, prevent waste and to fully protect the co-equal rights of the several owners thereof, purposes clearly within the scope of the police power, no reason from a constitutional standpoint exists why legislation providing for such unitization should not be adopted the same as in the case of the unitization of the smaller spacing unit or drilling block.

D. Unitization and unitized operation of separately owned tracts authorized under Principles of Swampland, Irrigation, Mill Dam, and similar cases.

A perfect analogy exists between the need for legislation in respect to unitization and unitized operation of separately owned tracts within a common source of supply of oil and gas and that necessitating legislation in respect to the drainage of swampland; the creation of irrigation districts, the building of mill dams, and the creation of other and various types of conservation and improvement enterprises, having for their purpose the better and more beneficial development, management and enjoyment, through joint effort and expense, of adjoining privately owned lands which by reason of their natural condition cannot be fully improved and enjoyed without joint action and at joint expense.

In the case of a common source of supply of oil and gas, it is "common" to the lands overlying the same. The reservoir energy in the reservoir, as said by the Oklahoma Supreme Court in *Russell* v. *Walker* (1932), 160 Okla. 145, 15 P.2d 114, 117, "is owned in common by the owners of the common source of supply." The oil and gas in the reservoir, under the holding of this court in *Ohio Oil Co.* v. *Indiana* (1900), 177 U. S. 190, is a "common fund". What one owner does directly and materially affects all others. The owners, acting separately, cannot so produce their wells and utilize the reservoir energy so as to obtain the greatest recovery of oil and gas. Because of the migratory nature of gas or water returned to the reservoir, the owners cannot, except through unitization

and joint effort, successfully engage in or carry on pressure maintenance or repressuring operations. Acting individually, the owners can recover only about 25 per cent of the oil which nature has placed in the reservoir, whereas through joint effort twice to three times as much can be recovered. The additional oil recovered through unitized operations is like the finding of a new source of supply of oil equal in size to that of the same source of supply in the absence of unitized operation. Like in the case of drainage of swamplands, the irrigation of arid lands and the building of mill dams, the public has a very definite interest in the results of the project and in the greater recovery and conservation of the natural resource.

In the case of *Wurts* v. *Hoagland* (1885), 114 U. S. 606, this court had under consideration the validity of a New Jersey act authorizing, upon proceedings instituted "by some of the proprietors," the drainage of privately owned swamplands, over the objection of other of the owners, which by reason of the natural condition thereof could not be improved and fully enjoyed without the concurrence of all and at their joint expense. This court said (p. 613):

> "This review of the cases clearly shows that general laws for the drainage of large tracts of swamps and lowlands, upon proceedings instituted by *some of the proprietors* of the lands to compel all to contribute to the expense of their drainage, have been maintained by the courts of New Jersey, (without reference to the power of taking private property for the public use under the right of eminent domain, or to the power of suppressing a nuisance dangerous to the public health) as a just and constitutional exercise of

the power of the Legislature, to establish regulations by which *adjoining lands, held by various owners in severalty and in the improvement of which all have a common interest*, but which, by reason of the peculiar natural condition of the whole tract, cannot be improved or enjoyed by any of them without the concurrence of all, *may be reclaimed and made useful to all at their joint expense*. The case comes within the principle upon which this court upheld the validity of general Mill Acts in *Head* v. *Amoskeag Mfg. Co.*, 113 U. S. 9" (Emphasis ours).

In the case of *Head* v. *Amoskeag Manufacturing Company* (1885), 113 U. S. 9, cited in the *Hoagland* case, involved an act by the New Hampshire Legislature authorizing companies engaged in manufacturing to erect private dams along streams to create power for the operation of their mills even though by so doing, the land of upstream riparian owners was overflowed. This court, after discussing at length the various theories on which the mill dam acts and acts for the drainage of swamplands and other similar projects had been sustained, said (p. 21):

"We prefer to rest the decision of this case upon the ground that such a statute, considered as regulating the manner in which the rights of proprietors of lands adjacent to a stream may be asserted and enjoyed, with a due regard to the interests of all, and to the public good, is within the constitutional power of the Legislature.

"*When property in which several persons have a common interest, cannot be fully and beneficially enjoyed in its existing condition, the law often provides a way in which they may compel one another to submit to measures necessary to secure its beneficial enjoyment, making equitable compensation to*

any whose control of or interest in the property is thereby modified. * * *

"The statutes which have long existed in many States, authorizing the majority of the owners in severalty of adjacent meadow or swamplands to have Commissioners appointed to drain and improve the whole tract, by cutting ditches or otherwise, and to assess and levy the amount of the expense upon all the proprietors in proportion to the benefits received, have been often upheld, independently of any effect upon the public health, as reasonable regulations for the general advantage of those who are treated for this purpose as owners of a common property" (Emphasis ours).

In the case of *Fallbrook Irrigation District* v. *Bradley* (1896), 164 U. S. 112, this court, in sustaining the validity of a California law providing for the creation of irrigation districts for the irrigation and better improvement of privately owned lands, said (p. 163):

"The power does not rest simply upon the ground that the reclamation must be necessary for the public health. That indeed is one ground for interposition by the state but not the only one. Statutes authorizing drainage of swamp lands have frequently been upheld independently of any effect upon the public health, as reasonable regulations for the general advantage of those who are treated for this purpose as owners of a common property. *Head* v. *Amoskeag Mfg. Co.*, 113 U. S. 9, 22 (28:889,894); *Wurts* v. *Hoagland*, 114 U. S. 606, 611 (29:229-230); Cooley, Taxn.2d ed. p. 617. *If it be essential or material for the prosperity of the community, and if the improvement be one in which all the landowners have to a certain extent a common interest, and the improvement cannot be accomplished without the concurrence of all or nearly all of such*

owners by reason of the peculiar natural condition of the tract sought to be reclaimed, then such reclamation may be made and the land rendered useful to all and at their joint expense. In such case the absolute right of each individual owner of the land must yield to a certain extent or be modified by corresponding rights on the part of other owners for what is declared upon the whole to be for the public benefit" (Emphasis ours).

For an interesting background discussion of the principles relied upon by this court in the cases last above cited, having their origin in early common law jurisprudence, see *Fiske* v. *Mfg. Co.* (Mass.), 12 Pick. 68; *Turner* v. *Nye* (Mass.), 14 L. R. A. 478; *Lowell* v. *City of Boston*, 111 Mass. 454.

The same principles were applied by the Supreme Court of Pennsylvania in the case of *Jukman* v. *Rosenbaum* (1919), 263 Pa. 158, 106 Atl. 238, and by this court on appeal in the same case, 260 U. S. 22, 30, to a Pennsylvania act authorizing the physical invasion of the surface of adjoining lands for the purpose of erecting a party wall and providing for the mutual rights and obligations of the adjoining owners in respect thereto. The Supreme Court of Pennsylvania, in the case before it, said (106 Atl. 243):

"If it be said that the dangers from fire may be amply provided against in other ways, the answer is that, since the ordained method presents a long-established, oft-approved, and reasonably proper means to accomplish the desired purpose, which in congested districts (where, for the public welfare, it is desirable and necessary to economize land space) contributes to the common economical management of

adjoining properties, its validity as a proper measure cannot be attacked successfully.

"In connection with the thought just suggested concerning the right to use the police power of the state to work out a common scheme for the economical management of adjoining properties, see *Wurts* v. *Hoagland*, 114 U. S. 606, 611, 5 Sup. Ct. 1086, 1089 (29 L. Ed. 229), involving the constitutionality of a state law for the common drainage of adjacent lands, where Mr. Justice Gray quoting from another case, states [Here the court quotes from *Wurts* v. *Hoagland*]:

"Upon the application of this power to a land irrigation case, see *Fallbrook Irrigation District* v. *Bradley*, 164 U. S. 112, 163, 17 Sup. Ct. 56, 65 (41 L. Ed. 369), where it is said: 'In such case the absolute right of each individual owner of land must yield to a certain extent or be modified by corresponding rights on the part of other owners for what is declared upon the whole to be for the public benefit'."

This court, in affirming the case on appeal, said (260 U. S. 30):

"In the state court the judgment was justified by reference to the power of the state to impose burdens upon property or to cut down its value in various ways without compensation, as a branch of what is called the police power. *The exercise of this has been held warranted in some cases by what we may call the average reciprocity of advantage, although the advantages may not be equal in the particular case.* *Wurts* v. *Hoagland*, 114 U. S. 606, 29 L. Ed. 229, 5 Sup. Ct. Rep. 1086; *Fallbrook Irrig. Dist.* v. *Bradley*, 164 U. S. 112, 41 L. Ed. 369, 17 Sup. Ct. Rep. 56; *Noble State Bank* v. *Haskill*, 219 U. S. 104, 111, 55 L. Ed. 112, 116, 32 L. R. A. (N. S.) 1062, 31 Sup. Ct. Rep. 186, Ann. Cas. 1912A, 487" (Emphasis ours).

This court has further applied the principles so stated to an enforced composition in bankruptcy in which a number of individual creditors have a common interest. In the case of *Louisville Joint Stock Land Bank* v. *Radford* (1935), 295 U. S. 555, 585, this court said:

> "So far as concerns dissenting creditors, the composition is a method of adjusting among creditors rights in property in which all are interested. In ordering the adjustment, the bankruptcy court exercises a power similar to that long exercised by courts of law, *Head* v. *Amoskeag Mfg. Co.*, 113 U. S. 9, 21, 28 L. Ed. 889, 893, 5 Sup. Ct. 441, * * *."

The applicability of the principles so discussed under this subhead D to the operation and development of a common source of supply of oil and gas is made clear in the opinion of Justices Rutledge, Black, Murphy and Burton in the case of *Republic Natural Gas Company* v. *Oklahoma* (1948), 334 U. S. 62, 74, 90.

Although the opinion in the *Republic* case appears as a dissenting opinion, the element of dissent had to do with a jurisdictional question which the majority of the court held precluded a consideration of the case on its merits, but from the special concurring opinion by Mr. Justice Douglas, it appears that a majority of the court were in accord with the minority opinion in respect to the constitutional questions involved.

E. Numerous other states have laws providing for unitization of separately owned tracts within a common source of supply.

Oklahoma is not the only state having laws that provide for the compulsory unitization of a common source of supply. Arkansas in 1951 adopted such a law patterned somewhat after the Oklahoma statute.[6] The States of Alabama[7], Georgia[8], Florida[9], and Louisiana[10] all have laws that provide for field-wide unitization where necessary to carry on cycling operations. The Louisiana law has been applied to a number of pools in that state and was sustained by the Supreme Court of Louisiana in the case of *Crichton* v. *Lee* (1946) 209 La. 561, 25 So.2d 229, in respect to an order of unitization relating to the Cotton Valley Pool.

The States of Alabama[11], Arkansas[12], Colorado[13], Georgia[14], Florida[15], Indiana[16], Louisiana[17], Michigan[18], Mississippi[19], New Mexico[20], Oklahoma[21] and Wyoming[22]

22. 1951 Cumulative Pocket Part Supplement to Volume 4 of Wyoming Compiled Statutes 1945, Section 57-1113.

all have laws providing for the compulsory pooling and unitized operation of separately owned tracts within drilling or spacing units.

F. Provisions and requirements of the law are reasonable.

It requires only a brief review of the Act[23] to demonstrate its reasonableness and the extent of the protection and advantages afforded the nonconsenting land and royalty owners and lessees. It limits individual rights no more than is reasonably necessary and proper to accomplish the desired objectives. Certain adjustments of property and contract rights are of course necessary.

Contrary to the statements of appellants, the Act does not arbitrarily turn over to any particular lessee or group of lessees, large or small, integrated or nonintegrated, or other private individuals, the right at will to dictate the manner and method in which a pool shall be unitized and operated, the property to be included, the apportionment of the unit production, or the operation of properties of others.

Section 4 provides that before a unit can be created, the Commission, after notice and hearing, must determine and find that to do so will reasonably accomplish the objectives of the Act and that if such is the case, the Commission shall enter its order creating the unit, but upon "such terms and conditions as may be shown by the evidence to be fair, reasonable, equitable and which are necessary or proper to protect, safeguard and adjust the respective rights and obligations of the several persons

23. See pp. 4-16 of this brief.

affected, including royalty owners, owners of overriding royalties, oil and gas payments, carried interests, mortgagees, lien claimants and others, as well as the lessees."

The range and adequacy of the hearing so provided for is evidenced by the twenty-four days of testimony in this case extending over a period of eight months and resulting in the voluminous record herein. It was no hyperbole when the Commission in its order (R. 1241) recited that "at the hearing everyone who desired to do so, regardless of the interest of such person, was given full opportunity to offer any and all competent evidence that any such person chose to offer, either for or against the recommended Plan of Unitization or by way of amendment thereto, and to otherwise be heard in regard thereto."

Section 5 requires that the *"order of the Commission"* define the unit area of the unit, limited to all or a portion of a single common source of supply, and prescribe the "plan of unitization" applicable thereto. Section 5 in detail sets out and outlines the legislative requirements and standards to guide the Commission in so defining the unit area and prescribing the plan of unitization for a particular unit. The requirements and standards in respect to the plan of unitization so set out cover every phase of unitization and unitized operation of an oil and gas pool, including, among other things, the manner and method of operation, the division of interest or formula for the apportionment or allocation of unit production, the method of financing, the initial adjustment of investment, the management of the unit, the time when the unit shall become effective, as well as when it shall end.

All that the petitioners or any group of lessees can do under the provisions of Sections 4 and 5 of the Act in respect to the formation of a unit is to file the petition and submit, for the convenience of the Commission, a recommended plan of unitization. What is done if a unit is to be created, the terms, provisions, conditions and limitations thereof, the definition and extent of the unit area, and what the plan of unitization shall provide are all determined and prescribed by the Corporation Commission after notice and hearing pursuant to the standards and guides prescribed by the Legislature.

Section 7 provides for a full, speedy and adequate review of any such order of unitization by the Supreme Court of the State of Oklahoma on appeal therefrom.

In addition, Section 7 authorizes any person, firm or corporation aggrieved by the order of the Commission or the action of a unit, to bring suit in the District Court of the county in which the unit is located to have his rights and equities determined, in connection with which the further right of appeal to the Supreme Court of Oklahoma obtains.

Sections 9 and 10 further spell out in detail the extent of the adjustment of the rights and interests of the parties resulting from and necessary to effect any such plan of unitization. Section 9 makes it clear that under no circumstances and in no event can the one-eighth part of the production constituting the normal one-eighth royalty of the landowner be chargeable with any part of the cost or expense of unit operation and that an otherwise free royalty in excess of the one-eighth can only be made

secondarily subject to such costs in the event the party who by contract is obligated to pay the same fails to do so. Even then the owner of the excess royalty who may be called upon to pay a part of the cost and expense is given full right of subrogation as against the interest of the party primarily obligated to pay the same.

A comparison of the provisions of Section 5, relating to the plan of unitization, and of Sections 9 and 10, further relating to the rights and obligations of the parties, with the more or less standard provisions of the voluntary unitization agreements prevailing throughout the oil and gas producing states in instances where unitization of pools or large areas is brought about by agreement, will show a marked similarity and will disclose that the Act under consideration does no more and goes no farther than is considered necessary where the parties are able to get together by 100 per cent agreement.

The operation of the unitized properties is not turned over to any lessee or lessees as private parties to operate as they please.

Section 9 of the Act provides that each unit so created shall be a "body politic and corporate". As such the unit is no different from the long recognized irrigation, drainage, levee, water improvement, conservancy and various other types of improvement districts. The Unit in this instance could well have been called an "oil and gas conservation district". The functions and characteristics are the same.

Thus the unit as such is a public corporation, a *quasi* municipal body, performing functions of government. Persons comprising such public corporations do not function as individuals but as public officers.

The right and authority of the states to so create such agencies of government consisting of interested property owners and to prescribe the powers with which they shall be endowed, are clearly stated by this court in the case of *Fallbrook Irrigation District* v. *Bradley* (1896), 164 U. S. 112, 174, as follows:

> "The formation of one of these irrigation districts amounts to the creation of a public corporation, and their officers are public officers. This has been held in the Supreme Court of California. *Re Madera Irrig. Dist. Bonds*, 92 Cal. 296, 14 L. R. A. 755; *People* v. *Selma Irrig. Dist.*, 98 Cal. 206.
>
> "There is nothing in the essential nature of such a corporation, so far as its creation only is concerned, which requires notice or hearing of the parties included therein before it can be formed. *It is created for a public purpose and it rests in the discretion of the legislature when to create it, and with what powers to endow it*" (Emphasis ours.).

See also *Hager* v. *Reclamation District* (1884), 111 U. S. 701, 705; *O'Neill* v. *Leamer* (1915), 239 U. S. 244, 253, 254; *Houck* v. *Little River Drainage District* (1915), 239 U. S. 254, 262-265; *Myles Salt Company* v. *Iberia Drainage District* (1915), 239 U. S. 478.

By the provisions of subparagraph (e) of Section 5 of the Act, each and every lessee within the unit area is given representation on the operating committee of the

unit and a vote equal to its proportionate interest in the unit. Each lessee, proportionate to its interest, has the same voice as does every other lessee. Those who were petitioners or proponents of the unit have no more voice in proportion to their interest than does the most violent dissenter. The appellant, The Palmer Oil Corporation, in this case is given representation on the Committee and has its voice in the management of the Unit.

Once a unit is created, prior differences as to whether the unit should have been created or as to the division of interest, etc., should not in any way affect the vote of any of the lessees on the operating committee. Once the unit is created, all have a single common purpose, namely, working in cooperation to recover the greatest possible volume of oil and gas from the common source of supply under and in accordance with the best and most efficient engineering and operating practices. This is one of the most important reasons for the success of unitized operations. Guiding the project is the combined judgment of all the lessees, having a common purpose. If The Palmer Oil Corporation is the highly efficient and commendable operator as pictured by its attorneys in this case, then through its representation on the Operating Committee it, in the interest of the public good, will contribute much to the judgment of the Operating Committee in the proper conduct of the unitized operations.

Under the law the royalty owners have everything to gain and nothing to lose, except possibly the royalty owners who in the absence of unitization are obtaining an undue proportion of the oil and gas from the common

reservoir and who under a plan of unitization receive only their fair and equitable share, The only real change in their status is that, instead of sharing to the extent of one-eighth in the limited production from a particular well or lease in the absence of unitization, they share in the same percentage in a much larger quantity of unitized production allocated to the tract or tracts in which they have an interest. There is no longer any problem of offset drainage or of the failure of individual lessees to fully and adequately develop the property. Any reasonable plan of unitization, as does the Plan of Unitization in respect to the West Cement Medrano Unit, would require the proper and efficient development and operation of the whole of the unit area in accordance with the best engineering and operating practices.

There is nothing in the unitization law that takes away from the Corporation Commission its continuing jurisdiction under the general oil and gas conservation laws as affecting operations carried on within the unit area. The Corporation Commission, by its order in this case, specifically reserved such jurisdiction in respect to the West Cement Medrano Unit and the Unit Area of said Unit (Paragraph 4 of order, R. 1249).

G. Being within the scope of the Police Power, debatable questions of reasonableness, wisdom or propriety of the Act are for the Legislature and not the Courts.

This court in *C. B. & Q. Railway Company* v. *McGuire* (1910), 219 U. S. 549, 569, said:

> "The scope of judicial inquiry in deciding the question of power is not to be confused with the scope

of legislative considerations in dealing with the matter of policy. Whether the enactment is wise or unwise, whether it is based on sound economic theory, whether it is the best means to achieve the desired result, whether, in short, the legislative discretion within its prescribed limits should be exercised in a particular manner, are matters for the judgment of the legislature, and the earnest conflict of serious opinion does not suffice to bring them within the range of judicial cognizance."

In the case of *McLean* v. *Arkansas* (1908), 211 U. S. 539, 547, this court said:

"The legislature, being familiar with local conditions, is, primarily, the judge of the necessity of such enactments. The mere fact that a court may differ with the legislature in its views of public policy, or that judges may hold views inconsistent with the propriety of the legislation in question, affords no ground for judicial interference unless the act in question is unmistakably and palpably in excess of legislative power [Citing cases]."

In the case of *Standard Oil Company* v. *Marysville* (1929), 279 U. S. 582, 584, this court tersely stated the rule as follows:

"We need not labor the point, long settled, that where legislative action is within the scope of the police power, fairly debatable questions as to its reasonableness, wisdom and propriety are not for the determination of courts, but for that of the legislative body on which rest the duty and responsibility of decision [Citing cases]."

See also *Walls* v. *Midland Carbon Company* (1920), 254 U. S. 300; *Ohio Oil Company* v. *Indiana* (1900), 177 U. S. 190; *Jacobson* v. *Massachusetts* (1905), 197 U. S. 11.

In the case of *Cities Service Gas Company* v. *Peerless Oil and Gas Company* (1950), 340 U. S. 179, 186, this court said:

> "It is no concern of ours that other regulatory devices might be more appropriate, or that less extensive measures might suffice. Such matters are the province of the legislature and the Commission."

Point II.

Provisions requiring that petition be filed by designated percentage in interest of lessees and providing that proceeding be dismissed on protest of a certain percentage are not an unlawful delegation of legislative authority to private parties.

Appellants charge that the provisions of Section 4 of the statute requiring that the petition for an order of unitization be filed "by or with the authority of, lessees of record of fifty per cent (50%) or more of the area of the common source of supply or portion thereof sought to be unitized," and the provisions of Section 6 requiring that if at any time before sixty days after the entry of the order by the Commission "lessees of record of fifteen percent (15%) or more" of the unit area shall file a protest, the proceeding shall be dismissed, constitute an unlawful delegation of legislative authority to the lessees owning the percentage of interest so named, citing *Eubank* v. *City of Richmond* (1912), 226 U. S. 137; *Carter* v. *Carter*

Coal Company (1936), 298 U. S. 238; and *Washington ex rel. Seattle Title & Trust Company* v. *Roberge* (1928), 278 U. S. 116.

Such position is without merit and the cases thus cited have no application. In each such case the statute or ordinance involved gave to a majority or a class of persons the right, at their will and without any other legislative standard being provided, of saying what should be done with respect to the conduct, rights or property of a minority. No discretion or supervisory action of any kind by any agency of government was involved. No hearings were provided for. There was no right of appeal. This court in those cases held, and rightly so, that such action was an unlawful delegation of legislative authority to private parties and thus constituted the taking of property without due process of law.

An entirely different situation exists here. The percentage provisions of Sections 4 and 6 are merely jurisdictional steps or restrictions in connection with the taking or effectiveness of action by a duly constituted governmental agency. Here, before any action can be taken that will affect a minority or a class other than that having the right to initiate the proceeding, notice and a public hearing are required, all persons affected have an opportunity to be heard, and the duly constituted public agency must determine if the statutory grounds for such action exist and the terms and conditions upon which it shall be taken, if taken, all pursuant to legislative standards in respect thereto and from which action any person aggrieved has the right of a judicial appeal.

The constitutional questions involved have been put at rest in a number of cases by this court, some of which expressly distinguish the cases relied upon by appellants in this instance.

The case of *Currin* v. *Wallace* (1939), 306 U. S. 1, involved the Federal Tobacco Inspection Act authorizing the Secretary of Agriculture to designate the markets from which tobacco sold at auction could move in commerce, but provided that such action, in each case was dependent upon the approval of a designated percentage of the "growers". This court said (p. 15):

> "So far as growers of tobacco are concerned, the required referendum does not involve any delegation of legislative authority. Congress has merely placed a restriction upon its own regulation by withholding its operation as to a given market 'unless two-thirds of the growers voting favor it.' Similar conditions are frequently found in police regulations. *Thomas Cusack Co.* v. *Chicago*, 242 U. S. 526, 530, 61 L.ed. 472, 475, 37 S. Ct. 190, L. R. A. 1918A, 136, Ann. Cas. 1917C, 594. This is not a case where a group of producers may make the law and force it upon a minority (see *Carter* v. *Carter Coal Co.*, 298 U. S. 238, 310, 318, 80 L. ed. 1160, 1188, 1192, 56 S. Ct. 855) or where a prohibition of an inoffensive and legitimate use of property is imposed not by the legislature but by other property owners (see *Washington ex rel. Seattle Title Trust Co.* v. *Roberge*, 278 U. S. 116, 122, 73 L. ed. 210, 214, 49 S. Ct. 50, 86 A. L. R. 654). Here it is Congress that exercises its legislative authority in making the regulation and in prescribing the conditions of its application. The required favorable vote upon the referendum is one of these conditions. The distinction was pointed out in *J. W. Hampton, Jr. & Co.* v.

United States, 276 U. S. 394, 407, 72 L. ed. 624, 629, 48 S. Ct. 348, where, in sustaining the so-called 'flexible tariff provision' of the Act of September 21, 1922, and the authority it conferred upon the President, we said: 'Congress may feel itself unable conveniently to determine exactly when its exercise of the legislative power should become effective, because dependent on future conditions, and it may leave the determination of such time to the decision of an Executive, or, as often happens in matters of state legislation, it may be left to a popular vote of the residents of a district to be affected by the legislation. While in a sense one may say that such residents are exercising legislative power, it is not an exact statement, because the power has already been exercised legislatively by the body vested with that power under the Constitution, the condition of its legislation going into effect being made dependent by the legislature on the expression of the voters of a certain district'."

The case of *Miller* v. *Schoene* (1928), 276 U. S. 272, involved a Virginia statute which made it the duty of the state entomologist "upon the written request in writing of ten or more reputable freeholders of any county or magisterial district" to make an investigation and to take action with respect to diseased cedar trees in conformity with certain other provisions of the act. This court said (p. 280):

"The statute is not, as plaintiffs in error argue, subject to the vice which invalidated the ordinance considered by this court in *Eubank* v. *Richmond*, 226 U. S. 137, 57 L. ed. 156, 42 L. R. A. (N. S.) 1123, 33 Sup. Ct. Rep. 76, Ann. Cas. 1914B, 192. That ordinance directed the committee on streets of the city of Richmond to establish a building line, not less than 5 nor

more than 30 feet from the street line whenever requested to do so by the owners of two-thirds of the property abutting on the street in question. No property owner might build beyond the line so established. Of this the court said (p. 143): 'It [the ordinance] leaves no discretion in the committee on streets as to whether the street [building, semble] line shall or shall not be established in a given case. The action of the committee is determined by two-thirds of the property owners. In other words, part of the property owners fronting on the block determine the extent of use that other owners shall make of their lots, and against the restriction they are impotent.'

"The function of the property owners there is in no way comparable to that the 'ten or more reputable freeholders' in the Cedar Rust Act. They do not determine the action of the state entomologist. They merely request him to conduct an investigation. In him is vested the discretion to decide, after investigation, whether or not conditions are such that the other provisions of the statute shall be brought into action; and his determination is subject to judicial review. The property of plaintiffs in error is not subjected to the possibly arbitrary and irresponsible action of a group of private citizens."

The case of *Doty* v. *Love* (1935), 295 U. S. 64, involved a Mississippi statute which permitted the reopening of closed banks upon terms proposed by three-fourths of the creditors in number or in value upon approval of the plan by the Superintendent of Banks and confirmed by the Court of Chancery. This court said (p. 70):

"The argument will not hold that the necessary operation of the statute is to subject dissenting creditors, who may be as many as one-fourth, to the

will or the whim of the assenting three-fourths. The creditors favoring reorganization, though they be ninety-nine per cent, have no power under the statute to impose their will on a minority. They may advise and recommend, but they are powerless to coerce. Their recommendation will be ineffective unless approved by the Superintendent. Even if approved by him, it will be ineffective unless the court after a hearing shall find it to be wise and just. Upon such a hearing every objection to the plan in point of law or policy may be submitted and considered. The decree when made by the Chancellor will represent his own unfettered judgment. The judicial power has not been delegated to nonjudicial agencies or to persons or factions interested in the event. Like statutes have been upheld by the courts of other states [Citing cases]."

The case of *Fallbrook Irrigation District* v. *Bradley* (1896), 164 U. S. 112, involved a California statute authorizing the creation of irrigation districts upon petition of a specified number of persons affected and giving to the supervisor and the people the right to say whether such a corporation shall be created. This court said (p. 178):

"An objection is also urged that it is delegating to others a legislative right, that of the incorporating of public corporations, inasmuch as the act vests in the supervisors and the people the right to say whether such a corporation shall be created, and it is said that the Legislature cannot so delegate its power, and that any act performed by such a corporation by means of which the property of the citizen is taken from him either by the right of eminent domain or by assessment results in taking such property without due process of law.

"We do not think there is any validity to the argument. The Legislature delegates no power. It enacts conditions upon the performance of which the corporation shall be regarded as organized with the powers mentioned and described in the act."

The case of *United States v. Rock Royal Co-operative* (1939), 307 U. S. 533, involved the provisions of Section 8c(9)(B) of the Agricultural Marketing Act of 1937 authorizing the Secretary of Agriculture to approve marketing agreements signed by "fifty per cent or more of the handlers" of certain agricultural products, or to issue orders in respect thereto in the absence of such an agreement provided such order is approved or favored by two-thirds or more of certain of the producers. This court said (p. 577):

"2. Delegation to Producers. Under § 8c(9)(B) of the Act it is provided that any order shall become effective notwithstanding the failure of 50 per cent of the handlers to approve a similar agreement, if the Secretary of Agriculture with the approval of the President determines, among other things, that the issuance of the order is approved by two-thirds of the producers interested or by interested producers of two-thirds of the volume produced for the market of the specified production area. By subsection 19 it is provided that for the purpose of ascertaining whether the issuance of such order is approved 'the Secretary may conduct a referendum among producers.' The objection is made that this is an unlawful delegation to producers of the legislative power to put an order into effect in a market. *In considering this question, we must assume that the Congress had the power to put this Order into effect without the approval of*

anyone. Whether producer approval by election is necessary or not, a question we reserve, *a requirement of such approval would not be an invalid delegation*" (Emphasis ours).

The case of *Parker* v. *Brown* (1942), 317 U. S. 341, involved the California Agricultural Prorate Act authorizing the establishment of prorate marketing plans upon petition of ten producers and after notice and hearing, conditioned further upon the subsequent approval thereof by a specified percentage of the producers in a given zone. This court said (p. 352):

> "It is the state which has created the machinery for establishing the prorate program. *Although the organization of a prorate zone is proposed by producers, and a prorate program, approved by the Commission, must also be approved by referendum of producers, it is the state, acting through the Commission, which adopts the program and which enforces it with penal sanctions, in the execution of a governmental policy.* The prerequisite approval of the program upon referendum by a prescribed number of producers is not the imposition by them of their will upon the minority by force of agreement or combination which the Sherman Act prohibits. The state itself exercises its legislative authority in making the regulation and in prescribing the conditions of its application. The required vote on the referendum is one of these conditions. Compare *Currin* v. *Wallace*, 306 U. S. 1, 16, 83 L. ed. 441, 451, 59 S. Ct. 379; *J. W. Hampton Jr. & Co.* v. *United States*, 276 U. S. 394, 407, 72 L. ed. 624, 629, 48 S. Ct. 348; *Wickard* v. *Filburn*, 317 U. S. 111, *ante*, 122, 63 S. Ct. 82" (Emphasis ours).

The case of *Booth* v. *Indiana* (1915), 237 U. S. 391, involved an Indiana statute requiring the furnishing of washrooms in mines upon the request in writing of twenty or more employees, or in case there were not so many employed, then upon the request of one-third of the employees. This court said (p. 398):

> "There remains to be considered only the contention that the law 'is, within itself, a dead letter.' And it is said that 'it *would forever lie dormant if not called into exercise and activity by the request of private persons.*' Or, as plaintiff in error otherwise expresses what he thinks to be the evil of the law, '*it is not enforceable by any power which the state government possesses, under its Constitution, or its laws enacted thereunder, but it is enforceable only upon the demand, the whim, or the election of a limited number of employees in the coal mining business.*' And it is declared that 'this is the exercise of an arbitrary power, for an arbitrary private right, and against a private business.'
>
> "We have quoted counsel's language in order to give them the strength of their own expressions of what they consider the vice of the law; but manifestly it is but a generalization from the particular objections which we have considered, and those objections we have sufficiently discussed. (Emphasis ours).
>
> "Judgment affirmed."

Under House Bill 339, if anything is to be done, it is not done by the petitioners or any percentage of the lessees. They do not impose their will upon the minority. What is done is done by order of the Corporation Com-

mission, after notice and hearing, pursuant to a policy and standards prescribed by the Legislature and subject to review on appeal. The percentage requirements in respect to the filing of a petition and the percentage of the lessees required to acquiesce, as evidenced by a failure of a designated percentage to protest, are but conditions prescribed by the Legislature to the enforcement of its will.

Point III.

The procedural and other rights granted the lessees as distinguished from the lessors or royalty owners do not deny to the lessors or royalty owners the equal protection of the law.

The provisions of Sections 4 and 6 of the statute giving to a percentage of the lessees the right to file a petition for unitization, or by protest to bring about a dismissal thereof, and the other provisions of the law and plan of unitization giving to the lessees rights in respect to the management of the unit not granted the lessors or royalty owners do not deny to the lessors or the royalty owners the equal protection of the law.

The answer is merely that of a reasonable classification of the persons so affected.

It is elementary to say that there is nothing in the Constitution that prohibits the states, in the enactment of legislation, to classify and treat differently parties and objects affected thereby so long as there is a reasonable basis for such classification in respect to the lawful objects to be accomplished. *Field* v. *Barber Asphalt Paving*

Company (1904), 194 U. S. 618; *New York Rapid Transit Corporation* v. *New York* (1938), 303 U. S. 573; *Clark* v. *Kansas City* (1900), 176 U. S. 114; *Lakeshore & M. S. Railway Company* v. *Clough* (1917), 242 U. S. 375; *Great Atlantic & Pacific Tea Company* v. *Grosjean* (1937), 301 U. S. 412; *Kotch* v. *River Port Pilot Commissioners* (1947), 330 U. S. 552; *Pacific States Box & Basket Company* v. *White* (1935), 296 U. S. 176; *Lindsley* v. *Natural Carbonic Gas Company* (1911), 220 U. S. 61.

It is equally well established that every presumption is in favor of the validity of legislation and the exercise by the state of its police power and that the burden is on persons attacking the same to show wherein the facts do not warrant the same or warrant the classification by the state of the persons or objects affected. *Pacific States Box & Basket Company* v. *White* (1935), 296 U. S. 176; *Corporation Commission* v. *Lowe* (1930), 281 U. S. 431; *Lindsley* v. *Natural Carbonic Gas Company* (1911), 220 U. S. 61; *Bradley* v. *Richmond* (1913), 227 U. S. 477; *Alaska Packers Association* v. *Industrial Accident Commission* (1935), 294 U. S. 532.

This court in the case of *Pacific States Box & Basket Company* v. *White*, *supra*, said (p. 185):

> "When such legislative action is called in question, if any state of facts reasonably can be conceived that would sustain it, there is a presumption of the existence of that state of facts, and one who assails the classification must carry the burden of showing by a resort to common knowledge or other matters which may be judicially noticed, or to other legitimate proof, that the action is arbitrary."

The differences between the position and interests of the lessees on the one hand and of the lessors or royalty owners on the other are obvious. Some of such differences are:

(a) The lessee by its lease contract is given the right and is charged with the responsibility of the development and operation of the leased premises. The unitized development, management and operation of a common source of supply is functionally an operating problem.

(b) The lessee is the one that has the geological, engineering and operating staff and is thus in the better position to know what should or should not be done from the standpoint of competitive or unit operation of properties in a common source of supply.

(c) The lessee is the one that, under the unitization law and any plan of unitization prescribed thereunder, is required to advance the money and defray the cost and expense of the project. The persons paying the cost of the project should have a greater voice.

(d) The lessee has the greater quantum of interest in respect to the production from the leased premises, namely, seven-eighths as compared with one-eighth.

(e) The lessor or royalty owner normally and usually does not have the technical staff or operating knowledge to know what should or should not be done in respect to matters of operation and of unitization.

(f) The royalty owners are, as a rule, scattered and do not generally have first-hand information as to the status of individual wells or the engineering or geological

conditions prevailing with respect to the area sought to be unitized.

As was said by the Supreme Court of Oklahoma in its opinion in this case (R. 41):

> "The distinction between the lessee and the royalty owners as classes in interest and the reason why the Legislature should extend the privilege so responsible to one and not the other is so manifest that it precludes any idea that in so doing the legislative act was capricious."

Except for the right of a designated percentage of the lessees to file the petition or of a designated percentage of the lessees to bring about a dismissal thereof by the filing of protests, absolutely no distinction is made as between the lessees, lessors or royalty owners in the hearing before the Corporation Commission on such a petition. All have the same right to appear and be heard, and in the making of any order pursuant thereto the Commission by Section 4 of the law is required to make the same "upon such terms and conditions as may be shown by the evidence to be fair, reasonable, equitable and which are necessary or proper to protect, safeguard and adjust the respective rights and obligations of the several persons affected, *including royalty owners, owners of overriding royalties, oil and gas payments, carried interests, mortgagees, lien claimants* and others, as well as the lessees." All have the same right of appeal.

In the particular case now before the court, as shown by the record herein, the nonconsenting royalty owners have been given every consideration both before the Cor-

poration Commission and before the Supreme Court of Oklahoma on appeal.

Point IV.

Order and Plan of Unitization are reasonable and are supported by the evidence.

Considered under this Point will be the contentions of appellants that the West Cement Medrano Pool is not a common source of supply and that the order of the Commission and certain provisions of the Plan of Unitization, including the division of interest, are unreasonable. The contentions of appellants are here so grouped because all involve an evidentiary review of the Commission's express findings of fact and its determination of what is fair and reasonable.

There is no foundation for appellants' statements that the findings of fact of the Commission are contrary to the undisputed evidence. Its findings of fact and determination of what is fair and reasonable are supported by an abundance of testimony. The most that appellants can claim is that in certain respects there was conflicting evidence. The same fact questions and questions as to the reasonableness of the Commission order presented here were presented to and determined adversely to appellants by the Supreme Court of Oklahoma in its decision herein appealed from (R. 28-56).

In regard to a further independent review of the evidence, this court, in the case of *Milk Wagon Drivers Union* v. *Meadowmoor Dairies* (1940), 312 U. S. 287, 294, said:

"It is not for us to make an independent valuation of the testimony before the master. We have not only his findings but his findings authenticated by the state of Illinois speaking through her supreme court. We can reject such a determination only if we can say that it is so without warrant as to be a palpable evasion of the constitutional guaranty here invoked. The place to resolve conflicts in the testimony and in its interpretation was in the Illinois courts and not here. To substitute our judgment for that of the state court is to transcend the limits of our authority."

In the case of *Pennekamp* v. *Florida* (1946), 328 U. S. 331, 345, this court said:

"While the ultimate power is here to ransack the record for facts in constitutional controversies, we are accustomed to adopt the result of the state court's examination."

In respect to this court substituting its judgment for that of a state regulatory agency as to what is reasonable and proper in respect to oil and gas matters peculiarly within the knowledge of the regulatory agency, this court, in the case of *Railroad Commission of Texas* v. *Rowan & Nichols Oil Company* (1940), 310 U. S. 537, 580, wisely said:

"A controversy like this always calls for fresh reminder that courts must not substitute their notions of expediency and fairness for those which have guided the agencies to whom the formulation and execution of policy have been entrusted."

And again on rehearing in the same case, 311 U. S. 570, 575:

"For its own good reason Texas vested authority over these difficult and delicate problems in its Rail-

road Commission. Presumably that body, as the permanent representative of the state's regulatory relation to the oil industry equipped to deal with its ever-changing aspects, possesses an insight and aptitude which can hardly be matched by judges who are called upon to intervene at fitful intervals."

Because of the views expressed by this court in the cases last cited, appellees will not indulge in a lengthy or detailed discussion of the evidence, but will answer the contentions of appellants only to the extent necessary to show that the Commission did not act without basis in fact or under the evidence. We will limit our discussion to those particular points wherein the appellants challenge the sufficiency of the order and the evidence.

A. The Unit is a single common source of supply.

The Corporation Commission, in Finding No. 2 of its order (R. 1243) expressly found that the whole of the Medrano Sandstone underlying the Unit Area "constitutes a single common source of supply of oil and gas, all parts of which are permeably connected so as to permit the migration of oil or gas from one portion of the common source of supply to another." Although the order recites that faults are known to exist, it further finds that they are not such as to prevent substantial migration of oil and gas from one part of the common source of supply to another.

The record shows that the hearing in this case was not the first knowledge and experience of the Commission in respect to this problem. Appearing in the evidence are Exhibits 12 to 22 (R. 1345-1398, offered in evidence

R. 205), being prior orders and findings of the Commission relating thereto, dating from January 4, 1943, when the pool was first regulated by the Commission.

The prior orders recite the studies made of the pool to determine if it was a single common source of supply, culminating in Order No. 17736 dated April 10, 1945 (Exhibit 22, R. 1396) finding and determining the whole of the Medrano Sandstone formation to be "in fact one common source of supply." As disclosed by the orders, the studies so made were participated in by the Conservation Department of the Commission, the United States Bureau of Mines, as well as the operators, and involved actual well performance and bottom hole pressure tests. Order No. 16399 (Exhibit 16, R. 1366) ordered the shutting in of the gas wells for two weeks as a part of the study.

Every proration and other conservation order of the Corporation Commission relating to the West Cement Medrano Pool since its discovery, and there have been many, has been predicated on the basic fact that the pool is a single common source of supply.

The fact that the pool was a single common source of supply and that the faults known to exist were not such as to constitute impervious barriers was testified to at length by the witnesses in the case (R. 213, 237, 239-40, 317-18, 232-24, 360, 364-66, 373-74, 603-22, 730-34). Much of the intervening testimony was cross-examination involving details supporting the conclusions so reached. The witnesses were men thoroughly qualified who were acquainted with and followed the development of the field from the date of its discovery and who had participated in the field-

wide detailed study of the field looking to unitization (R. 206, 208, 229, 230-34, 427). The Commission saw the witnesses, knew their qualifications, and was in a position to appraise the competency and reasonableness of their testimony.

The evidence relied upon by appellants consists of a number of exhibits which merely show or make reference to the known faults, which for one purpose or another were used to classify the different parts of the field by fault segments. As stated in the findings of the Commission, the presence of the faults has been known, but this is far from saying that the faults constitute complete barriers separating the pool into separate common sources of supply. Several of the exhibits were made by or under the direction of the witnesses who testified in the case, who explained that the exhibits did not show what the appellants here claim they show.

B. It was not too late to accomplish beneficial results merely because approximately two-thirds of the reservoir energy had been produced or expended.

Neither common sense nor the statute arbitrarily conditions the making of an order of unitization upon any percentage or stage of depletion of reservoir energy. The criterion, set forth in Section 4 of the Act, is the added recovery of oil and gas that can be obtained by unitized methods of operation as compared with that which can be obtained in the absence of unitization.

The Commission in this respect, notwithstanding the stage of depletion of the natural reservoir energy, found:

"That by and through the unitization of the proposed Unit Area and the unitized management and operation and further development thereof as a unit, all as set out and provided for in the Plan of Unitization hereto attached, full use can be made of the gas energy in the reservoir to the mutual advantage of all the owners of the said common source of supply of oil and gas, that waste of large volumes of oil and gas can be prevented, gas can and will be returned to the reservoir to supplement the natural reservoir energy, water encroachment, either natural or artificial, on the lower side of the pool can be properly controlled and utilized, substantially more oil, amounting to many millions of barrels, can be recovered from the common source of supply than can be otherwise recovered, a more equitable distribution of the recoverable oil and gas can be had as between the several owners of the pool, and the correlative rights of the several owners can be more fully protected" [Finding No. 7, Order No. 20239, R. 1246].

The evidence in this regard was that the additional recovery as a result of the order and Plan of Unitization in this case could reasonably amount to as much as 24 to 25 million barrels, or approximately twice what could otherwise be recovered (R. 250-54, 260-73, 283-84, 851-84).

This is the equivalent of finding an entire new oil pool of comparable size and productivity to that of the pool in the absence of unitized operation.

Appellants nowhere in their briefs take issue with the findings or evidence on this score.

C. The Plan does not include acreage not proven to contain productive oil and gas.

The only contention of appellants in this regard is that wells have not been drilled on all of the tracts and that in one or two instances tracts were included on which wells referred to by them as dry holes had been drilled.

The Commission, however, after hearing all the evidence, found (Finding No. 2, R. 1243) that the whole of the Medrano Sandstone underlying the unitized area was a part of and constituted the Medrano common source of supply, was oil and gas bearing, and that (Finding No. 4, R. 1244) the limits thereof were reasonably defined by drilling operations.

The actual drilling of wells on every man-made subdivision of land is not necessary to prove that an oil and gas bearing formation exists under such tract of land. This can be proven by drilling around the different tracts. Likewise the drilling of an uneconomical or so-called dry hole at a particular spot does not condemn an entire tract nor prove that the tract is not underlain with oil and gas that can be recovered by unitized operations. One of the advantages of unit operations is the recovery for the benefit of the landowners of oil that cannot otherwise be recovered.

There was an abundance of testimony that all of the tracts included within the Unit were a part of the common source of supply and underlain by oil and gas producible therefrom (R. 209, 238-39, 297-98, 407-8, 510-17, 566-72, 597-98). It was clear from the testimony that Exhibits 54R and 56R (R. 1496, 1500), geologic maps relied

upon by all parties throughout the hearing, reflected the answer to the question of the productive limits of the common source of supply. Both Mr. C. H. Keplinger and B. T. Murphree, engineers testifying on behalf of the protestants before the Commission, the appellants here, acknowledged the reasonable accuracy and reliability of such exhibits (R. 963, 1116-17).

D. The division of interest is fair and reasonable.

The Commission in this regard found:

> "* * * that the division of interests set forth in 'Exhibit B' attached to said Plan of Unitization pursuant to which the unit production is to be apportioned and allocated among and to the several separately owned tracts within the Unit Area is fair and equitable and is such as will reasonably permit persons otherwise entitled to share in or benefit by the production from such separately owned tracts to receive, in lieu thereof, their fair, equitable and reasonable share of the unit production or other benefits thereof; that the division of interest assigned to the several separately owned tracts in the Unit Area as set out in said 'Exhibit B' to said Plan of Unitization is fair and reasonably representative of the value of said several tracts for oil and gas purposes and the contributing value thereof to the unit in relation to like values of other tracts in the unit; that the basis used to arrive at said division of interest takes into account the acreage of the several separately owned tracts, the quantity of oil and gas recoverable therefrom, the location thereof on structure, the probable productivity of oil and gas from such tracts in the absence of unitization, the burden of operation to which such tracts will or are likely to be subjected, together with

all other pertinent engineering, geological and operating factors as are reasonably susceptible of determination; * * *" [Finding No. 11, R. 1247].

Appellant, The Palmer Oil Corporation, simply by statement says that the division of interest so established is objectionable (its brief, pp. 73-74) because (a) it fails to attribute to the Palmer interest in the Palmer-Sterba lease credit for oil which it claims could have been drained from below 6,000 feet, which had been reserved to Gulf Oil Corporation by its contract with The Palmer Oil Corporation (Exhibits 34 and 35, R. 1477, 1527); (b) it fails to compensate The Palmer Oil Corporation for the risk incurred in drilling dry holes on the lease; (c) it gave Palmer no special consideration because of its "commendable qualities" as an operator nor to comparative lifting costs as between leases; and (d) the alleged inaccuracy of certain of the technical factors used to arrive at the division of interest.

The argument of appellants in these respects is too inconsequential to call for a detailed answer. Suffice it to say that the record discloses that 50 per cent or more of the testimony and other evidence was given over to a detailed and careful consideration of the various steps used to arrive at the percentage of participation or the division of interest, as it is variously called, including all of the considerations raised by appellants. Perhaps the most condensed portions of the evidence relating thereto are to be found at record pages 290-316, 567-572, 618-690, 705-722. It was uncontradicted that the procedures and formula so used to arrive at the division of interest were

in accordance with sound and accepted geological and engineering practices (R. 313, 315, 863).

The fact that the formula and procedures so used may not be made with mathematical nicety or in exact quality is no objection. *Lindsley* v. *Natural Carbonic Gas Company* (1911), 220 U. S. 61, 78.

The provisions of the Plan of Unitization prescribing the vote by which action of the Operating Committee of the Unit shall be taken (Paragraph VIII of Plan of Unitization, R. 1250, 1258-1262) are necessary and reasonable. As pointed out under subhead F of Point I of appellees' argument herein, the Unit so created by the order of the Commission is "a body politic and corporate", a *quasi* municipal body, performing functions of government. It is only proper that the authority creating such a body prescribe how and by what means it shall function. Subparagraph (e) of Section 5 of the law specifically provides for an Operating Committee to manage its affairs. The members of the committee as such do not act as individuals but as *quasi* public officers. It is usual and customary that any board, agency, industry committee or other group performing functions of this kind act as a body pursuant to a vote of less than the whole. All have a vote. Furthermore, the action of the Operating Committee in this instance is circumscribed and controlled by the detailed provisions of the Plan of Unitization prescribed by the Corporation Commission (R. 1250-1300). The Plan of Unitization itself fixes the division of interest and how the unit production is to be allocated, how the costs are to be paid and apportioned, the accounting procedure, how the investment is to be adjusted, what the method of op-

eration shall be, and all matters of major importance. In instances where discretion is left to the Operating Committee, standards to guide the committee are stated. The Plan of Unitization itself sets out clearly how the Unit is to be carried on and shall function.

Perhaps the greatest evidence of the fairness and reasonableness of the Plan of Unitization prescribed by the Commission is not only the fact that the Commission itself, familiar with the pool and familiar with the subject matter with which it was dealing, adopted it after twenty-four days of evidence in which the protestants, appellants here, raised every point of objection here presented, but the further fact that twelve lessees in the field, some little, some big, some corporations, some individuals, some owning leases in one end of the field, some in the other, some owning only leases in the gas cap, others owning leases only in the oil zone, in all owning leases on 94 per cent of the Unit Area, are subscribers thereto. (R. 286) and, in addition, the Supreme Court of Oklahoma, after reviewing the evidence, approved the same. It is interesting to note that the protesting lessees, who have refused to subscribe to the Plan, likewise refused to join in the study of the facts in the first instance to determine whether or not unitization would result in a substantially greater recovery of oil for the advantage of all concerned, or to work with the other lessees in their endeavor to work out a fair and reasonable plan of unitization to recommend to the Corporation Commission (R. 288).

The thing that is most noteworthy about the whole of appellants' attack on the reasonableness of the order and the sufficiency of the evidence to sustain the same is

the relative insignificance of the points so raised as compared with the great benefits and importance of the overall project.

Point V.

The enactment of Senate Bill 203 amending House Bill 339 has no effect in this case.

The interpretation by the Supreme Court of Oklahoma (R. 1536-38) was that the enactment of Senate Bill 203, May 26, 1951, by the 1951 Oklahoma Legislature[24] was but a re-enactment and continuation in effect of House Bill 339, with certain amendments, and has no effect on the rights of the parties in this case. Being an interpretation of the operation and effect of a state law, it is conclusive here. In fact, appellants, except for one or two loose statements, do not contend otherwise.

The conclusion by the Supreme Court of Oklahoma in such regard is but a statement of the universal rule that where, as here, a statute is repealed and all or some of its provisions are at the same time re-enacted, the re-enactment is considered a reaffirmance of the old law and a neutralization of the repeal, so that the provisions of the repealed act which are thus re-enacted continue in force without interruption, and all rights and liabilities incurred thereunder are preserved and may be enforced, and further, that proceedings instituted under the law so repealed and re-enacted do not fall but may be continued and concluded under the new law. *Bear. Lake and River*

24. Sections 1 to 16, Chapter 3a, Title 52, Session Laws of Oklahoma, 1951, set out in full as Appendix "J", page 302, of Statement As to Jurisdiction by The Palmer Oil Corporation in Case No. 301.

Waterworks & Irrigation Company v. *Garland*, 164 U. S. 1; 50 Am. Jur., Statutes, Sec. 573, p. 538; 59 C. J., Statutes, Sec. 529, p. 927.

The amendment of the law does not in any way indicate a question in the minds of the Oklahoma Legislature as to the "legal" sufficiency of the law prior to the amendment. Such an assertion by appellants is sheer speculation. Legislative acts are amended from time to time for many and varied reasons.

The significant thing, however, is that after six years of effectiveness of House Bill 339, with the experience and knowledge gained by the creation of fourteen units thereunder, the state through its Legislature redeclared its purpose and policy of fostering the unitized operation of oil and gas pools by the enactment of the amended unitization law. The unanimity of thinking on the part of the legislative branch of the state in respect to the benefits of unitized operation of oil and gas pools is evidenced by the fact that Senate Bill 203 passed the House of Representatives by a vote of 106 to 1.

CONCLUSION

In conclusion, appellees respectfully submit that the Oklahoma unitization law and the particular order in respect to the West Cement Medrano Pool here under consideration constitute a reasonable and proper exercise of

the police power of the state and should be sustained in all respects by the judgment of this court.

1924 Annual Report of the United States Bureau of Mines, p. 31.

Report III of the Federal Oil Conservation Board to the President of the United States, February 29, 1929, pp. 10-17, 19-25, 29-30, 33-34, 40.

"Unit Operation", by George Otis Smith, U. S. Geological Survey, delivered at a group session on unit operation in connection with the Eleventh Annual Meeting of the American Petroleum Institute, November 12, 1930.

"Comparison of Competitive and Unit Operations in Cromwell and Seminole City Pools", by James O. Lewis, Consulting Petroleum Engineer, Tulsa, Oklahoma, appearing in handbook on *Unitization of Oil Pools*, published by Mid-Continent Oil & Gas Association, 1930, p. 35.

"Compulsory Unit Operation of Oil Pools", by W. P. Z. German, 17 A. B. A. J. 393, June, 1931.

Thornton Oil and Gas, 1st ed., Secs. 21, 22 and 218, 1932.

"Recycling Gas, Repressuring Oil Sands and Storing Gas in Depleted Fields, As Conservation Measures", by J. H. Dunn, Production Engineer, Dallas, Texas, presented to the Mineral Section of the American Bar Association at Cleveland, Ohio, July 25-29, 1938.

"The Conservation of Oil", by Ely. 51 Har. L. Rev. 1209, 1938.

Oil and Gas Leases and Royalties, by Samuel H. Glassmire, 2d ed., Secs. 5, 6, 7 and 11, 1938.

[APPENDIX]

Summers Oil and Gas, by W. L. Summers, Professor of Law, University of Illinois, Vol. 1, Perm. Ed., Secs. 3 and 104, 1938.

"Recent Progress in Petroleum Development and Production", by H. C. Miller and G. B. Shea, U. S. Bureau of Mines, submitted to special subcommittee on petroleum investigations of the Committee on Interstate and Foreign Commerce, House of Representatives, 66th Congress (Recess), on H. R. 7372, November 7, 1939, p. 391.

Report of Energy Resources Committee to the National Resources Committee, prepared in consultation with the several federal agencies involved and submitted to Congress February 15, 1939, by the President of the United States, Franklin D. Roosevelt, pp. 216-221.

"Engineering Aspects of Waste and Conservation in the Petroleum Industry", by R. A. Cattell, Chief Engineer, Petroleum and Natural Gas Division, U. S. Bureau of Mines, contained in report of investigation by the Temporary National Economic Committee of the 76th Congress of the United States, Part 17, Section 4, published 1940, dealing with the petroleum industry, p. 9861.

Covenants Implied in Oil and Gas Leases, by Maurice H. Merrill, Sec. 227, 1940.

Report of Engineering Committee of the Interstate Oil Compact Commission, submitted at New Orleans, April 14, 1941.

Report of Temporary Subcommittee on Secondary Recovery in Oklahoma of the Temporary Production Subcommittee for Oklahoma of the Production Committee for District No. 2 under the Petroleum Industries Committee appointed by the Petroleum Coordinator for National Defense, April 10, 1942.

"Report on Petroleum Production and Development", by H. C. Miller and Ben F. Lindsly, U. S. Bureau of Mines, submitted to special subcommittee on petroleum investigations of the Committee on Interstate and Foreign Commerce, House of Representatives, 73rd Congress, on H. R. 441, November 1, 1943, as it appears in Vol. 1 of the report of that investigation, beginning at p. 1193.

"Unitizing the Royalty Interests", by Frederick Squires, Petroleum Engineer, Illinois State Geological Survey, printed in *The Producers Monthly*, October, 1944.

"Secondary Recovery in Arkansas—A Survey", a report to the 56th General Assembly of the State of Arkansas under the auspices of the Arkansas Oil and Gas Commission, by George H. Fancher, Professor of Petroleum Engineering, University of Texas, and Donald K. Mackay, Senior Geologist, Arkansas Oil and Gas Commission, 1946, p. 245.

Staff Report of Federal Power Commission entitled, "Practices and Problems in Producing, Gathering and Processing Natural Gas", summarizing results of a nationwide investigation of the natural gas and petroleum industry during the greater part of the year 1946, Docket No. G-580.

"Report of Legal Committee of Interstate Oil Compact Commission Relating to Secondary Recovery and Related Operations", dated April 11, 1947, in Interstate Oil Compact Quarterly Bulletin, Vol. VI, No. 2, August, 1947, pp. 73-80, being a revised reprint of earlier report dated June 20, 1942.

Statement of Paul Montgomery, Petroleum Engineer, Lafayette, Louisiana, made to Interstate Oil Compact Commission with respect to unitization and unit operations in Louisiana, appearing in Interstate Oil Com-

pact Quarterly Bulletin, Vol. VI, Nos. 3 and 4, December, 1947, p. 58.

Antitrust Laws v. *Unit Operation of Oil or Gas Pools*, by Robert E. Hardwicke, 1948.

"Unit Operation of Oil and Gas Fields", by Jacobs, 57 Yale Law Journal 1205, 1948.

Unitized and Cooperative Projects in the United States, published by Interstate Oil Compact Commission, 1948. Contains lists of all unitized projects in the United States as of date of report.
